

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

The Literary Digest

VOL. XIX., No. 1

NEW YORK, JULY 1, 1899.

WHOLE NUMBER, 480

Published Weekly by

PUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE SCHLEY CONTROVERSY.

WHEN Lieutenant-Commander Hodgson denied that the famous colloquy between him and Rear-Admiral Schley ever occurred, the newspaper friends and foes of the admiral took up the cudgels with a vigor unequaled since the controversy began. The alleged dialog, as published at frequent intervals in the New York *Sun*, ran, it will be remembered, as follows:

"Schley: Hard sport.

"Hodgson: You mean starboard.

"Schley: No, I don't. We are near enough to them [the Spaniards] already.

"Hodgson: But we will cut down the *Texas*.

"Schley: D— the *Texas*! Let her look out for herself."

The *Sun* used this dialog as proof that Rear-Admiral Schley was so badly frightened that he tried to run away from the Spanish vessels, and was willing to send the *Texas*, one of his own squadron, to the bottom with her half a thousand men, if he himself could only escape. Upon Hodgson's denial, The *Sun* was at once assailed with a torrent of denunciation from the papers friendly to the admiral, but replied by saying that Hodgson had assured The *Sun*, both directly and indirectly, that the alleged conversation was correct in the main. As the Hodgson denial had been given out by Admiral Schley, the Navy Department made an investigation, and found that Lieutenant-Commander Hodgson intended his letter to the admiral to deny the verbal accuracy of The *Sun's* dialog, but sent with it a note affirming its substantial accuracy. The *Sun* thereupon says that the admiral, inasmuch as he failed to give out Hodgson's statement that the conversation was substantially correct, is, in addition to his other crimes, a liar, and should take off the United States uniform.

The many papers friendly to Admiral Schley take the view that the maneuver of the *Brooklyn* was necessary to avoid blanketing the fire of our ships and to avoid the rams and torpedoes of the enemy, and that it contributed greatly to the success of the fight. As to the relations between the *Brooklyn* and the *Texas*, The

Sun has ceased to say that Admiral Schley exclaimed "D— the *Texas*!" and the Schley papers assert that he was simply expressing the naval rule that in battle each ship must look out for herself. The most serious charge of the anti-Schley press, of course, was the one that the admiral acted in a cowardly manner. The reply of the Schley papers, which are led by the Washington *Post*, the Baltimore *American*, the Philadelphia *Times*, and the New York *Times*, is well represented by the following extract from the New York *Times*:

"The enemies of Admiral Schley have made clumsy use of the loop incident to make the ignorant believe that he sought by this maneuver to get out of the fight. Inasmuch as all the testimony shows that his ship was right in the fight and firing her guns during the turn, and put away like a greyhound after the fleeing Spaniards the moment the turn was complete, firing rapidly all the time; and inasmuch as the official diagrams and reports show that the *Brooklyn* was hit by Spanish projectiles oftener than all the other ships of the fleet put together, and that she hit the Spaniards with more big projectiles than all the other ships of the fleet together, it would appear that the persons who make this base charge have been so blinded by hate and spite that they can not see, altho everybody else sees, the absolute worthlessness of their theory of the loop as an evidence of misconduct.

"The *Times* thinks the loop of the *Brooklyn* can stand on its merits. Admiral Schley needs no defenders as to that part of his distinguished and flawless career. The loop being justified, the conversation that took place when the order for it was given becomes a matter of mighty small consequence."

The attitude of The *Sun* may be gathered from the following extract:

"Practically the two letters to Schley, the letter used and the letter not used, were one. Hodgson's story to Chadwick and his story to Schley were absolutely identical, and to say that because of them Hodgson must have lied to one or the other is a mean and baseless slander.

"Printing one letter, therefore, as the Washington *Post* printed it, without the other, was what Lieutenant-Commander Heilner suspected, a garbling of the correspondence. It is inconceivable that a newspaper alive to the value of a fair reputation could have deliberately sought thus to mislead the public. We can not believe that in printing the letter in question The *Post* knew that there was another legitimately a part of it.

"It is necessary," said the Baltimore *American*, Schley's home organ, "that the liar in the case be apprehended."

"He stands revealed to all. Even if the Washington *Post* was knowingly associated with the turpitude of this transaction, the party primarily guilty of the attempt to deceive the public by making it believe that Hodgson had said one thing when in truth he had said the opposite, the garbler of the Hodgson correspondence, the suppressors of the truth, in short, the liar in the case, is, shame as it is to say it, the officer of the navy named Winfield Scott Schley.

"With the proof now afforded that The *Sun's* story of the *Brooklyn's* loop was correct there also lies the proof of The *Sun's* charge that Schley bore false witness before the United States Senate when he explained his unnatural maneuver by the fantastic assertion that it was necessary in order to avoid blanketing the American fire. The mournful but unquestionable fact is that Rear-Admiral Schley has sullied the uniform he wears. He should take it off."

A large number of papers take the attitude that no possible good to the service can come from a continuation of the controversy, and that it ought to be dropped. The Chicago *Record* says:

"According to reports which issue from Washington from time

to time the officials of the Navy Department are still unwilling to let the Schley-Sampson controversy rest. If there is anything in these recurring rumors it is time to admonish the officials that the public will resent any effort which may be made to stir up this subject again with a view to adding to the laurels of either officer at the expense of the other. The public knows enough of the facts now to form its own judgment of the conduct of the naval battle off Santiago, and it has ample trust that history will do full justice to all concerned.

"No conceivable good could be secured now by a secret inquiry into Schley's instructions to officers of the *Brooklyn* during the engagement. The fact that Schley's ship was in the forefront of battle throughout answers all imputations that he had any reluctance to meet the enemy. The only result of an inquiry would be to stir up further recriminations into which not only the friends of the two rear-admirals, but the captains and other officers would be drawn.

"The controversy has been deplorable from the beginning, as the one blemish upon a great naval triumph. Let the matter be dropped now before it has attracted more of the world's attention and become a discredit and a scandal."

The Washington correspondent of the *Philadelphia Ledger* says:

"The Navy Department exhibits a disposition to perpetuate the Schley-Sampson controversy over the battle of Santiago, and the indications are that, unless it is summarily stopped by an order from the President, the navy will be divided into two acrimonious factions, with inevitable and serious injury to the service. . . . The feeling in the Department was so unfriendly toward Schley following the Santiago battle that it was only through the positive action of the President that his name was inserted in the list of officers sent to the Senate last winter to be advanced several numbers for his distinguished service in the destruction of Cervera's fleet. . . . No good can possibly come by continuing the contention, and by encouraging it the Secretary of the Navy and Rear-Admiral Crowninshield, chief of the Navigation Bureau, are materially contributing to a state of demoralization in the service."

OPPOSITION TO MANILA NEWS CENSORSHIP.

It is quite generally conceded that news about intended movements of our troops, or any other news likely to aid the Filipinos, should be denied the use of the cable from Manila, lest it be transmitted back to the natives and used to our disadvantage. Some are of the opinion, however, that the censorship is carried to a needless extreme. We quote a few of these criticisms to show the reasons urged against the restriction:

Responsible for Wild Imaginings.—"It is responsible for filling the public mind with the wildest imaginings and the most

fantastic inventions about the Americans and the Filipinos and the relations of each among themselves and with each other. This has been going on ever since the censorship was set up, and has produced a whole literature of history of that which never happened and never existed."—*The Commercial Advertiser (Rep.)*, New York.

Engenders Doubts and Fears.—"The country is permitted to know that battles are fought with the Filipinos, that great victories are proclaimed, and that peace is almost daily promised, but the informing particulars of battles are not allowed to be published; despatches from Otis are withheld from publication; the Filipinos alleged by the Washington authorities to have been defeated and driven to the mountains make frequent attacks at the very doors of Manila; our people know that the climate of the Philippines at this season is dangerous to health and life; they have fathers, sons, brothers, and friends in the camps, but they know nothing of the general health of the army. The actual condition of affairs in and about Manila may be excellent; the health of the soldiers may be fairly good; the battles may all have victorious results, but the censorship bars the way to any accurate or precise information respecting these matters. The silence and secrecy observed engender doubts and fears in the public mind, and infinite anxiety and distress are the consequences of the suppression of the news.

"If there is a convincing reason for the maintenance of this rigorous fear and distress begetting censorship, the authorities are quite right to maintain it; if there is no reason for its maintenance it should not be maintained, and if there is an adequate reason for it, the country should be informed of it. As it is the public can perceive no valid reason, no justifying cause for the secrecy and mystery of the censorship."—*The Ledger (Ind. Rep.)*, Philadelphia.

People Want the Truth.—"Before the rebellion began last February, and up to this present time, there has been exercised at Manila an arbitrary and harmful censorship on all correspondence, particularly on that sent by cable. The result of this is that the people of the United States are not and can not be familiar with the methods and practices of the general commanding the Eighth Army Corps and governing by military force the people of the Philippine Islands. No newspaper correspondent may write the facts on these matters under pain of banishment.

"*The Record* has urged that peace be restored in the Philippine Islands by sending a sufficient number of troops there to capture and garrison all important points which are now overrun by the armed followers of Aguinaldo, and by sending to direct these troops and to govern the Philippines the major-general commanding the armies of the United States, Nelson A. Miles. It now adds to these demands a further demand that the degrading and

OTIS WON'T DO.

If Uncle Sam expects to catch that rabbit he had better change dogs.—*The Tribune*, Minneapolis.

"DON'T YOU THINK YOU HAD BETTER HURRY ALONG THOSE REINFORCEMENTS?"

—*The Herald*, New York.

CARTOON VIEWS OF THE PHILIPPINE SITUATION.

unjust censorship exercised at Manila be removed, and that the truth regarding the government and the management of the troops there be permitted to go out for the information of the people of the United States."—*The Record (Ind.)*, Chicago.

High-Handed Militarism.—"It will not tend to lessen the popular dissatisfaction with existing conditions in the Philippines to know that the contents of General Otis's late despatches are being withheld from the public at the same time enlistments for reinforcements for Otis are being rushed with exceptional vigor. It is known that a severe military censorship of press despatches already exists in the Philippines. This censorship is described by a correspondent at the front as being more rigid than that maintained by the Spanish General Weyler in Cuba. If, in addition, a censorship is also to be established in Washington, resulting in the suppression of official reports, there is good cause for popular protest. The people of the United States are not yet ready for militarism of this high-handed character. They have a right to know the truth of how things are going in the Philippines. The Administration is taking desperate chances in resorting to these tactics. It might be well to hesitate and do some sane thinking before permanently adopting such a course of action."—*The Republic (Dem.)*, St. Louis.

A KENTUCKY VENDETTA.

THE feud in Clay county, Ky., which has been attracting national attention recently is considered the bitterest ever waged in that State, six men having fallen in two years, which is more than were killed in any two years, it is said, of any of the other famous Kentucky feuds. The present conflict is reported to have arisen from a quarrel over the payment for a \$40 spring-wagon, a quarrel which has been aggravated by its own consequences until it seems likely that only the extermination of one or the other party will end the dispute. The bitterness of the contest may be realized from the statement of Mrs. "Tom" Baker after her husband, who was under arrest for murder, had been shot by one of the White-Howard faction. She said:

"I can not realize that poor Tom is dead. He was so good to me and the boys. There are eleven of them, you know, and I have prayed to God that my unborn child will be a boy, that he, too, can help in the work of vengeance that I have laid out for my sons to do. They have sent my oldest boy, Jimmie, to jail, but he will get out, for they can not convict him. I shall devote my life to getting revenge for the slaying of Tom. I shall teach the boys that it is their duty to kill every White and every Howard who was in any way responsible for the killing of their father."

As the White-Howard faction are in control of many of the county offices, the local authorities do not seem disposed to stop the feud, unless by exterminating the Bakers and their allies. Judge William Brown, Governor Bradley's brother-in-law, circuit judge of the disturbed district up to last January, said in an interview:

"The Baker-Howard feud will never end until the Bakers are wiped out or driven away as were the Amys in Breathitt county by Captain Bill Strong, or the Tollivers in Rowan county by Boone Logan. They have Indian blood in their veins and they are fighters of the fiercest kind. I was opposed to allowing them bail, for I knew the fighting would begin as soon as the Bakers got back home. It was not a week until they tried to kill Tom Baker. The only way to stop the feud by law is to arrest every man on each side, bring all into court and put them under bond to keep the peace, and then blot out the business of the blind tigers which sell moonshine whisky. You have no idea what a vile concoction this moonshine is. They use buckeyes and ivy to make the corn yield more, and the result is that this stuff will make the man that drinks it want to fight his grandmother. I broke up the Ku-klux in my county, Laurel, by calling them all in and binding them over to keep the peace for a year and then having the local-option law enforced. Yes, there is great danger of more fighting in Clay, and it would not surprise me to hear of Bev. or John G. White being killed at any time."

Judge T. C. Orear, of Montgomery County, Ky., said:

"The situation is the worst I have ever known, not excepting that in Rowan county when Craig Tolliver ruled in a reign of terror. Clay county is so completely isolated, so hard to get to and to get away from, that it possesses peculiar advantages for the propagation of feuds. The men who are connected with the Baker-Howard war are the most determined fighters I ever knew in mountain feuds."

Adjutant-General Collier, who lives in the disturbed district, said:

"That the situation is as bad as it can be there is no sort of doubt. But what is the remedy? The State guard can act only under the civil authorities, and when these authorities are mixed up in a feud as they are in Clay county I can not, for the life of me, see how we are to stop the killing."

Not a Case of Relapse.—"It is education both industrial and literary, of books and tools, that is needed to make the mountaineer—of whom there are said to be 2,000,000 in the States on both sides of the Appalachian ridge—conform to the laws and customs of the lowlands. No case of a relapse into barbarism is presented by these mountain feuds, as in rural lynchings or urban riots. It is rather a survival of the socially primeval. Things go on as in the days before there were courts. We hear most of them from Kentucky, because Kentucky has pride in the enforcement of some of her laws and calls out her soldiers when defiance follows violation. But in such slipshod States as North Carolina and Tennessee the feud probably progresses normally without any one's special notice. The idea of the judicial regulation of private quarrels, lost when the forbears of these people left the coasts and plunged into the woods and mountains one hundred and fifty years ago, has never been regained. Save as to murder and moonshining the mountaineer is not particularly lawless. He is not especially given to brawling or rioting. His morals are not lax. He is simply as he was and as his ancestors have been. He sees no need of a court. Neither does he of what we call a house and its furniture. He lives in such a log cabin as Boone may have first built after he crossed the mountains. He cooks in one iron pot. It is said that here and there he wears homespun of his wife's weaving. His ignorance is primeval, and when last year some rumor drifted up to his eyrie of the setting forth of a

CAPTAIN HENRY F. NICHOLS, OF THE "MONADNOCK."
Who died on his ship in Manila Bay, June 10, of sunstroke.

foe's flying squadron, he was prepared to meet it as his ancestors met the British should it light on King's Mountain.

"The mountaineer simply has to be brought to date. This is a pity in some ways, for, if knowledge is power, it is seldom happiness. But if the process is not altogether agreeable to the mountaineer it will be beneficial for the country. For here is a vast virgin forest of rugged, native American timber, the last tract of its sort. It will be of great use in the repairing of the State. All that General Howard gets rich Americans to invest in his mountain university will be repaid manyfold in that best of coin—popular intelligence, social and political stability."—*The Press, New York.*

Corsica in America.—"It is the fashion in talking of those strange illustrations of human passion known as vendettas, to refer to Corsica as the home and chief illustration of these blood-feuds. But it is doubtful if Corsica has anything more conclusive to offer in this way than some parts of our Southern country, especially the mountain region of Kentucky and Tennessee. The vendetta is so ingrained in various of those half-civilized neighborhoods as to be accepted as quite a matter of course. Family quarrels are carried on from one generation to another. Originating, often, no one can tell how, in some question of boundaries or in uncertain far-off personal affront, they are handed down from father to son along with the farms and other property. It is a truly extraordinary state of things, and one of which we of the North have scarcely a conception. Miss Murfree, in her tales of the Great Smoky Mountains, has given us such light as we have but the subject is a sociological problem which deserves closer attention than that of the romancer. Among prominent vendettas which have of late claimed newspaper attention, tho without readers to any large extent grasping the facts, are the Baker-Howard, French-Eversole, and Hatfield feuds. But these are only illustrative, and are brought into view simply because they are among the worst. Travelers tell us that the vendetta is common, rather than exceptional, in Kentucky, where all the quarrels named rage, and that the women are worse than the men."—*The Evening Telegraph, Philadelphia.*

How Texas Ended the Feuds.—"The fact ought to be noted that the men who perpetrate the secret assassinations, which are the regular and most revolting features of these feuds, are not Italian members of a mafia, organized for purposes of bloody revenge, nor are they foreigners unacquainted with American institutions and traditions. They are, on the contrary, men of Anglo-Saxon blood, descendants of families that have been in this country for generations.

"It is impossible to put a stop to these bloody feuds, which are handed down from father to son, if left to the local authorities, for these are more or less mixed up by marriage, blood relationship, or interest, with one faction or the other, and the only remedy possible is that which was used so efficaciously in Texas. No State was more cursed than Texas with bloody family and neighborhood quarrels. They were carried on for generations until the blood-guilty participants were hunted down and brought to justice by the 'Texas Rangers,' a State police force maintained to put down the organized bands of highwaymen, horse thieves, and desperadoes that flocked to the Lone Star State in early times. The Rangers took a hand in putting down the factional and family feuds, until their bloody deeds are but little heard of now. Some such means would be effective in Kentucky and in those parts of Louisiana where bloody family quarrels have been so rife."—*The Picayune, New Orleans.*

Kentucky Can Not Afford to Tolerate It.—"Whether a Baker or a Howard was the first wrongdoer in the bloody affrays that have just culminated in another murder is immaterial. The history of the feud shows that it has been sustained through a period of more than fifty years, during which it has been productive of the most frightful atrocities. This is reason enough for the accusation that the Bakers and Howards are not alone responsible for it. Its permanent cause can be found only in a general contempt for law which affects the entire community. The whole body of citizens and the mis-called authorities who suffer or even participate in the strife are the most blameworthy promoters of this series of crimes. . . .

"Kentucky can not afford to tolerate such an environment. Her governors, her legislatures, her courts, her people stand ar-

raigned before the world, and may not escape by devolving responsibility on Manchester and the Manchester district. Had there been a thorough and impartial administration of the law throughout the State during the last fifty years the Baker-Howard feud would have been forgotten long since."—*The Times-Herald, Chicago.*

LODGING-HOUSES IN AMERICAN CITIES.

ALTHO it has come to be recognized that the housing of the poor vitally affects the health and safety of the rest of the people in every community, it appears from an investigation made by Mr. John Lloyd Thomas, manager of the Mills hotels in New York, that there are few cities in the United States in which the authorities give sufficient attention to the condition of the workingmen's lodging-houses. Mr. Thomas, who gives the results of his inquiry in *Municipal Affairs*, finds that in some cities the lodging-houses are practically left to run themselves. He says:

"The authorities of San Francisco, St. Paul, St. Louis, New Orleans, and Cleveland report that there is no control exercised over common lodging-houses, except the ordinary restrictions of the health, building, and fire departments, and that there is no information at hand relative to the number, character, and condition of such houses, except such as has been obtained through frequent complaints of their insanitary condition. Private information warrants the opinion that in some of these cities the lodging-houses are little more than appanages to the saloon which is the chief source of revenue; and in Indianapolis it has been found necessary to make a police raid of so-called lodging-houses to scatter the hordes of vagrants and thieves who are harbored there."

Denver, Cleveland, Philadelphia, and Boston lodgers fare better than the worst, altho fifteen of the twenty lodging-houses in Boston and eight of the eleven in Cleveland are without baths. The average price for a night's lodging in a Boston lodging-house is eighteen cents, the lowest five.

Chicago makes no special supervision of its lodging-houses, does not require the keepers to obtain licenses, and, in fact, has passed no regulations on the subject beyond the usual ones governing dwellings, altho frequent inspection has brought good results. Of Chicago's eighty-five lodging-houses, alcoholic liquors are sold in twenty-five, and twenty-seven are reported to be in poor or bad sanitary condition. As to baths and air space, the city authorities did not give Mr. Thomas any information.

Mr. Thomas found the Baltimore authorities a still less fruitful source of information. He says:

"In Baltimore, no license is required for a lodging-house, and no official facts are available. The health department is informed that there are some three-decker beds rented for 5 cents per night, and the average charge is from 10 to 15 cents per night. The condition of some of these houses is that of indescribable filth."

This hint at the physical condition of the Baltimore lodgers might seem bad enough, but Mr. Thomas proceeds to reflect upon their mental and moral state by telling of the discouraging reception which met the attempt of Mr. Eugene Levering, a leading business man of the city, to give them a fine lodging-house with separate rooms, needle, shower, plunge, and foot baths, and a fine restaurant, for the same price they were paying for the accommodations described above. The lodgers preferred the old quarters.

New York, Mr. Thomas finds, is in sad condition. The reports show that, outside the "Raines Law" hotels and the Mills hotels, New York has 112 lodging-houses, of which half are without baths of any kind. Half, too, have saloons in the same building or next door. As to the "Raines Law" hotels, which have sprung up in great numbers within two years, Mr. Thomas quotes from

*The Tariff
and the
Trusts
in Cartoon*

a report which John McCullagh, formerly chief of police of New York, made January 12 last, as state superintendent of elections:

"I secured an official list of the places holding licenses under the liquor tax laws as hotels, and found them to be over three thousand in number. . . . I selected for investigation only those that in my judgment were to be classified as suspicious, the total number to be investigated being in the neighborhood of twenty-five hundred. . . . Investigation proved conclusively that a large percentage of these places were being conducted for immoral purposes. . . . I directed the comparison should be made by my deputies of the names found upon the hotel registers on October 7 with those found thereon on October 8. The comparison demonstrated beyond a doubt that a gigantic and almost universal use of these places was to be made for the purpose of registering the inmates as voters."

Mr. Thomas does not find that such lodgings are likely to improve the physical, mental, or moral tone of the lodgers. He says:

"From the foregoing statements it can readily be judged what would be the trend of the lodging-house population. Granting the moral and physical cleanliness of the man who patronizes such lodging-houses, it will be a miracle indeed if his future career does not pass through successive stages which may be accurately described as follows: Dirt, Disease, Degradation, Loss of Work, Vice, Crime.

"First, he passes through a course of self-deterioration until he becomes, second, a public menace and hurden."

The hopeful feature of the lodging-house situation is found in the two Mills hotels in New York, which have proved successful from both a financial and a humanitarian view. These hotels, according to Mr. Mills, are not intended for loafers and drunkards, but for self-respecting men of small incomes. They are provided with everything that will conduce to the health and comfort of the lodgers, and their 2,154 bedrooms, of which all but 100 rent at 20 cents a night, are usually well filled. On some winter nights many are turned away. As many as 900 baths have been given in one day in the larger hotel, and 300 a day is the average. The success of this enterprise, in Mr. Thomas's opinion, points to one way for the solution of the problem.

WILL THE NEGRO SAVE THE SOUTH?

SOUTHERN labor experts seem to be of divided opinion upon the desirability of negro labor in the South. Mr. J. Polk Brown, president of the Agricultural Society of Georgia, testified before the Industrial Commission at Washington, June 20, that the dominant cause of the lack of development of the South is the presence of the negroes. He accused them of retarding the industrial, moral, religious, social, and agricultural development of the section, and asserted that if they were absent a better class of labor would take their place. Mr. Brown wanted the race separated from the whites and colonized either in this country or elsewhere, in the interest of the Southern States. From Mr. J. B. Killebrew, of Nashville, who says that he has had extensive experience with negroes both before and since the war, both in the South and the North, comes the opinion, however, that the negro is sober and industrious and that no other nationality is his equal for work on the farm or in the forest. The editor of *Dixie* (Atlanta), a magazine devoted to Southern industrial interests, goes even further, and asserts:

"The manufacturing center of the United States will one day be located in the South; and this will come about, strange as it may seem, for the reason that the negro is a fixture here. This line of argument may be somewhat startling, even to Southern people who are best acquainted with the situation, for it must be admitted that the negro has been generally considered a hindrance, rather than a help, to the industrial development of the South. . . .

"Organized labor, as it exists to-day, is a menace to industry.

The negro stands as a permanent and positive barrier against labor organization in the South. This declaration is not carelessly made. It is based upon a painstaking investigation which has extended through many years of intimate acquaintance with Southern conditions, both industrial and sociological."

After explaining the difference between good and bad labor organizations, he continues:

"Here in the South we will never be seriously troubled with the vicious class of labor organizations. The ignorant and vicious portion of our population is not eligible for membership. The negro is not admitted to membership in any of the labor organizations North or South, and he never will be. It is against the nature of things.

"True, there has been some spasmodic effort to organize negro unions, but this plan has proven a flat failure. The negro lacks the venom and vicious tenacity that breeds the dangerous Socialistic organizations which threaten industry in certain sections of our country. . . .

"So the negro, all unwittingly, is playing an important part in the drama of Southern industrial development. His good nature defies the Socialist. In the mean time, his condition is improving daily. He is becoming skilled in the mechanical arts, and there is no possible hindrance to his efforts in this direction. But the negro and the white man will work separately always.

"In a general way, it is considered that organized labor, of the vicious sort, is an evil which the South has thus far fortunately escaped. But we do not owe this blessing to the neglect of the professional agitator. He has done his best, or rather his worst, and failed. Freedom from vicious Socialistic conditions is a practical and permanent advantage that the South offers to-day, and will always offer, to the manufacturer and to others who are seeking profitable investment. It is this tremendous advantage that will one day make the South the manufacturing center of the United States."

POLITICS AND OUR JUDICIARY.

ELECTION of judges by a popular vote is made the object of a vigorous attack in *The Atlantic Monthly* by Mr. Frank Gaylord Cook, who holds that judges so chosen can not but be influenced by the partizan feelings of party politics and their integrity and impartiality seriously affected. He begins by referring to late events in New York State:

"Is it safe to leave the selection of judges to campaign committees or to party bosses?

"Recently, the boss of New York City declined to renominate for the supreme court a judge who had served upon the bench with honor and efficiency for twenty-eight years. The reason given was that the judge had 'refused to recognize his obligations to Tammany Hall.'

"In the election of November, 1897, the candidates for the highest judicial office in the State of New York—the chief justiceship of the court of appeals—upon the Republican and the regular Democratic tickets, were named by the state committees of their respective parties. Apparently the people were not consulted. No nominating convention was held, and all the people had to do was to ratify at the polls the choice of their party leaders. To these leaders, this method has other advantages besides its simplicity and directness. Being irresponsible and uncontrolled, they are able the more easily to exact from the candidate a campaign contribution in proportion to the office conferred. In a recent election, Tammany Hall received, 'for the purpose of advancing the cause of the Democratic Party,' the sum of \$5,000 from its candidate for the office of justice of the city court, and the sum of \$8,830 from its candidate for the office of justice of the supreme court. Both of these candidates were elected. In their position upon the bench, will they be able to forget or disregard the circumstances under which they were selected? Will they, nevertheless, be independent, impartial, and fearless? Will they, none the less, retain the traditional respect and affection of the people?

"These questions involve the integrity of the courts, and hence the foundations of our social and political system."

Mr. Cook then sketches the debate in the Constitutional Conven-

tion of 1787 which resulted in our present method of choosing the judges of the United States Supreme Court, and the subsequent unsuccessful attacks upon the system. He tells of the methods adopted from time to time by the various States, with the resulting condition as follows:

"Of the forty-five States that now comprise the United States, in five the higher judges are elected by the legislature, in seven they are appointed by the governor by and with the advice and consent of the council or senate, while in thirty-three they are elected by popular vote."

As an example Mr. Cook takes New York State, in which the courts have been connected with popular elections for fifty years. He finds that the courts have been affected for the worse:

"One effect is certain. As a rule it has made the judge a prominent and active member of a political organization; in other words, a partizan in politics. A partizan he must be to obtain the office, and a partizan he must be to keep it. The office of judge, like the other offices filled by popular vote, is subject to the conditions of popular elections; and these are in the exclusive control of the political parties. The nomination is made and the campaign is waged by them and for their benefit. The fact that now and then one party is compelled, by an emphatic demand of the public, the bench, or the bar, to accept as its candidate for judicial office the nominee of another party is an exception that proves the rule. Such a concession is made only through compulsion. It weakens the party as an organization. It gives over to the enemy one of the offices or strongholds, the possession of which increases the party discipline, influence, and power. If a political party is to exist and prevail, it needs every office within its gift, to bestow upon its adherents; either to reward distinguished service, to strengthen wavering allegiance, or to secure a generous campaign contribution. That the office of judge has proved to be no exception to this rule is seen from the examples cited at the beginning of this article. They are not the only ones. Thanks to recent state laws requiring sworn statements of campaign expenses by candidates for office, the facts are now open to the public. In New York, since the passage of such a law in 1890, Tammany Hall received, in 1890, \$10,000 from its candidate for the superior court of the city of New York; in 1891, \$6,500 from its candidate for the supreme court, and \$10,000 from its candidate of the court of common pleas; in 1893, \$5,000 from its candidate for the court of common pleas; in 1895, \$5,000 from its candidate for the court of general sessions, and \$5,000 from its candidate for the supreme court.

"The contribution need not be called the purchase price of the office. It is enough to state that its payment is evidently obligatory upon the candidate by reason of his acceptance of the nomination. Being under obligation to his party for one of its most honored gifts, he manifests his gratitude by becoming one of its most generous supporters. Even in office his zeal does not flag. He participates in party councils and takes the stump in political campaigns. The faithful servant and generous supporter of his party, he is rewarded with a renomination at the end of his term.

"Meanwhile, in the community where he is prominent as a politician, he also sits as a judge. In the interpretation of the law and in the trial of causes he may have to decide between the very men, as litigants or attorneys, with whom he is associated or to whom he is opposed, in the arena of politics. Possibly the cause brought before him has itself arisen out of, or is involved with, the political questions that agitate his community and receive the support or opposition of his party. At any moment his record or sympathy as a politician may come into contrast or conflict with his duty as a judge.

"Even if his association with politics does not influence his judgment or conduct upon the bench, still it tends to weaken his hold upon public confidence and respect. Normally, the judge is regarded with a feeling of deep respect and of genuine affection; but this feeling is based upon a belief in his impartiality, independence, and fearlessness. By allying himself prominently with one class or party as opposed to another—especially by participating in party strife and incurring political animosity—he arouses in the former a hope of favor, and in the latter a fear of disfavor, in his judicial decisions. In both cases his office and function are undermined. The judiciary, while entrusted with preeminent powers, is nevertheless the weakest department of the Govern-

ment. The force and influence of its decisions rest solely upon the credit and respect with which they are received. The judicial mandate loses much of its power if it be believed to come from a political partizan."

The subtlety of political influence is likely to undermine the firmest character:

"Men of the highest qualifications, intellectual and moral, for judicial office, when chosen under the prevalent system of popular election, can scarcely escape the baleful influences to which that system subjects them. An under-feeling of political obligation, a brooding dread of political decapitation, consciously or unconsciously qualify the judgment and disturb the mind. They at least prevent complete independence and repose. 'It is plain,' says Mr. Bryce, 'that judges, when sucked into the vortex of politics, must lose dignity, impartiality, and influence.'

"In fact, the judiciary can not escape the harmful power of politics so long as it is subject to popular election. The time has come for the States to return to the system of appointment. It is not contended that thereby all evil political influence would be obviated. Under a system of appointment, the selection of judges may at times be controlled by executive favoritism or by political considerations, but the possibility of such control is reduced to a minimum. The executive can be held personally and directly responsible for his appointments to judicial office, and any departure from his duty can be rebuked at the polls.

"Such a reform would be in harmony with a similar reform now in progress in municipal government. In recent years, in some of our great cities, notably New York and Boston, the method of appointment has been substituted for that of popular election in the selection of heads of departments and other similar officers. Thus we are to-day correcting the excesses to which the principles of democracy and of popular election have been carried. The various functions and factors in local and municipal government are being readjusted with less regard to party passion and advancement, and with more attention to an expeditious, economical, honest, and efficient transaction of the public business.

"In this reaction toward better government, let us not neglect the judiciary, the very foundation of the State."

LETTERS AND ART.

FITZGERALD'S VARYING RENDITIONS OF THE RUBÁIYÁT.

A WRITER in a recent number of *Literature*, under the title "An Unhappy Recension," takes Edward FitzGerald severely to task for what he terms the latter's manifold and grievous sins against literary judgment in his several revisions of the Rubáiyát. He writes:

FIRST PAGE OF ORIGINAL MS. OF THE RUBÁIYÁT IN THE BODLEIAN LIBRARY AT OXFORD.

"FitzGerald's greatest friend, Tennyson, was one of the most accomplished and unerringly well-inspired of revisers; FitzGerald himself was apparently his exact opposite in these respects. A comparison stanza by stanza of the first version of the Rubáiyát published in 1859 with the revised text of the poem, will show that it is not going too far to say that FitzGerald has seldom touched any of his original work save to mar it, or varied its form of expression except for the worse. Who, for instance, being familiar with the splendidly audacious opening stanza of the 1859 edition:

"Awake! for Morning in the Bowl
of Night
Has flung the Stone that puts the
Stars to Flight;
And, lo! the Hunter of the East
has caught
The Sultan's Turret in a Noose of
Light,"

can forget the blank discomfiture with which he saw that both these daring strokes of Oriental imagery had disappeared under the reviser's hand in the edition of 1868, and that for the novel and vividly picturesque figure of the hunter with his lasso of rays has been substituted a hackneyed comparison with the archer."

The later edition—there were altogether five editions in FitzGerald's lifetime—prints the lines as follows:

"Wake! For the Sun, who scattered into flight
The Stars before him from the Field of Night,
Drives them along with them from Heaven, and strikes
The Sultan's Turret with a Shaft of Light."

The writer, after alluding to the many small alterations—"merely fidgety and vexatious"—with which the revised version abounds, continues:

"Everywhere there is visible the same strange determination to substitute the expanded and elaborate for the terser and more pregnant phrase. Thus:

"Then said a second, 'Ne'er a peevish Boy
Would break the Bow' from which he drank in joy,
And he that with his hand the Vessel made
Will surely not in after wrath destroy?'"

The last two lines originally ran:

"Shall he that made the Vessel in pure Love
And Fancy, in an after rage destroy?"

'With his hand,' for 'in pure Love and Fancy'! What an 'amendment'! . . . FitzGerald's recension of the original Rubáiyát must forever remain on record as a melancholy example of

the way in which the most critical taste may fail a man who sets to work to surpass the unsurpassable."

There are altogether sixty-seven stanzas—out of the one hundred and one that compose the later editions of the translation—in which considerable differences exist between the early and later editions.

A book full of interest to all lovers of Omar Khayyam and FitzGerald is the recent sumptuous edition of the Rubáiyát by Edward Heron-Allen, containing a photographic facsimile of the original manuscript of the Persian poem, now in the Bodleian Library at Oxford, together with a transliteration of this manuscript into modern Persian characters, a literal translation into English, and extensive bibliographical and critical matter. We reproduce the first page of this manuscript herewith, showing the first quatrain, and the first two lines of the second. The Bodleian manuscript contains altogether one hundred and fifty-eight quatrains. It need hardly be said that FitzGerald, while preserving in a marvelous manner the spirit of the original, often departed very far from the letter, suppressing many quatrains and combining others. Prof. Charles Eliot Norton, in a passage which has been said to be "unsurpassed in the literature of criticism," calls FitzGerald's translation

"the poetic transfusion of a poetic spirit from one language to another, and the rerepresentation of the ideas and images of the original in a form not altogether diverse from their own, but perfectly adapted to the new conditions of time, place, custom, and habit of mind in which they reappear . . . It is the work of a poet inspired by the work of a poet; not a copy, but a reproduction; not a translation, but a redelivery of a poetic inspiration."

As an evidence of how closely FitzGerald often kept both to the spirit and the letter of the original poem, we quote Mr. Heron-Allen's literal translation of quatrain 149 of the Persian manuscript:

"I desire a little ruby wine and a book of verses,
just enough to keep me alive, and half a loaf is needful;
and then, that I and thou should sit in a desolate place
is better than the kingdom of a sultan."

The reader will not fail to recognize in this a substantial likeness to FitzGerald's exquisite quatrain—with a new infusion of the spirit of poesy pulsing through it:

"A Book of Verses underneath the Bough,
A Jug of Wine, a Loaf of Bread—and Thou
Beside me singing in the Wilderness—
Oh, Wilderness were Paradise enow."

Again, as evidence of how far FitzGerald often departed from both letter and spirit, or rather infused the spirit of the whole of the original poem into a few lines, take stanza 157 of the Bodleian manuscript:

"Had I charge of the matter I would not have come,
and likewise could I control my going, where should I go?
Were it not better than that, that in this world
I had neither come, nor gone, nor lived?"

We recognize in this—but only faintly—the sentiment of FitzGerald's oft-quoted lines:

"Ah, Love! could you and I with Him conspire
To grasp this sorry Scheme of Things entire,
Would we not shatter it to bits—and then
Remold it nearer to the Heart's desire!"

An Author's Revenge.—An alluring picture of the pleasures of successful authorhood is given by a writer in a recent number of *The Independent*. He tells of a mythical author who, after many failures and many heartburnings over rejected manuscripts, finally became famous, so that editors and publishers were eager to obtain articles from his pen. Says the writer:

"A small colored boy guarded the outer door and took the cards of editors who crowded his anteroom, jostling one another, and who wanted special Sunday and other features. . . . He had, however, a very retentive memory, and for the ordinary editors

who had returned his manuscripts unconsidered and unread when he was unknown he had a printed form that read:

"Washington Irving Browne has received your request for a manuscript. He regrets to say that it will not now be possible for him to consider your present wishes in this regard. His time is so engrossed in his regular channels that he is unable to consider anything outside of his present clientèle. This does not imply any lack of appreciation on his part of your suggested patronage or signify in any way that the standard of your magazine is not acceptable to him. It has been a pleasure for him to have received the courtesy of your submitted request. Respectfully."

The *New York Times*, commenting on this tale, caps it with a true story of Stevenson in which the author again has the best of it, to the following effect:

"Here was revenge sweet to be sure. And once Robert Louis Stevenson partook of it in his own genial, gentle way. When he visited New York for the first time he called upon the well-known editor of a well-known magazine, presented a letter of introduction, and asked the privilege of writing something. The editor eyed him dispassionately and told him that his stuff would hardly do. Nine years passed. In the mean time the 'stuff' had been disposed of elsewhere and the literary journals were filled with notes about the new author. In the full blaze of his fame he paid another visit to America. Among the first to leave cards at Mr. Stevenson's hotel was the aforesaid editor of the aforesaid magazine. Mr. Stevenson, like Washington Irving Browne, had a 'very retentive memory.' He rolled a cigarette and repeated the incident. 'How provoking,' said the editor. 'I wonder which of my clerks could have been so discourteous to you.' Stevenson lighted his cigarette and replied mildly and with his usual beautiful smile: 'Why, now I recall his face. You are the man I saw.'"

ROSA BONHEUR.

ALTHO few would deny that Rosa Bonheur's works have of late years by no means retained the place which they held in the popular fancy thirty years ago, and while in the estimate of critics her fame has suffered some decline, she still unquestionably stands at the head of the list of women who have attained

ROSA BONHEUR.

eminence in art, and her death on May 26 has commanded wide attention. Her friend, Mme. Blanc, writing in *The Outlook* only a few days before her death, gives the following account of her as she appeared in her home at the Chateau de By:

"We shall surprise her here, in a fine studio on the first floor, at work as usual, her two favorite dogs near her; still brisk and

agile, in spite of her years, clad in masculine attire, which she wears with the ease of one accustomed to it from youth. When a vocation leads one to frequent horse-markets, to tramp over the rich loam of plowed fields and the litter of farm stables day after day; when one lives in the company of animals, in all kinds of weather and seasons, trousers seem far more practical than skirts. The blue serge suit that Rosa Bonheur wears in her studio is the neatest and best-fitting thing imaginable. Her slender, wiry, and admirably proportioned little body moves at ease in a very loose sack coat; her thick silvery hair is cut just below the ears and sets an aureole of light on her fine brow. None of her recent portraits, except one by an American artist, Miss Klumpke, gives any idea of the delicacy of her physiognomy lit up by sparkling eyes that penetrate one."

Of Rosa Bonheur's early years in Paris Mr. Hay Forbes draws the following picture in a recent number of *The Criterion*:

"In the year of our Lord 1832 there came up from Bordeaux to Paris, a poor little drawing-master, a few francs in his pocket, and in his train four hungry youngsters—one being Marie Rosalie, ten years of age, a swarthy, black-browed, leggy youngster. She was the eldest of the lot and was sent as a day-boarder to the nuns of Chaillot in the Rue de Reuilly. Daily for five years she trudged away to school. Her road lay through the Bois—delightfully wild and woody in those days. Perhaps half the time she resisted the temptation of the green and lawless park; the rest of the time she played truant. So the good nuns summoned her father. He came, the poor little drawing-master, sadly enough. And the nuns said: 'It is wasting time and money to leave Marie Rosalie here; she is too stupid to learn—she can never be a governess.' Gloomily the little man led her home—this dark-visaged, bony little maid, who had not wit enough for a governess, nor beauty enough for a wife. He bound her 'prentice to a dress-maker. She couldn't sew—in a week she was home again. Then he put her in another school, where he was drawing-master. She had her first lesson in drawing. She was fifteen. By the time she was sixteen she was an artist of no mean talent; and she worked like a little beaver. Up in the garret of their sixth-floor back she kept a tame sheep—and drew him. She drew in the Louvre; drew in the Bois; drew in the slaughter-house. In 1840 she was eighteen years of age. She determined to paint a picture for the Salon. She took for her subject two common pet rabbits nibbling carrots. It was exhibited—with a picture of sheep and goats—the next year. These pictures were signed 'Rosa Bonheur'—Marie Rosalie had vanished forever. From that time her life was easeful. Success came slowly but surely; her fame in the world grew apace. The little drawing-master died, snuffed out by the cholera. Rosa Bonheur was left with a ready-made family on her hands. She taught Auguste, the elder brother, to paint animals almost as well as she painted them herself. She taught Isidore to be a tolerable animal sculptor. Little Juliette (who became Mme. Peyrol) turned out a graceful painter of flowers and fruit."

As to her characteristics and rank as an artist, Mr. Forbes says:

"In the first place—it is well this should be said—Rosa Bonheur was the greatest of women painters. She did not paint like a woman—the pretty graces of Angelica Kaufmann, the fanciful mysticism of Berthe Morisot were utterly alien to her. If you compare her with the greatest modern animal painter, Troyon, still more conspicuous is her lack of all those qualities that we are wont to call feminine. She had, I think, as true an insight into animal life as Troyon had; but she had none of his poetry, none of his sentiment for light, none of his feeling for color, none of his spiritual imagination—if you will permit me to use a strutting phrase. She painted more correctly than Troyon—but that is mere matter of rhetoric, and negligible. The chief note of her work was its sincerity. She was inflexibly sincere. Using the word in its very best sense, I would say she was prosaic. She had no wine in her soul. Her work was wholesome in its equable spirit; there was a sort of familiar realism about it that went straight to the public heart. Then it was masterly—all her pictures of animals (there need be no question of her landscapes) impress you with a compelling sense of being well done. You say to yourself: 'The artist has achieved precisely the effect she had in mind—neither more nor less by a hair's breadth.' Take the 'Horse-Fair,' for instance, which you may see in the Metro-

politan Museum of this city. It has no emotional background. There are no spiritual contents. There is no imagination. Here you have a picture of horses—the realism softened into a sort of familiar and popular picturesqueness—full of vigor, well-painted, well-drawn, well-composed; a picture that will wear like a page of Thackeray's prose.

"This resolute and strenuous little artist was influenced very little by contemporary thought and contemporary modes of expression. The influence of George Sand is discernible in 'Labourage Nivernais' (in the Luxembourg), which is a pictorial translation of the novel. School after school arose in painting, but Mlle. Bonheur went her own way undisturbed. Her period of production lasted until 1870. Her earlier pictures were the best. 'The Ploughing Near Nevers' and the 'Haymakers' (both in the Luxembourg) are, after the 'Horse-Fair,' her masterpieces, and they were painted before she was thirty. Her visit to England and Scotland in 1856 bore fruit in a half-dozen memorable canvases, the 'Denizens of the Highlands'—that picture, perfectly composed of shaggy steers—the 'Scottish Raid,' a far bolder study than the 'Horse-Fair,' and 'Morning in the Highlands.'

"No animal painter has covered so wide a field as Mlle. Bonheur. She could paint any animal and painted them all equally well. The three horses who thunder along the road in her 'Three Musketeers' are not a whit more individual than the brown bull who lurches at you from the 'Long Reeds,' or more intimate than her Scotch sheep and slim does of Fontainebleau. Hers was a broad, sincere, equable talent. In the animal world life is simple and plain—the passions are poised—there are no great emotional heights and no depths. Now this life Rosa Bonheur reproduced with a large measure of authentic realism. She added nothing to what she saw; she never degenerated into anecdote—her dogs never rescued drowning babies, her lions never walked abroad with Una. Add, too, that she threw over everything a glamour of familiarity—that she never overstepped the prosaic—and you have the secret of her popularity. That she was the most popular artist of her day, and that, withal, she never condescended to any of the tawdry tricks of Millais, Frith, *et al.*, is a fine compliment to the taste of the age. She did not belong to the hierarchy of great artists, merely because the good Lord, who made her a painter, did not make her a poet as well."

The London *Athenaeum* takes a somewhat higher view of her rank as a painter. Speaking of her early studies and later triumphs it says:

"She had no teachers except her father and nature; but Cogniet did, indeed, greatly help the girl with encouragement of many kinds, as he recognized her ability and her insight into nature. One of her most frequented studies was the Abattoir du Roule, where, with characteristic fortitude, she not only controlled her natural repugnance to scenes of slaughter, but overcame all the disgust which attended the '*brutalité grossière*' of the people employed there. Even at this early period she studied not only the outward aspects and anatomical construction of the creatures she painted, but their passions and tempers.

"The greatest glory of Rosa's youth soon followed the loss of her father: that noble landscape with animals which is known to all the world as 'Labourage Nivernais' was finished, sent to the Salon, bought by the nation, engraved, and hung in the Louvre, as it now hangs in the Luxembourg. From this time a constant stream of successes followed. Masterpiece after masterpiece came from her easel, and of such equality of merit that no one will venture to say which is her chief work. 'The Farmer of Auvergne,' 'The Chalk Wagon of the Limousin,' 'The Charcoal-Burners,' and 'The Horse Fair' followed each other during a long series of years. Of the last there are at least three slightly different versions with a uniform inspiration. Of these one attained the unique distinction of being the first work by a living foreign animal painter which was admitted to the National Gallery. When 'The Horse Fair' first appeared at the French Gallery in Pall Mall, it created a sensation only paralleled by that which attended Mr. Frith's 'Derby Day' and Mr. Holman Hunt's 'Christ in the Temple.' There are at least four prints of 'The Horse Fair,' and the work itself has held its place in popular estimation. 'The Hay Field' came soon after it, and was immediately bought by the French Government.

"Rosa Bonheur's pictures may be counted by scores, but not one of them was put forth in a crude and unfinished state; honors

were poured upon her, but, steadfast, sober, and self-restrained to the last, she, like her great contemporary Mme. Henriette Browne, held aloof from the squabbles, the aggressions, and the follies of her neighbors, not less than from those corruptions of French contemporary art which have given to the world two Salons, and degraded painting in its natural center, Paris. . . . At By she lived, at By she died, the object of a world's admiration."

Rosa Bonheur's preference for masculine attire and her carelessness as to dress naturally led to not a few amusing incidents. The writer in *The Outlook* already quoted says of this characteristic:

"At first she lived on a sixth floor in the Rue Rumford, where she had found a way to make a sheep climb up to her rooms, but without any other possibility of becoming acquainted with oxen than by heroically going to study them at the slaughter-house, in the midst of carnage. Next she occupied a sort of cottage in the Rue d'Assas, about which an anecdote is current whose authenticity we can not guarantee. When she moved there, and just as her goods and chattels were being carried in, she returned, in muddy boots, from a day's painting in the country; the movers, misled by her accoutrements, took her for a boy of their own class, and asked her, roughly enough, to help them instead of standing there idly looking on; which she did, with a good grace, putting up with all their bad jokes on the weakness of her muscles. Later on, having resumed her feminine garments, which she calls her 'natural clothes,' and always wears in company and in town, she came back among the workmen and gave them a generous fee."

The following incident, taken from the New York *Tribune* (June 4), is given by a newspaper writer who paid a visit to By some years ago in order to obtain an interview with Mlle. Bonheur:

"A funny-looking man came toward me knitting his brows. He wore an enormous straw hat. Under it was a soft, beardless face, browned by the sun and lighted by chestnut-colored eyes; a small nose exaggerated the size of the large mouth, with rows of superb teeth, and there was a breezy flow of long hair.

"'Who are you? Where do you come from, and what do you want?' he said sharply, stopping and thrusting his small hands in the pockets of gray, ribbed trousers.

"This sharp questioning disconcerted me for a moment, but, recovering, I answered, 'I am a journalist, and wish to see Miss Bonheur.'

"'Well, look at her,' said the little peasant, taking off his great hat. 'You must excuse me; I am obliged to keep intruders away.'"

THE BALZAC CENTENARY IN FRANCE.

THE one hundredth anniversary of the birth of Honoré de Balzac, which was celebrated with much *eclat* at Tours on May 20, receives much attention in the French press, altho the Gallic mind has been much distracted by the contemporaneous glorifications of the living hero of France, Major Marchand. We quote from a number of *L'Illustration* which appeared just before the Marchand furor had reached its more effervescent stage, the following characteristically French picture:

"Decidedly, Balzac is the *lion* of the hour, as they used to say in his day. Everywhere there is an extraordinary outburst of zeal to glorify the memory of the illustrious novelist—at Tours, where he was born a hundred years ago, at Paris where he died fifty years ago. Our most eminent sculptors are striving—without success thus far, however—to model the figure of the master and to symbolize his genius. Finally, the number incessantly increases of those who, never having read a line of the author of the '*Comédie Humaine*,' proclaim themselves proudly 'Balzaciens.' And perhaps it is for a great name the supreme sanction of posterity that such a naïve cult should thus display its touching faith.

"But this is not enough for the enlightened admirers of Balzac. They demand for him the honors of the Pantheon. Why? 'If there is a French Academy, I have a right to be in it,' said, one day, with a manly freedom, one of our contemporary writers

whom it is useless, I think, to designate more explicitly. But altho he was not greatly troubled by excess of modesty, Balzac abstained from formulating so crudely his personal opinion of his rights to immortality. He could not, however, be unconscious of his just dues, and could understand without presumption that his place was allotted under the cupola of the Palais-Mazarin. But how as to that other cupola, reserved for posthumous apotheosis—did he not sometimes see it rise up before him, in the vast dreams of his fevered imagination? The hypothesis of such a vision on his part is not improbable, witness this curious passage in a letter which he wrote in 1844 to Mme. Hanska:

"In short, here is the spot which I amuse myself with. Four men have exerted a vast influence in this half century: Napoleon, Cuvier, O'Connell; I would like to be the fourth. The first lived by the blood of Europe, he was steeped in arms and warfare; the second was wedded to the whole world; the third has given new birth to a nation; for my part, I have carried a whole social fabric in my head."

"Altho he did not realize all the designs of his ambition, it is still true that this prodigious intellect must occupy the most considerable place in the literature of the first part of this century. And thus, 'if there is a Pantheon, Balzac has a right to be in it.'"
—Translation made for THE LITERARY DIGEST.

PORTRAIT OF BALZAC, BY BOULANGER.

MRS. OLIPHANT: A LITERARY HEROINE.

IN "The Autobiography and Correspondence of Mrs. M. O. W. Oliphant," published last month in London, we have the personal records of a long literary career—the life of an intellectual and kindly woman who just missed attaining something like greatness. Mrs. Oliphant, whose maiden name was Margaret Wilson, was born in the Scotch Lowlands in 1820. Her father during her younger days was an official in the custom house at Liverpool. Some of the circumstances of her early life in this city and her first essays in literature are thus related by her:

"We lived in the most singularly secluded way. I never was at a dance till after my marriage, never went out, never saw anybody at home. Our pleasures were books of all and every kind, newspapers, and magazines, which formed the staple of our conversation as well as our amusement. In the time of my depression and sadness my mother had had a bad illness, and I was her nurse, or at least attendant. I had to sit for hours by her bedside and keep quiet. I had no liking then for needlework, a taste which developed afterward, so I took to writing. There was no particular purpose in my beginning except this: to secure some amusement and occupation for myself while I sat by my mother's bedside. I wrote a little book in which the chief character was an angelic elder sister, unmarried, who had the charge of a family of motherless brothers and sisters, and who had a shrine of sorrow in her life in the shape of the portrait and memory of her lover, who had died young. It was all very innocent and guileless, and my audience—to wit, my mother and brother Frank—were highly pleased with it. (It was published long

after by W. on his own account, and very silly I think it is, poor little thing.) I think I was then about sixteen. Afterward I wrote another very much concerned with the church business, in which the heroine, I recollect, was a girl who in the beginning of the story was a sort of half-witted, undeveloped creature, but who ended by being one of those lofty poetical beings whom girls love. She was called, I recollect, Ibbey, but why I can not explain. I had the satisfaction afterward, when I came to my full growth, of burning the manuscript, which was a three-volume business. I don't think any effort was ever made to get a publisher for it."

Later Mrs. Oliphant met Major Blackwood, and through the publishing house of which he was head began to address a larger public. A marriage which left her a widow at thirty, with £1,000 of indebtedness, compelled her to use her utmost exertions to support herself and her three children. Her first successful literary venture, "The Carrington" series of stories, brought her in £1,500 from the Blackwoods, and the tide of her fortune turned to success, yet she had much to make her take a sober view of life. Perhaps something also of the spirit of the age she could not throw off. *The Athenæum* (May 13), which gives an extended review to the work, remarks this trait and says:

"The tone of the autobiography is sad—singularly sad it will seem to those who knew Mrs. Oliphant as a bright, kindly woman who toiled on industriously and without complaint for many years, and did not know or remember how many sorrows had darkened her career and weighed down her inborn optimism. The reader who had a superficial acquaintance with her or who knew her only by her writings, and did not pay heed to such revelations of her deeper self as 'The Beleaguered City,' will be surprised by passages such as these:

"I have lived a laborious life, incessant work, incessant anxiety—and yet so strange, so capricious is this human being that I would not say I have had an unhappy life. I have said this to one or two friends who know faintly without details what I have had to go through, and astonished them. Sometimes I am miserable—always there is in me the sense that I may have active cause to be so at any moment—always the gnawing pangs of anxiety, and deep, deep dissatisfaction beyond words, and the sense of helplessness, which of itself is despair. And yet there are times when my heart jumps up in the old unreasonable way, and I am—yes, happy—tho the word seems so inappropriate—without any cause for it, with so many causes the other way. I wonder whether this is want of feeling, or mere temperament and elasticity, or if it is a special compensation—"Werena my heart licht I wad dee"—Grizel Hume must have had the same."

With marvelous courage and generosity she took her brother and his children into her house in a time of need, sent the boy with her own sons to Eton, and educated the girls abroad. The heroism of the deed is enhanced by her simple narration of the incident:

"I had been obliged to work pretty hard before to meet all the too great expenses of the house. Now four people were added to it, very small two of them, but the others not inexpensive members of the house. I remember making a kind of pretense to myself that I had to think it over, to make a great decision, to give up what hopes I might have had of doing now my very best, and to set myself steadily to make as much money as I could, and do the best I could for the three boys. I think that in some pages of my old book I have put this down with a little half-sincere attempt at a heroic attitude. I don't think, however, that there was any reality in it. I never did nor could, of course, hesitate for a moment as to what had to be done. It had to be done, and that was enough, and there is no doubt that it was much more congenial to me to drive on and keep everything going, with a certain scorn of the increased work, and metaphorical toss of my head, as if it mattered! than it ever would have been to labor with an artist's fervor and concentration to produce a masterpiece. One can't be two things or serve two masters. Which was God and which was mammon in that individual case it would be hard to say, perhaps; for once in a way mammon, meaning the money which fed my flock, was in a kind of a poor way God, so far as the necessities of that crisis went. And the wonder was that we did it, I can't tell how, economizing, I fear, very little, never knowing quite at the beginning of the year how the ends would come together at Christmas, always with troublesome debts and forestalling of money earned, so that I had generally

eaten up the price of a book before it was printed, but always—thank God for it!—so far successfully that, tho always owing somebody, I never owed anybody to any unreasonable amount or for any unreasonable extent of time, but managed to pay everything and do everything, to stint nothing, to give them all that was happy and pleasant and of good report through all those dear and blessed boyish years."

Mrs. Oliphant was on terms of intimacy with many celebrated literary people of her day—particularly with the Carlyles. She wrote a life of Edward Irving which warmed the sage of Chelsea into eulogistic praise. Mrs. Carlyle thus writes to Mrs. Oliphant:

"I do long to see you to tell you, not what I think of your book, but what Mr. C. thinks, which is more to the purpose! I never heard him praise a woman's book, hardly any man's, as cordially as he praises this of yours! You are 'worth whole cartloads of Mulocks and Brontës, and things of that sort.' 'You are full of geniality and genius, even!' 'Nothing has so taken him by the heart for years as this biography!' You are really 'a fine, clear, loyal, sympathetic female being.' The only fault he finds in you is a certain dimness about dates and arrangements of time!—in short, I never heard so much praise out of his head at one rush! and I am so glad! For me, I am not in a state to express an opinion yet, having read only here a little and there a little, in whichever volume Mr. C. was not occupied with, and admit 'a pressure of things'!—all the worse for being trivial things. But to-morrow I shall begin at the beginning. Mr. C. got to the end last night, and the last part was the best of all, he says; and that he is 'very glad—very glad indeed that such a biography of Edward Irving exists.'"

The rather extraordinary view which she gives us of Lord Tennyson's habitual crabbedness of manner when in society tallies, however, with many of the anecdotes of him which have been published. It must be confessed that in it the poet, who had reaped all that fame and worldly fortune had to give, does not present a very creditable figure beside this quiet little woman who had met the world so bravely, and yet missed many of the marks of appreciation:

"Mrs. Tennyson lay upon her sofa, as she did always—tho able to be taken to the luncheon-table by her excellent son Hallam, whom I knew a little, and who was always kind and pleasant. I have always thought that Tennyson's appearance was too emphatically that of a poet, especially in his photographs; the fine frenzy, the careless picturesqueness, were almost too much. He looked the part too well, but in reality there was a roughness and acrid gloom about the man which saved him from his over-romantic appearance. He paid no attention to me, as was very natural. The conversation turned somehow upon his little play of 'The Falcon'—now more forgotten, I think, than any of his others, tho it seemed to me much the most effective of them. I said something about its beauty, and that I thought it just the kind of entertainment which a gracious prince might offer to his guests, and he replied, with a sort of indignant sense of grievance, 'And they tell me people won't go to see it.' I am afraid, however, that I did not attract the poet in any way. . . . However, feeling I had not been entirely a success—a feeling very habitual to me—I was glad of Mrs. Stewart's sign of departure, and went up to Mrs. Tennyson on the sofa, to which she had returned, to take my leave. I am never good at parting politenesses, and I dare say was very *gauche* in saying that it was so kind of her to ask me; while she graciously responded that she was delighted to have seen me, etc., according to the established ritual in such cases. Tennyson was standing by, lowering over us with his ragged beard and his saturnine look. He eyed us, while these pretty speeches were being made, with cynical eyes. 'What liars you women are!' he said. There could not have been anything more true, but, to be sure, it was not so civil as it was true."

Boston's Opinion of Perosi.—Perosi's oratorio of "The Transfiguration of Christ" was sung by the Boston Cecilia a short time ago. The performance is spoken of by musical critics there as a grievous disappointment, both from the viewpoint of art and technic. The American critic evidently does not believe in Perosi, and after this pronouncement from Boston, and the fol-

lowing crushing comment on the Cecilia concert which we quote from *The American Art Journal*, Perosi, we should think, would feel impelled to renounce music and retire to the more fitting and congenial surroundings of a Roman monastery:

"There is nothing suggestive even of the musician of average talent, nothing to demonstrate that Don Lorenzo Perosi had anything to say. He handles the tools of his art like a thoughtless amateur; he does not carve, but scratches; there is no firmness of hand, no intensity of thought, no originality even of the lumbering kind. Perosi has studied the old masters without understanding them; even as an imitator he is a sad failure, and to compare him to Palestrina, as his admirers have done, is to indulge in the most crushing satire.

"The music suggests nothing, it appeals neither to the intellect nor to the emotions; one listens to it in a kind of hopeless surprise, and departs carrying away not the slightest grain of comfort. The orchestration is of the trivial kind; the music is without character, without contrasts, without indication that it might not have been written by any bright conservatory pupil. The singers did their best to build a palace out of arid sand, but the sand conquered.

"The concert ended with Verdi's 'Te Deum,' and it gave the audience the opportunity of judging between genius and incapacity."

NOTES.

D'ANNUNZIO'S new play, "Gloria," has been hissed off the stage at Naples, and Eleonore Duse, it is said, has abandoned her intention of producing it in Rome. The author is not so easily put down, however, and will immediately publish it in book-form, with a dedication "To the dogs who hissed it at Naples." Neapolitan dogs must be a species of geese, according to this use of the word, altho many people would say they showed surprising good sense for that fowl.

THE Seidl memorial volume will probably bring the widow of the dead musician something more than five thousand dollars, which, with the sixteen thousand dollars netted by the recent Seidl memorial performance at the Metropolitan Opera-House, will make a not inconsiderable sum. Yet when one recalls the fact that Jean and Edouard de Reschke receive two thousand two hundred dollars a night, the rewards of a musical career, even among great musicians, do not seem very evenly divided, for Seidl left little or no fortune at his death.

"NO. 5, John Street" is having a large sale in America and a still larger one in England. The author, Mr. Richard Whiting, is not an American as many have supposed, says the *New York Times*. In spite of his many references to America and Americans he is a full-blooded Britisher, of an ancient line of Yorkshire farmers. He has been for many years a London journalist, and has made two visits to this country. He began his career, however, as an artist in the Latin Quarter in Paris, and one of his old friends is Justin Huntly McCarthy, the translator of the *Rubáiyát*, and the recent husband of Cissy Loftus.

APPROPOS of the announcement that McGill University, Montreal, has conferred the degree of Doctor of Laws upon Mr. Rudyard Kipling, the *London Academy* drops into poetry to the following effect:

"Why have you been so long, McGill?
Where were you when our friend was ill?
Its surely wrong to wait until
He's well before you 'doctor' him."

As a matter of fact, remarks *The Academy*, Mr. Kipling is particularly pleased that this honor, the first degree he has received but probably by no means the last, should come to him, as he puts it in his letter of acceptance, from "the elder sister of the new nations within the empire."

RUDYARD KIPLING has recently brought suit for damages against Elbert Hubbard, of the Roycroft Shop, at East Aurora. The grounds of complaint seem to be technical and involve practically the same issue as in the suit recently brought against G. P. Putnam's Sons—that is, the right of a publisher to give a name of his own to a volume, even tho the matter contained therein is not covered by copyright. For instance, Mr. Hubbard has called a certain poem "The Dipsy Chanty." Mr. Kipling admits that the expression "Dipsy Chanty" occurs several times in the poem, but avers that the correct title is "The Last Chanty." G. P. Putnam's Sons called their set of Kipling's works "The Brushwood Edition," but Mr. Kipling says he never authorized any such title, and denies the right of the Putnams, or any one else, to distinguish his books by any title he has not himself chosen. Mr. Kipling brings up another point that has never been adjudicated—as to the right to print selections from an uncopyrighted book. To print the book entire is, of course, privileged; but to print selections from it, Mr. Kipling claims, might place the author in a very wrong light before the public and tend to injure him in the estimation of intelligent readers. The recent suit brought by Houghton, Mifflin & Co. for infringement in publication of "The Autocrat," failed because it was shown by the defendant that the matter was first printed in an uncopyrighted magazine. All the Kipling poems printed by Mr. Hubbard, it is claimed, were first printed in newspapers in India or magazines in England, which periodicals were not copyrighted in America; and whether the courts will take cognizance of the points brought up by Mr. Kipling is yet, of course, an open question. It is said that Mr. Kipling has now twenty-three suits in process, against as many different publishers and booksellers throughout the United States.

SCIENCE AND INVENTION.

WRITING AND THE ORIGIN OF LANGUAGE.

SPEECH seems to come so naturally to man that we forget he must have been thousands of years in acquiring it and that his first efforts are completely lost. No language that is spoken to-day, and none of those dead languages that are preserved in written form, resemble at all the speech of our remote forefathers. What that speech was, and how it was first reduced to writing, M. T. Obalski attempts to tell us in an article in *La Science Française*, May 19, in the light of some of the most recent investigations. Says M. Obalski:

"When we compare the designs by means of which certain savage tribes of North America represent men, animals, and plants, we are struck with their resemblance to the rudimentary figures traced by children.

"An instinct for imitation leads men to reproduce the forms of surrounding objects, and in the invention of the graphic art he has aimed to materialize his thoughts and give them form and substance; he has wished to supply the place of the absent word, and even to depict it to the eye in the present and in the future.

"From the identity of object springs the identity of the means used to attain it, and writing thus becomes one of the most powerful instruments of civilization.

"It is generally admitted that writing was at first ideographic and solely by means of pictures, as it is yet among certain Indian tribes of North America; it then became phonetic, then syllabic, and finally alphabetic, thus reaching its apogee.

"Certain of the letters of the alphabet themselves have a very pronounced pictorial origin. The first letters of the Greek alphabet, for instance, had once the form of an ox's head, of a house, of a tent, of a camel, of a door, etc.

"In ideographic writing, man limits himself to the representation pure and simple of the beings or objects which he wishes to recall, such as a tree, a brook, a lion. This is ideographism proper or concrete.

"Our [the French] libraries contain some curious specimens of ideographic writing, accompanying the earliest narratives of our missionaries in Canada.

"Next we come to pure symbolism, which consists in expressing abstract ideas by figures that will suggest these ideas to others, a bird signifying speed, a fox cunning, etc.

"From this point to phonetic writing there is an immense step to be taken. Here the image or symbol must represent a sound. The 'rebus' is really a transition form between ideographic and phonetic writing.

"The American savages give us numerous examples of all these different modes of writing. With the Chinese, writing has been arrested in its development, at the syllabic form; it is not alphabetic.

"The characters used in Mexican inscriptions seem to have been formed of parts of symbols once used in their integrity, but we do not know whether these hieroglyphics, whose meaning is still a mystery, ever had phonetic value like those of the Egyptians and the Chinese.

"We ourselves still use in astronomy a kind of hieroglyphics to indicate the signs of the zodiac.

"Traces of writing have been sought in relics of the Stone Age, but only a few primitive hieroglyphics have been found, traced on bits of wood and horn discovered in cave-dwellings.

"Without attempting to solve the problem that is still taxing the wisdom of the most learned linguists, we may, with some appearance of reason, imagine the primitive man as expressing his feelings by cries similar to our interjections and his more lively perceptions by imitative words. His vocabulary was poor in words, wanting almost entirely in abstract terms, but his language was rich in metaphors, exuberant with images, reflecting his lively emotions. Numerous gestures must have accompanied the expression of his feelings and thoughts, imperfect as it was. But altho we can form a more or less exact idea of the primitive processes of speech, we have, unhappily, no means of knowing the language or languages of our first ancestors.

"It is quite generally agreed that all languages probably began

by being monosyllabic, as Chinese is still. From monosyllabism they went on to agglutination (the state of a majority of American Indian languages), consisting of simple juxtaposition of the elements—often numerous—that enter into the formation of the words, each of which is thus equivalent to a whole phrase. Finally language passed to the inflective stage, that of the classical tongues. Such are the successive stages that language passes through before reaching its complete development.

"At the end of the Stone Age the population reached a state of density which, obliging a greater division of labor, conducted inevitably to more rapid progress. In this stage, the needs of commerce and communication being more pressing and more frequent, the numerous inconsistent human modes of speech, consisting of simple imitative sounds accompanied by gestures, gave place slowly to more general types, which gradually became more precise and developed into true languages.

"Language being not only the external manifestation of thought, but also in some sort identified with it, its development is one with that of the human mind itself.

"The most simple and easy expressions must have been those that were first formed. By a very natural process which may yet be seen in children, these first vocal expressions, which are very few in number, serve spontaneously to designate objects and ideas analogous to those that they designated at first by the simple addition of accessory roots, later agglutinated so that they formed but one word with the former and finally transformed under the influence of accent, which gave unity to the word.

"The first words, designating phenomena of the same order, all having relation with the individual, were the starting-points for others having for their object the translation of related ideas and similar phenomena, always passing from the concrete to the abstract."—*Translation made for THE LITERARY DIGEST.*

CHILD-TRAINING BY HYPNOTISM.

A FRENCH physician, Dr. Bérillon, advises the use of hypnotism in the management of children. He has experimented in this direction on several thousand little ones during the past twelve years and has given his conclusions in twenty-three different medical pamphlets. Says Dr. M. L. Holbrook in a review of the French physician's work in *Omega* (New York, June):

"His conclusion . . . is that eight out of ten children are subject to this agent in a profound degree at the first or second effort, and that normal children are more easily influenced than abnormal ones. With care on the part of the hypnotizer, who should always be a man of good habits and carefulness, there is, he says, no risk of harm physically, mentally, or morally.

"In the treatment of degenerate children, or children who have fallen below the standard of their race physically, mentally, or morally, Bérillon has found hypnotism very useful. Some of the signs of degeneracy which he enumerates are the existence of habits which tend to become automatic, such as nail-biting and other similar habits. By hypnotic suggestions he would bring these habits, done unconsciously, into the domain of consciousness, and arouse or build up the power of restraint. To give an illustration: when the nail-biting child is in the hypnotic state, he suggests to it that it will hereafter always be conscious of the act. This is of the first importance. There is no hope of a cure if it continues to be performed unconsciously. He tells it it will feel that the hand is heavy whenever it tries to lift it to the mouth, and that this feeling will act restrainingly. These suggestions may require many repetitions at each sitting before they take root in the mind, and this must not be forgotten.

"Kleptomania is a sign of degeneracy. It is a disposition to steal which can not be resisted. Bérillon has cured many cases. In the hypnotic state the suggestion is repeatedly made that it [the patient] will have no desire to steal, that he will be conscious of it when the feeling comes up, and he will be able to dismiss it from the mind, have a horror of it, etc.

"Dr. Bérillon gives in his pamphlet some very bad cases of idleness, inattention, and cowardice cured by suggestion. A pusillanimous child is generally weak-minded. It may have all the brain-cells that brave children have, but they have not been called into activity. Perhaps they are not nourished by a stream

of blood going to them and can not act. In the hypnotic sleep they are called into activity, the blood flows to them and in some mysterious way the child's nature changes.

"There is no doubt much prejudice among a majority of persons against hypnotism, and this is natural because most people think there is something almost supernatural about it. One physician remarked he had rather have his children naughty than made good in this way. Ordinary naughtiness which may exist in any child certainly does not require hypnotism to cure it. It is only when it is excessive. No sensible parent or educator would advise its use for any but such cases in which ordinary methods of education have failed, in which case it may save a child from a bad course leading to misery and perhaps to crime."

ANTARCTIC EXPLORATION.

THE preliminary report of the Belgian Antarctic expedition of 1897-99 has just been published by the Belgian Royal Geographical Society. From an abstract in *The National Geographical Magazine* we extract the following paragraphs:

"After leaving Punta Arenas, December 14, 1897, the *Belgica* kept on southward, and reached Hughes Bay January 24. . . .

"They entered the Pacific February 12 and soon made out in the distance Alexander I. Land, but, as an impenetrable ice-floe prevented an approach, changed their course to the west. Two weeks later, when at 70° 20' south by 85° west, a violent northeast wind opened up deep channels in the pack, so that, altho the season was very far advanced, the occasion seemed favorable to continue on toward the south. The dangers of a winter in the Antarctic zone were evident, but, on the other hand, if caught in the ice and unable to regain the open sea, they might drift to a high latitude and perhaps winter near new lands. On March 3, seeing the absolute impossibility of continuing farther, they put the helm about, and during the few following days drifted seven or eight miles in the midst of a compact mass of ice. By March 10 the *Belgica* was completely blocked, as the cakes of ice which surrounded her had welded together and formed an impenetrable field.

"Beginning with the latter half of the month of March the cold became very sharp because of the winds from the South. . . . The aspect of the pack changed continually; tho for the most part very compact, at times great gaps and channels would open and extend for miles, but the ship, imprisoned in a wall of ice, could not gain them. By May 30 they had drifted to latitude 71° 36' by 87° 38', apparently the farthest point south gained by the expedition. During the winter snow-storms frequently made all work out-of-doors impossible; also the treacherous character of the ice-floe and the violence of the gusts of wind prevented any long excursion upon the ice. The sun set on May 17 and did not rise again until July 24. The seals and penguins, without ever being very numerous in the immediate neighborhood of the vessel, constituted the main part of the crew's fare during the last months of winter, and this fresh food not a little contributed to maintain their good health, which, except during the polar night, was excellent.

"In October, 1898, an outlet opened about 600 meters distant, but immediately around the ship the floe continued unbroken. As summer was passing very quickly and a second winter seemed imminent, at the beginning of January, 1899, Captain De Gerlache determined to dig a canal to this outlet. The measurements made by the sounding-line indicated an average thickness of ice of 1 meter, but around the vessel it exceeded 2 meters. Something like 2,500 to 3,000 cubic meters of ice were excavated, and this work, in which every one took part, lasted for three weeks. By February there only remained the blocks immediately adjacent to the *Belgica*, but the pressure increased; the canal just completed contracted, and at the same time the outlet in which it ended closed up. Eleven days later, however, the pack opened sufficiently for them to advance fifteen or sixteen miles toward the north, when they were again blocked. But the dark sky in the north and the perceptible swelling of the sea were sure signs that in this direction there was a grand expanse of water, and perhaps the open sea. During the winter the *Belgica* had only once suffered dangerous pressure; only for a few moments had she ever been in danger, but now, continually battered by the

great blocks of ice wedged against her by the swelling sea, the little vessel was in a very dangerous situation. Fortunately, the pack opened again March 14, and this time they were able to gain the open sea and return to Punta Arenas.

"Captain De Gerlache concludes his report as follows: 'Upon our escape from the pack, we were about 103° west longitude, so that the general drift was found to be 18° toward the west by about 70° 31' average latitude. We had seen no signs of the land given in the charts at 70° south and 100° west. It is furthermore worthy of remark that our drifting, which was, almost as rapid toward the south before the north wind as it had been toward the north before the south wind, as well as the soundings which we made whenever the weather permitted, carries several degrees toward the south the hypothetical contours of the austral continent in that part of the Antarctic zone. During this winter, the first that has been passed in the midst of austral ice, we were able to conduct satisfactory magnetic operations, to form an important series of meteorological polar observations, and to make a good collection of specimens of pelagic and abyssal fauna, as well as of specimens of submarine deposit.'"

The work of South Polar exploration is not to be allowed to flag. According to *The Times*, London, the German Antarctic expedition is now being actively organized. The committee in charge has decided that the expedition is to be composed of one ship only, any possible disadvantages being compensated for by greater independence and mobility. Says *Science*:

"The vessel is to be built entirely of wood. The committee are confirmed in this decision by Nansen's experience with the *Fram*, and by their desire to eliminate all possible causes of error in their magnetic observations. The ship is to be laid down this autumn, and the expedition is to be ready to start in the autumn of 1901. It is to be away two years altogether. After touching at the Cape the expedition is to make for the Antarctic continent south of the Kerguelen Islands, and there establish a scientific station at some point suitable for wintering. A pack of Siberian dogs is to be taken, and dashes will be made on sledges toward the South Pole and the south magnetic pole. Meteorological observations will also be made from a captive balloon. After the breaking-up of their winter quarters the expedition will attempt to make as complete a survey as possible of the coast line of the Antarctic continent. The leader of the expedition is to be Dr. von Drygalski, who conducted the German exploration of Greenland in the years 1891-93. The committee expresses great satisfaction that the English Antarctic expedition has at last been definitely decided on, and points out that the value of the two sets of meteorological observations will be greatly enhanced by their being carried on simultaneously. According to their information, the English expedition is to make the attempt to penetrate southward from the South Pacific. The meeting of the International Geographical Congress in Berlin in October will give an opportunity for deciding on the details of the scheme of cooperation."

A New Work on Criminology.—In a book just published in Paris entitled "The Mind of the Criminal," the author, Dr. de Fleury, attempts to set forth the golden mean between the extreme theories of Lombroso and his school and of those who utterly disbelieve all that the Italian professor upholds. Says a reviewer in *Cosmos*, June 3: "There do exist, incontestably, perverted beings, destined for the gallows, whose natural home is the prison, and who are incapable of adaptation to the social environment. These born criminals, as Lombroso calls them, are what they are," he says, by reason of hereditary malformation of the brain—we all know these theories of the Italian criminologists, which are now almost abandoned. Others, with more reason, see in the perversity of certain creatures an effect of bad education that has not properly repressed certain tendencies, a result of imitation, an influence of environment. M. Maurice de Fleury in this popular work tries to hold to the golden mean. He explains clearly the physiology of the nervous system and the mechanism of reflex action, but personality, justice, and liberty are more complex ideas than he seems to think. The question of human criminality is not exclusively medical, and when the doctors have determined the cases—perhaps more numerous than has been supposed—in which responsibility has been suppressed or

weakened because of some disease, we shall still have to solve the problem of the crimes committed by normally organized but perverted beings.

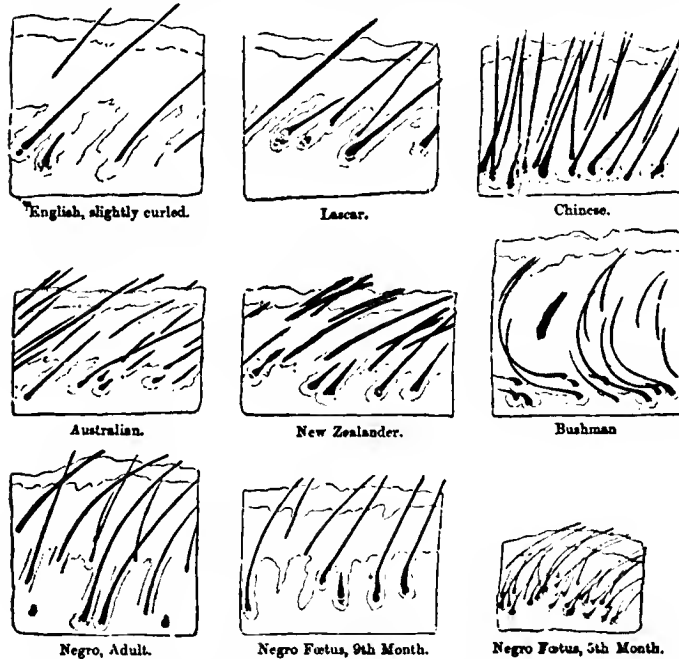

"For these last, moral education and especially religious training, the author believes, will be an element of preservation. He cites other things that may be of use, and finally he recommends that young persons who, altho not vicious, are difficult to manage, should be sent to the colonies, with the hope that a life of hardship and adventure will enable them to make use of the exuberance of energy which, if it did not find an outlet in this way, might lead to crime. This form of prevention, which is difficult to use in practise, can be applied only to a restricted number of persons. Many criminals become so through idleness, carelessness, lack of will power; they fill our ranks with worthless material and never become any better.

"Among many false notions, much interesting information is to be found in this book, and it is written in a style that makes its perusal attractive."—*Translation made for THE LITERARY DIGEST.*

WHAT MAKES HAIR STRAIGHT OR CURLY?

THE difference between straight and curly hair, whether in individuals or races, depends, we are told by a writer in *Knowledge*, London, April 1, not only on the rigidity of the hair itself, but also on the condition of the little muscle that tends to make it stand upright. Says this author:

"The muscle called the *erector pili*, from its attachments, has long been recognized as having an influence on the position of the

SECTIONS SHOWING APPEARANCE OF THE HAIR FOLLICLES IN THE SCALPS OF RACES WITH STRAIGHT, WAVY, AND CURLY HAIR.

hair, causing its erection by pulling forward the root of the hair, thus converting the shaft into a lever, the fulcrum of which corresponds to the dense *stratum corneum* through which it passes to appear on the surface. Such action of these little muscles is displayed when a cat in rage erects the hair of its tail, or a straight-haired dog causes the hair of its back to rise in a median crest. Their influence in man is commonly observed in the condition known as 'goose skin.' Further, it is to be noticed that the gland is always placed between the muscle and the hair-shaft, thus occupying the triangular interval between them, so that during the action of the muscle the gland must necessarily be subjected to pressure, aiding thereby the expulsion of its contents.

"Straight hair is always circular in section, and is usually thicker than curly hair, which is ribbon-like and fine, the finest human hair being that met with in the Bush and Andaman races.

Now it appears to us that these facts have a most important bearing on the question under consideration. In order that the muscle afore mentioned may act as an erector of the hair, it is necessary that the hair must be sufficiently strong to resist the tendency to bend; unless this be so, the lever action is at once destroyed. On the other hand, when the hair is fine and ribbon-like, the shaft, no longer sufficiently stout to resist the strain of the muscle, naturally assumes a curve. . . . The influence of the sebaceous gland on this curvature must not be overlooked. If a scalp, in which the follicles are curved, be examined, the gland is seen to be placed on the concave surface of the curve, and the muscle is attached to the same side of the follicle just below the gland; the gland, therefore, forms a mass of greater resistance around which the follicle may be curved by the traction of the muscle, thus leading to the characteristic form of the follicle met with in races with curly hair. At the same time it may be noticed that the base of the follicle is often hooked backward, as may be seen in the Bush scalp, and this, presumably, must be accounted for by its vascular connections, which are here best developed, and which will tend to withstand the strain exercised by the muscle. The follicle thus becoming more or less permanently curved, it naturally follows that the softer cells at the root of the hair will accommodate themselves to the curve, and becoming more horny in their consistence as they advance to the surface, will retain the form of the follicle in which they are molded, the cells on the concave side of the hair being more compressed than those on the convex side. In this way we have, in all probability, a more reasonable explanation of how curliness in the hair is produced than any hitherto offered."

THE TUBERCULOSIS CONGRESS.

THE International Tuberculosis Congress, held this month in Berlin, was one of the most noteworthy gatherings of medical men in the world's history. *The British Medical Journal* says of it editorially in its issue for June 3:

"The Congress on Tuberculosis in Berlin . . . has attracted an amount of public attention which can not fail to have a favorable effect upon measures now being taken in this country to check the ravages of the disease. In gaging the value of the work done it is important to bear in mind the objects with which it was called. It was promoted by the central German committee for the Establishment of Sanatoria for Pulmonary Diseases, and the full title of the congress . . . may perhaps be best translated as 'Congress on the Fight against Tuberculosis as a National Disease.' . . . It may be pointed out that the discussions were essentially of a practical nature, that the programs of the sections converged upon the question of the establishment of sanatoria for the working classes, and that many of the associations interested in workmen's assurance sent delegates."

The congress was divided into five sections, which discussed respectively the dissemination of tuberculosis, its causes, the prevention and treatment of the disease, and sanatoria. Of the papers the correspondent of *The Medical Journal* says:

"Tho many of the papers read in the various sections of the congress were of great interest, there is little that will be actually new to those medical readers who have followed the literature of tuberculosis. This is not to be wondered at, as science does not reveal her secrets the more freely because a congress is on foot, and the quiet work of laboratories keeps its slow and arduous course 'without haste and without rest,' regardless of the impatience of governments and princes."

In spite of this rather lukewarm praise, the correspondent believes that the congress has accomplished much, for he tells us, in conclusion:

"There is no doubt that the congress has been a great success. If it has added nothing new to science, it has gone far to popularize much good work that science has already accomplished, and will appreciably strengthen the practical efforts now being made by the civilized states in Europe to combat on rational and comprehensive lines one of the greatest maladies which humanity has had to endure. That the success was so signal is largely due to the interest displayed by the Empress, and to the enthusiasm of

the Duke of Ratibor, the president, and the other members of the organizing committee.

"The doubts and fears expressed by some as to the costliness of the sanatorium treatment and the possibility of the discovery of some tuberculin which shall render them unnecessary in the treatment of tuberculosis are groundless. The sanatorium treatment has a wider significance than that of a mere passing phase of treatment for tuberculosis. It is a practical recognition of the fact that huge barracks in the hearts of cities are not ideal homes for the chronic sick, and there can be no doubt that the open air, the country life, and the peaceful surroundings of sanatoria will be found an effective form of treatment for many other forms of chronic sickness."

The "Water Curtain" as a Fire Protection.—Commenting on the news that the Chicago Public Library is to be protected from injury by fire occurring in neighboring buildings by pipes around the cornice, from which a "curtain" of water may be caused to descend to the street, *Engineering News* says:

"To be frank, such a construction as has been employed on the Chicago Public Library does not on first blush inspire much confidence in its efficiency, where a really severe fire is concerned. Briefly described, a one-fourth-inch nozzle discharging ten gallons of water per minute is depended upon to protect a section of wall 2 feet wide and 90 feet high, or an area of 180 square feet. Supposing the water falling freely to maintain an unbroken sheet over this area, it would form a curtain less than 0.02 inch thick. It would be, in fact, much thinner, for we have neglected to consider the initial velocity due to the pressure of 30 pounds per square inch under which the discharge takes place. This might resist with some success the passage of a dangerous amount of radiated heat from a fire across the street, but it pretty certainly would not withstand bursts of flame of such volume and intensity as are driven against an exposed wall in the fires which frequently occur in our large cities.

"It must be remembered, however, that the discharge from the nozzle will assume no such perfect sheet-like form as we have supposed, but that the water will break into drops and spray almost immediately. This decreases enormously the resistance which the water discharged offers to the passage of flame and heat."

The Power of Niagara.—"The power of Niagara," says Prof. R. B. Owens in *Cassier's Magazine*, "has been estimated at about 7,000,000 horse-power—greater probably than the physical force the whole human race is capable of continuously exerting. At present about 350,000 horse-power is to be developed on the American and Canadian sides, or about five per cent. of the total power available—not enough to perceptibly diminish the flow over the falls. However, should the whole be utilized, leaving the rocky river bed dry and bare, we would but be substituting a wonderful cataract of ethereal energy for the splendid flow of gravitational matter so justly famed. Which spectacle would present greater beauty would depend upon the individual. To those who trace in imagination the course of a beam of sunlight, as it buries itself in the ocean, rises in cloud, and falls again in grateful shower over grain field and vineyard, filling brook and swelling river, and finally tumbling through mighty turbines and silently streaming from the polished sliprings of stately dynamos, bursting again into wholesome sunlight, to brighten the homes of hundreds, the substitution would but be the completion of a full cycle of usefulness and beauty."

Bananas as Importers of Foreign Animals.—"All sorts of curious creatures," says Dr. Morris Gibbs in *The Humane Alliance*, "come to us in bunches of bananas, and I know of over twenty species of insects, reptiles, and mammals that have gained free transportation to our land by stowing themselves away in bunches of this luscious and popular fruit. It is a very common occurrence to find spiders of several varieties, all of which are pronounced deadly poison, of course. I have seen three species of snakes which were taken in these well-built places of concealment, one of which was a greenish-colored boa, all of five feet long, and two little fellows, and all alive. It is not rare to find

active little lizards which have made the thick shelter their home, and been taken over twenty-five hundred miles into a foreign land, never to return to their sunny home in Central America. Curious land crabs also migrate by this method, and, like all the rest of the unknown creatures from foreign lands, are pronounced most virulent and are killed on sight. Then, too, we often find little mice with very long tails, which have made themselves comfortable on the journey by preparing soft nests in the center of the bunch. . . . The great bunches of fruit hang near the ground, and the wild creatures seek the space within and thus escape the hot sun, or perhaps their enemies. What more natural than for a mouse to build its nest and rear its little brood in this retreat? Then the time comes for the shipping of the green fruit. The big stem is cut with a huge knife much like the Cuban machete, and the bunches are carried to the coast, where they are loaded on the steamer for American ports. . . . Thousands and tens of thousand of crabs, reptiles, mice, and endless quantities of spiders and insects are annually brought into our boundaries in bunches of bananas, and are distributed throughout all civilized quarters in the Union."

Bee-Stings.—In a *résumé* of personal observations on accidents due to bee-stings, published in *La Naturaliste*, M. Spalikowski says that in some cases a sting is really a serious matter. Some subjects are more sensitive than others, and the number of stings is also important. The symptoms usually present are fever, rising to 39° C. [102° F.] or even to 40° C. [104° F.] in special cases, with insomnia, loss of appetite, vomiting, and delirium. The mechanical action of the sting is uncertain; perhaps the venom acts simply like those toxins that have a direct effect on the nervous system. In some subjects the sting causes a sort of temporary mania which may be called "aphobia." They have an extreme fear of bees and dare not approach their hives; the very sight or even thought of bees makes them grow pale or tremble.—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

CREDIT to *Appleton's Popular Science Monthly* was inadvertently omitted in the article entitled, "How Old is Niagara?" in our issue of June 17.

A NEW incandescent lamp is announced by *L'Electricien*. Its filament is of silicon carbide enveloped with a layer of silicon and carbon. This lamp, the invention of M. Langhane, gives, by reason of the refractory character of the material forming the filament, a better result than the ordinary carbon-filament lamps, and assures an economy of 25 per cent.

ICED chloroform, according to *The Medical Times*, has been used as an anesthetic in Professor Shorburg's clinic in the Julius Hospital at Würzburg, Bavaria, in over 14,000 cases without a single unpleasant result. "The advantages claimed for this preparation of chloroform are the quickness of its action, its comparative freedom from danger, and the absence of the nausea and depression so common with other anesthetics."

HYSTERIA IN A CAT.—"A nine-months' old kitten, very fond of play, was one day bitten in the back by a dog," says *The Medical News*. "Thereafter, it dragged its hind legs, and did not move its tail, just as if the cord had been crushed. Later it fell from the first story of the house. It was instantly cured and used its legs and tail as well as ever. It is evident that the shock of the fall produced a psychic effect sufficiently powerful to overcome the idea of paralysis. That the trouble was only a hysterical paralysis was further shown by the preservation during the whole time of the functions of the bladder and intestines."

"IN California," remarks *La Nature*, "are vast tracts of cultivable land where the rainfall is insufficient, but where thick fogs often occur. These generally take place in the night, during the dry summer months, and they are dissipated by the early morning sun. It would be useful if some mechanical device could be invented to intercept the suspended water-particles, collecting them as the leaves of trees do, and allowing them to run down to the ground." An American meteorologist named Earlscliffe, we are told, is studying the problem, but has not yet succeeded in solving it practically. Dynamite explosions, he thinks, would serve, but would be too costly.—*Translation made for THE LITERARY DIGEST.*

PROFESSOR EWING, the English physicist, said in a recent lecture, according to *The American Electrician*, that a Chinese navigator named Hoang Ti so long ago as twenty-four centuries before Christ used a magnet for navigating a fleet of ships. "This presumably was the first use of the mariner's compass. The form in which he is said to have used it was that of a fragment of lodestone, which was floated so as to be free to revolve. Lodestone, it will be remembered, is a natural magnet, consisting of the natural magnetic oxides of iron. The mariner's compass of Chinese origin was first brought to Europe in the thirteenth century by a man named Marco Polo. Notwithstanding these early uses of the magnet, the science of magnetism will be only three hundred years old next year, as it dates from the publication of Gilbert's famous book in the year 1600."

THE RELIGIOUS WORLD.

MAY SPIRITUALISM BE INVESTIGATED?

FOR the most part the newspaper comment on Prof. James H. Hyslop's article in *The New World* on "Immortality and Psychic Research" (see THE LITERARY DIGEST, June 17) has justified his opinion there stated, that any discussion of the phenomena usually termed Spiritualism is certain to arouse antagonism, and to share the ill odor which he thinks has naturally been associated hitherto with the claims of Spiritists. Most of the comments agree with those of the *New York Sun*, which in its well-known satiric vein commiserates the professor on his fall from intellectual grace in thus dabbling in what it regards as such transparent fraud. The following are fair examples of the newspaper criticisms of Professor Hyslop's article. The *Baltimore American* says:

"In the matter of ghostly testimony there is not much left for Hyslop to obtain. His predecessors appear to have pretty well covered the ground. Kiddle went for the statesmen and generals and poets, and Marsh for the patriarchs and prophets. Washington was laboring under a chronic fit of the blues because of his inordinate vanity while on earth, Bonaparte beat his breast in anguish because he allowed his ambition to prevail over humanity while on earth, and even Shakespeare wrote some verses deprecating the evil influence of his dramas, thus establishing the fact that he did, and Bacon did not, write them. Adam and Eve's main lament was their expulsion from Paradise, and so poignant was the former's grief he could not be brought to mention the garden by name. Cain and his wife, Noah and his sons, David and Goliath, Samson and his parents, Solomon, Jonah and Job, were successively interviewed, but no material additions were made to the world's knowledge. Job, the most patient of men, was the only spirit which actually sulked and refused to make answer.

"Professor Hyslop will not be able, in all probability, to add anything of note to this rubbish, and scientists will be astounded that an intelligent professor can be so deluded as to offer it as scientific testimony, much less proof. Proof may yet be offered of the immortality of the soul, but it will be in accord with scientific principles, and not the eccentricities of mind transference, the ravings of hysteria, or the ingenious trickery of adventurers. The indestructibility of matter will probably be the starting-point of such effort. If no atom of matter is or can be destroyed, then all the atoms in a human being ought to come together again at some remote period in the future, and the human being be rehabilitated. This may be the solution of the problem, but meanwhile revelation tells all that it is necessary to know about the matter. Further knowledge may have been wisely concealed. Progress in this world is undoubtedly part of God's economy, and, were the delights of a future world to be specifically revealed, men might lose all interest in the present, and thus arrest the wheels of progress. Such things have actually occurred on a limited scale, and it is not desirable that they should be repeated."

The *Providence Journal* comments as follows:

"The important fact to know," says Professor Hyslop, 'is that the evidence for immortality, such as it is, represents precisely that type of incidents actually in the lives of the two persons supposed to be thus communicating across the boundaries of two worlds, which forces the assumption of supernormal acquisition of knowledge, and so completely satisfies the requirements of testimony for personal identity.' This is the language of a doubting Thomas demanding carnal proof of spiritual mysteries. Immortality as a doctrine no longer has a philosophical basis; we must throw it overboard unless we are prepared to accept the witness of the 'spirits' whom a slatternly 'medium' in a dark room may summon to talk with a sordid circle of hysterical cranks. Such a defense of spiritualism is a strange one to come from a professor in Columbia University. It really begs the question. It does not touch upon the problem of immortality at all. It simply is a labored attempt to win support for a demonstrated fraud and delusion by trying to persuade timid people that if they refuse to believe they can talk with the departed, they will be

obliged to admit that the departed are dead beyond the hope of resurrection. To Hamlet on the moonlit battlements of Elsinore his father's spirit might well be an impressive portent; but what shall be said of the ghosts who breathe out bad grammar and whisky in a stuffy cabinet with a 'trick' door?"

The Independent, however, takes a different attitude. Asking the question, "May Spiritualism be investigated," it says:

"Why not? There might be two reasons why not, one because we know beforehand that there are no spirits, and the other because the possibility of communicating with disembodied spirits has been thoroughly disproved. The first of these assumptions, that there are no disembodied spirits, the world, with the exception of a very few super-certain people, rejects. Most of us believe in God, who is a Spirit, and in the continued existence after death of the spirits of human beings. This may be a very unscientific, a very unenlightened faith, but we still hold it, whether we be common people or wise philosophers. The second of these reasons, that the possibility of communication with disembodied spirits has been absolutely tested and fully disproved, is certainly untrue. Some years ago the University of Pennsylvania received a handsome bequest, the income of which was to be devoted to the investigation of the claims of Spiritualism. A certain amount of testing of 'mediums' was done, and they were found to be frauds or failures, and the money was turned over into the general funds of the university. But meanwhile there has been an immense development of knowledge about mental powers in abnormal or unusual states. The word *telepathy* has come to have a meaning. Hypnotism has risen almost into a science, so that laws are restricting the practise of it. It no longer seems as absurd to imagine that we may possibly communicate with the spirits of the dead as it did twenty years ago. The idea of there being a possible communication between two spirits, one of whom is still in the body, is not very much more incredible than communication between two spirits in the body separated beyond all reach of the ordinary senses, by what is called telepathy, if there be such a thing, or by hypnotism, which is no delusion. Still further, the most thorough and careful investigations, carried on for many years by the Society for Psychical Research, have convinced some at least of those most active in it that communications have actually been held with spirits of the dead. There is absolutely no reason why the investigation should not be regarded as a legitimate one.

"Of course the probabilities are greatly against success, and the utmost caution should govern the experiments; but, under the new conditions since the rise of the school of Salpêtrière, it is not only legitimate, it is also obligatory, that the men who are put in positions where leisure is given them to make investigations should tackle this subject. Professor James, of Harvard, is at work at it, and now Professor Hyslop, of Columbia, has joined in the search. They are doing this work in a scientific spirit, and we trust a scientific method. They should not be laughed at or abused, but encouraged and sharply watched. The history of this search is full of sad failures, and yet it is not hopeless that some Childe Roland may come to the Dark Tower.

"At present the main difference between those who are engaged in these researches is as to whether there is real intercourse with disembodied spirits, or whether there is some sort of thought-transference. With every prepossession in favor of belief in a spiritual existence after death, and yet against all likelihood of communication between the living and the dead, we pronounce the investigation not only legitimate but necessary. And we do not see why it is not as proper for a university to appropriate funds for this investigation as for other psychological laboratory work. We understand that the Society for Psychical Research has found its greatest difficulty to be the financial one."

"Ian Maclaren," and the Worldliness of American Churches.—Dr. John Watson, who has lately returned to his church in Liverpool after an American trip of some months, took occasion upon his return to tell his congregation some of his observations on religion in the United States. He said in part:

"Among many things he had seen in America, one thing which had greatly startled him was the power of the secular spirit and the weakness of the Christian church. In that country men were devoted to money in a way he could not have imagined. The

power of money permeated all society; in politics, high ideals were almost stifled, for every man had his end to serve, and the Christian church was, to a considerable extent, conducted as a large business concern. There were districts where the church was practically abandoned by men, and the congregations composed almost entirely of women."

These remarks have been widely commented upon in the religious press, most American journals taking the ground that while there were many elements of truth in Dr. Watson's remarks, upon the whole his view of American Christianity was unduly pessimistic and founded upon incomplete knowledge. A Southern paper, the *Richmond Central Presbyterian*, however, appears to share the rather common Southern view that religious conditions in the Northern States are much less promising and much more given over to advanced and heretical tendencies than is the case south of Mason and Dixon's line. It says:

"It is sadly true that there is much of the secular spirit in the American churches; worldliness in some places eating out spirituality as a cancer. The condition must be very bad indeed, if one coming from Liverpool and London was so greatly startled and grieved. It is to be said that Dr. Watson spent the time of his last visit to America in the West, and, when there, not in the country, but in the great centers of rude and rushing Western life. We have some suspicion also as to the kind of churches into which he entered. When he comes again perhaps we can persuade him, without money, to come to the South. We have enough of worldliness, heaven knows, but our churches are not wholly given up to the world; nor are they abandoned by men. A great reason for the presence of men in our churches, and for whatever of religious life and fruitfulness they have, is the fact that our ministry is not secularized, and has not secularized the pulpit. They are not attempting to preach, in a feeble and sensational way, the politics and reforms and economies of the day, but having a divine word in their hands they are delivering a divine message both of righteousness and grace. We have our Bible, and our divine Redeemer and our redemption by the Cross, and we have not found them to fail in holding a multitude of men, busy men, strong men, the very best men we have in all classes and conditions. Nor have we found that kind of public work to fail in keeping the churches true to a spiritual service and a fruitful work at home and abroad."

A NEW ERA IN THE ENGLISH CHURCH.

IN the defeat of the Clergy Discipline bill, which was introduced into the House of Commons with the design of compelling the Catholic party in the church to conform more closely to the letter of the law pertaining to ritualistic practices, and in the opening of the court of the archbishops at Lambeth lately, it is thought not improbable that we have the beginnings of a new and far-reaching influence in the Anglican communion. Hitherto the civil power of the judges and Parliament has been practically the arbiter in questions of religious usage, and to some extent of doctrine when the latter has been involved, as it often is, in matters of ritual. Hereafter it is likely that all such cases will come before the two English archbishops, and will be decided in accordance with the traditions of the English church as interpreted by religious experts. The prevailing feeling both in England and America seem to be that this outcome of the matter is a fortunate one, and bodes good for the English church. *The Spectator* of recent date says:

"The chief difficulty experienced hitherto in disputed points of ritual has been the refusal of a great portion of the clergy to render obedience to the court by which the matters in dispute have been heard. We do not personally share the feelings that inspire this revolt against the so-called secular courts, but all reasonable men must take it into consideration, and must admit the grave difficulties that always ensue when men conscientiously refuse to admit the jurisdiction of the tribunal which is claiming their obedience. Clearly, it is always better in spiritual matters to em-

ploy, if possible, a tribunal which commands the obedience of those who come before it. Now in the Church of England there is one kind of authority which practically all men are agreed to uphold—the episcopal authority. No tribunal founded on that authority can, if the clergy are loyal to their church, fail to obtain obedience. But the court of the archbishops is founded on that authority in the surest and most direct manner, and, further, it is the tribunal distinctly ordered by the prayer-book—the preface is part of the prayer-book—for the determining of disputes in matters of ritual. It is argued, however, that this does not make the tribunal a real court; that it has no right to insist upon any person appearing before it who wishes to keep away; that it has no power to enforce its decisions; and that even if those who do appear before it respect its judgments as they would those of an arbitrator, other clergymen will shut their eyes to its judgments and refuse to consider them. Now we venture to assert that these views are entirely mistaken, and that it can be shown that, even if not in name, at any rate in all essentials, the Lambeth tribunal is a competent court. We hold, that is, that it can, in fact, insist upon disputed points being brought before it, that it can enforce its decisions, and that the principles laid down in its judgments will be respected and carried out, not merely by the individuals primarily involved, but throughout the church."

The Spectator does not agree with those who believe that the decrees of the archbishops will meet as little acceptance by extreme ritualists as have the decisions of the civil power. It says:

"In our opinion the court of the archbishops has got all the status, sanction, and authority it requires to restore discipline to the church. In the first place, it is based upon the two strongest and most fundamental things in the Church of England—the prayer-book, and episcopal authority. Next, it naturally claims the support of all High Churchmen as a purely spiritual tribunal, substituted for one which they regard as secular. Finally, owing to the existence of the bishop's right of veto, its decisions can, if necessary, be enforced by the calling into use of the machinery of the Public Worship Regulation act. The bishops, that is, can always, if they are defied, let loose the two aggrieved parishioners. Thus the court of the archbishops, based as it is on the authority of the bishops, holds the discipline of the church in its hands. If it acts—as we believe it will—boldly and independently, and pays no attention to the clamor of outsiders, it can save the church."

This is, of course, a secular view. A conservative ecclesiastical view is found in the following passage from *The Churchman*:

"All the forces of conservatism and traditionalism, even when united by an impulse in itself most praiseworthy, were unable to force back the organic life of the church into a mold which it had outgrown. The debates and agitations of the past year, however distasteful they may have been from many points of view, have at least resulted in one most certain conclusion. And it is a conclusion which proves the inherent soundness of the public conscience of England when a perfectly definite principle is presented to it. It is now certain that the English church is no longer a part of the machinery of the state, as she was a hundred years ago. The action of Parliament in refusing to accept a measure of discipline based on the conceptions of the mutual relations of church and state, for which Sir William Harcourt has raised his voice, proves that no majority of sensible men at this day will wish to see the church imitate the ways of earlier generations when she cast out the Methodists and refused to send the episcopate to America.

"The surest way to revert to this devitalized type of Christianity would be the assumption of a body like Parliament to undertake the conduct of ecclesiastical business and to proceed to lay down what shall be the norm of public worship. . . . It is a satisfaction to the American critic to find our kinsmen adopting a principle we ourselves adopted years ago and have tested by the practice of over a century. The church must govern herself. No body of men, however well-intentioned, can act in her stead. Her mission lies in a sphere where the state, by its direct action, only destroys its best interests. True citizenship is Christian citizenship, but it will never reach the highest atmosphere of Christian thought and Christian practice if the state marks off by statute the church's path, or acts as the guardian of her precepts.

The ecclesiastical distress of 1898 will be a small price to pay for the victory of these principles on English soil."

The court of archbishops—which derives its legal authority and standing from the directions contained in the preface to the English "Book of Common Prayer"—has already begun to hear cases of disputed ritual. The first cases argued related to whether incense may be used in the Church of England. Some of the evidence was both curious and of antiquarian value. It was brought out that incense was used in Ely Cathedral as late as the end of the eighteenth century, and was then discontinued, not from any Puritan protest, but because a prebendary of the cathedral disliked the smell, and attributed to it his headache. The proceedings of the court, says *The Spectator*, are characterized by great dignity, good sense, and patience.

THE CHURCH VERSUS CHURCH SOCIETIES.

THE rapid growth and development of young people's societies in the churches is still a question which troubles the minds of some church workers and leaders. The topic came up recently before the Newark Preachers' Association, composed mainly of Methodist and Presbyterian clergymen in that city. The occasion for raising such a question was the alleged decline in the number of members and probationers in New York and Philadelphia and parts of New Jersey. This decline had attracted attention, and a meeting of the association was called for the special purpose of considering the cause of it. In the discussion much of the blame was laid at the door of the Epworth League by the Methodist and of the Christian Endeavor by the Presbyterian preachers.

It was charged that these societies monopolize the attendance of young people by their six o'clock meeting and the sociability of the congregation by their special meetings, for that purpose. Thus the attendance at the regular services is not only depleted, but the usual interest in welcoming strangers and members before and after worship is withdrawn. The societies have become a sort of religious club which is a law unto itself, and hence amount to an independent church, while the social and worldly elements in them make them a menace to the church. This club-house attachment to the church withdraws energy that would otherwise be spent in the church, and therefore plays the part of a parasite.

The statements made before the association are the subject of extended comment in *The Lutheran* (Philadelphia). It is inclined to an unfavorable view of the multiplication of church societies. It says:

"There are institutions that add strength to the church, and there are leeches that suck the church's blood. Chief among the former (not to speak of her seminaries, colleges, schools, orphans' homes, hospitals, etc.) are her catechetical, parochial, and Sunday schools, and her benevolent and missionary societies. Any organization within the church that does not work along either educational or missionary lines is likely to prove a leech—it consumes energy, but imparts none. The curse of modern church activity is the centrifugal tendency of its organized forms, which scatter energy in a thousand directions, but do not bring it to bear on the distinctive work of the church. There are societies within societies, wheels within wheels, machinery within machinery, and while there is a great deal of noise and friction, comparatively little comes of it. Much energy has been spent, but to little purpose.

"Now, all right-thinking members of the church want something to do. It is a favorable omen when they ask the question, 'What shall we do?' And it is a very unwise thing for any one to say to them in effect, 'Go and hold your peace.' Back of that question lies latent, willing energy. It would be a grievous mistake to discourage its awakening or its application. Faith without works is dead, and when the question pertains to fulfilling the great work and mission of the church, we must not say to them,

'Only believe.' We therefore have no fault to find with the modern ambition of young church-members to put their hands to the wheel and to help make things go. That is what we want. We may add the word of caution to the church, not to ignore this spirit or to fail to take into account the peculiar religious conditions existent in our American churches, if not the world over. The type of church-membership has greatly changed within the last generation because the type of Christian life and character has changed. The church does not have her youth rightly in hand, and they get their training in quarters where it does neither them nor the church any good. Their religious life is at best alloyed with much worldliness, and the church's evangelical and educational machinery does not seem equal to the task of separating the two."

NEW YORK'S SEMITIC OUTBREAK.

BOTH Europe and America have their "problem of the Jew" at the present moment. The outbreak of antisemitism which culminated abroad in the persecution of Captain Dreyfus has had numerous echoes in the New World. Just now this ancient spirit of antagonism is finding bitter vent in the East Side of New York, in a Hebrew mission which has recently been established in the center of the Ghetto, on East Houston Street. We quote the following statement of the trouble from *The New Voice* (June 24):

"Last week New York had its first religious riot for many years. Wilson W. Dunlap, of Philadelphia, who calls himself the 'paralytic missionary,' has inaugurated a street crusade to convert New York Jews to Christianity, and has stirred up surprising opposition. Mr. Dunlap has been holding a series of meetings at the Hebrew mission on East Houston Street, right in the heart of New York's Jewry. Last week, however, he launched out into broader fields. With a wagon covered with Scripture texts in English and Hebrew, an assistant, one Oscar Lemburger, a converted Hebrew, and three women singers, he drove through the streets of the Ghetto and attempted to hold street services. Vigorous opposition began at once, developing, through vituperation and watermelon rinds, to firecrackers, ancient eggs, vegetables, defunct animals, and finally cobblestones. One of the young women began to sing a hymn, but was soon knocked to the ground by a cobblestone and nearly killed. The two policemen detailed to protect Mr. Dunlap were powerless to stop the fury of the crowd, which numbered, according to newspaper reports, more than 3,000 persons. Trouble of more or less seriousness has been going on ever since the Hebrew mission opened several months ago. Mayor Van Wyck has threatened to revoke the missionary's license to preach in the streets if the rioting continues, and this Mr. Dunlap and his coadjutors regard as an infringement of their right of free speech."

In connection with this trouble the following advertisement appeared recently in the New York *Tribune*:

TO CHRISTIANS.

"It may surprise you to know that in New York City attempts are made almost daily by Jewish foreigners to kill American citizens for proclaiming the Word of God.

"Thousands of Jews residing in this city are taught that the Lord Jesus Christ was an illegitimate child, who was killed by a rabbi when thirteen years of age.

"They are also taught that they do God service by trying to kill those who teach the truth about the Lord Jesus.

"This fulfils prophecies contained in the Word of God, all of which was written by Jews.

"The object of informing you of this is to call to your attention the great need of giving the truth to those perishing, and the great opportunity which is at your very door.

"Further facts or literature showing what Jews are taught free upon request.

"No financial aid is needed, but we earnestly request the cooperation, prayers, and moral support of all Christians. BIBLE SCHOOL FOR HEBREWS, 202 East Houston Street."

The American Hebrew, in an editorial headed "To Our Chris-

tian Friends," quotes the foregoing advertisement and comments upon it as follows:

"We respectfully ask the editor of *The Tribune* if he believes his journal to be justified in publishing libelous advertisements of this kind. We call upon the authorities of this city, and we call upon the Christian community, to read these extracts of a public advertisement, with all the deliberation possible, and weigh their possible danger. The first and third paragraphs are calculated to give the impression that there are Jews in New York City who are bent on murdering persons who seek to convert the Jews into Christianity. We need not give these statements the stamp of falsehood. The Jews are too well known as law-abiding citizens, and need no defense whatever in this direction. But, as to the statement that the Jews teach their children that Jesus was an illegitimate child, who was killed by a rabbi or by any one else, or that the Jews teach that a service is rendered to God by killing those who seek to teach the truth about Jesus, it is not only an abominable falsehood in itself, but has a tendency to bring about hostile feeling between the Jews and the Christians that we can ill afford in this country, and it remains altogether for the authorities of this city, and for the respectable Christians of this city, to say whether or not a church movement which adopts such methods shall be permitted to continue its existence.

"We have heretofore pointed out to the mayor of New York the danger of permitting these people to preach in the public streets, with the knowledge that, whenever that is done, there is a breach of the peace. Circumstances that have recently occurred have proven to our satisfaction that these breaches of the peace are not caused by the Jews at all, but are part of the plan which this missionary has set on foot for the purpose of bringing his work into notoriety, and to keep himself before the public eye. We are fully convinced of the truth of this statement, which we make in all seriousness. Mr. Dunlap and his aids do this for the purpose of creating trouble, and thus being enabled to pose before their Christian friends as martyrs to the cause of bringing Christianity to the Jews."

Commenting upon the same advertisement in *The Tribune*, *The Independent* says:

"We have seldom seen anything more vicious and false. Its purpose is to stir up race prejudice and religious prejudice. 'Almost daily' must be as many as two hundred and fifty times a year. It is strange that none of these attempts at murder succeed. It is not strange that the school has trouble and that the police have had to interfere."

The New York *Tribune* has made some investigations among the missions on the East Side, and in the course of a recent article presents the Jewish argument thus:

"Men who are connected with the missions on the East Side deny indignantly the reports about marking the children, and investigation has shown that if these outrages were committed they were neither inspired nor carried into execution by them, but by the men who are known to the East Side Jews as meschumiths, or apostates. 'The Christian missionary in this part of the city,' said A. H. Fromenson, associate editor of *The Jewish Daily News*, 'is not an objectionable person to us. We have been accustomed to his presence among us, and we have no complaint to make about him, any more than a densely populated Christian district would make against a Jew who would establish headquarters among them for the purpose of making converts to Judaism and do his work in a quiet and orderly way. Of course, the comparison is purely hypothetical, because Jews do not work in that direction—we never try to make converts. The Rev. Mr. Birnie and other men of his stamp, who come here thinking that they may convert some of our people, are not the men to whom we object, and they are not the men who are accused of injuring the children or abusing their rights as missionaries. We object to the meschumiths, their methods, and the false light in which they place the whole Jewish community. These are Christians for money only, and they induce many miserable wretches to go through the ceremony of conversion, make them relate their 'experience,' and then make a show of souls saved so that they may be continued in the service. The men who supply the funds, the ministers who give their support to the missions, and the community at large are entirely ignorant of the true state of affairs, and

there are thousands of good people who think that many Jews are converted to Christianity every year, while in fact there are no converts.'"

A somewhat different view of the affair is given in the following excerpt from the *Hartford Times*:

"This question, how great a part ordinary, every-day, secular courage plays in what may be called aggressive missionary work, is suggested most recently by the attempt of a missionary to hold street services among the Jews of the East Side in New York. The man is a paralytic, and knows that his services are extremely offensive to the people among whom he goes. Yet he not only goes himself, previously demanding police protection, but takes others with him, including women. The accounts of last Sunday's proceedings indicate that the course followed was injudicious, but they do not show that the missionary was alarmed or disturbed in any way. Some of his assistants were slightly hurt by missiles, and one young woman who was singing was knocked down by one. As she rose a man in the crowd spat in her face. This young lady seems to have been of the stamp of Peter, but having no sword she trusted to her fists, and after jumping from the wagon and chasing the man some distance, she caught him and slapped his face. In getting back she had her dress nearly torn from her body. Three separate demands were made on the police for protection, and the police seem to have done all they could. But the advent of these missionaries among people who know and despise their faith was certain to make trouble. It did make a riot of moderate dimensions. There is no visible reason to believe that any good can be done by such a mission as this man has attempted, while bad feeling and actual violence are almost certain to attend his efforts."

The New Voice thus sums up the case:

"There are two sides to the matter—there always are two sides. Mr. Dunlap has a perfect right to preach any doctrine he pleases so long as he complies with the law, and the authorities are bound to protect him while he retains his license. It is also little less than incitement to riot for a great newspaper, with a circulation up in the millions, to praise the rioters for their stone-throwing violence as 'highly creditable to their self-respect,' and to call the missionary 'a common nuisance which ought to be suppressed.' On the other hand, it would seem to be injudicious, to say the least, to parade among a people so rock-bound in their religious conservatism as the Jews—mostly illiterate Jews at that—with signs and utterances strongly obnoxious to them, calling them sinners, and denouncing their beliefs. The mission where orderly propaganda is conducted may be a good thing, but unnecessary offense to religious prejudices is always a dangerous thing, especially in the crowded streets of New York's East Side."

RELIGIOUS NOTES.

In Montreal a Christian unity meeting was held recently. Eighty-four ministers of Protestant denominations were present. Bishop Bond of Montreal presided.

THE new Year-Book of the Congregational churches in this country shows that this denomination made a gain last year of six churches and 2,370 members. The adult baptisms were 1,803 less than the previous year, and infant baptisms 1,170 less. There was a loss of 3,001 members of Sunday-schools. The additions to the churches on confession (25,189) was smaller than in any year since 1885. The benevolent contributions fell off \$552,405 from 1897, and the home expenditures increased \$82,093.

COMMENTING on the recent discovery of the mummy of Meremphah, one of the early Egyptian Kings, *Bibbia* says: "This is interesting. The fact that this king's body could not be found had led the dilettante to the conclusion that he must have been the Pharaoh who was drowned in the Red Sea. As he ruled at the close of the nineteenth dynasty, when the exodus may very probably have taken place, this conclusion was regarded as secure. Apart from the fact that the Biblical narrative does not state that the Pharaoh was drowned and the further fact that many Pharaohs' bodies are missing, this theory is now hopelessly shattered by the discovery of Meremphah's body."

THE use of individual cups in the communion service is the subject of an approving editorial in *The Lutheran Observer*. The editor speaks of being present at a service in which the individual cups were used and says: "The quiet solemnity with which all this occurred removed every vestige of prejudice and apprehension which we previously entertained in regard to this method of administering the Holy Supper. It was really more solemn and impressive than the old method, and we advise any pastors who have doubts and prejudices in regard to this improved method of administering the sacrament to attend on such an occasion in order to judge of its adaptation and character for themselves."

FOREIGN TOPICS.

THE DREYFUS CASE.

CAPTAIN DREYFUS'S refusal to don his former uniform, when embarking to return from the Île du Salut to France in the cruiser *Sfax*, is taken by some as signifying that he expects France to make unusual amends to him. The chances are very much in his favor, but not altogether so. He is to be tried at Rennes, away from easily excited Paris. But the belief in his guilt has become so much a gospel with many Frenchmen that there is some difficulty in obtaining an impartial military court. Colonel Saxie, of the Tenth Artillery, who was at first chosen as president of the new court, declared so openly that "he did not care a hang for the evidence before the Court of Cassation, had read none of it, and would do his best to send the Jew back to the island," that a more impartial officer had to be appointed. Clemenceau writes in the *Aurore*:

"The object is to shield General Mercier, tho there can be no doubt of his guilt. Every one knows that he obtained Dreyfus's conviction by secret document, that he used forgeries against the prisoner which were made to order by the general staff. The court at Rennes will be told: 'To liberate Dreyfus is to convict Mercier. Choose now between the Jew and your general.' That has been done before, it may be done again. But it will not cause us to relax our efforts."

The *Petit Journal*, which has been violently anti-Dreyfusard throughout the whole affair, and is the only paper read by many *petits bourgeois*, innocently declares that "Colonel Paty du Clam has been arrested, but nobody seems to know why." "It's the revenge of the Jews. Dreyfus prophesied that his race would revenge him," says the *Libre Parole*, but omits to adduce any evidence for its assertion. The *République Française* expresses itself, in the main, as follows:

Let us at least have a rest after the new court has given its verdict. This principle of reopening a case after it has been judged is a bad one. If every prisoner who thinks he has been hardly used were allowed to agitate for a new trial in the press, France would be uninhabitable. Nor need the Dreyfusards think they are forgiven. The public have suffered too much for that. The army has been belittled, even weakened by the relentless war which has been carried on against our best generals. When we come to think that most of the persons who besmirched the army had nothing to do with the Dreyfus affair, and only wanted a pretext to disorganize our military power for the furtherance of their own revolutionary purposes, we know that the indignation of the country has not been allayed.

In the *Figaro*, however, Cornély writes:

"The fear that the new court will decide against Dreyfus, despite the evidence in his favor, is groundless. Alfred Dreyfus will be declared innocent unanimously. He will be sent as captain to a regiment. He will be introduced to the troops with special honors, and he will be promoted rapidly, to make good to him the time he has lost. And not a single officer of his regiment will be so unjust as to refuse to associate with him."

M. Émile Zola points out that the famous letter to the President, for which he was convicted of slander and forced to fly the country, was, after all, not strong enough. He says in the main:

I had greatly softened things, I had even withheld some evidence which to-day is clear, but of which I was then in doubt. I suspected Henry, yes, but I had no proofs, and so I thought it best to leave him out. I had confidential information so terrible that I feared to publish it. Yet to-day these confidences have become commonplace truisms. My poor letter is no longer up to date, it seems childish, weak, by the side of the revealed truth.

The *Indépendance Belge*, Brussels, points out that it was the foreign press, more impartial and calm than the French, which encouraged such men as Zola in their efforts to get at the truth.

The *Westminster Gazette*, London, thinks Frenchmen were not altogether to blame for their opposition to the revision. It says:

"For what had the French people to presume, before they could accept the theory of Dreyfus's innocence? Simply the most incredible depravity on the part of men highly placed and completely trusted. It is scarcely wonderful if a conviction to this effect has only been brought home to the mass of Frenchmen after a long and violent struggle in which many well-intentioned people have pledged themselves deeply to the wrong cause. When the worst has been said—and there is a great deal to be said about the violent anti-Jew and extreme Catholic fanaticism which has swept over France—the case remains so intrinsically incredible, and has been so difficult to follow in its dark and devious windings, that we are under no necessity to hold the French people partners in the guilt of Henry and Esterhazy and others who must shortly be branded. A passionate reluctance to believe M. Zola's incredible tale would not be a bad fault in a good Frenchman."

Prof. Goldwin Smith, in the *Toronto Weekly Sun*, says:

"This Dreyfus affair has lowered the army, or at least its chiefs, in the eyes of Europe. It is doubtful whether the same effect has been produced on the mind of the French people. If the Americans, with all their intelligence, could swallow the story of the *Maine*, the French may continue to believe, despite the evidence, the guilt of Dreyfus. The army is the one thing in which all Frenchmen feel pride, and when its honor is concerned their faith is as blind and as proof against the evidence of facts as that of any religious devotee."—*Translations made for THE LITERARY DIGEST.*

WHY UNIVERSAL PEACE IS IMPOSSIBLE.

WHAT the Peace Conference at The Hague has accomplished so far has not been officially revealed to the outside world. There is a rumor that the German Government suggested that the sittings be made public, but that England refused. At any rate, the proceedings are secret, and all we hear is subject to the proverbial grain of salt. In the mean time the conviction is getting stronger that the Conference, so far as the establishment of universal peace is concerned, must necessarily be a failure. This is especially well expressed by a writer in the *Handelsblad*, Amsterdam, who, under the heading "Ultior Hopes," writes as follows:

"To make lasting peace possible, national ambition must be killed. Is that possible? Let us see.

"Here comes Marianne, the personification of France. The cap of liberty is on her raven locks, but it does not sit very firmly. Will it fall from that restless little head?

"'Do you think I am hopeless?' she asks. 'Have I forgotten Alsace-Lorraine? No, no, the Latin race is not dead. We will unite Spain with us; we will raise the Pope—dependent upon our support—once more to a throne; we will teach Italy the step of our battalions. Does any one think I have forgiven Agincourt and Crécy, and Waterloo? No, and I have not forgotten the America and India of my forefathers. The Latin race shall once more rule the world, for my children are as countless as the sands by the sea.'

"'I have aspirations,' says John Bull. 'I want the consolidation of my empire, I want an alliance with the Anglo-Saxon on the other side of the water. Do you think I flatter him so humbly for nothing? Africa must become a British island. The Russian will be driven out of sight. When Ireland once more is loyal, my fleet shall rule the world, if only the Yankees will help me! I can always recruit an army out of the lower orders. The gold, the wealth of the earth must be mine. Let Britannia rule!'

"Here comes Pobydonoszeff, the typical Russian. He is master of Europe just now, thanks to poor Marianne. He represents the Slavic races, who dream no less of being masters in Europe and Asia than any other race. The Orthodox church must be made victorious everywhere, he says. He points to China and Central Asia, soon to be all Russian. He points to the want of unanimity in Europe, and tells us that the sword of mighty Russia is the real arbiter. And the three widows whom he has robbed, Finland, Poland, German Russia, bow their heads in fear.

"And now the youthful Kaiser, crowned by a helmet which

bears the emblem of the fighting eagle: 'I hope for the realization of the dreams of Frederick, of Louise, the country's saint in the struggle with France, of my grandfather, who knew what he wanted, and knew how to be patient as well as to act. Let every one who speaks the German tongue be as brothers. Let an invincible navy defend our sons, our trade, our industry against the jealous. We need a mailed fist to obtain our share of the wreck of China. I stood upon the Mount of Olives, and I saw that all Asia Minor, once the corn chamber of the world, will be so again in the hands of the Germans. I shall do my duty and see to the fulfilment of my people's ulterior hopes.'

"But how is peace to be established with all this?"—*Translations made for THE LITERARY DIGEST.*

ENGLAND AND THE TRANSVAAL.

MUCH feeling has been aroused by the news that another plot has been hatched—and discovered—for destroying the independence of the South African Republic. A few arrests have been made, but the men imprisoned are evidently not the heads of the conspiracy. The London *Daily Chronicle* nevertheless

HONEST JOHN BULL DOESN'T KNOW THERE HAS BEEN AN ATTEMPT MADE TO ROB HIS UNCLE PAUL.—*Kladderadatsch, Berlin.*

admits that it would be easier to believe "the arrested men acted upon their own responsibility if the existence of a serious plot were not denied by the very papers which encouraged the Jameson raid." That all such troubles are raised artificially for the purpose of robbing the Boers of their independence is shown by the address signed by over twenty thousand foreigners in the Rand—mostly Germans, Dutch, French, Belgian, and Old-Colony men—who declare that they wish for no foreign interference to redress whatever grievances they may have. They express their confidence in the government of the republic, and declare expressly that their signatures can be proven to be *bona fide*, thousands being property-holders, while the names appended to the petition sent to England were obtained during the races and the cricket match. Meanwhile the British Government, acting upon the suggestion of the last-named petition, sent Sir Alfred Milner to confer with President Krüger at Bloemfontain. The meeting was without result. The British account of it is, briefly, as follows:

Governor Milner suggested that all foreigners should be made citizens after five years' residence. He also asked for better representation of the Rand. He also informed the President that he expected concessions great enough to enable the Uitlanders to help themselves, without the assistance of the suzerain power (England). President Krüger was willing to grant liberal concessions in the matter of the suffrage, if England would agree to arbitration in other questions. Sir Alfred Milner said that concessions to the Uitlanders must be made in any case, if the "home rule" of the Transvaal is to be respected. A foreign arbitration, however, would never be admitted by Great Britain.

The South African Republic gives the following account:

"On the part of Great Britain the suffrage and the dynamite monopoly were mentioned as grievances, on the part of the republic the Swaziland boundary, the still unpaid damages of the Jameson raid, and the arbitration question. Sir Alfred Milner demanded alterations in the text of the naturalization oath, better representation for the Rand, and full citizenship for all who have been five years in the country. The President offered to grant a 'first paper' after two years' residence, and after seven years' residence full citizens' rights to men owning real estate worth \$750, or having an income of at least \$1,000 per year, or paying \$250 per annum in rent. The oath of allegiance must, of course, contain a clause forswearing the new citizen's former country. The President is willing to suggest still further concessions, if Great Britain will arbitrate."

The British papers hardly conceal that the object is to annex the Transvaal, not to redress alleged grievances of the English-speaking Uitlanders. *The Speaker*, London, says:

"If the Uitlanders, whose petition was forwarded to the Queen, wish to get rid of their nationality, be liable for compulsory service in the Boer army, and to be loyal citizens of the South African Republic, they undoubtedly have a grievance in not being at once admitted to the franchise. But Mr. Lionel Phillips, who

knows as much about the Transvaal as any man, admitted very frankly that the question of the franchise excited no interest. It is used because it makes an impression in England."

Yet the same paper complains bitterly that the shortsighted policy of the Boers is "to maintain a government of the country for the Dutch and by the Dutch." *The Westminster Gazette*, London, says:

"In the pass to which matters have come, there is nothing to gain by disguising the truth. We can do everything, if the Cape Dutch are with us; we can do nothing if they are against us. This is not an acknowledgment, as some Boers might suppose, that Great Britain is not strong enough to assert her ascendancy, if the occasion required it. . . . We need have no shame in conceding to the Boers that they can, if they choose, take advantage of this situation to delay a settlement which, as we hold, is as much in their interests as in ours. Nor, if we are just, shall we fail to add that this situation is part of the penalty which we must still pay for that disastrous raid. Still, there it is, and we had better make a clean breast of it. . . . Our jingoes will no doubt tell us that this is a slow process, unworthy of a great power which has the men and the money to force a settlement. We can only reply that in the nature of things a forced settlement will be no settlement. At the best it would throw South Africa back for twenty years, whereas opinion, however slow it seems, will bring the conclusion in half that time."

But the great majority of British publications demand revenge for the defeats England suffered at the hands of the Boers. In *The Nineteenth Century* a Rev. Father Ryden wants war against the Boers to wipe out the disgrace of Majuba Hill. "The honor of England demands it," he thinks. The English papers are full of incorrect descriptions of Boer life and Boer character, and the

sum of the argument is always: "How dare a Dutchman think himself as good as an Englishman!" In *The National Review*, London, Arnold White writes:

"The Uitlanders live and move with a stinging sense of humiliating inferiority as compared with the Dutch. Pride of race, which is perhaps the dominant note of the English character, tells the British settlers in the Transvaal that altho they are thrust down into a position of political serfdom, they are really the superiors of the Boers who hold the whip-hand over them. It is not difficult to conceive the wounding and bitter sense of wrong experienced by men and women of the proudest race on earth."

He is especially embittered by the fact that the language of the Dutch, of whose rich literature and deep learning Englishmen are generally ignorant, should be given preference in the Transvaal. The *Newcastle Chronicle* says:

"During the recent elections at the Cape, the president of the Afrikaner Bond Congress said: 'This is our country, but we will allow other people to live in this country provided they behave themselves properly, and we are going to be the judges of the behavior.' This amazing tenet of the Bond party which is now in power at the Cape is precisely what President Krüger holds in his Dutch Republic. How little this conforms with the idea of British supremacy in South Africa will be seen by every one. It rests with Mr. Chamberlain to disenchant both Boers and Bond of their illusion."

Party politics make little difference to this feeling. *Lloyds* and *Reynolds*, *Money* and other financial papers, the Scottish and the Irish of the North, all join in the cry: "Down with Krüger and the Boers!" The colonial papers, too, regard the question a safe one for professing loyalty. The *Montreal Gazette* thinks with pleasure of the havoc British lyddite shells will make among the Boers. The *Victoria Times* is certain that British honor requires the destruction of the country, "altho of course, from the Boers' point of view it may be asked: Why can't the foreigners go away, if they don't like our laws?" On the other hand, the Boers have never been so confident of ultimate success, if war is forced upon them, as now. That they will be succored from the Old Colony is certain. At a Bond meeting in Burgersdorp the following motion was passed:

"We are certain that, unless the 'imperialist' policy adopted against the Transvaal is modified, South Africa and the British empire will suffer. We will not sit still when the Transvaal is treated unjustly by England."

One speaker declared that "there can be no lasting peace until the Transvaal is altogether free." Others offered prayers to God for the speedy advent of the day when "all Afrikaners can throw off the yoke of Britain." "A Dutch-speaking Afrikaner" writes to the *London Speaker* as follows:

"Notoriously, there is no country in the world where gold-mining is carried on under such extremely advantageous conditions as in the Transvaal; witness of this fact is the enormous dividends (200 and 300 per cent. in some cases) declared by the gold companies. If one wishes to find a down-trodden gold-mining industry one has to go to India, where the industry is simply crushed under the many burdens imposed upon it; to Klondike, and other places under British rule, not to the Transvaal, where there are hardly any appreciable burdens imposed upon the industry. . . . The English press, instead of encouraging British subjects, instigated by the capitalist organs in South Africa, to keep up an agitation which would not be allowed in any other country than the long-suffering Transvaal, should try to view this matter with some slight degree of fairness and justice. If there is any cause of offense given, it is not given by the Transvaal, but by Mr. Chamberlain. Witness his infamous 'suzerainty' claims."

How powerful the Dutch element in the Cape Colony may be gathered from the following, in the *Colesberg Advertiser*:

"I learn from a reliable source that Mr. Schreiner is starting a crusade against the royal coat of arms! That is to say, he is

desirous that all official documents that have heretofore been embossed with the royal cypher should in future be plain. This is giving the most favorable view of the Prime Minister's intentions, altho economy in printing, etc., can be the only excuse for this extraordinary decision. What excuse, however, Mr. Schreiner can find for replacing 'On Her Majesty's Service' on official envelopes, by 'On the Public Service,' is not so apparent. Will the next alteration be 'On the Republic's Service,' I wonder?"

Mr. Schreiner has warned the British Government that an attack upon the Transvaal may be disastrous to British rule in South Africa. The Pretoria correspondent of the *Nieuws van den Dag*, Amsterdam, writes:

"They threaten us! Do they know what that means? We are armed to the teeth, and we have over two million cartridges in reserve.* Money there is in abundance, cash enough to carry on the war for years. Natal has many Boers who will join us, the

JOHN BULL: "I am going to the Peace Conference for a while, but you needn't think I am done with you!"
OOM PAUL: "Oh, I don't know!"—*Amsterdammer*.

Old Colony is almost entirely with us. Yet England threatens! Some day our patience will be ended. Then it will be time to pray for the souls of the poor English soldiers. This time no quarter will be given. . . . As a nation we would have lost all self-respect if we could longer bear the coarse insults heaped upon us."

That the Germans settled in the Transvaal will act like our own German-Americans during our wars may be gathered from an address sent by the Johannesburg Germans to Dr. Lieber, leader of the Center Party in the Reichstag, and which runs, in the main, as follows:

We thank you for the position you have taken in the question of Cecil Rhodes's reception of Germany. We do not expect Germany to make sacrifices for us. We trust in God and our rifles. We felt hurt, however, when the British cable agencies informed us that a man of Rhodes's character had been honored by the Reichstag. Since we know the truth, we are aware that Germany still upholds the morality of nations.

The continent of Europe sympathizes with the Boers in their danger. The following sketch from the *Handelsblad*, Amsterdam, admirably describes the views of moderate people in most countries:

"A Transvaal Boer is nothing but an African Tory. He is Conservative to the bone. He is, above all, true to the church. He is a landowner, and guards his property with jealous love. He looks down with contempt upon mere money-makers, upon speculators, clerks, and shopkeepers. He is full of prejudices from the soles of his feet to the top of his head. He knows nothing of 'foreigners,' and does not care to know anything about

* In 1880-81 the Boers were so badly armed that many men could not obtain rifles and ammunition until they were taken from the English. Others went into action with two or three bullets only.—*Editor of THE LITERARY DIGEST*.

them. He will not speak their language, and he hates their mode of worship because it is different from his own. He holds what he has. He does not believe in the franchise for poor people. He opposes reforms, and his motto is 'England for the E——'. I beg pardon. *I forgot I was talking of the Afrikaner Tory.* His motto is 'Africa for the Afrikanders.' The Transvaaler has stronger principles, no doubt, and is more vigorous all around. But he is only a Tory for all that, despite the fact that the British Tory wants his blood."—*Translations made for THE LITERARY DIGEST.*

LIBERAL AND CONSERVATIVE RUSSIA.

AMONG the countries which offer the best possibilities for our foreign trade is Russia. Her chief development will probably be for many years to come in the direction of agriculture, and while the American farmer may expect to find serious competition there, the American manufacturer might find a ready market, if the Muscovites had the necessary capital to make purchases, and the high tariff on foreign machinery were removed. M. de Witte, the present Minister of Finance, is anxious to open the country to foreign capital and machinery; the Russian Nativists, whose chief organ is the *Novoye Vremya*, want to keep both out. According to the *Russkoie Bogatstvo*, St. Petersburg, M. de Witte argues as follows:

"From a general national standpoint, the protective system can have but one object and excuse—the emancipation of domestic economy from dependence on other markets, other producers, and other means. Protection is a temporary policy, and its logic is self-abolition. Meanwhile we are passing through a costly experience. The Russian consumer must pay higher prices for everything he buys, and this is an objection, a criticism upon protection. But because of this we must try to pass through this stage of our industrial development as quickly as possible. To free ourselves, we must encourage manufactures in every possible way, and we must invite and attract foreign capital. We have no investment-seeking capital of our own; agriculture does not yield it. It becomes necessary to take advantage of the plentifulness and cheapness of foreign capital. To be sure, we have to pay for this outside capital, but simple arithmetic will show that it is better to introduce foreign capital than foreign goods and implements. There can be no question which is the cheaper way—the importation every year of hundreds of millions' worth of goods, the price of which goes entirely into foreign pockets, or the introduction once for all of a given amount of capital, and with its aid to organize production at home, realizing under the least favorable circumstances 90 per cent. of the value of the commodities."

The *Russkoie Bogatstvo* nevertheless argues that it is not necessary to hold out special inducements to foreign capitalists. It says, in the main:

Foreign capital can not be prevented from coming and needs no special inducements or artificial privileges. The thing to remember is, that rapid development by foreign capital will also bring in its train a labor question, a diminished demand for hand labor, a displacement of males by females and children, and improved machinery. If the Government is to protect and encourage anybody at all, it should protect the factory laborer and prevent the struggle between capital and labor.

But that is hardly as dangerous to the future of Russia as a continuation of the present system of exclusion with its attendant evils. A correspondent of the *Vorwärts*, Berlin, describes the condition of Russia as follows:

"In eleven out of the sixty-eight *gouvernements*, that is, in a sixth of European Russia, the famine has raged for four years. Our Government, which permitted collections for the starving Hindus, does nothing to prevent a recurrence of the famine, and the people, who regard revolt against the Czar as sinful as revolt against the church, dare not help themselves. A revolution need not be feared. The people are not ripe for it, do not know how to organize it, would not be able to substitute something better if the present system fell. But it is pretty certain that the politi-

cal strength of Russia suffers under misgovernment on the one hand and stupid lethargy on the other."

Intriguers against the Czar are not wanting, and his life is not all "beer and skittles." The St. Petersburg correspondent of the *Grazer Tageblatt* says:

"The Empress-Dowager and her clique do everything in their power to neutralize the Czar's good intentions. Several attempts were made to kidnap his child, as a hostage for his good behavior, and the imperial couple hardly dare to leave the little girl out of their sight. In 1897 a palace revolution was prevented by the loyalty of a few adjutants only. No wonder that subsequent illnesses of the Czar and Czarina were attributed to poison. The old nobility are the Czar's worst enemies, since he emancipated himself from his mother's influence, and everything is done to prejudice the people against him in order to procure his removal. The masses are ignorant, fanatical, easily influenced by the clergy; the clergy are as ignorant and fanatical, and as easily influenced by the Holy Synod. If a son is born to the Czar, attempts will be made to force him to abdicate. The news of his ill health is really due to these machinations. Not the reporters but the Empress-Dowager has originated it, to prepare the public for a change. The Czarina is as unpopular as her husband, as she is too strong a character to submit easily to the influence of the Empress-Dowager."

Among other means to estrange the people, the *Tageblatt* mentions apparent slights of the clergy. The priest of a village is told to wait with bread and salt in a certain spot, and the Czar is made to pass him a few yards distant, depriving the priest of the honor of offering the orthodox hospitality to the ruler of the empire and the head of the church. The article of the *Tageblatt* is, however, chiefly of interest in showing that a bitter, if noiseless, feud is being waged between the Conservatives and the Liberals in Russia. The rumors mentioned in the article will spread much faster in Russia than any story printed in the newspapers, and as such rumors may seriously undermine the influence of the Conservatives, the suspicion gains ground that the Liberals are fully the match of their adversaries in intrigue.—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

LORD CURZON, the viceroy of India, has signed a bill by which he shows his appreciation of American tariff legislation. Sugar on which a bounty is paid by the exporting country will have to pay extra duty in India. That sugar comes chiefly from the United States.

A FRESH attempt is made in England to abolish the opium trade in the British colonies. The agitation is now strongly assisted by the Church of England, the Archbishop of Canterbury and the Bishops of Carlisle, Derry, Liverpool, Norwich, Rochester, and Mauritius openly taking part in it.

THE Trans-Siberian Railroad will now terminate at Port Arthur instead of at Vladivostok. Few people appreciate how useful this longest of all railroads is already to Russia, incomplete tho it is. Tens of thousands of emigrants are transported to the East, for the new Russian maxim is, "Go East, young man." Last year 200,000 colonists settled in Russian Manchuria.

THE German consul at Hongkong, whom the press agencies accused of supplying arms and ammunition to the Filipinos, is a salaried official (*Berufs Consul*) and as such not permitted to engage in mercantile transactions of any kind. Representatives of the press in Hongkong must know this, and the "news" was, therefore, most likely manufactured in London or New York.

THE death is reported of Tuku Umar, the chief of the Malay rebels in Atcheen, who has opposed the Dutch Government with varying success for over twenty years. Bribed now and then to side with the Dutch, he always broke his word, and it cost untold treasure and thousands of men to subdue the rebellions led by him. It was not until the natives had learned to appreciate the benefits of Dutch rule that Tuku Umar's following decreased.

"THE conservative English lawyer opposes the codification of laws as practised on the Continent. Yet there are some regulations which, while theoretically still in force, should be removed from the statutes as obsolete," says the Amsterdam *Nieuws van den Dag*. "Thus there is a law which condemns the members of societies for the propagation of prohibition to seven years' hard labor. Disobedient clergymen may be imprisoned for life. Stealing from the Queen to the value of more than a shilling must be punished with death or not at all. Calais is treated as if it still belonged to England."

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Erdman writes from Breslau, January 24, 1899, in regard to the expense attending the importation of a box of meat containing six hams and six pieces of breakfast bacon. The weight of the box was about 115 pounds, and Mr. Erdman paid a duty in Hamburg of 10.15 marks (\$2.42), a local duty in Breslau of 7.65 marks (\$1.82), which, with freight charges from New York, made a total of 43.80 marks (\$10.42). The consul adds: "It will be seen that it is an impossibility to import American meat into this part of Germany. With the cost of freight and duty, it is much more expensive than German meat."

Consular Agent Mertens, of Grao, writes, under date of February 15, 1899:

"Spain's tobacco factories are to a great extent dependent upon American tobacco. During the late war this could not be furnished, and various trials were made with other kinds; but none seemed able to replace the American product. In the month of May, new contracts for tobacco deliveries are made by the company which has the monopoly of the tobacco trade in Spain, and, as it will probably purchase American tobacco again, our merchants should enter into negotiations with them. Already, agents from Germany with samples have arrived in Madrid, and no time should be lost by the United States houses."

Consul Jarvis, of Milan, under date of January 20, 1899, reports that the project of covering the canals in that city is being discussed. The circular lines of the canals were once the city limits, but the growth of Milan has brought them into the busy portion, and they obstruct traffic and are undesirable from a sanitary standpoint. The canals possess a water surface of over 17 acres.

Under date of February 16, Consul Roosevelt, of Brussels, transmits translation of a royal order published in the official journal, to the effect that partial remission of the excise tax is accorded for glucose employed in the following industries: Spinning, weaving, finishing, dyeing, and tanneries; also in the manufacture of playing-cards, wax, blacking, and imitation parchment paper.

Reduced Prices

WE wish to close out our Summer suitings and skirtings during the next few weeks in order to make room for Fall goods. We have therefore made decided reductions on almost every suit and skirt. You now have an opportunity of securing a fashionable garment at a reduction of one-third from former prices.

No. 611.—This illustration represents a most attractive Summer suit, consisting of a short jacket and stylish skirt. Both jacket and skirt are lined throughout, and the revers are faced with satin. The jacket can be worn open as illustrated, or closed in double-breasted style. We make this suit from your selection of over thirty all-wool materials. Retailers ask \$15 for a suit of this kind. Our price has been \$10.75.

Reduced price for this Sale, \$7.17.

Pique Suits,
duced from \$4 to \$2.67.
Pique Skirts,
reduced from \$3 to \$2.

We tell you about hundreds of other reduced price garments in our Summer Catalogue and Bargain List, which will be sent, free, together with a full line of samples of materials to any lady who wishes them. Any garment that is not entirely satisfactory may be returned and your money will be cheerfully refunded.

Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

THE NATIONAL CLOAK & SUIT CO.,
119 and 121 West 23d St., New York.

The tax is fixed at 13.50 francs (\$2.61) per 100 kilograms (220.46 pounds) of dry extract contained in the glucose, and the order took effect February 20.

Since the Siberian Railway has brought the eastern sections of Russia into the area of universal trade, the question of the future importance of Siberia as a competitor in the international market as regards natural products, and as a country having more or less openings for the disposal of manufactured goods, is becoming of great interest to all European countries. The resources of Siberia are, at the present moment, undergoing careful investigation on the part of both Russian and foreign capitalists. Siberian newspapers publish daily the formation of new companies and commercial undertakings through banks and agencies, for the benefit of firms in foreign countries which desire to gain the Siberian market, and likewise a part of the Chinese trade. The railway has also opened up a new market for each province in European Russia. It is reported that in Poland several factories have been opened exclusively for the manufacture of goods suitable for the Siberian markets. The Ural iron merchants, owing to the keen competition of the manufacturers of southern Russia, are now directing their energies toward Siberia. The agricultural interests of Russia, long before the opening of the Siberian Railway, foresaw serious competition in grain, and therefore succeeded in raising the tariff of transportation on the Siberian product.

Siberia entered the world's trade under very favorable conditions; with bad harvests in Europe and rising prices, Siberia was able to place on the market enormous quantities of corn. Western Siberia, during the first half of 1897, sent nearly 58,000 tons, and during the second half, 174,000 tons; but, owing to deficiency in rolling stock, 80,000 tons of grain remained beyond the Urals. During the first half of 1898, about 170,000 tons were sold at good prices and hurried abroad by the Baltic and Black Sea ports, while some were sold in Poland and Moscow. Grain from Siberia can be transported to Russia by two routes, either by water through Tumaine or by rail through Cheliabinsk. The former route has by no means lost its importance; on the contrary, transports have increased.

Not reckoning caravan transports from the government of Tobolsk, the export of cereals from Siberia in 1897, according to *Siberian Life*, was about 400,000 tons. Of this quantity, nearly 91 per cent. was wheat and flour, 5 per cent. oats, and a little more than 3 per cent. other grains. The exports in 1897 were distributed as follows:

	Tons.
Baltic Sea ports.....	229,225
Black Sea ports.....	9,338
Western frontier.....	39,048
Rivers Volga and Beloy.....	5,500
Internal Russian markets.....	6,225
Ural works.....	4,709

From the above, it will be seen that 94 per cent. of Siberian wheat was sent abroad, and if the wheat sent down the rivers to wharves in Samara, Oufa, and Perm, also intended for export, is included, the quantity will be more than 95 per cent. The largest quantity was exported through Reval—namely, 145,161 tons, or over 48 per cent. of the whole export. After Reval comes St. Petersburg, Libau, and Riga, and lastly the southern ports, Novorossisk, and Rostoff.

The Formosan Government has asked for an appropriation of 40,000,000 yen (\$20,000,000 in United States gold) for the construction of a railway through the island and for the improvement of Kelung harbor. The Japanese cabinet has given its approval, and, as the railway and harbor are urgently needed, it is believed the diet will pass the bill. There is at present in the island a railway 60 miles long, running from Kelung to Teekcham (Hsinchik). It was commenced in 1887 and completed in 1891. It was owned by the Chinese Government, but, on the taking over of the island by the Japanese, it passed into the possession of the latter Government. The proposed railway will

VIOLIN TONE

Is of the utmost importance to violinists—amateur or professional. The correct quality of tone may be obtained in its highest perfection in our establishment. Our collection of violins is unequalled by any other stock in the world for tone quality and for preservation of individual specimens.

Among the violins now for sale by us most beautiful in tone quality are the following:

Antonius Stradivarius 1714—large pattern, beautiful red varnish, marvellous preservation	\$6000
Nicolaus Amati, Cremona	\$2300
Lorentius Gaudagnini	\$2000
Very perfect specimen with tremendous tone.	
Joannes Baptiste Gaudagnini, very perfect. broad rich tone	\$1800
Francisco Ruggerius, Cremona 1700—large grand pattern (quite different from the ordinary type) very brilliant tone	\$1500
Dominicus Montagnana	\$1000
Francisco Stradivari	\$1000
Alessandro Gagliano	\$900
Jos. Gaudagnini	\$550
Francisco Ruggeri	\$500

and perfect examples of Gagliano, Bales-trieri, Zanoli, Eberle, Carcassi, Castagneri and others at from \$150 to \$500

Also a number of genuine old violins suitable for students at from \$30 to \$100.

Bows by Tourte, Vuillaume, Bausch, Henry, Dodd, etc., at from \$20 to \$150.

Authenticity of Every Violin Guaranteed.

Lyon & Healy,
Wabash Ave., and Adams St.,
CHICAGO.

Enamelling Bathtubs

With a can of our liquid enamel you can renew perfectly your bathtub, refrigerator, food boxes, window casings, chairs, or any surface that needs smooth paint. Our liquid enamel is immensely superior to any other both in finish and durability. Keep a can in your house for a score of emergencies. Write for prices

JOHN MAIR & SON,
136 S. Delaware Ave., PHILADELPHIA.

extend south from Teckcham to Takow, a distance of 175 miles.

The Japanese have rebuilt a part of the existing road, but no new rolling stock, with the exception of two or three second-hand locomotives from Japan, has been added. At present, 6 locomotives, 12 passenger cars, and 20 freights and flats are in use. The gage of the present line is 3 feet 6 inches, and the same will probably be continued in the new road. There will be required steel rails (probably of 60 pounds), locomotives, and bridge material for the line, and one of the leading engineers connected with the work has expressed to me his intention of recommending American locomotives. The United States consul has been urgently requested by Mr. A. Yamashita, Taipei, Formosa, one of the leading merchants and president of the Taipei municipality, to place his name before the manufacturers of railway supplies; he specially desires information regarding American locomotives.

Under date of February 15, Consul Smith, of Moscow, sends the following:

"The custom-house department has published the following data of the passenger traffic across the Russian frontier for six months ended December 31, 1898: Number of Russian and foreign passengers that have crossed the European frontiers with passports and other legitimate documents from Europe to Russia, 2,632,627; from Russia to Europe, 2,722,912; over the Asiatic frontier: from Asia to Russia, 75,311; from Russia to Asia, 48,816.

The arrivals into Russia of passengers with passports exceed the departures by 25,000.

It is interesting to note Germany's eagerness to equal England as a mercantile and manufacturing state. Chemnitz, hundreds of miles inland, recently organized a branch of what is known as the national union for increasing the fleet. In the industrial development that has assumed gigantic proportions in the last forty years, the mercantile marine has not only kept pace with internal progress, but has done much to increase its fields of operation. Germany's fleet is second only to that of England. In 1875, Germany's merchant marine numbered 4,062 ships with 1,068,000 registered tons net; in 1895 she had 3,665 ships with 1,554,000 tons; in 1898, 3,663 ships and 1,555,000 tons. While the number of ships is smaller, the number of tons, compared with 1875, has increased 50 per cent.

Hot Weather Dyspepsia

Thousands Suffer From It at This Season of the Year.

Hot weather dyspepsia may be recognized by the following symptoms: Depression of spirits, heaviness and pain in the stomach after meals, loss of flesh and appetite, no desire for food, bad taste in the mouth, especially in the morning, wind in stomach and bowels, irritable disposition, nervous weakness, weariness, costiveness, headache, palpitation, heartburn. It is a mistake to treat such troubles with "tonics," "blood purifiers," "cathartics," "pills," because the whole trouble is in the stomach. It is indigestion or dyspepsia and nothing else.

All these symptoms rapidly disappear when the stomach is relieved, strengthened and cleansed by Stuart's Dyspepsia Tablets. They should be taken after meals and a few carried in the pocket to be used whenever any pain or distress is felt in the stomach. They are prepared only for stomach troubles.

Stuart's Dyspepsia Tablets are indorsed by such physicians as Dr. Harlandson, Dr. Jennison, and Dr. Mayer, because they contain the natural digestive acids and fruit essences which when taken into the stomach cause the prompt digestion of the food before it has time to ferment and sour, which is the cause of the mischief.

Stuart's Dyspepsia Tablets are pleasant to take and unequalled for invalids, children and every person afflicted with imperfect digestion. It is safe to say they will cure any form of stomach trouble except cancer of the stomach.

Nearly all druggists sell Stuart's Dyspepsia Tablets, full sized packages at 50 cents. A book on stomach troubles and thousands of testimonials sent free by addressing F. A. Stuart Co., Marshall, Mich.

The falling-off is in sailing-ships. In 1875 there were 4,303 with a capacity of 878,385 tons and 299 steamers with 189,098 tons; in 1885 there were 3,607 sailing-ships with 880,345 tons and 650 steamers with 413,943 tons; in 1895, 2,622 sailing-vessels with 660,856 tons and 1,043 steamers with 843,046 tons; in 1898, 2,522 sailing-vessels with 585,571 tons and 1,171 steamships of 669,800 tons. In general, a steamer is thought to be able to carry three times as much as a sailing-vessel of the same size. The falling-off in sailing-ships from 4,303 in 1875 to 2,522 in 1898 was more than making up for in the increase of steamers from 299 in 1875 to 1,171 in 1898. The regular crews numbered, in 1898, 47,428 men. The average was 5.7 men to a sailing-ship and 24.3 to a steamer. German writers point with pride to the fact that whereas formerly a good many, if not quite all, of the big ships were built abroad, they are now built in German shipyards, by German mechanics, with German materials, etc. All that is now needed, they say, is a powerful fighting marine. The empire's interests are in every part of the world. These must be protected.

The approach of the wine-making season has caused the agriculturists in this part of France to unite in a movement for the repeal of the tariff on sulfate of copper, which is extensively used to protect the grapevines against black rot and mildew. In periods of heavy rains, the vines sometimes require five treatments, at an aggregate expense of from \$2 to \$2.50 per acre. The use of copper has increased, and is expected to further raise the cost of the sulfate; hence the movement for a reduction of the duty. As the United States is the largest copper-producing country in the world, a résumé of what is said on this subject in France will not be without interest. The imports of the sulfate into France were:

	Tons.
1895.....	24,641
1896.....	34,539
1897.....	30,909
1898.....	31,428

The metal base enters into the composition of the sulfate in the proportion of 26 per cent, the price of the sulfate being entirely governed by the price of copper. When the proposition was made to remove the tariff of 3 francs (57 cents) per 220 pounds from copper, it was stated that an American syndicate had cornered the market and that the corner must soon break, with a resulting fall in prices. Wine-growers, influenced by this report, refrain from laying in a supply of sulfate, and as the demand for that article ceased, manufacturers stopped producing. A legislative commission appointed to investigate the subject reported the advance in price to be a legitimate result of the workings of the law of supply and demand, to wit, the new and increased uses of copper in machinery, the extension of telegraphs, telephones, electric lighting and electric tramways, and especially the building of the Metropolitan Trolley Railroad in Paris, which will consume 5,000 tons of copper. The opinion was expressed by the commission that the demand for consumption will continue in access of production: that Japan and Spain can not increase their output; that Chile can increase here; but that the possibility of equalizing the two factors—supply and demand—must depend upon the copper producers of the United States. The consumption in France amounts, annually, to 60,000 tons—47,000 tons in block, bars, and plates; 8,000 tons of old metal, all imported; and 5,000 to 6,000 tons of old copper picked up at home.

PERSONALS.

OF Li Heng Chang numberless stories are told in Chinese society. Now and then one reaches this country through our consuls at China.

On one occasion when the premier was having a bitter fight with some of the more conservative members of the Tsung-li-Yamen he received as a present a magnificent cake which he had reason to suspect contained poison. He put the cake aside and set all his powerful machinery to work to find out who was at the bottom of the plot. The investigation was partly successful, the crime

being traced to three men, of whom one, at least, was absolutely guilty. Li had the trio arrested, and brought to his Yamen. When they arrived they were ushered into his presence and were received in his courtliest manner. The cake was produced with the remark that "politeness forbade his tasting it until the three generous donors had had an opportunity to enjoy its excellence." Li cut the cake and one of his servitors handed it to the unwilling guests. Each took a piece and ate, or pretended to eat it. One crumbled the pieces and let them fall upon the floor, but the other two ate calmly, without manifesting any emotion. Ten minutes and the two men began to show symptoms of suffering. Li smiled benignantly and said to the man who had not eaten: "Your wisdom is so great that I am compelled to reserve your head as a souvenir to transcendent genius."

The man was removed and promptly decapitated. To the other two the premier remarked: "The cake that you are eating is not the one you sent, but one which I had my cook imitate. The poison from which you are suffering exists only in your imagination. I know of no way to cure your present pain except by letting you share the same fate as your friend who has just left the room."

As they were led away the statesman said to his retinue: "It is a pity that a man who can eat a deadly corrosive poisoning with an unmoved countenance should so misapprehend the talent where-with heaven has endowed him."

It seems that the late M. Sarcy, the well-known Parisian critic, whose Monday article in *Le Temps* has had only two interruptions in the course of forty years, died with a half-written "causerie" lying on his desk. "I must get up," he said to the doctor, a few hours before his passing. "It is absolutely necessary that I should finish my article. What will Paris say if it does not appear next Monday? I will do only a demi-feuilleton, if I must, but I must do it." Later he returned to the

idea. He mentioned the Théâtre Français. "I shall go again and see 'Le Torrent.' I am afraid this piece is not well understood. It has not been rightly judged." These were his last words.

BRIG-GEN. WILLIAM LUDLOW, military governor of Havana, is well remembered in Detroit, where he was stationed for many years, first as engineer of the Ninth and Eleventh lighthouse districts and afterward as engineer in charge of river and harbor work. It is recalled, says a writer in the *New York World*, that while lighthouse engineer an Irish contractor who had been doing government work for some years visited Ludlow and introduced himself, slyly laying down with his card a crisp \$50 bill. It was his way of "feeling off" a new man. Ludlow neither affected to ignore the incident nor lose this temper over it. On the contrary, he looked at the card and remarked pleasantly, "So you are Patrick Flaherty?" "That is my name, sir," answered the visitor. "And you have called to see me about getting some contract work for the Government?" "I have, sir." "Well, Mr. Flaherty," said Ludlow, "I suppose we can talk more freely over a cigar. Do you smoke?" He drew from his pocket two cigars, handed one to the contractor and put the other between his own lips. Then, looking around on his table as if for a match, and finding none, he coolly took the \$50 note, twisted it into a lighter, set it aflame at the open grate fire, lighted his own cigar and, without changing countenance, passed the stump of the burning bill over to the contractor.

IMMANUEL KANT! A distinguished name, says the *New York Times*, for he who bore it was the most subtle of modern philosophers. Kant quickened thought and was the father of modern rationalism, and still a God-fearing man. Kant outlived the last century and was eighty when he died, in 1804. Philosophers—all save M. Voltaire—do not know how to make money, and their descendants do not fall heir to rich estates. Fräulein Benigna Kant, a grandniece of the author of the "Criticism of the Pure Reason," died recently at the poorhouse at Mitau, in Courland, aged seventy-two. She was destitute, without friends, and so passes away the last descendant of the great Königsberg philosopher.

INVEST YOUR SAVINGS

You would, if you knew that each month's savings can be invested as saved.

By our plan each dollar is put to work as soon as saved, and is giving the earning power of ten.

You can begin an investment with us if you have a few dollars laid by. \$25 will do for a \$500 investment.

Remember our strong point—PERFECT SAFETY.

Needed Advice.—A paper published in Paris recently contained the following unique advertisement: "A young man of agreeable presence, and desirous of getting married, would like to make the acquaintance of an aged and experienced gentleman who could dissuade him from taking the fatal step."

Its Value.—"What do you think of this persistent demand for arbitration?" asked a diplomat at The Hague. "Well," answered the gentleman from Germany as he pensively exhaled a cloud of smoke, "I am inclined to think that if we manage things with discretion it can be prevented from becoming a *casus belli*."—*Washington Star*.

How They Talk and Think.—SHE: "It always exasperates me to meet Josephine Jenkins, whom you used to be sweet on."

HE: "Why, my dear?"

SHE: "She always looks at you as if she could have married you if she had wanted to."—*Chicago Record*.

A Cheerful Chap.—MAUD: "Dick proposed to me last night."

ELLA: "What did you tell him?"

MAUD: "I said he had better ask mamma, and what do you think the wretch said?"

ELLA: "Goodness knows!"

MAUD: "He said he had asked her already, and she wouldn't have him."—*Tit-Bits*.

A Safe Refuge.—"Tom," said Jimmy, "do you know that some day the world will be burned up with fire?" "So I have heard," replied Tom. "But, Tom," went on Jimmy, who was deeply concerned about the approaching catastrophe, "what will you do when the world is burned up?" "Oh," replied Tom, with an air of one who has provided for all contingencies, "I shall go out to Uncle Billy's and stay."—*Detroit Journal*.

A Unique One.—Talking about the school commencements, one of the best advertisements we have seen is that of the colored principal of a log-house school in the rural district. It reads:

"We is to hold a commencement of the endin' of this school on the 21 of June. Miss Williams will play the organ—if the planner tuner fixes it in time. If not, there will be banjo pickin' and spellin' an' definin'."—*Atlanta Constitution*.

An Impertinent Personage.—"Did you ever hear of St. Dunstan?" asked the man who was chewing his lead pencil. "St. Dunstan?" answered the friend. "Certainly. What was there so remarkable about him?" "What was there remarkable about St. Dunstan? Why, great Scott, man, don't you know that his name is the only thing in the English language that furnishes a rime for 'Funston'?"—*Washington Star*.

In Kansas.—FIRST POPULIST: "We expelled the deacon from the party for mixin' religion an' politics."

SECOND POPULIST: "Mixin' religion an' politics?"

FIRST POPULIST: "Yes; he'd go to a political meetin' an' he'd fall asleep in the middle of a speech, b'gosh! jest like if it was a sermon."—*Puck*.

After the Explosion.—MRS. JONES: "Where's Mary?"

MR. JONES: "I sent her to find out where the escape of gas was."

MRS. JONES: "Did she tell you how it came to explode?"

MR. JONES: "No."

MRS. JONES: "How's that?"

MR. JONES: "She hasn't come back yet."—*Pick-Me-Up*.

LARKIN SOAPS

OUR OFFER FULLY EXPLAINED IN LITERARY DIGEST, MARCH 25TH.

THE TREATMENT OF RHEUMATISM BY TARTARLITHINE.

Stuck to His View.—"And now, Cassimere," rapturously whispered the young man, it only remains for you to name the day." "I will marry you, Orlando," she replied, as the blushes chased each other over her face, "on the first day of the twentieth century." And Orlando abjectly surrendered the point that had been so long in dispute between them. In defiance of every dictate of reason, common sense, and the plainest elementary principles of mathematics, he murmured: "You are right, dearest. It begins January 1, 1901!"—*Chicago Tribune*.

Current Events.

Monday, June 10.

—The Secretary of the Navy receives the report of Captain Chadwick, of the Schley-Hodgson controversy.

—A severe engagement takes place at Imus in the Philippines.

—It is decided that every man who participated in the battle of Manila Bay will receive a medal of honor.

—Charles E. Littlefield, Republican, is elected to Congress to succeed the late Nelson A. Dingley, of Maine.

—Extensive military preparations are reported to be taking place in the Transvaal.

—The Pope creates eleven new cardinals and a number of bishops.

—Baron von Bülow in the Reichstag defines Germany's attitude on the Samoan question.

—The Spanish Chamber of Deputies approves the bill ceding Spain's Pacific islands to Germany.

Tuesday, June 10.

—President McKinley receives the degree of D.C.L. from Mount Holyoke College.

—Admiral Watson arrives at Manila and raises his flag on the *Baltimore*.

—New South Wales votes in favor of Australian federation.

—General Wheaton occupies the Filipino town of Perez das Marinas.

Lowest Rates West.

Rates to the West are lower via Nickel Plate Road than via other lines, while the service is excelled by none. Three fast trains are run every day in the year from Buffalo to Chicago. The day coaches are of the latest pattern, are elegantly upholstered, and have all the modern improvements, such as marble lavatories, steam heat, lighted by kerosene gas, while colored porters are in charge to look after the wants of passengers, especially the ladies and children. Vestibuled buffet sleeping-cars are run on all trains, while the dining-cars and meal stations are owned and operated by the company and serve the best of meals at moderate prices. If your ticket agent cannot give you all the information you desire in regard to rates, routes, etc., address F. J. More, General Agent, Nickel Plate Road, 207 Main St., Buffalo, N. Y.

Comments: "Too many duals for a first-class problem"—M. W. H.; "A high-wrought, happy Hollander"—I. W. B.; "Well-constructed, variations very good"—F. S. F.; "A fine composition"—C. R. O.; "A good one"—R. M. C.; "A first-rate two-mover"—C. F. P.; "One of the best two-ers I have tried"—C. D. S.; "Key rather difficult to find"—C. F. McM.

The reason so few got this problem is that so many selected R-B 5 and R x P as the key-move. Neither of these will do.

The London International Tournament.

LASKER STILL HOLDS FIRST PLACE.

The first part of the Masters' Tournament (14 games each) was finished on June 19, with Lasker leading. The following is the full score:

Total won.	12	11	10	9	8	7	6	5	4	3	2	1	0	Lost
Teichmann.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Tinsley.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Bird.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Lee.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Mason.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Showalter.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Steinitz.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Cohn.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Tschigorin.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Blackburne.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Schlechter.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Janowski.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Pillsbury.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Maroczy.	12	11	10	9	8	7	6	5	4	3	2	1	0	0

Teichmann.	12	11	10	9	8	7	6	5	4	3	2	1	0	0
Total lost.	12	11	10	9	8	7	6	5	4	3	2	1	0	0

The second part was begun on June 20. At the time of going to press the score stands:

Won.	Lost.	Won.	Lost.
Bird.....5½	12½	Mason.....7½	6½
Blackburne.....11	7	Pillsbury.....11½	6½
Cohn.....8½	8½	Schlechter.....11	6
Janowski.....14½	5½	Showalter.....9	9
Lasker.....14½	5½	Steinitz.....8	10
Lee.....9½	12½	Tinsley.....3	13
Maroczy.....11½	6½	Tschigorin.....9½	13½

The Old and the New.

Steinitz is credited with being the inventor of the so-called "new school" of Chess. The difference between the old school and the new was well illustrated by Anderssen when he was asked years ago for his opinion of Kolisch and Steinitz as

Chess-players. "Kolisch is a highwayman," he said, "and points the pistol at your breast: Steinitz is a pickpocket; he steals a Pawn and wins a game with it."

Games from the London Tournament.

BLACKBURNE BEATS LASKER.

The game in which the English expert beat the World's Champion is one of the finest specimen of Chess. Blackburne had a deep and brilliant combination which Lasker didn't see. This game gives Blackburne a fine chance for the Brilliance Prize.

Notes.

(a) If P-K 3, the Caro-Kann opening, then 4, P-K 5, and the game is turned into a French with White an extra move ahead, as Black, sooner or later, must play P-Q B 4. The present line of play brings the Q B into action, but Black labors under other disadvantages, notably a weak K P, and a retarded development of his King's side.

(b) Intending ... B-B 5.

(c) To guard against P-B 5, followed by B-B 4.

(d) Black is tied up badly. This attempt at getting relief does not help him, but infuses new interest into a hitherto very one-sided affair.

(e) Not B x P, because of 21, Kt x B, Kt x Kt; 22, B-B 4.

(f) His only chance of prolonging the struggle. Kt x Kt or any other move instead would lose speedily.

(g) Black evidently relied upon this resource in conjunction with the fact that if checked his King moves, discovering check. Lasker, however, is equal to the occasion.

(h) The termination is most trenchant.

Orthodox Mohammedans are forbidden to make or use any "graven image," consequently their Chess-men have no resemblance to human figures. A "broad" Moslem would have no objection to playing with "Stannton" Chess-men, but formerly the Turks and Arabians would not play with pieces to represent men. It is said to have been different with the Persians, who are not "orthodox."—*The Cheltenham (Eng.) Examiner*.

The Literary Digest

VOL. XIX., No. 2

NEW YORK, JULY 8, 1899.

WHOLE NUMBER, 481

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

REINFORCEMENTS FOR THE PHILIPPINES.

WITH the reports from Washington that the army in the Philippines will be increased to 40,000 or 50,000, many demands are heard that it be increased to 100,000 or more, and much dissatisfaction is expressed at General Otis, principally because he persists in trying to crush the native uprising with 30,000 men. A considerable number of papers are demanding his recall. The most important opinion recently expressed upon the situation was given by Dr. Charles A. McQueston, of General Otis's staff, upon his arrival at San Francisco from Manila. He said in an interview:

"Unless troops, thousands of them, are sent to the aid of our men there, they will be driven back into Manila in the course of the next few months. During the rainy season our men simply can not stand the climate. Fifty per cent. of them will be incapacitated by sickness, and the territory overrun will have to be abandoned. Manila will be in a state of siege again.

"Our officers and soldiers have accomplished wonders and have proved themselves the best soldiers in the world. But nothing decisive has come of it, because our men were not in great enough force. One of the great dangers that our men have to face is the climate. The newcomers will be at a disadvantage, because the volunteers who are returning home are inured to the climate. This will make more men necessary than we would otherwise have to put in the field. As a matter of belief, the Filipinos think they have the Americans licked already.

"One solution of the situation might be to enlist colored men from the Gulf States, and this might settle some of the race questions of that section. These men would be better able to stand the climate and this is around Manila, and it has been proved that they are good fighters.

"I want to say a word for the Western volunteers. They make the finest soldiers in the world, and their fighting qualities are wonderful. But the volunteers all want to return home, and I hardly think that the plan to enlist three skeleton regiments from the volunteers now in the Philippines will be a success. The

men enlisted to fight for their country, and they are not the kind of men who want to stay and fight an insurrection for money or the fun of fighting."

Some of the Republican papers do not hesitate to criticize the Administration sharply, the Portland *Oregonian* going so far as to cast doubts upon the wisdom of renominating Mr. McKinley. The Minneapolis *Tribune* reports public sentiment in that part of the country as demanding a more definite and vigorous course in Luzon, and the San Francisco *Chronicle* calls for an extra session of Congress to decide upon a policy. The sentiment of many papers is similar to the following opinion expressed by the Philadelphia *North American*:

"Not ten thousand, but a hundred thousand men should be despatched. And were the War Department headed by a man capable of grasping large situations and acting with an eye to the future, that number of soldiers would now be enlisted, drilled, and ready for delivery in the Philippines. But all this preliminary work is yet to do.

"The war must be ended, and it can be ended only by an army big enough to act quickly and overwhelmingly wherever the insurgents keep the field. In spite of the censorship and the fatuous cheerfulness of the War Department, every day's fighting confirms this view. The Filipinos are battling more desperately and doing more execution than in February. The official despatches have crushed them scores of times, but always they return to the contest with increased resolution. They are brave men, and will submit only when they are made to recognize the hopelessness of their cause. Solely by the presence of a great army can they be made to understand the uselessness of waging war against the United States, a first-class power.

"The Republican press of the Union, in common with the intelligently patriotic portion of the Democratic press, supports the demand of *The North American* that the President brush aside Alger, confront the real situation, and finish the war by landing an adequate army. There is every reason in justice, mercy, and policy why Mr. McKinley should do this, and do it promptly.

"Our volunteers, scanty in numbers, worn out by incessant fighting, and discouraged by the failure to receive the reinforcements which they had a right to expect, are refusing to reenlist, and insisting on returning to this country. It is reported from Washington that even General Funston has reached the point of disgust, and will come home with his men. General Hale and many other officers have followed his example.

"The death roll in the Philippines has already outstripped that of our war with Spain, and what has been gained? War, as Otis conducts it, or as he has been compelled to conduct it, in the end is deadlier than war waged on a large scale, for this sanguinary skirmishing can be kept up indefinitely.

"For the sake of our soldiers, for the sake of the country's prestige in the world's eyes, and, lastly, for the sake of the Republican Party, President McKinley must rouse himself. It is a Republican Administration that is carrying on the war. As it is well or ill conducted, the party will be held responsible. Up to date only the War Department seems pleased with results. The fact must be faced that no matter how imperative the reasons may be for slaughtering the Filipinos, and having our men slaughtered in return, this is not a popular war. And the longer the war endures, the more unpopular it will become. There were cheers for Dewey, and immediately afterward cheers for Aguinaldo, at a lecture given in Philadelphia on Monday night by a returned soldier. The significance of that incident, which is typical of deep-seated public opinion throughout the republic, is not to be lightly waved away. . . .

"President McKinley, besides being commander-in-chief of our army and navy, with full power at this time to call out an army

strong enough to overawe the Filipinos, or to stamp out, if necessity compels, the last spark of rebellion, is the guardian of the interests of his party. As such guardian, and putting his duty upon no higher ground, it behooves the President to act largely and swiftly.

"The Philippine war is a horror. It has brought a sense of bloodguiltiness upon the American people which can not longer be endured without vehement protest.

"Force the fighting and end this horror."

The independent and Democratic press make still more radical proposals, many of them persistently urging that General Miles be sent to quickly make an end of the war. The *Springfield Republican*, one of the leaders of the anti-expansion press, warns the President that if he tries to satisfy the ultra-belligerent wing of his party, he himself will fall at last a victim to their pugnacity, and that he had better seek other advisers. The *Chicago Chronicle* (Dem.) voices as follows the demand that Miles be substituted for Otis:

"General Otis has been in command at Manila longer than any general officer of the Civil War retained a command unless he showed by the best results that he was competent to hold it. Active war with the Filipinos has continued for the last four months, and so little has been accomplished that no sign of encouragement appears. The rebels have not been permanently driven out of any territory beyond the reach of the guns in the outposts of Manila. It may be said that General Otis has accomplished no more because he had not soldiers enough to overrun a greater extent of territory and to hold what he had gained. But we are constantly assured that he has said that he wanted only 30,000 soldiers, all of which he had in the regiments under his command.

"To be sure, General Otis has not encountered any defeats. His hundred or more battles have all ended in victory. But the victories have been fruitless. No progress has been made toward the permanent conquest of the islands which we bought for \$20,000,000, receiving only a quitclaim title, which General Otis was to perfect. It is no better now than it was when Spain signed the act of cession by which the Philippines nominally passed to American ownership. And if General Otis remains in command, pursuing the same policy, the United States will have no greater scope on the islands for years than that which they now possess.

"General Miles should be sent to the Philippines with enough troops to overwhelm the rebel forces and with power to establish a settled government. We can now scarcely retreat from the Philippines without national discredit. They are on our hands and we must make the best of it. Reinforce our armies there—place a competent general in command, conquer a speedy peace and make it permanent. Then fulfil our obligations to the people of the islands."

Mr. H. Irving Hancock, a Manila correspondent of *The Criterion*, New York, throws some light on the much-mooted question of native sympathy with our efforts. He writes:

"As to loyalty, these little brown people surely show it to their own cause. Looking out through his office window across the plaza of Malolos, General MacArthur pointed to a group of amigos, as the pacificos here are called. 'When I first started in against these rebels,' said the general, 'I believed that Aguinaldo's troops represented only a faction. I did not like to believe that the whole population of Luzon—the native population, that is—was opposed to us and our offers of aid and good government. But, after having come this far, after having occupied several towns and cities in succession, and having been brought much into contact with both insurgents and amigos, I have been reluctantly compelled to believe that the Filipino masses are loyal to Aguinaldo and the government which he heads.

"It is beyond any question that these amigos know much about the movements and plans of the insurgents. They could tell me where the insurgents are to be found in greatest force; they could tell me where Aguinaldo gets his food supplies; they could tell me the numbers of the enemy at various points. Do you think they are doing it? Neither by threats, promises, offers of reward, nor by assurances of safety can I persuade one of these amigos to talk against the insurgent cause. They tell me that they are friends of ours; that so far as the insurgents are concerned they know nothing. And no art that we are master of will get any in-

formation from them. At first I thought this reticence was due to fear of Aguinaldo's vengeance. It can not be that, for the most stupid of these natives within our lines must now realize that Aguinaldo can never hope to take Manila."

THE SAMOAN SETTLEMENT.

GENERAL satisfaction is expressed at the agreement which the Samoan commissioners have reached. The impatience with which the American press regarded the spilling of American blood in the quarrel of petty kings has naturally turned to gratification at the news that there is likely to be no more of it. The fact that the kingship will be abolished will cure at least the quarrels that have arisen over that feature of the Samoan government, and the surrender of about four thousand rifles by the natives is another omen of peace. The form of government proposed by the commission provides for a legislature elected by popular vote; but the real governing body will be a council of three, one delegate from England, one from America, and one from Germany, who will advise and assist a governor. The confirmation of Malietoa as king is considered a victory for Chief Justice Chambers, who is an American, for he decided in favor of Malietoa and against Mataafa at the beginning of the recent troubles. As there is now no throne to claim, however, the confirmation of Malietoa is a rather barren victory for him, and is considered really little more than a confirmation of the chief justice's judgment. Whatever troubles arise in the future will at least be from clashes of international, and not of native, interests.

How the Trouble Arose.—"The long tenancy of a place in our foreign relation by the 'Samoa question' has given it an importance to the people of the United States which may become sentimentally misleading. We first appeared upon the stage as champions of the Samoans against Teutonic aggression, and we no doubt saved that simple and kindly people from receiving the full measure of German wrath. Germany wanted to grab all Samoa. To this project three parties objected, the United States, Great Britain, and the Samoan people themselves. While our protests were diplomatic, they went very close to the verge of hostilities, and in conjunction with England we won a triumph over Bismarck at Berlin to which neither he nor Germany could ever be reconciled. The Samoan protest was eminently practical.

"The Samoans gave a German expedition as sound a flogging as ever freebooters received. The smart of this defeat stung deep in the German pride, for at that time the Kaiser's navy was very new and inclined to sport a chip on each shoulder. Possibly the ambush into which the American and British forces were led by Germany's protégé Mataafa, a few weeks ago, may have been regarded in Berlin as offsetting the German defeat of ten years ago, but it must in candor be said that the Germans, if they felt satisfaction, kept it to themselves.

"Our tangible interest in Samoa is found in our possession of Pago-Pago, or Pango Pango Bay, on the island of Tutuila, for a naval station. This we did not grab, but fairly purchased, paying the Samoans a good price in cash and holding it in fee simple. We are now busily employed in putting up our station on the harbor, which is one of the finest in the Pacific, far superior to that of Apia, which is open to the hurricanes. As we have no trade to speak of in Samoa, and very few citizens there, it would not be an unhappy solution of the 'question' if we took Tutuila to ourselves, and left Great Britain and Germany to squabble together for the rest of the group."—*The Transcript, Boston*.

Stevenson's View.—"The decision of the three Samoan commissioners to abolish the kingship is not so radical as it sounds. No white man has ever studied the Samoans so intimately and under such advantageous conditions as the late Robert Louis Stevenson, who was neither an official nor a trader, and who was fond of the natives and greatly admired by them, and he declares that he never succeeded in finding out what was involved in the kingship of Samoa. On the whole, he thought the office carried with it, according to native conceptions, rather less power than the presidency of a debating society.

"The chiefs of each of the five clans carried with it well-defined

prerogatives; the kingship seemed to be merely the primacy among these chiefs, and depended partly on the suffrages of the clans and partly on the military prowess of one of the chiefs. So far as Mr. Stevenson could understand, the native traditions regarded the votes of the five clans as essential to a good title to the kingship, but he intimates great doubt whether any chief ever got the five votes. Failing in that, his only resource was to defeat the clans that withheld their votes. The Berlin Treaty provided that if there should be a contest for the kingship it should be determined by the chief justice in accordance with native laws and usages. But there are no native laws and usages except that one aspirant shall defeat the others, and the parties to the Berlin Treaty refuse to allow this trial of arms. Hence the difficulty of Chief Justice Chambers last winter in obeying the treaty and satisfying the natives; the treaty assumed something that does not exist. . . .

"Neither Mataafa nor Malietoa Tanu has made any great sacrifice in waiving his claims to the kingship; they can enjoy the chiefship of their respective clans, and the former can enjoy the chiefship of some or all the other clans, and unless one of them had been able to crush the other in war this is all they would have got under the native laws and usages had the foreigners kept their hands off."—*The Journal of Commerce, New York.*

"The periodical contests for royal honors have been the starting-points of all the disturbances in the islands. It is like the *antebellum* games of football at Harvard. The ball was hucked—and that was the last seen of it. The players immediately engaged in a free fight, which had to be suppressed by the authorities. The only use for the office of king in Samoa is to precipitate a fight. When the fight is over, the king puts away his robes for his successor to battle for. With its abolition will probably disappear all dangerous controversies in the islands."—*The American, Baltimore.*

OUR DISCORDANT LABOR LAWS.

MR. S. N. D. NORTH, a member of the new United States Industrial Commission, points out that while in Great Britain, France, and Germany the parliaments make factory laws that are uniform throughout each country, we have left the matter to the individual States, with a resulting medley of labor legislation that is hardly conducive to the prosperity of either capital or labor. Writing in *The North American Review*, he says:

"The diversity of the labor legislation of the several States is almost startling. There are no two States of the forty-five in which the conditions governing industry, so far as they are regulated by the State itself, can be described as at all similar. Examining all these laws, in all these States, noting their points of variation and contradiction, they impress us as a legal farrago, lacking the most rudimentary elements of a uniform system, such as should prevail in a country which boasts equality of rights to all its citizens. To illustrate by obvious instances, the laws fixing the hours of labor for women and children in manufacturing establishments vary from fifty-six in New Jersey, fifty-eight in Massachusetts, sixty in other New England States, in New York, and Pennsylvania, to seventy-two in Southern and Southwestern States. The age limit at which children can be employed in these establishments varies from fourteen to thirteen, twelve, and eleven, until it strikes certain States where there is no legal limit whatever. The employers' liability laws are as wide in their provisions as the continent itself. Factory inspection is enforced with varying stringency in half a dozen States, and entirely omitted in the rest. Such instances of discriminating legislation are beginning to tell in the reinvestments of capital and the relocation of industries. They reveal an unequal development which demands an intelligent effort in the direction of unification.

"In one sense it is a situation beyond the power of regulation. Congress can not interfere, for these are matters that appertain strictly to the States. The most the Industrial Commission can do is to supply an analysis of these conflicting statutory provisions and a report of the actual operation of the various labor laws, upon which it can base recommendations showing which of them can be adopted with advantage by such States as do not now possess them. The first step in the direction of intelligent unification will thus have been taken. The rest must be left to time

and public opinion. The current will at least have been set in the right direction, and we may hope for the ultimate upbuilding of the semblance of a national code of labor laws, under which the working classes can be assured that they are receiving, so far as the State can determine it, the same treatment and consideration, whether they live and work in an Eastern State or a Western State, and the employer can feel sure that the laws which regulate his business are sufficiently alike to give no legal advantage to any competitor anywhere in the Union."

But the differences of climate and civilization in different parts of our country present, in Mr. North's view, obstacles to uniformity of labor laws that are "formidable almost beyond the point of exaggeration."

RECENT EXPERIMENTS WITH ALCOHOL.

LITTLE attempt is made to dispute the conclusion tentatively reached by Prof. W. O. Atwater, of Wesleyan University, that two ounces a day of alcohol can be used by the human system as a food, a conclusion based upon scientific experiments recently made by the professor himself and extending over a number of weeks. It was supposed by many that the result of these experiments (which, however, have not been completed) might be a considerable change in public opinion regarding alcoholic beverages. On the contrary, a tendency is evident in the press to take into consideration the personal experiences that many unscientific individuals have had with alcohol; and so far as can be judged from press comments, most of those who have considered the subject retain about the same opinions that they held concerning alcoholic beverages before the announcement of Professor Atwater's discovery.

Will the False Prophets Cease Their Rant?—"It is like the irony of fate to hear that an institution supported by the Methodist church, which has among its members the most rabid cranks on the subject of alcohol, must furnish the evidence dispelling the lies and misrepresentations that have formed the stock-in-trade

CHARLES E. LITTLEFIELD (REP.), OF MAINE.
Elected to Congress to succeed the late Nelson Dingley, Jr.

of the whole fanatical temperance brood. Will these false prophets now cease to rant about 'alcohol as a poison'; will they revise their text-books on temperance physiology and cease their false and misleading teaching in the public schools; will they be honest enough to admit that alcohol is a food and not a poison that in any quantity, large or small, is harmful and not useful; will they admit that they have published lies which are directly opposed to the results of the latest and most reliable research, and to the opinion of the leading authorities the world over; will they accept as demonstrated fact the result of the experiments just made by Professor Atwater at a cost of a great deal of labor and money furnished by the Methodist church, which stands committed to total prohibition?

"Professor Atwater deserves great credit for having established by scientific methods the accuracy and truth of the position upon which *The Wine and Spirit Gazette*, in common with all conservative liquor-trade advocates, has made its fight against fanaticism, intolerance, and narrow-mindedness. Will the cold-water cranks and fanatics in their mistaken effort to make man better respect the one thing which no upright man need fear, the truth? We pause for an answer."—*The Wine and Spirit Gazette, New York.*

Other Facts Still Remain Facts.—"To denounce as incorrect or dishonest the statements of these gentlemen who are conducting their investigations in all candor and good faith would be at once foolish and bigoted. To arbitrarily assume that their conclusions are of necessity correct is unnecessary, and perhaps unwise. The question is one for scientific demonstration, and scientific investigation is not only not feared, but is welcomed and courted, by every right-thinking man or woman interested in the temperance cause. We have again and again urged that scientific men direct their attention more critically to the consideration of the subject of the physiological effects of alcohol, and we heartily welcome the efforts of Professor Atwater and his coadjutors. If it shall prove that their conclusions are correct it may be that certain of the temperance workers will be called upon by the facts of science to revise and correct their views and methods. If so, well and good. The whole of truth never hurt the whole of virtue; and as the gentleman at the head of the investigation himself says, 'There is one thing which we must always seek and one thing which we need never fear—the truth.' If their views, on the other hand, shall, after all, prove to be erroneous, the demonstration of their error will not be long delayed."

"Our own words, written more than two months ago in anticipation of this very announcement which Professor Atwater has now made, are even more applicable now than then: 'Were it even demonstrated that alcohol had a food value beyond that of bread, that fact would not at all change the relation of the waste of a billion dollars every year for drink to the widespread poverty and the grinding hard times. That fact would not at all change the relation of drink to crime, or make one whit less terrible that horrible procession of outrage and murder that follows in the saloon's wake. No scientific discovery of any hitherto unknown chemical property of alcohol can change the well-known character of alcoholic drink for the destruction of homes and the blighting of lives; and no revelation that scientists may promise or bring to us will ever change the duty of the citizen, who cares for the welfare of his fellow men, toward the liquor traffic.'"—*The New Voice (Proh.), New York.*

Theory and Practise.—"At a farmers' institute in Colorado once on a time, one of the professors from the agricultural college delivered a lecture upon feeding animals, in which he told what food values were shown by chemical analyses to exist in the various grain and grass products, and described a combination of fodder which should best provide the elements of nutrition for milch cows. At the conclusion of his remarks one of the farmers approached and asked the learned man to come out to his barn and talk to his cows. 'For,' said he, 'I've tried the mixture you say is best, and my cows don't analyze it that way.'

"According to the Old Testament, Noah, naturally having a surfeit of water, inaugurated the series of human experiments with alcohol which has continued down even to the present day. The recorded result in the case of the diluvian patriarch was shame and confusion, and there has been a unanimity of opinion of all writers, except Omar Khayyám, ever since as to the evil

effects of alcohol on the human system. But in spite of the warnings of writers of all ages, every generation has found men who have not only persisted in drinking alcoholic liquors, but who have refused to believe that the practise harmed them."

"The last analysis will continue to be made by the individual as heretofore. Those to whom alcohol is a food will continue to enjoy its nutritive powers, while those whom spirituous beverages poison will either leave them alone if they are wise, or suffer their penalties with resignation if they share the frailty of humanity. Glass cases may help out the scientists, but they do not change human nature."—*The Republican, Denver.*

We are Not All Swedes.—"We are informed that the person who was confined in the box and experimented on was a Swede, a workingman in robust health. Now, it is well known that Swedes and Scotchmen, living as they do in a cold and raw climate, have developed in the course of generations a special oxidizing apparatus in their insides by which they can turn large amounts of alcohol into energy and still retain placid and unruffled countenances. The experiment was evidently a special one. You can not generalize from a Swede or from a Scotchman in this matter. They are built on purpose to oxidize alcohol, and are trained from infancy in the art. Professor Atwater's experiment merely proves that alcohol is food for a Swede. In the same way he might have shown that an ostrich can develop energy from brass buckles and wire nails. It would not follow that a cassowary possessed the same power. A slight presumption might arise, but surely the burden of proof would still rest on the cassowary.

"Secondly, we understand that the Swede received only two ounces of alcohol a day, equivalent to three ordinary drinks of whisky. As John Frowdie said after eating the pigeon-pie, 'Three small pigeons and a trifle of crust is only an aggravation.' The Swede was working hard all the time trying to make a record on a dynamometer, and six wine-glasses of whisky were far within the limits of a reasonable test. What the experiment proves is that a very little whisky per day is a food to a certain kind of man. To establish a general rule, a Methodist, a Baptist, and a high-church Episcopalian should be tested. Then, if the results were tabulated and averaged, a general law might be formulated with the usual array of exceptions, for 'what is one man's food is another man's poison.' We are inclined to think that the old rule, based on common sense and experience, would be reestablished; that is, that alcohol is a stimulant, and, unless taken in very small quantities, ruins a man's capacity for work, especially

TRYING TO KEEP STEP TO PLATFORM CHANCES.

—*The Times, Denver.*

for intellectual work. It is not necessary to put a man in a box to prove that."—*The Courant, Hartford.*

Dangers of Overfeeding.—"Professor Atwater's announcement that if a man absorbs no more than two ounces of alcohol per diem the liquor gives sustenance is interesting. But its practical value is damaged by the fact that many men, in the fear that they will not get the full two ounces, take two ounces and a half, or even more, in which case the effect is deleterious, not to say disorderly. An overdose of beefsteak and potatoes does not produce such vociferous and undesirable results."—*The Dispatch, Pittsburgh.*

PINGREE AND ALGER IN ALLIANCE.

THE announcement that Governor Pingree, of Michigan, will support Secretary Alger in his candidacy for the Senate (see THE LITERARY DIGEST, June 10) brings something like bewilderment to a number of Republican journals. The Administration papers that have been loyal to the Secretary of War have considered Governor Pingree in the light of a political heretic, on account of his Socialistic and free-silver leanings; while the papers that approve Governor Pingree have in many cases been among the hithermost in their denunciation of General Alger. The union of the two on a common platform, therefore, has caused no small stir. The two main planks of the Alger-Pingree platform are popular election of Senators and opposition to trusts; Mr. Alger announcing, in addition, that no money will be used during the campaign for buying votes. What makes the campaign of national interest is the fact that General Alger's ally, Governor Pingree, opposes the Administration's expansion policy, and is an implacable foe of Senator Hanna; while General Alger's opponent, Senator McMillan, is a strong Administration man. This places the President in the position of leaving the enormous and recently enlarged patronage and power of the War Department in the hands of one who can use it to aid his political enemy. Governor Pingree, in defeating his political friend and supporter, Senator McMillan. Whether the new alliance will result in a change at the War Office, therefore, offers new material for speculation. Mr. Alger has said, in several interviews, that he does not intend to resign.

Alger Should Not Sully His Clean Record.—"General Alger has formed and proclaimed an alliance with that gubernatorial Coxey, Hazen S. Pingree.

"At a time when he is expected to resign from the Cabinet to seek a seat in the Senate Secretary Alger ought to be especially careful to keep his political record clean and creditable. No man who has been associated with the present Administration has earned the commendation of history more deservedly than he. In the trying days between the destruction of the *Maine* and the declaration of war with Spain he took a position to which he, his friends, and his posterity can point with unqualified pride. Throughout this momentous period he stood alone, unmoved and immovable, for the one policy which the verdict of history will pronounce right. Tremendous pressure was exerted upon the Government to induce it to forget its duty. Almost daily the Administration was pushed to the point of yielding. But the Secretary of War stood firm as a rock for the honor of this republic, and his stand stemmed the tide in the Cabinet for peace at any price.

"The United States owes to General Alger

a debt of gratitude which should never be forgotten or belittled. But his splendid record is to-day in danger of being blotted, not by his malicious enemies, for he has triumphed signally over them all, but blotted by his own hand. At such a time it must be the fervent hope of every man who realizes how but little more than a year ago he saved this nation from overwhelming disgrace in the eyes of the world, that he will not cast his lot permanently with those political shysters whose only principle is vote-catching, and whose sole claim to popular consideration is their demagogism."—*The Inter Ocean (Rep.), Chicago.*

Two Views of Mr. Alger.—"In its discussion of a public character in its Sunday issue, *The Times* [Ind. Dem., New York] spoke of him as one of a 'type in the Senate chamber—men without scruple or shame, greedy, selfish, walking conspiracies against honest lawmaking; of poisonous influence and dangerous power, lovers of money, rhinoceros-hided, a loathsome and horrible product of Republican institutions.' Of this public man *The Times* says his name is detested; connects it with 'slick work' and with the 'effluvium of corruption'; says his presence is a 'defilement and a damage' and a 'smirch,' and insinuates that his speeches if made in the Senate would be for the benefit of his own pocket. Finally *The Times* says that 'hut for the triple brass' of this public man's 'assurance he would have been driven from his place. He would go away and hide. Oblivion would be the natural and kindly end of his foul career.'

"It happens that the man against whom this billingsgate is thrown is Secretary R. A. Alger, of Michigan, known of all men here as at least an honest, upright citizen; as a gentleman with unbounded liberality, with charity for all men; as a man of large affairs successfully managed to the profit of himself as well as to that of hundreds of others. The offense in the present instance, it appears, is to cherish an ambition, without the permission of the *New York Times*, for election to the United States Senate.

—*Detroit Evening News*—

—*St. Paul Dispatch*—

—*The Denver News*—

For this and nothing else, so far as we can discover, *The Times* heaps abuse on libel, falls into screams of anger like a fishwife gone demented, makes charges it could not prove in a thousand years, and establishes a record that, were Ananias on earth again, would turn him green with envy."—*The Journal (Rep.)*, Detroit.

Saul Among the Prophets.—"The appearance of General Alger among the anti-trust reformers is as great a surprise as was that of Saul among the prophets, the class which he had previously persecuted, driving some into exile and others to death. If the public intelligence is not greatly abused General Alger's millions, safely invested and liberally productive, are his share of the profits of the lumber trust, one of the most powerful, wealthy, exclusive, and oppressive trusts existing under the protection of federal tariff laws. If Alger, like Havemeyer, is going to turn state's evidence against the trusts the people will appreciate his services. But they will hardly be disposed to rise up and reward him with a United States senatorship for his betrayal of his former 'pals' in a consummate system of public robbery.

"As to the method of electing United States Senators, sagacious people will urge General Alger to use all his efforts for a senatorial election before the matter is left to a popular vote. If he ever gets to the Senate it will be while the people have no chance to express their opinion as to candidates. The latest convert to the system would inevitably prove its first victim."—*The Chronicle (Dem.)*, Chicago.

Alger Needs a Hint.—"There is little indication that Alger will retire from the Cabinet unless he shall receive a commanding hint. The Secretary is indifferent to, if not oblivious of, public opinion, and the proprieties of public life give him no concern if they conflict with his inclinations. He has already given great embarrassment to the Administration by retaining his portfolio in the face of the popular condemnation of Algerism as evidenced in the beef contracts. Should he fail to relinquish the office of Secretary of War while pursuing his campaign to capture the seat of a Senator who has always been in accord with the Administration, General Alger will add new embarrassment to the executive, inasmuch as the people of Michigan will regard his course as an evidence that he is Mr. McKinley's own choice for Senator. It is evident that the initiative must come from the President, who, in justice to Senator McMillan and the citizens of Michigan, can not permit himself to intervene in behalf of the political fortunes of a discredited member of his official household. To stay in the Cabinet would constitute a point of vantage for Secretary Alger, as it would enable him to employ the patronage of his office to further his canvass, while it would be accepted as a tacit indorsement of his candidacy by the President. Mr. McKinley can not afford, out of respect for his own dignity, to permit the Secretary

of War to thus avail himself of the prestige of the Administration.

"It is unlikely that Pingree and Alger, as a political firm, can hold together for any length of time, as they are, probably, the most incongruous firm ever joined together in American politics. But, be this as it may, President McKinley should firmly notify his Secretary of War that as a participant in an acrimonious campaign he is *persona non grata* in the Cabinet."—*The Ledger (Ind. Rep.)*, Philadelphia.

"As Senator McMillan is known to be the Administration candidate for Senator from Michigan, this announcement is virtually a defiance of President McKinley by Alger. It probably marks the parting of the ways between the two. Alger can not expect to remain in the Cabinet while waging war on the President's candidate.

"We don't know how strong Alger is in Michigan as compared with McMillan, but in Governor Pingree he has an ally who will insure a lively contest. Whatever its outcome, the people of the country will have reason to rejoice if it takes Alger out of the War Department and gives the President the opportunity to fill the place with a man in whom the country can repose entire confidence."—*The Tribune (Ind. Rep.)*, Minneapolis.

CURING THE TENEMENT-HOUSE BLIGHT.

THE sad picture presented by Mr. Jacob A. Riis in the article on "New York's Tenement-House Blight" (see *THE LITERARY DIGEST*, June 24) is much relieved by an article following it, telling of the efforts to remedy the tenement evils, and their encouraging success. New York, Mr. Riis tells us, has the worst housing system in the world. More than half New York's millions live in tenements, not counting those who live in the better class of flats. The magnitude of the problem of bettering the condition of these people, therefore, can readily be seen. One of the first lessons the reformers learned was that gentleness and "ladylike" treatment of the offending landlords were useless. Writing in *The Atlantic Monthly*, Mr. Riis says:

"Moral suasion had been stretched to the limit. The point had been reached where one knockdown blow outweighed a bushel of arguments. It was all very well to build model tenements as object-lessons to show that the thing could be done; it had become necessary to enforce the lesson by demonstrating that the community had power to destroy houses which were a menace to its life. The rear tenements were chosen for this purpose."

These rear tenements, built in the back yards of the other tenements, are themselves damp, dark, and disease-breeding, and in

UNCLE SAM: "Let's look pleasant, gents; we are all on the anxious seat."—*The Republic*, St. Louis.

—*The Journal*, New York.

addition cut off the light and air from the houses around them. An idea of their menace to life may be gathered from the following paragraph:

"A canvass made of the mortality records by Dr. Roger S. Tracy, the registrar of records, showed that while in the First Ward (the oldest), for instance, the death-rate in houses standing singly on the lot was 29.03 per 1,000 of the living, where there were rear houses it rose to 61.97. The infant death rate is a still better test: that rose from 109.58 in the single tenements of the same ward to 204.54 where there were rear houses. One in every five babies had to die; that is to say, the house killed it. No wonder the committee styled the rear tenements 'slaughter-houses,' and called upon the legislature to root them out, and with them every old, ramshackle, disease-breeding tenement in the city."

A law for the destruction of buildings dangerous to health or unfit for human habitation was passed in 1895, and the good work began. The Health Department kept a list of 66 old houses with a population of 5,460 people, and found that a quarter of the tenants died in five years. The worst houses were chosen and the tenants driven out. The owners, one and all, rushed angrily to the courts; but, to their surprise and dismay, the courts held with the health officers. Mr. Riis describes the moral effect of this victory as instant and overwhelming. The landlords gave up the fight, and a quiet but extensive campaign of repairs and sanitation was begun by slum landlords who feared the loss of their tenements. "Of 94 rear tenements seized that year," says Mr. Riis, "60 have been torn down, 33 of them voluntarily by the owners; 29 were remodeled and allowed to stand, chiefly as workshops; 5 other houses were standing empty and yielding no rent in March, 1899." In the worst of them all, the Mott Street Barracks, the infant death-rate in one year before they were torn down was 325 per 1,000, while the general infant death-rate for the whole tenement-house population was 88 per 1,000. "With entire fitness," remarks Mr. Riis, "a cemetery corporation held a mortgage upon the property." The effects of the destruction of these houses were soon apparent:

"In the 94 tenements (counting the front houses in; they can not be separated from the rear tenements in the death registry) there were in five years 956 deaths, a rate of 62.9 at a time when the general city death rate was 24.63. It was the last and heaviest blow aimed at the abnormal mortality of a city that ought, by reason of many advantages, to be one of the healthiest in the world. With clean streets, pure milk, medical school inspection, antitoxin treatment of deadly diseases, and better sanitary methods generally; with the sunlight let into its slums, and its worst plague spots cleaned out, the death rate of New York came down from 26.32 per 1,000 inhabitants in 1887 to 19.53 in 1897. Inasmuch as a round half million was added to its population within the ten years, it requires little figuring to show that the number whose lives were literally saved by reform would people a city of no mean proportions. The extraordinary spell of hot weather, two years ago, brought out the full meaning of this. While many were killed by sunstroke, the population as a whole was shown to have acquired, in better hygienic surroundings, a much greater power of resistance. It yielded slowly to the heat. Where two days had been sufficient, in former years, to send the death rate up, it now took five; and the infant mortality remained low throughout the dreadful trial. Perhaps the substitution of beer for whisky as a summer drink had something to do with it; but Colonel Waring's broom and unpolitical sanitation had more. Since it spared him so many voters, the politician ought to have been grateful for this; but he was not. Death rates are not as good political arguments as tax rates, we found out. In the midst of it all, a policeman whom I knew went to his Tammany captain to ask if Good Government clubs were political clubs within the meaning of the law, which prohibits policemen from joining such. The answer he received set me to thinking: 'Yes, the meanest, worst kind of political clubs, they are.' Yet they had done nothing worse than to save the babies, the captain's with the rest."

So much for the destructive part of the work. The other, the

constructive part, the building of tenements that admit light and air freely and pay five per cent. to the owners, at the same or less rent to the occupants than the dark and foul barracks, is a work as interesting and as full of promise. A number of capitalists formed a company, bought nineteen lots on Sixty-eighth and Sixty-ninth streets, west of Tenth Avenue, and built some tenement-houses. Mr. Riis says:

"When I went through them, the other day, I found all but 5 of the 373 apartments they contain occupied, and a very large waiting list of applicants for whom there was no room. The doctor alone, of all the tenants, had moved away, disappointed. He had settled on the estate, hoping to build up a practise among so many; but he could not make a living. . . . The rents are a little lower than for much poorer quarters in the surrounding tenements. The houses are built around central courts, with light and air in abundance, with fireproof stairs and steam-heated halls. There is not a dark passage anywhere. Within, there is entire privacy for the tenant; the partitions are deadened, so that sound is not transmitted from one apartment to another. Without, the houses have none of the discouraging barrack look. The architecture is distinctly pleasing."

The capital stock of the company has been increased to \$2,000,000, and the erection of a new block of buildings in East Sixty-fourth Street begun. The same company has built a hundred cottages and has land for two or three hundred more in the suburbs of Brooklyn, and most of the cottages are already sold—on the instalment plan. The price of the cottages averages \$3,100 and the monthly instalment, which includes the premium on a life-insurance policy, is a trifle over \$25. A Woman's Hotel Company is under way which will erect, at a cost of \$800,000, a hotel to shelter over five hundred guests at a price within reach of women clerks, stenographers, and nurses. The number of women in New York in need of such an establishment is said to exceed forty thousand. What the Mills hotels have done for men of small incomes is already well known. Mr. Riis says in conclusion:

"When I look back now to the time, ten or fifteen years ago, when, night after night, with every police-station filled, I found the old tenements in the 'Bend' jammed with a reeking mass of human wrecks that huddled in hall and yard, and slept, crouching in shivering files, upon the stairs to the attic, it does seem as if we had come a good way, and as if all the turmoil and the bruises and the fighting had been worth while."

LETTERS AND ART.

SARAH BERNHARDT'S HAMLET.

FRANCE is just now undergoing a widespread revival of interest in Shakespeare—almost as fervent as the enthusiasm which prevailed, through the influence of Garrick, in the last century, or, later, in the days of the Revolution, of Victor Hugo and the *Romantiques*. At the Comédie Française a French version of "Othello" has been acted before a conservative public with great success, and in another theater the greatest of French actresses has chosen "Hamlet" for the most ambitious attempt of her genius. The translation, by a master of French prose, M. Schwob, is a model of scholarship and skill. Jules Claretie, writing from Paris to the London *Athenæum*, thus narrates some of the features of this Shakespearian revival:

"I shall mention a small fact—one of those *petits faits* which Stendhal loved—which seemed to me very singular, very unusual. Among the papers offered for sale on the boulevards by the hawkers of Paris—patriotic novels, biographies of Paul Déroulède, or narratives in favor of or against Dreyfus—suddenly I heard 'Hamlet' shouted; yes, Shakespeare's 'Hamlet.'

"Ask for 'Hamlet'—complete edition! twenty centimes!

"And it was 'Hamlet' hawked about thus in the streets, a small edition with a yellow cover, printed by a house that publish popular pamphlets, and adorned by a very fair figure of the Prince of Denmark in dark costume, meditating on the skull of Yorick. The copy I bought bears this notice: 'Thirty-second thousand.' And on the back of the cover the publisher announces an edition of a similar sort of 'Quentin Durward' with the words sixteenth thousand. The mere fact that 'Hamlet' is hawked about in the thoroughfares of Paris appears to me what is called a 'sign of the times.' It consoles one for all the folly, twaddle, and coarseness which the public hawkers usually offer to their passing customers."

The common English view of Mme. Bernhardt's attempt is reflected in the London *Speaker*:

"Mme. Bernhardt's Hamlet is a curio. Her exploit is to serious histrionic art precisely what a model of the Laocœon group in wax or of Windsor Castle in blanc-mange is to the art of sculpture—a *tour de force* with an inappropriate material. This must happen whenever any woman impersonates any man in sober earnest, and not in merry jest as a professed travesty. 'Sir, a woman's preaching is like a dog's walking on his hinder legs. It is not done well; but you are surprised to find it done at all.' Johnson's impolite comparison would have applied with even more force to tragedy-queens figuring as men. It may be argued that there is a colorable pretext for the adventure in the case of Hamlet, because of the woman in him. He had the artistic tem-

perament, and, as Balzac says in one of his recently published letters to Mme. Hanska, 'les artistes sont un peu femmes.' Hamlet had the fragility and mobility of a woman, and a touch, too, of hysteria. But this is not the same thing as an exchange of sex—a man's a man for a' that—and a woman can no more present the partly feminine Hamlet than a man can present the partly masculine Lady Macbeth. From first to last, then, that sense of illusion which is vital to tragedy is denied to Mme. Bernhardt's Hamlet. The mere poise of her body and *timbre* of her voice—to leave all mental differences on one side—forbid it. Orange-peel and water, said the Marchioness, tastes like wine—if you make-believe very much. But no amount of make-believe will persuade you that Mme. Bernhardt's Hamlet is any one but Mme. Bernhardt, disguised in flaxen wig and inky cloak and customary suit of solemn black.

"There is another insuperable obstacle in Mme. Bernhardt's way besides her sex; her race, to wit. For, while she is a Dutch Jewess by birth, she is by temperament and training a French woman; whereas Hamlet is English to the backbone, and that for the very sufficient reason that he is a projection of William Shakespeare. It is well to bear this in mind, because we are apt to concentrate our attention on what is also a truth—his universality, the type he presents of doubting, dreaming, will-less humanity. We say he is like Orestes and René and a hundred other variants of the type, of all races; and so he is; but he is like them with a difference, and what constitutes the difference is the mind and nature of William Shakespeare, the Englishman. When Shakespeare took him in hand he was, as we know, merely the hero of a revenge-drama, but the really remarkable and curious thing about Shakespeare's treatment of the given subject is the ease and joy with which he throws off the revenge-drama at every moment, in order to present his hero not as an avenger but as a projection of himself—as a man thinking and feeling what he, William Shakespeare, could not but think and feel, all ghosts and sacred missions and

family vengeance notwithstanding. To represent Hamlet (and justify Goethe's exegesis by anticipation) as the meditative student crushed by the duty of action would have been simple enough—and would have resulted in what 'Hamlet' notoriously is not, a straightforward, plain-sailing, acting play—but Shakespeare could not resist the temptation to cram himself into it, all his virtuosity and dilettantism, his keen interest in life as a spectacle and as a game to be played, his intense vital energy and *joie de vivre*. For Hamlet is not naturally melancholy, any more than Othello is naturally jealous. His scenes with the players, with the grave-diggers, with Osric, prove the inherent buoyancy of his nature, its humorous appreciation of all things human."

Mme. Bernhardt's Hamlet is, in the opinion of this critic, only another example of the sometimes fatal French "genius for lucidity" which Matthew Arnold so often reminds us of. This Hamlet is as simple as A, B, C, as clear as the noon-tide day—exactly what Shakespeare's Hamlet is not. He continues:

"And so you get the husk of Hamlet without the kernel—a very

"Here hung those lips that I have kissed I know not how oft."

SARAH BERNHARDT IN THE CHARACTER OF HAMLET.

picturesque and dramatic husk, to be sure—just the sort of a play which Mme. Bernhardt, with her instinct for stage effect and her incapacity for fathoming Shakespeare's mind and philosophy, naturally supposes Hamlet to be. And how interesting she makes this external drama! What ingenuity and feminine tact she brings to the illustration of minor points of the action. Polonius comes in to interrupt the reading. Up go her legs, full length on the settee, so that he shall have no chance of sitting down. Does she need the 'recorders'? One of the players is made to pass at the back of the stage, and she snatches the instrument from him. With what gusto she thrusts it into Guildenstern's face! 'Buzz, buzz!' says Hamlet in the play. Mme. Bernhardt makes believe to catch a fly, and slowly opens her palm under Polonius his nose. . . . One could mention a score of other novel ingenuities—her toying with Yorick's skull, her dramatically defiant pause on discovering Laertes, his trick with the poisoned rapier, and so forth. In short, she has given the old play a bright new coat of 'luminous paint.' But not once has she pierced an opening for fresh light on the soul within. For the soul within is no longer there to be illuminated. .

For these reasons her performance must be dismissed, as I say, for a mere curio. That serious French critics have taken it seriously shows very conclusively what needed no demonstration, that Shakespeare was a free-born Englishman.

The London *Athenæum* (June 17) comments as follows upon Mme. Bernhardt's performance of Hamlet at the Adelphi Theater, London, during the latter weeks of June:

"Nothing has been omitted from the performance by Mme. Bernhardt that Englishmen hold capable of representation. Polonius is skewered through the arras, and the deaths by sword and poison of the last act are carried out to the bitter end. So far as we are aware, nothing exactly conforming to the English text has previously been seen on the French stage. In the adaptation by Dumas and Meurice, played in 1847 at the Théâtre Historique, with Rouvière as Hamlet, the life of Hamlet was spared, the ghost expressly commanding him to live. This took place when the romantic movement was at its height. Half a century later, when Mme. Bernhardt first produced 'Hamlet' for the sake of enacting Ophelia, she cut out the snatches of songs which the heroine in her madness sings, and substituted romances more sentimental and suitable to the lips of an *ingénue*. Now, however, no compromise is attempted. 'Gille' Shakespeare triumphs all along the line. Classicism hides its 'diminished head.' Hamlet as he is has appeared on the French stage for the first time, except in the performances of English or Italian companies. This is already much, tho the gain is for the French stage—not the English. One may and must admire the fine intentions and the admirable method that enable Mme. Bernhardt to set before us a Hamlet that not only is not ludicrous, but is intelligible, consistent, and conceivable. There are points—not many—when the audience is stirred. It is a triumph of method, however, and not of insight or interpretation, and our gain extends no further than the knowledge what one of the most versatile and highly endowed of Frenchwomen can read into a character it is impossible for her to play. The suggestion of *Punch*—offered, of course, as badinage—that Sir Henry Irving shall play Ophelia to the new Hamlet, seems, beside the present experiment, not wholly outrageous. . People have heard of the Hamlet of Mrs. Siddons, have admired—what have not people admired?—that of Miss Cushman, and have seen that of Miss Marriott. Such things are mere triumphs—if triumphs they can be called—of posturing or elocution. A woman is positively no more capable of beating out the music of Hamlet than is a man of expressing the plaintive and half-accomplished surrender of Ophelia."

The critic of *The Saturday Review*, under the caption "Hamlet, Princess of Denmark," finds it difficult to restrain his merriment over the figure of Sarah in doublet and inky cloak:

"I can not, on my heart, take Sarah's Hamlet seriously. I can not even imagine any one capable of more than a hollow pretense at taking it seriously. However, the truly great are apt, in matters concerning themselves, to lose that sense of fitness which is usually called sense of humor, and I did not notice that Sarah was once hindered in her performance by any irresistible desire to burst out laughing. Her solemnity was politely fostered by the Adelphi audience. From first to last no one smiled. If any one

had so far relaxed himself as to smile, he would have been bound to laugh. One laugh in that dangerous atmosphere, and the whole structure of polite solemnity would have toppled down, burying beneath its ruins the national reputation for good manners. I therefore, like every one else, kept an iron control upon the corners of my lips. It was not until I was half-way home and well out of earshot of the Adelphi, that I unsealed the accumulations of my merriment. . . . The best that can be said for her performance is that she acted (as she always does) with that dignity of demeanor which is the result of perfect self-possession. Her perfect self-possession was one of the most delicious elements in the evening's comedy, but one could not help being genuinely impressed by her dignity. One felt that Hamlet, as portrayed by her, was, albeit neither melancholy nor a dreamer, at least a person of consequence and unmistakably 'thoroughbred.' Yes! the only compliment one can conscientiously pay her is that her Hamlet was, from first to last, *très grande dame*."

ZOLA'S NEW NOVEL—"FÉCUNDITÉ."

CLEMENCEAU'S journal *L'Aurore* has begun the serial publication of a new work of fiction from Zola's pen, completed during his exile. It is called "Fécundité," and is the first of a series of four organically connected novels. The others are to be entitled respectively "Travail," "Justice," and "Vérité."

The first chapters of "Fécundité" describe in the author's realistic manner the environment and conditions of Parisian manual laborers. The hero of the story is a workman, Mathien Froman. The author's general purpose in this novel—for it belongs to the category of "tendency fiction"—is thus explained in the introductory remarks of *L'Aurore*:

"'Fécundité' is a study, drama, and poem at the same time. It celebrates and glorifies the achievements of a numerous family. Around the central character, who knows how to love and to will, to work and to create, in the midst of a constantly growing family, Zola has grouped more than fifty subordinate personages of the opposite kind, bad and decadent representatives of the modern social-economic order—men and women who carry death and dissolution with them in the lives of Malthusianism, in the terrible mortality of children."

"'Fécundité' is the history of the dissolution of the capitalistic industrial system, the history of fatal and deadly poverty; it is the picture of social hell, the result of social injustice, which inevitably entails the ruin of country and humanity."

"It is impossible to create a more impressive and striking drama than that contained in Zola's tale of two deliberate murderers, who are depicted in a series of marvelous scenes. At the same time it is difficult to conceive of a more reassuring, more inspiring and elevating poem than is given here. In the pages of this novel, full of joy and charm, there is the triumphant song of the all-conquering family—the family which conquers by virtue of its numbers, which brings to the country and humanity the hope of to-morrow, health, joy, indomitable energy, in the interest of the coming society and for the erection of justice and truth."

Some time ago Zola wrote an essay on the healthfulness and beneficence of labor, in which he claimed that his works had been misrepresented, and that instead of despair and pessimism he inculcated love of useful life and invigorating, honest labor. This idea, it is now said, finds artistic embodiment in "Fécundité."—*Translation made for THE LITERARY DIGEST.*

A Litterateur's Appetite.—A correspondent of *Literature* (June 2) tells a pretty story of Honoré de Balzac and a little English "counter girl" in Paris, who had apparently hitherto believed that great geniuses lived by faith and *lettres* alone, and not by such gross things as macaroni patties. He writes:

"Léon Gozian used to relate how he met Balzac one day, on the Boulevard des Capucines, 'dying with hunger.' The novelist insisted on taking Gozian to a confectioner, who sold macaroni

patties. Forgetting his hunger, Balzac plunged into an appreciation of Cooper's 'Lake Ontario' (newly appeared). Gozian noticed that the shop attendant, an English girl, had heard him address Balzac by name, and was gazing at the author as tho fascinated. She was astounded presently by the appetite of genius for macaroni patties, which disappeared by couples. 'How much do I owe you?' asked Balzac. 'Nothing, M. Balzac,' said the English girl firmly. Balzac was nonplussed for a moment; then he pushed his precious copy of 'Lake Ontario' into the girl's hands, saying, 'I can never sufficiently regret, mademoiselle, that I did not write that book.'

SOME MEMORIES OF TENNYSON, BROWNING, AND GEORGE ELIOT.

MR. JUSTIN MCCARTHY, in the course of a lifetime spent in the British metropolis, has had particularly favorable opportunities, through his prominence as a man of letters and a politician, of studying the chief literary figures of the times. In an article contributed to *The Youth's Companion* of recent date, he has some interesting things to tell of four of these. He first met Tennyson at a house party in the Isle of Wight, upon the occasion of the famous visit of Garibaldi to England in 1864. Mr. McCarthy thus narrates the experience:

"It was a very curious and interesting gathering. The late Lord Shaftesbury was there—the great philanthropist and devotee of orthodox religion, English church, of course—and Mr. George Jacob Holyoake, the free-thinker and Socialist, and Alexander Herzen, the then famous Russian exile, and, I think, Louis Blanc and Lord Kinnaid and Grant Duff, and many more whose names I have forgotten.

"I thought I had then never seen a more commanding figure than that of the poet laureate. A stately and even magnificent presence, a man tall, erect, broad-shouldered—somewhat over six feet in height, I should think—with a splendidly outlined face and a mass of dark, wavy hair, almost black, then hardly even streaked with gray. I never knew Tennyson except in an outside sort of way, meeting him occasionally here and there. I can not say what his manners to his intimate friends may have been, except that I know of the affectionate terms in which his intimate friends always spoke of him, but to the ordinary observer from the outside his manners seemed rather abrupt and domineering. He sometimes sat chillingly silent, as Nathaniel Hawthorne might have done; but Nathaniel Hawthorne never, so far as I know, broke out into sudden bursts of self-assertion, and Tennyson often did.

"Tennyson was curiously out of sympathy with any democratic, or even any reforming, tendencies in the political sense on the part of the majority of his countrymen. He detested popular agitators at home, but admired them much when they were abroad. He admired Garibaldi; he did not admire John Bright. He attacked Bright fiercely in his magnificent poem, 'Maud'—attacked him in a manner which left not the remotest doubt as to the identity of the person he denounced. It was on a question of war and peace. Bright was for peace; Tennyson's voice was still for war. Bright retaliated in a sentence or two of surpassing power in a speech delivered on the platform of the famous Free Trade Hall in Manchester. He likened Tennyson to one of the false prophets in the Scripture whose tongues were said to be 'glibbed with lies,' and contrasted him with Longfellow, whose song always pleaded for peace and freedom.

"I think we must allow that, taking into account form, rhythm, melody, and all else, Tennyson was the greatest English poet of our time. My own sympathies, intellectual and personal, went rather with Browning. James Russell Lowell said to me in his Cambridge home, many years ago, that he thought Browning had started with the larger outfit, but did not know how to arrange his stock to the best advantage."

About Browning, Mr. McCarthy has a number of things to tell which show the poet's great simplicity and generosity of heart. The writer says:

"I knew Browning well, and loved him, as all did who knew him. He had none of the affectations of the proclaimed poet, the

professional 'child of genius.' He was a delightful companion who never gave himself airs, a charming talker, with no appearance of talking down his audience. He was very social; one met him everywhere. People who did not like him said that he only cared for the company of great dukes and duchesses and countesses and so on. I can only say that I have met Browning scores of times at the houses of quiet literary men who had hardly then risen out of mere obscurity. I fancy that if Browning liked people, he liked them whether they were dukes and marchionesses or obscure young poets and poetesses just in the bud.

"He seemed to be on the lookout to do kind, encouraging things for young writers in whom he saw any merit. I have known many instances of his going out of his way to send kindly messages to young writers whom he had never seen, bidding them to be of good cheer, and telling them that he was convinced there was sound stuff in them, and that they had only to take his word for it and to persevere. One must have been a young and obscure writer to appreciate the value of a stimulus like that."

Mr. McCarthy has more to say of George Eliot than of any other writer, and contributes not a little to our knowledge of her personal home life. He says:

"I went occasionally to her Sunday afternoon gatherings at The Priory, in the region of Regent's Park. Herbert Spencer was a frequent visitor there, and Professor Huxley and Professor Tyndall and many other men, mostly scientific. There is a legend that George Eliot never liked to talk about her novels. I can only say that she started the subject with me one day. It was, to be sure, about a picture some painter had sent her, representing a scene in 'Silas Marner,' and she called my attention to it, and said that, of all her novels, 'Silas Marner' was her favorite. I ventured to disagree with her, and to say that 'The Mill on the Floss' was my favorite. She entered into the discussion quite genially, just as if she were talking about the works of some stranger, which I think is the very perfection of the manner authors ought to adopt in talking about their books.

"I was at her house one day when she was in perfectly childlike delight over a box of biscuits she had received from some unknown admirer in Boston. She was proud of the gift, and I was honored with a specimen biscuit. It was, so far as I could see or taste, the ordinary brown biscuit of Boston, but to her it meant ever so much more. It was a tribute of sympathy—of admiration—from a country where she had never been, and where she knew that she was appreciated. . . .

"George Eliot seemed at first, to people who did not know her, to be affected in manner. She had a languid, monotone voice, and spoke usually in a minor key. There was a sentimental tone about her that made newcomers fancy she was purposely going in for languorous ways; but one very soon found that it was quite her natural way of talking. She was utterly free from affectation of languor or of anything else. She was an admirable hostess. She did not talk much herself, but she talked enough to keep the conversation going. If any pause occurred, she easily and naturally filled it up, and quietly started something new. She always kept the conversation general, and at all events did her best to prevent it from degenerating into little broken backwaters of talk."

Of still another writer Mr. McCarthy speaks. It requires a rather violent effort of imagination to conceive of the author of "The Buried Life" and "Balder Dead" familiarly addressed as "Matt," but we learn from Mr. McCarthy that this was his designation in the flesh, as shown in the following amusing skit:

"Matthew Arnold I met very often in his later years. I met him first at the hospitable home of the late Dean Stanley, under the shadow of Westminster Abbey. I had written a chapter of literary history in which I had described Matthew Arnold as 'a miniature Goethe.' I thought then, and I still think, that no higher praise could be given to a man of our time. I am sure Arnold, if he had ever read it, perfectly understood my criticism in that sense. But dear Dean Stanley was a humorist who loved his good-natured joke, and presented me to Matthew Arnold in a very unceremonious fashion:

"Look here, Matt, here is the man who says you are nothing but a miniature Goethe!"

"If I were only anything like that!" Arnold answered, with his sweet smile."

CASTELAR AS A WRITER.

THE literary eminence of Spain's great republican—best known to the world as a statesman and orator—has received little attention in the American newspaper comments on his death. A writer in *La Ilustración Española y Americana*, however, devotes an article wholly to his work as an author. The critic, Señor Eugenio Sellés, is not lacking in enthusiasm. A just estimate of Castelar as a writer, he says, requires, "not a necessarily brief article such as this, but whole volumes, ample time for writing them, and broad knowledge on which to base them; for thus extensive are the dimensions of the task."

Don Eugenio says that Castelar was not technically a poet, tho he might have been had he wished, for in his speeches and writings we find the true spirit of poetry. He did indeed write a few verses in his younger days—he would not have been true Spaniard had he not; but he soon turned to the more strenuous affairs of state. He also wrote a few dramatic pieces in dialog form, but they were unsuited to the stage, and in their lack of warmth, says Señor Sellés, resemble the dialogs of Plato or of Renan. It was as a novelist, critic, and historian that Castelar attained his real literary successes. In the novel, both at the commencement of his career and throughout his life of fruitful effort, he found congenial scope for his eminent aptitude in narration and description, and for his wide knowledge of men. Says Don Eugenio:

"He could sin occasionally, it is true, tho always venially, against some of the canons of literary precept; he could be deficient in the art of composing a plot, of distributing the interest of an action, of measuring in due proportion the literary rations which he was to serve out to his reader; but when once he arrived at the topmost summits, when the wings of his genius could be outspread in an atmosphere appropriate to their magnitude, one surrenders before the grandeur of the thought and is carried away by the miracles of expression, so forceful as to make us bend the knee as tho, raised to the heights of Sinai, we heard about us the songs of angelic hosts.

"'The Sister of Charity,' 'The History of a Heart,' 'The Sunset of Liberty,' 'The Sigh of the Moor,' and 'Fra Filippo Lippi'—these are not, to be sure, pages of such consuming interest as holds us spellbound with wakeful eyes, and then vanishes afterward like an intangible dream of the night. His pages are not of a type which pass and are forgotten; they present to us something which remains in the spirit and which will leave its mark on the history of art."

Castelar excelled also in another species of literature, full of interest and instruction in its way—the narrative of travel. Says Señor Sellés:

"His books entitled 'A Year in Paris' and 'Memories of Italy' have no equal in European literature. Free from the mere artifices of composition and from the limitations and prejudices of the masses, Castelar found himself here in his true element, one that befitted the breadth and openness of his mind. His crowded gallery of portraits surprises and attracts us. The descriptions here are true and exact, as tho reflected in a mirror of polished gold. Nowhere is there anything so beautiful as these marvels of Italian art delineated by the art of Castille."

As a critic, Castelar is worthy of high rank, says Señor Sellés. His "Life of Lord Byron," his "Lucan," and other biographical and critical writings were directed, not to the minutiae of technical criticism, but rather to the spiritual and intellectual content. His mind was not of the dissecting, botanizing variety, but was eminently constructive and inspiring—he was a critic of the soul, as Don Eugenio phrases it. Yet it was not as critic, novelist, or biographer that Castelar finds his highest literary distinction. As a stylist he is unique, without predecessor or successor in contemporary letters, as he certainly was without a peer as an orator since the death of Webster. As to this unique literary merit Don Eugenio says:

"He has created a style which can neither be parodied nor imi-

tated. That which in him is natural and just seems in others swelling and turgid. That which in him is full and round would appear in others pointless, paltry, and ridiculous affectation. His grand periods and long enumerations are read or listened to with awe; it appears that no other human strength is capable of attempting them without falling. But to Castelar it was given to be adjudged the crown of sovereign majesty in style. His idea takes to itself the reality of a living body, the image in his mind becomes a plastic picture, and his word has the sonorousness of a canticle. . . . To sum up, had he been born mute, he would have been the first writer of this century. His grandeur as an orator choked and held back his literary greatness, which nevertheless was sufficient to immortalize his name."

As a sedative to this somewhat perfervid Latin estimate of Castelar's power as a writer, the following characterization from *The Spectator* (June 3) may be of value:

"The late Señor Castelar attempted to be a philosopher. An enthusiast for the principles of 1789, he deduced from those principles a general doctrine of Republican political philosophy. It was a high and noble doctrine unsullied by any vulgar element; on its ethical side it left nothing to be desired, for it set forth liberty as man's highest good, and left him free to pursue his activities unhampered by civil or religious tyranny. Señor Castelar also plunged into the great sea of metaphysics. He studied German philosophy and English psychology, and he tried, in his vague tho brilliant way, to work out a kind of philosophy of history. We doubt whether any trained thinker would make much of his writings on these high themes, tho so brilliant a mind could scarcely fail to impart hints and suggestions in this field of inquiry. But while Castelar was thus apparently a citizen of the world and a cosmopolitan seeker after truth, he was yet a Spaniard, with the singular dominant weakness of the Spanish race as satirized and portrayed for all time by the greatest of Spanish writers. What, above all things, is it that Cervantes intends us to see in 'Don Quixote'? The story was written as a satire on the absurdities to which chivalry had been carried in Spain; but it is more than that. It is the analysis of a mind unable to see things as they are, and it may be believed that, in setting forth this type of mind, Cervantes was as truly analyzing the leading weakness of his countrymen as was Goethe in 'Werther' when exhibiting the ridiculous sentimentalism of young Germany in the latter half of the last century. Whatsoever the cause may be, Spain has been afflicted beyond any other Western nation with the capacity for self-delusion, with the inability to see things as they are. . . .

"Emilio Castelar's great claim to admiration and to fame was his oratorical power. Doubtless it was an oratory that would not have appealed to an English audience, for it was glowing hot with the Southern sun, and luxuriant as a tropical forest. The ideal English oratory is a speech made up in the main body of solid argument enlivened here and there by good stories, and with a peroration whose dominant note is moral feeling. But the most passionate declamation of Fox, the most tremendous whirlwind of eloquence of O'Connell, the most fervid moral appeal of Bright, were cold, were almost like scientific demonstrations, when compared with the habitual style and tone of Castelar. We can not quarrel with such speeches, however they may disagree with our taste. The business of the orator is to make an immediate impression, to dominate absolutely the thoughts, feelings, aspirations, of his hearers, to compel them by a hypnotic influence to share in the unseem emotions and convictions of his own personality. This Castelar did. He knew his countrymen, and he knew what would appeal to them. He achieved instant success, and that can alone be the test of oratory. It is recorded that after his noble and wonderful speech in favor of religious liberty, delivered in the Cortes in 1876, even his Clerical opponents hung on his words and greeted him with 'enthusiastic applause' while his friends embraced him in the tribune. 'In a sense, no such orator has lived in our time; and while we may differ from many of Castelar's specific opinions, and may criticize some episodes in his career, we may also with full conviction and much thankfulness say that his brilliant oratory was always dedicated to noble and generous ideals. He scorned materialism, he had faith in liberty, he loved his fellow man. Which of us can desire or deserve a higher tribute?'—*Translation made for THE LITERARY DIGEST.*

The Poet-Laureate's Intercessional.—Mr. Alfred Austin is still the butt of many jests, whether he writes an official poem or merely uses his pen to indite a prose epistle. Lately some one referred to him in a London newspaper as "Sir Alfred Austin," and Mr. Austin at once took occasion to write to *The Times*—that unfailing resort of every aggrieved Englishman—to point out that his proper designation was not Sir Alfred, but simply Mr. Alfred Austin. The London *Truth* takes this letter and the publication of the recent list of new titles, given by the Queen as "Birthday Honors," as a text for the following poem:

An Intercessional.

"The Fount will play again next week,
The 'Birthday-Honors' list they'll print,
So, more in sorrow than in pique,
'Tis time I give a gentle hint:
I'll mention I'm not knighted yet,
Lest they forget—lest they forget!

"Since first my merits they up-summ'd,
And granted me my heart's desire,
They can not say I've not 'tun-tum'd'
Persistently my laureate lyre—
Ode, eclogue, madrigal, 'lay'-ette—
Still they forget—still they forget!

"In loyal accents I have flapped,
I've ranted in a jingo vein,
In ecstasy I've even craped
The British Lion's mighty mane;
My Muse to turgid tasks I've set—
Yet they forget—yet they forget!

"Beneath a bright Italian sun
I've broken out in various spots—
A Tate and a Brady rolled in one,
A kind of courtly Dr. Watts;
Yet with no recompense I've met—
They still forget—they still forget!

"No wonder that my heart is sore
When at the feast I'm forced to see
'Sir Lewis' prondly walk before,
'Sir Edwin' take the *pas* from me;
I'm Laureate, 'tis true, and yet
They still forget—they still forget!

But hope, oft crushed, flies up once more—
They may pooh-pooh my futile rimes,
Yet how, I'd ask, can they ignore
My hint in yester morning's *Times*?
Methinks in Saturday's *Gazette*
They can't forget—they can't forget!"

L'ENVOI.

(Written after looking at the "Times" on Saturday last.)

"What's this? It is extremely odd!
Names stare at me from every line—
'Salt,' 'Armstrong,' 'Stanley,' 'Rennell Rodd,'
But there is not a sign of mine;
'Preece,' 'Pollitt,' 'Agnew,' 'Murton,' 'Rotton'—
They do forget—they have forgotten!"

A Proposed Kipling Trust.—The London *Academy* makes note of a new literary proposition which ought to arouse concern on the part of those who believe that we should continue to keep some phase of our existence free from the dictation of the rapidly multiplying trusts. The proposition is to form a syndicate which is to get complete control in America of all Mr. Kipling's writings. The *Academy* thereupon proceeds to construct a prospectus for the proposed syndicate, portions of which we reproduce:

KIPLING (Limited).

PROSPECTUS.

This Company has been formed to acquire and traffic in all the writings—prose, verse, or private letters—of the celebrated author, Mr. Rudyard Kipling. Mr. Kipling, who is at this moment the most famous writer now living, is still young, and there is promise that he has before him a considerable period of active productivity.

KIPLING (Limited).

The Company proposes to acquire not only Mr. Kipling's future

works and the work on which he is at present engaged, but also everything that may already exist. Negotiations are now afoot for the acquisition of letters written by Mr. Kipling as a child, for copybooks containing his earliest attempts at pothooks and hangers, and for a vast amount of other immature penmanship. These will be from time to time facsimiled in the illustrated papers and in due course sold by public auction, at (the Company feels convinced) a greatly enhanced figure.

KIPLING (Limited).

The Company will be vigilant that no imperial crisis shall pass without poetic comment from Mr. Kipling's pen. It trusts also that it will be successful in inducing Mr. Kipling to give to these political poems a form which shall be easily parodied; thus providing for increased publicity.

KIPLING (Limited).

In addition to such ordinary literary work as novels, short stories, and verses, Mr. Kipling, it is hoped, will agree to write every year no fewer than six strictly private letters on debatable public questions, which shall, in due course, find their way into the public press.

KIPLING (Limited).

A private wire will be affixed between Potsdam and the Company's offices, to facilitate the transmission of telegrams to Mr. Kipling from the German Emperor.

NOTES.

TWO medallion portraits—of Keats and of Lamb—have been placed at the doorway of the Passmore Free Library, Edmonton, England. Mr. Frederic Harrison, who made the presentation speech, said that Lamb had no second in prose, Keats no second in verse. According to Mr. Harrison, "the present engine-turned double-action system of teaching, with cramming, constant work at high pressure, and examination upon examination is not favorable to the cultivation of literary genius."

ANOTHER work in literary biography is shortly to appear—"Reminiscences of the Life of Edward P. Roe." Of it the *New York Times* says: "The death of the Rev. Mr. Roe occurred over ten years ago. His novels are still widely read by people who believe that every story should be adorned with a moral, and who are pleased if the writer gives plenty of incidents. The Rev. E. P. Roe was a master of incidents, and the moral always appeared in the last chapter in a mixed dish with the climax. In spite of these artistic blemishes, or possibly because of them, he is without doubt the most popular American novelist of this generation. And his 'Reminiscences' will certainly please the myriad readers of his novels, just as children are pleased with a peep behind the scenes at a pantomime."

THE whole "Affaire Dreyfus" is summed up in a little volume of about 100 pages entitled "The Dreyfus Story," by Richard W. Hale, a Boston lawyer. The *New York Times* says of it:

"He does not write for experts of the case, but it is his humble desire that the reader may be able to put down the book at the end and say: 'I think I understand now what it is all about.' There is no doubt that the general reader will be able to do this. Mr. Hale writes simply and with great clearness, and with a marvelous trick at condensation. The story is brought down to the present day—the eve of the decision of the case before the Cour de Cassation. In his chapter, 'The Legal Situation,' the author deals intelligently with a theme that is little understood by Americans, and is hence less appreciated."

RIDER HAGGARD has recently written a book called "A Farmer's Year" which is an account of the author's own observations on his farm in Surrey, where Mr. Haggard has lived the life of an English squire and son of a squire since long before he was heard of as a novelist. A recent writer says of the book:

"You read of corn, of beets, potatoes, of horses, cows, sheep, of rabbits, foxes, of crows, swallows, and then there are absurd comments on landlords, publicans, and farm laborers. You get an insight into English rural politics. Then Mr. Rider Haggard tells you of old churches, parsons, clerks, choirs. Many are his experiences. He has reared a pony, and the beast shows temper, and when harnessed flings himself on the ground, and cuts his knees, thus taking, 'in all probability, eight or ten pounds off his value.' Now comes in good advice: 'No young horse should be driven without knee-caps.' Ventilate your haystacks, Mr. Rider Haggard tells you. School matters, religious service, charities, all occupy the writer's attention. There is a certain tempered conservatism which pervades 'A Farmer's Year.' With his broad and extensive reading, many are the references to English country ways of two and three hundred years ago, and he draws on his African experiences. Mr. Rider Haggard's 'She' may be read for some time to come, but his experiences as a farmer will certainly be a lasting contribution to English agricultural life at the close of the nineteenth century. If Mr. Hardy is theoretical in regard to the English rustic, Mr. Rider Haggard's acquaintance with him is practical and exact."

SCIENCE AND INVENTION.

WHAT IS OLD AGE?

A NEW theory of old age and death has just been promulgated by the eminent Russian zoologist and bacteriologist, Professor Mechnikoff, whose name is best known for his theory that the resistance of the organism to disease depends on the activity of the white-blood corpuscles in attacking and destroying germs. These same corpuscles, according to this authority, play an important part in the transition from youth and vigor to old age. We translate from the St. Petersburg *Novosti* the following brief summary of the professor's theory:

"Every organ of our body is composed of two kinds of cells—common and, as it were, noble cells. The noble cells determine the peculiar functions of the organs. . . . The common cells do not differ from each other; they are identical in all the organs, and their only function is to connect and hold together the noble cells.

"Between these two kinds of cells there goes on an incessant struggle. The noble cells are stronger and for a long time they prevail—that is, they successfully resist. But eventually the struggle exhausts them, and the preponderance passes to the common cells. This signalizes the beginning of old age. The noble cells are crowded more and more, the common ones growing in size at their expense and interfering with the functions of the organ. Hence the abnormal, diseased appearance of the organs, and the increasing difficulties in the way of living. Ultimately the performance of the functions becomes entirely impossible, and we have death. [Mechnikoff gives the technical term *macrophagi* to the connective-tissue cells, while the noble cells, the leucocytes, he calls *microphagi*.]

"If, then, the subjugation of the noble by the common cells, after a protracted struggle, is the cause of decrepitude and shrunken old age, is it not possible to reinforce the former and stave off their defeat? If not, is it possible to weaken the common cells by some artificial means? Professor Mechnikoff is of the opinion that it will prove easier to do the latter than the former. We possess the means of destroying certain kinds of cells in the organism. For example, it is possible to inoculate birds in such a way as to destroy the red corpuscles in their blood without affecting the white ones. There is nothing improbable in the belief that a substance will be discovered which, introduced into the human body, will exert a destructive or restraining effect on the common cells, without incapacitating them for their proper function, and thus strengthen and prolong the life of the noble ones."—*Translation made for THE LITERARY DIGEST.*

WHY DO CUT APPLES CHANGE COLOR?

THE rapid discoloration of the exposed cut surface of an apple is so common a thing that probably few have ever thought it in any way worthy of interest; yet, according to Mr. G. C. Nuttall, who writes on the subject in *Knowledge* (London, June 1), the reason was long sought in vain, and light has only recently been thrown upon it. It is apparently connected with what is still a chemical mystery, the existence of certain substances that cause chemical change without being in any way affected by it themselves. Says Mr. Nuttall:

"The latest and most thorough explanation is one lately put forward by a chemist named Lindet, and it is an explanation of considerable interest. Within the cells of the tissues which make up the fleshy part of the apple—the part that is eaten—there is produced in their jelly-like contents a certain product to which the name malase or laccase has been variously given; and this product belongs to a curious class of substances known as enzymes. . .

"Now, an enzyme is a production of the activity of the cell which has the unique power of influencing other substances in its neighborhood, and yet remaining unaltered in any way itself. It can exert influence without apparently being affected by doing

so. Its own constitution is stable, but it possesses power to act, even at a distance, on certain of its surroundings, and produces great effects on the constitution of other matter, in some way not yet thoroughly comprehended. It will be seen at once that this is a very different thing from ordinary chemical action. . . . Enzymes stand in a position of great interest nowadays when the search among the beginnings of life is so intense, and when the effort to prove or disprove spontaneous generation—the origin of life from the non-living—is so keenly maintained by chemists and biologists, for in one instance certainly where very careful and exact study has been made of an enzyme it is suggested that the substance stands midway between the organic and the inorganic, that it is the stepping-stone across the gulf which has hitherto divided the great world of the living from that which has never known life."

This particular enzyme in the apple is at the bottom of the discoloration business—at least, according to the present explanation. Its peculiarity is that it causes the oxygen of the air to unite with the tannin in the apple, forming dark-colored compounds. Says the writer:

"It is obvious that tho the malase is probably always present in the cells, it can not exert its influence to any purpose while the apple is whole, and surrounded by a firm clear skin, for the air can not obtain admission until the peel is removed or the apple cut through, and hence there is no free oxygen to work with. But when the cells have been exposed the air enters, the malase transfers, in some mysterious way, the oxygen, the tannin is changed in nature, and the cells are dyed with the products. It is by no means certain that the malase and the tannin must be side by side in the same cells for this effect to take place. Lindet is inclined to think they are not, and that the malase exerts its influence for some distance, but this is a question which calls for further research before any more definite answer can be given."

We are told, in conclusion, that similar enzymes cause the discoloration of other fruits and vegetables, and also the darkening, or so-called "browning," of white wines. For this class of oxidizing enzymes the name of "oxydase" has been suggested.

Liquefied Hydrogen.—This latest product of scientific activity is, it would seem, still more remarkable than liquid air. Says the London correspondent of *The Sun*, New York, June 19: "In connection with the centenary celebrations of the Royal Institution this week Professor Dewar gave a remarkable demonstration with liquid hydrogen. As is well known, the task of obtaining this gas in a fluid condition has been exceptionally difficult. Liquid air, the production of which comparatively lately astounded the world, is now made by the quart. Some months ago it cost no more than a good champagne, and now hopeful *savants* are talking of producing it almost as cheaply as ale. But liquid hydrogen, as the professor remarked, is quite another affair; it is very costly to manufacture and very difficult to keep, as it is extremely volatile. Radiation must be checked as far as possible, and so the office of preventing hydrogen from again vanishing into a gas is assigned to liquid air. That, in fact, was constituted its jailer. Thus imprisoned, it was 'ladled' from its receptacle and shown in a tube to the audience. The temperature of liquid hydrogen is extraordinarily low. It was speckled with a light dust, which was nothing else than the frozen air which accidentally gained admission. Oxygen, sealed up in a tube and immersed, speedily became solid. But this fluid is so light that cork sinks in it like a stone. The temperature of its boiling-point—that is, the temperature at which it passes back into the state of gas—is almost inconceivably low, only 21° above the absolute zero. This is the lowest point which the experimenter has yet been able to reach. One thinks 20° below the zero of the Fahrenheit scale to be rather surprising, but the liquid hydrogen in the tube exhibited at the Royal Institution was more than 420° below that zero. Life in such a temperature would be impossible. The human body would be petrified. Motion, in the ordinary sense of the term, would be impossible. This, or something like it, is the temperature of space, so far as this phrase has any meaning. Where no matter is, there heat is impossible, and tho a something may be present in space which can transmit

light, it can not translate the latter into heat. But here, in the lecture-room, is exhibited a liquid almost as cold as the vacuity of space. The possibilities of this discovery are great. Professor Dewar showed how, by the use of liquid hydrogen, an almost perfect vacuum could be produced."

A PIONEER OF SCIENCE.

THE Royal Institution has just been celebrating its centenary in London. It is a curious thing that while our own Smithsonian Institution was founded by an Englishman, its British sister was established by an American, Benjamin Thompson, later Count Rumford. Says *Industries and Iron* of the work of the Royal Institution:

"Altho intended rather to popularize science and to create an interest in its development among rich patrons, the Royal Institution has gone considerably beyond that, and it only needs mention of the names of Sir Humphry Davy, Michael Faraday, and John Tyn-dall—the three predecessors of Lord Rayleigh—to prove its value to the scientific world. Sir Benjamin Thompson, who was also Count Rumford, had the idea of establishing a means of diffusing knowledge on the arts and manufactures which go to make up the comforts of domesticity. Exhibitions loomed large in his plan and catholicity characterized its conception, for among the list of things thus to be brought to the public gaze were lime-kilns, bridges, kitchen stoves, and culinary appliances generally. But altho something less than its ultimate scope was intended by the founder, it quickly assumed the wider shape. There were fifty-eight original subscribers of 50 guineas each who met Sir Joseph Banks, who, in 1799, was president of the Royal Society, and framed the petition for a royal charter, which was granted, and the house purchased in Albemarle Street, where the Institution has since been located, having entered into possession on June 5, 1799.

"Without government help, and solely by the liberality of subscribers, it has been identified with many important researches in electricity, chemistry, and kindred subjects. The present chemical laboratory was built by the generosity of the late Mr. Alfred Davis, and the more recent acquisition of the Davy-Faraday Research Laboratory was founded and endowed by Dr. Ludwig Mond. Granted a continuance of such benefactors the influence and value of the Royal Institution is not likely to diminish during the second century of its existence."

Science, June 16, says on the same subject:

"The Institution has undoubtedly been fortunate in the professors who have worked in its laboratories. But even genius can not do much without opportunity, and, therefore, some of the credit is deserved by the long succession of officers and members of the committee of managers, who have for a hundred years looked after its business affairs and guided it safely through many vicissitudes, not only without fee or emolument, but at the expense of much time and not infrequently of much money. . . . Mention, too, must be made of what the members themselves have done. Over and above their regular subscriptions, they, with their friends, have contributed since 1863 something like £13,000 to the fund for the promotion of experimental research, and it is safe to say that had it not been for this fund English science in general would have been the poorer, and the Royal Institution in particular would not possess the international reputation it bears to-day—a reputation won, be it remembered, in the good old English way, without state subvention or government aid. Modern scientific research daily becomes more costly, because apparatus grows in delicacy and complication on the one hand, and in size and weight on the other, and thus there arises a proportionate increase in the need for individual generosity. The fact that such pecuniary aid has been forthcoming in the last century warrants the expectation that the stream of benefactors to the Royal Institution will not fail in the next, and that they will enable it to point to as proud a record on its second centenary as it now does on its first."

Music Study and Nervous Disease.—"Dr. Waetzhold, a specialist in nervous diseases whose opinion is an authority in Germany, has just published an article," says *La Science*

Illustrée, June 3, "in which he asserts that the abuse of music in general and of the piano in particular predisposes directly to most kinds of neurosis, chlorosis, dyspepsia, brain trouble, and other maladies of this type. By 'abuse' the author means, for example, the premature age at which parents cause young children to begin the study of the piano, prolonged exercise at scales by young girls for three or four hours a day, etc. According to the observations of Dr. Waetzhold on 1,000 women who had begun piano lessons at the age of twelve years, more than 600 are to-day subject to some form of nervous disease. On the other hand, of 1,000 women that had never touched a piano, scarcely 100 had ever suffered from nerve troubles. The author declares in conclusion that the study of the piano should never be begun before the age of sixteen years."—*Translation made for THE LITERARY DIGEST.*

THE DETECTION OF COLOR-BLINDNESS.

TESTS for the detection of color blindness have come to possess great practical importance on account of the necessity of subjecting railroad employees to them. An engineer who can not tell a red from a green light may be the means of sacrificing the lives of hundreds of people. To devise a test that shall be rigid and yet absolutely fair to those who are required to pass it is no easy task. One of the favorite methods is the so-called "wool test," where the person tested is required to match skeins of colored worsted. Dr. Scripture, of Yale, has recently devised a new apparatus which he regards as superior to this, altho it is simpler and does not take up so much time. It is now in use on the New York Central Railroad and is said to be very successful. Says *The Railroad Gazette*:

"Mr. Scripture says that he has among his students one who is absolutely perfect at the wool test, but who is nevertheless color blind. His eyes are abnormally acute for differences in color, but he has only two fundamental sensations instead of three. A second student has perfect color-vision for objects near by, but is practically color-blind for objects which are distant or are weakly illuminated. To discover these classes of persons, says Mr. Scripture, it is necessary not merely to have them sort shades of some color, but to name certain fundamental and familiar colors.

"The instrument described is similar in appearance to that described by Dr. Williams, of Boston, in *The Railroad Gazette* of October 8, 1897, tho very much smaller. Two disks, about six inches in diameter, are fixed on a single axis, supported by a convenient handle for holding the whole instrument in one hand. One disk has three openings, in which are gray glasses, the first one being a very dark smoked glass, the second a ground glass (perfectly white), and the third a light smoked glass. The other disk, revolving behind the first one, has twelve openings, filled with different colored glasses, which, by revolving the disk, may be brought in line with either one of the three openings in the front disk. Thus thirty-six possible combinations are provided for. The twelve glasses are mainly reds, greens, and grays. By having the openings numbered, an examination may be made by any person with the requisite intelligence to correctly record the numbers and the names given by the person being tested to each color shown to him.

"Trainmen are said to like this method because it seems to them more like the signals they encounter in actual service. Not being required to name unfamiliar colors gives the men a feeling that the test is a fair one."

The Advance of the Plague.—Commenting on the news that the plague has obtained a foothold in Egypt, which state of things it regards as a menace to Europe, *The Hospital*, June 3, says: "Roughly, we know that plague is in some way connected with filth and insanitation, with rats, and fleas, and bugs, and other forms of biting vermin, with overcrowding and want of light and air, and with the state of body which results from the use of innutritious food; and when we see that in Eastern countries, however much the natives may suffer, the English mostly escape attack, we are apt to feel that Europe need not fear. But the English who thus escape are the cleanly and well-fed English,

not the English of the slums; and much as we may hope from the general measures of sanitation which during the past twenty years have so greatly changed the conditions of life in most Northern capitals, so far as public sanitation is concerned, we know too well what are the conditions of the dwellings which serve as homes for thousands—nay, for millions—of the people of this continent, to feel any confidence that Enrope is proof from an attack of plague. As we have just said, the conditions in the midst of which, as all history shows, plague is apt to occur are well enough known, however little we may be able to demonstrate the part which each of them plays in its propagation. And who will assert that the conditions which we have enumerated do not exist in London—here at our very doors? How did the disease reach Egypt? A correspondent of *The British Medical Journal* says: "The origin of the outbreak has not been traced, and as all the cases of plague which have been met with occurred in persons who have not been to the Red Sea coasts for either commercial or religious purposes the explanation of the outbreak is difficult. One theory, which seems credible, is that the infection has been brought to the city by pilgrims from Mecca, and that the disease exists in the town to a greater extent than is known, and was in all probability prevalent before the present cases occurred. This is so constantly the case in Eastern countries that it is exceedingly likely to be true of Alexandria."

RED LIGHT AS A CURATIVE AGENT.

OUR forefathers believed that there was virtue in red light, especially in the treatment of smallpox. Not long ago there was a "blue-light" craze, when the pendulum swung to the other extreme. Now we are on the return swing, it appears, a German authority having pronounced in favor of the red end of the spectrum. Of course, light of all colors is present in ordinary daylight, so the benefit, if any, must proceed from the exclusion of the rays other than the red. Says *The Lancet*:

"In our conscious superiority to our forefathers we have been used to look with contempt on their practise of treating cases of smallpox by means of red light in the form of red blinds, curtains, and coverlets, but with our present knowledge of the chemical and physical action of the different rays of the spectrum and the influence of light and darkness on life in its highest and lowest manifestations we may have felt a suspicion that, whatever the theory of the medieval physicians, their practise may have had a scientific basis. In the last number of the *Zeitschrift für Krankenpflege* we find that it has been tried, and apparently with remarkable results, in the treatment of measles. A child, eight years of age, having sickened with an attack of measles of more than usual severity, was on the second day brought under the influence of the rays of least refrangibility, the windows being fitted with red blinds and a photographer's lamp with an orange-yellow globe being used for artificial light. In three hours the rash had disappeared, the fever had subsided, and the child was playing cheerfully, complaining only of want of light. The blinds were consequently removed, when three hours later the medical man was summoned to find that the eruption and fever had returned and the child was weak and prostrate. The red light having been resumed the rash disappeared in little over two hours, as did the fever, this time permanently. In two more days the cough had ceased and the child was well in every respect. The brother and sister and a fourth patient infected from the first case were treated in the same way and with like success. In the great epidemic of smallpox in 1871-72 some cases were reported as having been kept in dark rooms with great benefit, especially as regards the pustulation and pitting. Clearly what virtue there may be in this method lies in the exclusion of actinic rays and the substitution of red or orange light for total darkness has obvious advantages, as in the case of photographic manipulations."

Victorium—Another New Element.—Sir William Crookes has announced his discovery of what he believes to be a new element. In his work on the fractionation of yttria, he found in a photograph of a spectrum not visible to the eye a group of lines indicating a new element. This he proposes to call victo-

rium, in honor of the Queen (who is in her eightieth year). *The Chemist and Druggist* publishes the following account of the new element, as given by Sir William: "Victoria [the oxid of victorium] is an earth characterized by a group of lines in the spectrum. In chemical characters it differs from yttria in many respects. . . . Tested by its position in a series of earths obtained by fractional precipitation with dilute ammonia, victoria is found to be less basic than yttria and more basic than most of the earths of the terbia group. The atomic weight of victorium is probably near 117. In the purest state in which it has yet been prepared victoria is of pale-brown color."

WHY ARE POISONS POISONOUS?

THIS question is grappled with by Prof. C. F. Crowley in a brief article entitled "The Cause of Toxicity." Professor Crowley concludes that the specific action of irritant poisons is due to the effect of molecular motion on the nerve terminals. He says in *The Druggists' Circular*:

"A thoughtful mind asks, Why does this or that particular thing kill; what makes it poisonous? Why does quinin not have the same effect as the [poisonous] alkaloids—surely the properties of an alkaloid are not due to the elements which make it up? Every day charred hydrocarbons—burnt bread, pie, and cake—furnish us with a large quantity of carbon. The proteids of meat and eggs supply nitrogen, and we drink hydrogen and oxygen in the form of water to the extent of quarts a day. If the individual elements are not poisonous, then why should they be so combinedly?"

"The faddist warped by the study of structural formulæ will suggest that the grouping of the atoms in the molecule produces the toxic effect. This is perhaps to some extent true. Just as the arrangement of the furniture in a room can produce a pleasing or a discordant effect upon the retina—so one arrangement of atoms in a molecule may have one effect on the nerve terminals while another arrangement would have another effect.

"In order to thoroughly understand the real effects of toxic alkaloids we must lose sight of the old superstition that molecules have fixed shape. Molecules have no shape. The atoms populating a molecular city are in constant motion, and molecules are just as devoid of shape and fixity as our solar system. The atoms are in motion, and that which we call molecular motion is a resultant force—the differential or algebraic sum of the atomic motions. Nerve terminals recognize, are affected by molecular movements. All impressions from without are carried to the centers within by first being produced at the nerve terminal in the form of motion.

"An alkaloid is absorbed into the circulation and carried along till, reaching a nerve terminal, its impress is made there by its molecular motion. This is the beginning, its physiological effect; but should the quantity of the alkaloid absorbed be so great that the molecular motion continues to irritate the nerve terminal and the physiological effect be superemphasized, we call it a case of poisoning. A river flowing smoothly on its course does little damage to a wharf, but a huge steamer in its current striking the wharf with its propeller wheels in full motion might become entangled and grind everything to pieces; so it is with alkaloids taken into the blood current as regards their action on its nerve terminals."

Alterations in the Organisms of Disease.—"It has been long customary," says *The Hospital*, "to divide bacteria into two main classes, those which are capable of exciting disease in men and animals and those which do not possess this power. The tendency of recent bacteriological researches, however, is to show that no such clearly defined distinction can be made." Under altered circumstances harmless bacilli seem capable of taking on true disease-producing properties. "Vincent has made an interesting series of experiments with two varieties of bacteria—the bacillus megatherium commonly found in garden soil, and the potato bacillus. Both these organisms have up to the present time been regarded as pure saprophytes [bacteria that grow only on dead organisms] which when inoculated into animals give rise to no symptoms of disease. By successive cultures within colloidal capsules placed in the peritoneal sac of guinea-pigs it has

now been found possible to completely alter the characters of these organisms. Their method of growth in all media becomes totally unlike what it was formerly." And if injected into animals they excite a specific disease which is fatal in a few hours. "These experiments," continues *The Hospital*, "throw a light upon the very obscure question of the origin of diseases, and help to explain the return of certain epidemics and isolated outbreaks of disease. A germ-inhabiting soil or water may through countless generations be innocuous until, under altered conditions, its characters become changed, and it acquires a virulence of such intensity as to excite disease processes in the human subject or in animals. As we have already pointed out, these facts will, if substantiated, do much to explain the mystery which surrounds the occurrence of some sporadic cases of typhus fever, and of localized and otherwise inexplicable outbreaks of enteric fever and diphtheria. They also accentuate the necessity for hygiene and cleanliness in life, for it is to be noted that these organisms, and we may also presume the organisms of all diseases, are foreign to the human economy, being introduced as extraneous matter from without."

Early Work In Wireless Telegraphy.—"There is nothing new under the sun." After the development of an invention we can usually find that some one who was ahead of his age experimented on it years before and was regarded as a crank for so doing. *The Electrical World* calls attention to the fact that experiments made in England by Hughes, the inventor of the microphone, in 1879, and by Henry in this country still earlier, point directly toward space-telegraphy. As abstracted by *Science* the article tells us that Professor Hughes "was experimenting with his microphone and induction-balance, and found that the microphone produced a sound in the receiver even when it was placed several feet distant from the coils through which an intermittent current was passing and not in any other way connected. He found that the whole atmosphere, even in several rooms distant from there, would be invisibly changed and that this could be noticed with a microphone and telephone-receiver. He experimented on the best form of receiver for these invisible electric rays, which he found would pass over great distances through walls, etc. He found that carbon contacts or a piece of coke resting on bright steel were very sensitive and self-restoring receivers. A loose contact between metals, while equally sensitive, required restoring. He also used the microphone as a relay in detecting such rays. He endeavored to discover the best receiver so as to utilize such waves for the transmission of messages. He showed his experiments to a number of well-known physicists at that time. The distance was 60 feet in the building, but he also took the instrument on the street, and walked away from the transmitter, obtaining signals up to 500 yards. He claimed the existence of the waves at that time, but was unable to convince others of their presence. He also calls attention to still earlier experiments of Professor Henry, of Princeton (United States), which were published by the Smithsonian Institution, vol. i., p. 203, the date being probably about 1850; he magnetized a needle in a coil 30 feet distant, and also by a discharge of lightning eight miles distant."

Seeing into the Brain.—The curious colored figures often seen when the eyes are closed are generally believed to be due to stimulation of the retina. Professor Scripture of Yale, however, thinks that he has experimental evidence that they are due to direct disturbance of the brain. The importance of this fact, if it be a fact, is thus noted by Dr. Scripture in a letter to *Science*: "The problem is really one of importance. If this light is cerebral, we have a means of distinctly observing some of the phenomena in the brain. The cerebral figures are intimately associated with the contents of dreams. I believe also that the forms of the figures of cerebral light are intimately connected with the phenomena of nutrition in the brain. I find at the present time that my figures are quite different from those which I have been accustomed to observing in past years; this may correspond to a radical change in the condition of the nervous system which I have observed to have taken place during the past six months. I find also that the figures on first awakening from sleep are very different from those that are seen when the mind becomes fully

awake. Systematic observations by medical men may show that diagnostic conclusions can be obtained by asking patients to describe their cerebral figures. The question at the present time concerns the sufficiency of the observations. If they are correct and reliable, there is, I believe, no escape from the conclusion that the figures are cerebral. I can see no reason to believe that my carefully and repeatedly made observations are erroneous, but it is highly desirable to have them confirmed by other observers."

The Disposal of Dust.—Commenting on the reported use of blasts of compressed air to blow away the dust from ornamental metal work, elevator-cages, etc., in New York office-buildings, *Cosmos* says (June 10): "Logic seems to be no better developed in the United States than in our own country. We have heard recently of the wise and draconian measures adopted there, in the name of hygiene, against spitters, but lo! at the same time they are setting up apparatus to get rid of dust by dispersing it through the atmosphere, an essentially anti-hygienic proceeding. . . . The dust thus dislodged will of course settle elsewhere and will not find a permanent resting-place till it reaches the mucous membrane of some patient or penetrates to his lungs. We may therefore hope to accomplish in this way, before long, the poisoning of the whole population."—*Translation made for THE LITERARY DIGEST.*

Are False Teeth Unhealthy.—A Boston physician, Dr. Simpson, maintains, according to *Cosmos*, "that the use of artificial teeth is bad for old persons, because it enables them to eat meat. The teeth, he affirms, fall out naturally at a certain age, because nature means that at this particular time of life we should limit ourselves to a vegetable diet. Dr. Simpson insists that his ideas on this point are by no means as paradoxical as they may seem to some people."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

THE centenary of the use of nitrous oxid as an anesthetic will occur in November next, we are told by *The Medical Times*.

IN a recent number of *The Critic*, the editors publish an excellent portrait of Prof. F. A. March of Lafayette College, with the assurance that it is the latest and best picture of the late Prof. O. C. Marsh, the distinguished Yale paleontologist.

"CHEESE," said some wiseacre long ago, "digests everything but itself." "Never was there a greater error perpetuated by a popular proverb," says a writer in *The National Druggist*, "(tho the class of sententious sayings, which pass for concrete wisdom, are responsible for many and great mistakes). It aids in the digestion of nothing, and being almost totally indigestible, simply adds another burden to an already overburdened digestive system. The feeling of comfort produced in a person of robust digestive faculties by partaking of a little—a very little—cheese is due entirely to the excitation of the flow of digestive fluid, provoked by the ingestion of a completely indigestible substance."

"THE beard," says *The British Medical Journal*, "has lately fallen under suspicion of being the haunt of bacilli. It has been hinted that surgeons who wish to keep inviolate the aseptic faith should for conscience' sake sacrifice what Parolles calls 'valor's excrement.' . . . But the beard may, we are now told, be a means of conveying infection quite apart from surgical operation. Dr. Schoull, of Tunis, has long been so convinced of the dangers which lurk in the beards and moustaches of men suffering from tuberculosis that he has made it a rule to insist on the thorough disinfection of these masculine adornments when the wearer will not consent to part with them. He has made experiments by inoculating material obtained from the hairs of the beard and moustache in guinea-pigs, and the results have convinced him that the danger to which he calls attention is a real one."

"UNTIL recently, as is generally known," says *Electricity*, "the use of electricity in any shape or form in Constantinople was strictly forbidden. The final triumph over the prejudices of the Sultan, who has always imagined that dynamo was a synonym for dynamite, is now said to have been due to a Spaniard and the kinematograph. This Spaniard, Don Ramirez by name, so the story runs, started a circus in Constantinople, and in order to be up to date imported a kinematograph. But the city authorities would not allow him to set his new instrument in operation because it had to be driven by the condemned electricity. In his difficulty he applied to his ambassador, who promised to do his best for him. During the next audience which he had with the Sultan, the wily diplomatist took occasion to enlarge on the wonders of the kinematograph, and interested the Sultan so much that Don Ramirez was ordered to bring his instrument to the palace. Moving scenes from the leading capitals of Europe were thrown on the screen for the delectation of the Sultan, with the result that permission was finally granted the Spaniard to install in his circus the first electric-light plant ever operated in Constantinople."

THE RELIGIOUS WORLD.

REINCARNATION, HEREDITY, AND EVOLUTION.

SPENCER, Darwin, and other great scientists who have worked out the theory of evolution and brought the scientific world around to their views, have ignored the Oriental theory of reincarnation as a help in their search for the missing links in evolution. While neglecting to associate these two theories, according to the Swami Abhedananda, the Hindu lecturer now in America, scientists can never succeed in making evolution satisfactory to the mind. It is only through reincarnation that evolution can be made complete. Reincarnation is the logical sequence of evolution. To accept evolution without reincarnation is to fail to take account of the moral and spiritual processes going on in man, and these can never be ignored in the pursuit of truth.

The Swami, in defining reincarnation as it is understood in the Vedanta philosophy, says the soul or the self in man does not evolve, does not change; for if it did, it could not be immortal. Nothing that changes or dies is immortal. But the soul, so long as it is not free, is yoked to a subtle body which does evolve by reincarnating and manifesting itself again and again in gross bodies. This subtle body is composed of the subtle forces, such as the respiration, digestion, elimination, the passions and desires, and the intellectual processes of the brain. Death does not destroy or separate these five forces from the soul of any individual, except a Christ or Buddha whose soul has become free, and which does not need to reincarnate.

The next reincarnation is largely determined by the thoughts and desires of the individual at death. On this point the Vedanta philosophy says: "The thought, will, or desire which is extremely strong during lifetime will become predominant at the time of death and will mold the inner nature of the dying person. The newly molded inner nature will express in a new form." The thought, will, and desire having stamped themselves upon the subtle forces at the time of dissolution of the gross body, they proceed to find suitable environment for manifesting themselves in a new form. In other words, the child selects its parents and chooses its opportunity for being born. The evolutionists explain this through what they call the law of "natural selection." Parents are only the principal parts of environment in a reincarnating individual; but natural selection even in human evolution is made as unconsciously as it is made in the germination and growth of a plant.

The Swami then makes the claim that reincarnation does satisfactorily explain what heredity does not explain, namely, the wide difference between children in the same family, one child being born an idiot and his brother a genius. He says that Dr. August Weismann, in his theory of heredity, has pushed the continuity of the germ plasm to such an extent that it has come almost to the door of the doctrine of reincarnation. Dr. Weismann has denied the transmission of acquired characters, but contends that the germ plasm can be metaphorically described as a creeping root-stock from which plants arise at intervals, these latter representing the individuals of successive generations. But Weismann's theory, Vivekananda declares, falls to the ground in not being able to tell where the potential characters of the germ plasm originate. Weismann's answer is "from the common stock"; but what and where that common stock is Dr. Weismann does not tell us. Vedanta, however, does teach us that each of these germ plasmas is but a reincarnating subtle body, containing potentially all the experiences, characters, tendencies, and desires which one had in one's previous life at the time of death, each individual soul contracts and remains in the form of the germ of life. It is for this reason, Vedanta says, that it is neither the will

of God nor the fault of parents that has formed the character of those children, but each child is responsible for its tendencies, capacities, powers, and character.

Proceeding from heredity to evolution, the latter, we are told, depends upon three laws: tendency to vary, natural selection, and the struggle for existence. Science has thus far failed completely to explain the innate tendency in all living creatures to vary, and there is nothing in evolution to account for the origin of man's moral and spiritual nature. It can scarcely be said that the lower animals manifest the rudiments of such a nature. Natural selection, then, can throw no light upon the origin of such a nature, and the struggle for existence, so manifest in all lower animal life and even in man, does tend to destroy it. The explanation of the theologians, that the spiritual nature has been superadded to the animal nature by some extra-cosmic spiritual agency, is not scientific, nor does it appeal to our reason. Vedanta accepts evolution, admits the laws of variation and natural selection, but goes a step beyond modern science by explaining the cause of that "tendency to vary." It says: "There was nothing in the end which was not also in the beginning."

The Swami quotes the following passage from an eminent English scientist, J. Arthur Thomson: "The world is one, not twofold; the spiritual influx is the primal reality, and there is nothing in the end which was not also in the beginning." "But," continues the Swami,

"the evolutionists do not accept this truth. Let us understand it clearly. It means that which existed potentially at the time of the beginning of evolution has gradually manifested in various stages and grades of evolution. If we admit that a unicellular germ of life or a bioplasm, after passing through various stages of evolution, has ultimately manifested in the form of a highly developed human being, then we shall have to admit the potentiality of all the manifested powers in that germ or bioplasm, because the law is: 'That which exists in the end existed also in the beginning.' The animal nature, the higher nature mind, intellect, spirit, all these existed potentially in the germ of life. If we do not admit this law, then the problem will arise: How can non-existence become existent? How can something come out of nothing? How can that come into existence which did not exist before? Each germ of life, according to Vedanta, possesses infinite potentialities and infinite possibilities. The powers that remain latent have the natural tendency to manifest perfectly and to become actual. In their attempt they vary according to the surrounding environments, selecting suitable conditions, or remaining latent as long as circumstances do not favor them. Therefore variation, according to Vedanta, is caused by this attempt of the potential powers to become actual. When life and mind begin to evolve, the possibilities of action and reaction, hitherto latent in the germ of life, become real, and all things become, in a sense, new. Nobody can imagine the amount of latent power which a minute germ of life possesses until it expresses in gross form on the physical plane. By seeing the seed of a hanyan-tree, one who has never seen the tree can not imagine what power lies dormant in it. A baby is born, we can not tell whether he will be a great saint, or a wonderful artist, or a philosopher, or an idiot, or a villain of the worst type."

Evolution reaches its highest fulfilment when the spirit manifests perfectly, when it becomes one with the universal spirit, or God. Man is the only animal in whom such perfect expressions of moral and spiritual nature are possible.

The Name "Catholic."—What is the correct title of the church that has for its sovereign head the pontiff at Rome? Should it be written "Roman Catholic" or simply "Catholic"? These questions have been up for discussion recently in religious papers representative of various Christian churches. Speaking from the Protestant point of view, *The Herald and Presbyter* (Cincinnati) defines the words "Holy Catholic Church" as used in the Apostles' Creed as meaning "universal" and applicable to

"the great body of God's people in all lands and ages." It insists that the Roman Catholic church has no right to exclusive use of the word "Catholic." The New York *Freeman's Journal* takes issue with these statements. It declares that the word "Catholic" rightfully belongs to the church founded at Rome by St. Peter, and to no other. It quotes St. Augustin, St. Cyril of Jerusalem, and other church authorities in support of its contention. From this *The Journal* proceeds to say:

"It clearly appears from these early Christian writers that the term Catholic was the distinguishing mark of our church, and not a general term including heretics and schismatics who professed Christianity. The term was used by St. Augustin and St. Cyril of Jerusalem to exclude heretics and schismatics. In the same sense it was used by St. Pacian, who said: 'Christian is my name, Catholic is my surname; by the former I am called, by the latter I am distinguished. By the name of Catholic our society is distinguished from all heretics.' It was in this sense that the name Catholic was used in the Apostles' Creed, and it is not surprising that those Protestants who use that creed are troubled when they come to that word.

"It is too late for the modern sects—who until recently held the term Catholic in detestation—to snuggle to that name. It was appropriated centuries before they came into existence. They can not be robbed of it, because they never had it. The whole world knows what Catholic means; and it knows it does not mean Presbyterian, or Calvinist, or Methodist, or Lutheran, or Baptist, etc. And when these heretical sects begin to claim it the world laughs—which is the sensible thing for it to do, under the circumstances."

WOMEN'S HATS AND THE HIGHER CRITICISM.

THE newspapers do not seem to be content with the considerable degree of success which has attended their efforts to induce women to remove their hats when at the theater. The spirit of reform in general has a tendency to increase its hold upon its adherents, and perhaps for this reason these journalistic reformers are now reaching out for new fields of conquest. From the comments which we have seen, there appears to be a remarkable consensus of opinion in the masculine editorial mind, altho there are a few dissenters, that women should not longer display this article of feminine vanity—as they term it—in the sacred edifice. The Brooklyn *Eagle* (June 23) says:

"If it is possible to get rid of hats in a theater, where there is not supposed to be any particular consideration on the part of the audience, and a worldly demeanor is expected, surely it is theoretically possible to do the like in a church where every one is supposed to want to be good, and where even a woman with a new hat is not supposed to insist on obtruding that possession on the eye of the produce merchant behind her, when he is eager to fix his eyes on the countenance of his pastor. So when Plymouth Church asked for the lessening of hats there was considerable response, enough, at all events, to encourage the people of the Hanson Place Methodist Church to prefer a similar request. The deacons were afraid to ask this right out in meeting, so they posted notices at the doors, but few women paid any attention to them, and the appeal was considered a failure. As it is known that the pastor is in favor of the reform, however, and as women value the opinion of their ministers, it is probably not a failure, and one of these times they will no doubt be asked, right to their faces, to take off the obstructions, and some of them can not refuse."

The Philadelphia *Inquirer*, however, dissents from this view of the subject, and thinks there can be no comparison between the theater, where there is a spectacle to be observed, and the church, where one does not come for visual amusement. It says:

"After all there seems to be no good reason why in church the hat should not stay on the top of the feminine head. There is no irreligious or sacrilegious idea mixed up with it, and in many ways it is the highest sort of reverence for the member of the congregation to appear at the service in the best she has. It is an

homage of a particularly graceful and beautiful kind, at least, if that feeling lies behind the show and beauty that usually congregate."

The Brooklyn *Times*, under the heading "The Spread of Heresy," thinks that such a violation of an apostolic ordinance would set a bad precedent, and that other and worse violations might follow:

"The Higher Critics do not question the authority of the Scriptures. They point out what they believe to be errors or interpolations in the text or mistaken theories of authorship, such errors as were almost inevitable in the transcriptions and retrancriptions by which only the copies of the sacred books could be multiplied before the invention of printing. But the clergymen who think that women should remove their hats during divine worship take bolder ground. They assert that the explicit mandate of St. Paul is devoid of authority now. Says the Rev. Dr. Jesse F. Forbes, of the Adams Memorial Presbyterian Church: 'What Paul said about women worshipping with uncovered heads does not apply in this case, or to modern circumstances generally.' Dr. Kraeling, of the Zion Lutheran Church, says that if St. Paul were to see some of the modern head-gear, he would be of modern mind and not so insistent that it be retained in the churches.

"The clergymen who lightly brush aside a plain mandate of Scripture with the airy remark that it amounts to nothing nowadays, make a more deadly assault upon the authority of the Bible than the critic who, while acknowledging the book as an authority for all time, indicate what they deem to be errors in the text. If, when Dr. Forbes admonishes a non-churchgoing brother with the words of St. Paul, 'Forsake not the assembling of yourselves together, as the manner of some is,' what can he answer if he is told that the admonition does not apply to modern times, when every man can have all the religious literature he can read at home without going to church to listen to a mediocre sermon? Some of our clergymen appear to be treading on rather dangerous ground."

CREEDS, NEW AND OLD.

IN THE LITERARY DIGEST of June 17 we quoted from an article in *The Outlook* which argued for a liturgical rather than a doctrinal basis for church unity, and advocated the retention of only the simplest creed—the Apostles'—which is almost wholly historical and non-doctrinal. In *The Christian-Evangelist* (June 8), Prof. B. A. Hinsdale, of the University of Michigan, takes much the same view, so far at least as creeds are concerned. Tracing the history of creeds from the first simple declaration of belief in Christ down to the Athanasian Creed of the fourth century, he says:

"What the primitive Christian Confession of Faith was is not now, happily, a matter of dispute. The old theory that some of the creeds of a later day, as the Apostles' Creed, were composed by apostles, or at least originated in the Apostolic age, has been abandoned by scholars, and it is held quite universally that a simple declaration of the Messiahship and divinity of Jesus Christ was the original symbol: 'Thou art the Christ, the Son of the living God.' For the Jew 'Christ' might have been sufficient, but for the Gentile, for whom the Jewish title had no meaning, it was necessary to add, 'Son of the living God.' Such was the first Christian confession; and it will be instructive to glance at the process by which it was gradually set aside and the partially expanded creeds of antiquity and the fully expanded ones of modern times put in its place.

"The creed-making process is mainly an excising, or at least a separating process, and is therefore negative in its effect. Those who frame and accept new creeds, no matter whether they write them out or not, strive, in so far as they are conscious agents, to mark themselves off from other men making the Christian profession and bearing the Christian name. If they make these symbols the basis of new communions, they are necessarily separatists. This fundamental truth a little history will render plain.

"Between the primitive symbol and such symbols as the Apostles' Creed there intervened this creed-form: 'I believe in God, in

Jesus Christ, and in the Holy Ghost.' This creed was made by putting the soul of the primitive symbol—the act of confession—into the body of the baptismal formula—Father, Son, and Holy Ghost. Traces of it are found in the memorials of the ancient church. It was the first stage in the evolution of the multitudinous creeds of the historic church.

"The second stage in the same process was the expansion of the articles of this tripartite form by the addition of successive increments, with a view of separating orthodoxy from heterodoxy. Thus, when the Gnostics made a distinction between God, the Father Almighty, and the Demiurge, or Creator of the world, the orthodoxy added, 'Maker of heaven and earth' to the first article. And later, when the Eastern Church taught that the Holy Ghost 'proceeded' from God the Father only, the Western Church added, 'And the Son' (*filiusque*) to the third article as framed by the Council of Nicea, making it read: 'And in the Holy Ghost, the Lord and Giver of life, who proceedeth from the Father and the Son,' etc. The history of creed-formation is one cumulative argument showing that such was the nature of the process; but these two examples will suffice for the present purpose."

Following the Apostles' and the Nicene creeds, the Athanasian Creed constitutes the third great expression of historic Christian belief. Professor Hinsdale, in common with many other scholars, regards it, however, more as a great song or pæan than as a formal creed to be recited. Thus he says:

"The late Dean Stanley remarks upon the rhythmical form of the Athanasian Creed: 'It was a prose treatise composed in the rhythm of the *Te Deum*. It was not only "the Confession of the Catholic Faith," but "the Psalm *Quicumque Vult*."' 'Every sentence is a verse, and the whole is a triumphant pæan.' The dean mentions two theories as to the time and conditions of the appearance of this symbol: one, that it first started into general acceptance with the triumph of Clovis over the Arian Visigoths; the other, that it signalized the triumph of Charlemagne over the Byzantine power, and says: 'It may in this aspect be regarded as the war-song of the orthodox king or emperor, the hymn of victory over the defeated heretics. Wherever it is still read or sung this is probably the best aspect under which it can be considered—as a theological song of Deborah, rejoicing over the fall of the enemies, as it was once thought, of God and of the Franks, as Deborah and Jael rejoiced over the fall of the enemies of God and of Israel.' Stanley found the main source of the life and power of this creed in its effect as chanted in the great cathedrals: 'The grand crash of music drowns the dissonance of the jarring words, and the burning vehemence, the antithetical swing of the sentences is carried along on the wings of choir and organ till the sense of their particular meaning is lost in the spirit and rhythm of their sound.' The Athanasian Creed is an extreme example of the habit of mind in which the great polemical symbols have originated; but they are all the product of strife and contention, and most of them still pulsate with the life and feeling that gave them birth. They are *polemicons*, not *eirenicons*."

As to the tendency of creeds to bring about disunion in Christendom, Professor Hinsdale says:

"There is still another aspect under which these creeds may be viewed. They have rallied the conservatism of the communions standing upon them; they have become objects of hallowed association, and so have lived on long after the circumstances in which they originated passed away. Thus they not only mark the divisions and contentions in which they originated, but they preserve such divisions and contentions. There is mutuality of cause and effect. Division begets the creed, and the creed keeps alive the division. The question of the legitimacy of creeds is not here raised for discussion. However that question may be viewed, men are coming to see that expanded polemical creeds are by no means a source of unmixed good; that they were produced when the church was in an abnormal state, and that they tend to perpetuate that state; that Christian unity and creed-revision proceed from the eirenical spirit, and that, as the church as a unit assumes a normal position and life, the more necessary it is to return to primitive simplicity and comprehension."

The writer quotes the opinions of Dr. Marcus Dods, one of the most eminent of Scottish theologians, and of Prof. John Stuart Blackie, to the effect that it is worthy of the consideration of any

church whether creeds "have not done more harm than good in accentuating peculiarities and perpetuating inconsiderable distinctions; whether freedom of thought and the currents of public opinion are not more likely than the imposition of a creed to bring Christendom to a common recognition of the truth." Continuing, Professor Hinsdale says:

"The reasoning of Dr. Dods and Professor Blackie can not be answered. If men in great numbers are to be united for political or religious work broad platforms must be provided for them to stand upon. Moreover, the larger the number of planks put into the platform the narrower it is. History as well as theoretical reasoning shows most conclusively that lengthening the creed shortens the list of its subscribers. And it is one of the hopeful signs of the times that this fact is becoming clear to an increasing number of minds.

"The more men reflect upon the Gospel and its claim to an universal acceptance, the more will they appreciate its adaptation to the needs and conditions of men. This adaptation is seen in its appeal to the universal elements of human nature; in the small number and simple character of its rites and ordinances; in the simplicity of its ecclesiastical arrangements, and in the surrender of details of order, opinion, and administration to the conditions of time and place. Apparent everywhere in the New Testament, this singleness of aim is nowhere more obvious than in the primitive Confession of Faith."

These ideas appear to be widely shared by religious thinkers on both sides of the ocean, and have just borne fruit in England in a new church union catechism put forth by a committee of the leading evangelical churches. Upon this new catechism, which may be regarded as the first step toward a new creed for united Christendom, *The Religious Review of Reviews* remarks as follows:

"It is admirable in every way. In the first place, it is a church union catechism. We have been insisting on the blessings that would come with church union, and here is one of them at once. It is a catechism made by Congregationalists, Baptists, Presbyterians, Methodists, and others. Then it must be good. But the wonder is, how did they ever make it? We can surmise. There is a subtle, secret, wondrous influence that we trust too little. It is called the Holy Spirit, and that is the way they made it. He is the Author of peace and Lover of concord, and rejoiced to help this beautiful work. Furthermore, the framers seem to have buried the whole vast system of scholastic theology. They have gone right back to the Scriptures; to the simplicity that is in Christ. They were a wonder to themselves. To think of Baptists and Pedo-baptists uniting to make a catechism about baptism, and succeeding, too! This, surely, is the coming of the end—the end of division; the beginning of the Universal Kingdom. If sects can unite on a catechism, why can not they unite on anything? Why follow the miserable fashion, divide, and be conquered? We hail this catechism, then, with a great joy; it meets our desires and hopes in every way. The framers deserve well of their nation and of the whole church."

In reference to a recent unfavorable comment by Dr. Abbott concerning this new catechism, *The Congregationalist* says:

"What does Dr. Lyman Abbott mean by saying to a representative of the admirable English monthly, *The Puritan*, that the 'new nonconformist catechism has had no favorable reception among us'—that is, among American Christians? We should say that it had had a remarkably favorable reception, judging by the frequency with which it was reprinted, by the editorial comments upon it by the journals of all denominations, and the circulation it has had in pamphlet form. It has been seriously discussed in the more formal religious quarterlies—usually favorably—and everywhere it has been hailed as a remarkable proof of the essential unity of British Dissenters, and a welcome sign of the relegation of metaphysics to the rear."

The Advance counsels the Congregational churches to dismiss without censure all Christian Scientists who wish to join Christian Science churches, but without the letters of recommendation to these churches, on the ground that they are not evangelical in doctrine.

SHALL THE SUNDAY-SCHOOL BE ABOLISHED?

A SEVERE indictment of the methods and results of modern Sunday-school training was recently made by the Rev. Dr. Pelham Williams in an address before the Church Club of the diocese of Long Island. Dr. Williams's denunciation was a sweeping one. The system was condemned *in toto*, and the opinion was expressed that the church and the religious world would be immeasurably stronger if the Sunday-school were wholly abolished. The main counts of the indictment are indicated in the following editorial comment on the address from *The Christian Intelligencer* (Reformed Church) of June 14:

"Few, if any, we imagine, will be inclined to follow the lead of Dr. Williams in seeking the abolition of the Sunday-school, or go to the length he has in condemnation of it. It is a poor remedy to kill the patient in order to get rid of the disease. Yet it is well to give honest attention to the opinions of foes as of friends, and even as the less radical but somewhat similar criticism of the editor of *The Ladies' Home Journal*, a year or so ago, these strictures and objections to the Sunday-school as it not always but often is, may be profitably considered, and if found true a remedy should be sought.

"Some of the points made as to the working and influence of the Sunday-school are scarcely worthy of consideration based as they are on exceptional cases and partial information. The instances where the Sunday-school can be correctly described as 'a sorry appendage to either a picnic or a festival' are exceedingly rare. And as to the character of the instruction given, however incompetent some teachers may be, in the majority of schools the teaching is not only sound, but by persons of the highest fitness. It is true that not always can enough well-qualified teachers be found to meet the demand, but this is a transient condition, and may be expected to improve with advancing intelligence, and the committing of larger classes to the competent teachers.

"In fact, the defects and failures of the Sunday-school so trenchantly and unqualifiedly presented by Dr. Williams are an argument, not for the abandonment of the institution, but for its improvement. There is no doubt that the Sunday-school, despite the excellent work done and the magnificent results achieved, has in some cases been allowed to usurp unduly the place of the church, and been an excuse for the neglect of parental instruction. It is well to have attention called to these things, and in so far Dr. Williams has done a far-from-harmful service by his iconoclastic assault. The result will be most healthful if it leads to greater care in the selection of teachers, the employment of only such as are competent, the explosion of the idea that the Sunday-school is 'the children's church,' the causing of parents and teachers to emphasize the paramount importance of church attendance for children as adults, the revival of religious instruction in the home, and the relegation of the Sunday-school to its true place as the supplement and not the substitute for religious instruction by parents."

After admitting that Dr. Williams may be partly right in his belief that diminishing congregations are the result of the Sunday-school, which often prevents the formation of a churchgoing habit, and that there is less careful instruction of children in the family nowadays than formerly, the writer concludes thus:

"The great and substantial argument for the Sunday-school as an institution was and is that it diffuses religious instruction more widely, and reaches a larger number of the young than is possible by any other method. Home-training is better than school-training where parents are fitted to give it, but were the Sunday-school abolished the children of multitudes of homes would grow up in religious ignorance.

"The need to-day is not less teaching in the Sunday-school but more in the home, not fewer Sunday-schools but better ones, not less attention to Bible study, but more attendance on the divinely appointed public worship of God. The Sunday-school may be, it is well for us to recognize, a source of evil as well as of good, and it becomes all Christians to address themselves to the task of correcting its faults and shortcomings, and making it more than ever a blessing to the church and the world."

The Living Church (Prot. Epis.) takes much the same view:

"Food for thought, as well as occasion of surprise, was recently furnished to the members of the Long Island Church Club by the Rev. Dr. Pelham Williams. It was well known that the speaker had some very positive (or rather, negative) views on Sunday-schools, and those who knew Dr. Pelham W. expected some plain talk on the subject. It seems that he succeeded in making himself understood, and raised quite a breeze. Some of the brethren were 'astounded,' the reporter says, 'swept off their feet!' One of the utterances that almost took their breath away was that he did not believe in 'any Sunday-school that ever was, ever is, or ever will be.' This was rather too strong, we must admit, for it may be that Dr. Williams does not know what the Sunday-school of the future will be. But he is not so far from right in his Pelhamesque way of putting it, concerning the Sunday-school that 'ever has been and ever is.' We believe that it is better for children to go to church than to school, on Sunday. To require them to go to both is to put upon them a burden to which their elders would not submit. Yet we presume that there is scarcely one pastor in a hundred who would vote to abolish the Sunday-school. By what other means can he reach the children? They will not come to church, for the most part, even if they do not come to school; their parents do not come, in many cases, nor do they teach the children at home. Is it not possible to bring the Sunday-school and the church services together?"

RELIGIOUS NOTES.

THERE are 120,000 persons in Jamaica, W. I., enrolled as members of some Christian church, which is one in five of the entire population.

ACCORDING to the reports to the last Assembly, the Southern Presbyterian church had 1,448 ministers, 2,873 churches, and 217,075 members. The total amount of contributions for all causes was nearly two million dollars.

THE Presbyterian church in Ireland is engaged in raising its "twentieth century fund," the Belfast Presbytery having made February a month of special effort to raise its part. Nearly half of the £1,000,000 (\$5,000,000) which the church proposes to raise for the fund has already been subscribed.

ACCORDING to *The Religious Herald* (Hartford, Conn.) the Rev. C. E. Stowe, who has resigned his charge at Simsbury, Conn., after twenty years of continuous labor in the pastorate, that he might enjoy a period of travel, study, and recreation abroad, has felt justified in taking this course because the ministry is so overcrowded. There are so many poor fellows saying: "Put me in the priest's office that I may eat a crust of bread," that he thinks it is just as well to give up a place which he does not want to some one who does want it very badly.

The Herald and Presbyter (Presbyterian) in an article on "Success in the Ministry," says: "We have not too many ministers. The ministry is not overcrowded. Young men who are considering the question of a call to this transcendently important work may as well understand very clearly that there is room for them if only they will press forward with consecrated vigor to occupy the place to do the work. These churches need pastors. Without question there is a very serious defect, practically, in our plan of bringing ministers and churches together, or rather, in our plan of leaving too many of them separated. We should improve the practical workings of our system. We must do it or suffer increasing loss."

ONE of the leading articles in a late issue of *The Fortnightly Review* is from the pen of the well-known Catholic writer, Willfrid Ward, who discusses the relations between the Holy See and the Italian Government as they apparently exist at the present time. Mr. Ward sees in some recent acts of the Quirinal a desire on the part of King Humbert and his ministers to be reconciled, to a certain extent at least, with the Papacy. He points out that the overtures, some of them open advances, which have been made by the King and his counselors to the Holy See indicate a disposition on their side to secure the revocation of the papal edict which since Pius IX.'s days has virtually forbade the Italian Catholics to take any part in the Italian national elections.

THE appointment of twelve new cardinals by the Pope has, it is said, upset the calculations of many persons who expected Leo's death and a reversal of his policy. The new cardinals are as follows: Mgr. Ciasca, secretary of the Propaganda; Mgr. Mathieu, Archbishop of Toulouse; Mgr. Missia, Archbishop of Goritz; Mgr. Casanova, Archbishop of Santiago in Chile; Mgr. Richelmy, Archbishop of Turin; Mgr. Portanova, Archbishop of Reggio in Calabria; Mgr. Francica-Nava di Bontifè, Archbishop of Catania and Apostolic Nuncio at Madrid; Mgr. Casalidel Drago, Patriarch of Constantinople and Vicegerent of Rome; Mgr. Cassetta, Patriarch of Antioch, Assessor of the Holy Inquisition; Father Vives de Llevaneras, a Spanish Capuchin, Definitor of his order and Consulor for several Roman congregations; Father Cormier, a French Dominican, procurator-general of his order at Rome. These are all, says *The Independent*, believed to be warm supporters of the present policy of the Vatican and of Cardinal Rampolla, and are cordial personal friends of his. This means that the German party, with the party favoring a compromise with the Italian Government, is outmatched, and that Leo's policy will in all essential respects be continued by his successor when the scepter falls from his own hands.

FOREIGN TOPICS.

THE SALE OF THE CAROLINES.

THE German Parliament and the Spanish Senate have already passed the treaty by which the remnant of Spain's possessions in the far East passes into German hands, and there is little doubt that the Spanish Lower House, tho the opposition exploits the matter against the Government, will also pass it. The news of this Spanish-German agreement came as a surprise to nearly everybody, showing how well governments can sometimes keep their business from a prying press. The Spaniards, to judge from the fact that the Senate passed the treaty without discussion, are well enough pleased. The *Epoca*, Madrid, says:

"This reminds us that we once invited disaster at the hands of one of the strongest of European powers. Our downfall would have come sooner had not Germany been willing to submit the Carolines dispute, which so excited us that the German eagles were torn from the consulates, to arbitration by the Pope. It was a similar spirit that led to our late disastrous war. But Germany gives a fair equivalent for what is only the remnant of our empire abroad, and we are now enabled to improve our trade relations with her."

The Republican papers accept the matter as a good chance to attack the Government. The *Pais*, Madrid, says:

"Not enough that nearly a third of our patrimony has been torn from us by force, but now the Government disposes of the rest. . . . Many people will argue that we should have retained those islands as a half-way house for our ships when trading in the Pacific, as a place where they could be fitted out under the Spanish flag. What everybody will criticize most bitterly is that the Government has not even consulted the Cortes before parting with what little the Yankee has not stolen."

The Carlists complain all the louder as it was rumored in the British press that Don Carlos would turn over the islands to Great Britain, were he established in power, and the *Correo*, which is now in British hands, complains bitterly of the "perfidy and incompetence" of the Government.

The islands ceded cover only about as much ground as Rhode Island, but many of them are very productive, and most of the German papers think that the price—\$4,000,000—is not excessive. The *Correspondent*, Hamburg, says:

"The extent of territory thus added to the empire is insignificant enough; but their trade is already in our hands, and as they can be acquired in a peaceful way, it was the duty of the Government to close with the offer. On the part of Spain this sale of her last colonial possessions reveals a determination to break with the past. Spain will never again become a colonial power, but the fact that she has given up that hope speaks well for her chances of healthy internal reforms."

Richter's *Freisinnige Zeitung*, however, thinks it will be difficult to discover which of the islands deserves a prize for being the most worthless, and the *Tägliche Rundschau* says that Germany "only gets the crumbs that fall from the Yankee's table." Some British papers object, chiefly because every additional island owned by Germany is likely to lead to an increase of the German fleet, a subject which no Briton contemplates with calmness. The *Outlook*, London, deplors that "the Kaiser has now another argument to enforce upon his reluctant subjects his demands for funds for the creation of a great navy." It adds:

"Given that, and he will not lag in realizing his dream of making Germany a world-power. But at whose expense? Scattered islets in the Pacific will not suffice, and there is nothing else to be had except by taking it. Contrast with what has happened Sir George Grey's dream of what should have happened—the pegging out of the islands of the Pacific as a dominion in trust for the Australasian nation of the future. To allow European powers to establish themselves there was, in his view, to make the Pacific a new fighting-ground for Old-World quarrels."

The *Speaker* supposes the German Catholic missionaries will desire to extend their work under the German flag. The *Edinburgh Scotsman* thinks the money which Spain receives from "the encroaching Teuton" will give her no small relief. The *Spectator* says:

"Spain, we suppose, as a matter of pride, reserves her right to three coal-depots—one in each group of islands—for her vessels of war and trade, and she is 'to retain the same, even in time of war.' The moral questions involved in selling territory are interesting and important. If the inhabitants really agree, there is, of course, no ground of complaint, but nothing could justify a power in selling a province against the will of the inhabitants. However, no one, white or black, will be likely to object to passing from a weak and inefficient government like that of Spain into the hands of Germany."

In France no objections are raised. The *Journal des Débats*, Paris, says:

"The matter does not concern France immediately, but if we welcome Italy in the far East, we may also be pleased with an extension of German influence. We have never believed that Germany thought of quarreling with the Americans over the Philippines. Everything that has been said to that effect in the English papers bore the mark of being influenced by the desire to make England's friendship appear valuable in American eyes. But if Germany has even greater ambitions in the far East, we have nothing to fear. When she took possession of Kiau-Chou she found France and Russia perfectly willing to give her place, and Germany's influence has assisted in preventing England from grabbing all China. As Germany obtains the possession of the Carolines without hurting the feelings of our Spanish friends, we have no reason to agitate ourselves."

The Dutch papers say that as Germany obtains the islands in a perfectly just and peaceful manner, no one need complain.—*Translations made for THE LITERARY DIGEST.*

THE ROYALIST ATTACK UPON PRESIDENT LOUBET.

THE demonstration at the Auteuil races against President Loubet seems clearly enough to have been made in the interest of a monarchical form of government, but the aims of those making it were defeated. Baron Christiani, who struck the blow at the President, has been sentenced to four years' imprisonment. In all over two hundred arrests were made, and some of the arrested bore distinguished names. Cornély, of the *Figaro*, lectures the Monarchists as follows:

"You, who yourselves have suffered persecutions, have by this act approved of persecution. You, who complain of the intolerance of the freethinker, exhibit the intolerance of the religionist. You profess to believe that all defenders of Dreyfus were bought

FATHER LOUBET TAKES MATTERS IN HAND.

"Come, children of the country."—*The Westminster Gazette.*

with money, and have glorified the forgers. Your connection with foreign aristocrats is the bond which unites France with the nations around her, but you have broken the moral ties which connect you with the nobility abroad, and while all Europe was convinced of Dreyfus's innocence, you remained as obstinate as mules or militiamen. You have failed to see what a splendid chance you had to strengthen your position by defending right and justice."

This, from the pen of a Monarchist and an ex-editor of the *Gaulois*, can not fail to make an impression, for of Cornély's honesty there is no doubt. The *Journal des Débats* thinks such futile attacks upon the republic will only strengthen it. "These people really don't know what they are doing. They are not intelligent enough," says the paper. Many papers in Europe take hold of the occasion to point out that there is a great difference between "smart sets" and real aristocrats, the former basing their claim to distinction upon money, the latter upon genuine superiority over the average man. "The 'smart' world of all countries is the perfection of vulgarity," remarks *The St. James's Gazette*, London. In another place it says:

"One of the features of modern life has been the creation in most countries of a large class of persons who have money and leisure. It is their ambition to be 'aristocratic,' but it is not given to anybody to attain that ideal by mere wishing. The result is the existence, under various slightly different forms, of a sham 'society,' which exists just below the real one, and has a very close likeness to it—when you stand at a distance. Even Spain has not escaped infection. It has such a class, and has invented the word 'curse' to describe it. In Paris this pinchbeck imitation of a genuine original is particularly numerous, but the French language having largely lost the power of making new words, our terms have been taken. 'Smart' is as familiar in Paris as it is here, and so is 'snob,' tho with a certain extension of meaning, subtle but legitimate. Whatever would like to be taken for the real thing which it is not, is 'snob' in French as well as in English; but on that side mere society fashions are also 'snobs,' which they have not yet quite come to be with us. 'This is the world which produced the riot at Auteuil as a masterpiece, and has been the cause of much more.'"

Even monarchic Spain refuses to recognize the Auteuil rioters. Says the *Epoca*, Madrid: "The Government must be firm, even rigorous in maintaining order. That is the opinion of all well-wishers of France outside of the republic, or, which means the same thing, outside of restless Paris. Such occurrences are the signs of degeneration." The Amsterdam *Handelsblad* sarcastically points out that the *jeunesse dorée* have shown their handiness with the stick on another memorable occasion—when they beat down women and children to escape the flames at the Bazaar de la Charité! The *Deutsche Tages-Zeitung*, the organ of the hard-working Prussian squires, has nothing but contempt for these elegant rioters. The *Kölnische Zeitung* says:

"It is quite possible that those dude rioters think they have done a great deed. So they have. They have strengthened President Loubet's prestige. A blow with a cause is, when delivered and received in this way, something one can not guard against any more than the bite of a mad dog. The President sat among ladies of the highest rank—the wife of the Italian Ambassador was one of them—and this alone should have protected him. Prison fare will, no doubt, have a cooling effect upon the blood of these gilded youth, and the man who so hastily attacked the President has been mauled sufficiently to keep him from showing himself on the Boulevards for a while, even if the President should pardon him."

Yet the paper sees much danger to France in the fact that the Socialistic elements have to be used in the defense of the republic. "After all, the republic is only the republic of the bourgeois money-bags," it says, "and the curse of the Panama swindle lies heavily upon it, and the power of the capitalist is on the wane in France."—*Translations made for THE LITERARY DIGEST.*

THE FILIPINO WAR.

IT was known abroad, much earlier than the press here was willing to admit it, that the Filipinos offer a resistance too determined to be overcome by a comparatively small force. To-day not a few people express their doubts of the ultimate conquest of the islands, as the cost in blood and treasure may be greater than the American people bargained for. It seems certain that the Filipinos have all along considered their position much better than the repeated rumors of their despondency would lead us to think. The *Manila Times*, speaking of the negotiations with a view to establishing an armistice, says:

"Not satisfied with being refused an armistice of three weeks, they came back with a new proposition asking for a complete cessation of hostilities in the 'entire archipelago' for a period of three months. A little questioning promptly elicited the confession that the Filipinos did not claim active sovereignty over all the islands, but they believed it only a matter of time until all the islands of the group would acknowledge the Filipino supremacy, and in the mean time they apparently wished an opportunity to thoroughly canvass the country and learn the disposition of the people. It is indeed a splendid scheme for the Filipinos. Needless to say, the proposition was not entertained."

A leading article in the *Independencia*, Aguinaldo's official paper, runs to the following effect:

The American jingoes will have to learn that 40,000 men can never conquer the Philippines. To get a distance of twenty-five miles, the Americans had to fight a whole month, losing 3,000 killed, wounded, sick, and prisoners. And that along the railroad track! They are masters of just as much soil in Luzon as their feet rest upon. We have freed this country from the Spaniards, and the nation that would annex us must put a garrison in every village. That will take 400,000 men, rather than 40,000. The sooner the Americans convince themselves of this, the better. Else they will lose many millions and only a fraction of their army will return home.

The London *Daily Chronicle* publishes part of the private correspondence of an English journalist in Manila, which we condense as follows:

That the Americans are past-masters in the art of describing

"OTHERWISE ENGAGED."

PEACE: "Dear me! How very dreadful! I wish I could stop to settle that affair, but I've a pressing appointment at the Hague."

—*Charivari*, London.

heroic battles which never took place is well known. But the Filipinos are just as progressive, and their journalistic efforts quite as astonishing. Like the Americans, they set up a big yell over a small scrap. The American papers are full of terrible battles—ending with the loss of two men slightly wounded on the American side. Between February 4 and April 4 there was not any battle quite as exciting as a lively election contest. The American losses average five per day, the Filipino losses ten per day, and that where the forces in the field are 30,000 and 60,000 respectively! The news is always very similar in the press of either belligerent. The Americans always report: "Losses of the enemy heavy, impossible to give exact numbers, as they carry away their dead." The Filipino papers say: "Many Americans succumbed to our fire, but the enemy hides his loss by removing the bodies." An American correspondent here was asked by his paper: "Why did you not cable the taking of Pateros?" He replied: "Because it did not take place," and a sharp reprimand for his "want of enterprise" was his reward. Another American correspondent, told by his stenographer in the midst of an exciting story that it was not true, calmly answered: "Never mind; it's good stuff." Another correspondent was dismissed as incompetent because he never sent such stories.

The Army and Navy Illustrated remarks that probably the Spaniards were right when they said that the Americans would win all the battles and lose the campaign. *The St. James's Gazette* says:

"From the despatches issued by the authorities at Washington and published to-day it would appear that a desire exists to make the most of the fighting in the Philippines and to magnify every decent skirmish into a hard-fought battle. The Filipinos are too conscious of their own weak points and of the superiority and resources of the Americans to care about venturing a pitched battle. The United States War Department has to make a show of the troops doing good work, if only as an excuse for the length of the operations and the necessity for increasing the force in the Philippines by five thousand men. It is known also that the press messages handed in at Manila to be telegraphed are revised by the authorities before being forwarded in order that nothing derogatory to the American arms may become known. . . . If the American troops were as successful in the various engagements as the glowing telegrams from Washington make them out to be, the war would soon be over. The United States may find the Filipinos as hard to deal with as Spain did, unless the Spanish plan of buying peace is adopted. The only drawback to this method is that the natives may resume the war each and every time they run short of pocket-money."

The Epoca, Madrid, asks what are the Spaniards in the Philippines who, until recalled, bravely held out against both Tagales and Americans, if the Americans are heroes. *The Tages Zeitung*, Berlin, professes to be amused at American complaints of treachery. "Soldiers must not entrust the enemy with their safety," says the paper. *The Frankfurter Zeitung* fears that the Tagales, even if they consider it convenient to stop fighting for a while, will begin again when it pleases them. *The Temps*, Paris, is informed that the Filipinos are much more incensed with the Americans than they ever were with the Spaniards, as the American troops behave most brutally. Its accounts of the plundering, rape, and butchery of which the American troops are supposed to be guilty is furnished by an Englishman long resident in Manila. Many Canadian papers believe that the United States will discontinue the war. *Events*, Ottawa, says:

"The policy of expansion inaugurated with such a flourish of trumpets in the first warm moments of success promises to suffer a painful collapse in the Philippines, for the simple reason that the Filipinos persistently and so far successfully refuse to be expanded upon, and it looks as if the islanders and an abominable climate between them are going to make the Philippines eventually too hot to hold the Americans. . . . The American public are beginning to realize that they have been systematically 'gulled.' They have been repeatedly informed that the war was all but ended, that the insurgents were utterly crushed, that the best people were shouting for the American eagle to spread its venerable wings over them. Success waited ever on the ban-

ners of the Americans and thousands of Filipinos were slaughtered in every engagement. The truth is oozing out that the Filipinos are stronger than ever and that, when the rainy season is over, the struggle will have to be renewed under the disadvantage of having to cope with an enemy tried against the valor and marvelous fighting qualities of the American soldier."

The Globe, Toronto, says:

"One of the worst features of American public life is the levity with which war is regarded. American newspapers and American public men too often seem to regard hostilities as a rather pleasurable novelty, and they appear discouragingly callous as to the horrors which fighting involves. In January, for instance, the anxiety seemed to be lest the Filipinos should not be 'taught a lesson,' rather than that the crimes and miseries of a struggle should be averted. The centuries-old experience of the British people has given them firm ideas and a just perspective in such matters; they regard war with the aversion which is its due, and accept it when inevitable without repining. After a few years of experience our American consins will probably take a less flip-pant view of national conflicts."—*Translations made for THE LITERARY DIGEST.*

MAJOR MARCHAND'S RETURN TO FRANCE.

MAJOR MARCHAND, "the hero of Fashoda," has been received with much enthusiasm in France. That the expedition of which he was the commander failed, at the last hour, to attain its end in the face of a British army is attributed chiefly to the incapacity of the French diplomats, while the ability shown by Marchand is taken as proof that French enterprise has not yet declined.

In an article in *The Journal*, the organ of M. Hanotaux, ex-Minister of Foreign Affairs, the writer expresses himself to the following effect:

Marchand is fêted because he represents French energy. Marchand and his companions bring to our noble race, so much decried of late, a ray of comfort, and that at the most opportune time. These men restore our self-confidence. For they are not the only ones of the kind among us. What they have done, others would do to-morrow, if the signal is given to them.

The Journal des Débats says:

"The Government has done its utmost to honor Marchand. He was a captain, he has been made battalion chief. By exceptional means he has been made a commander of the Legion of Honor. He has every chance to raise himself still higher, for his grand adventures have aroused great enthusiasm among his compatriots. And this unanimity of sentiment should be maintained. A few misguided persons fancy they can make him a cat's paw for party purposes, and little is wanting to make them shout, '*Le brave commandante!*' with the same intention with which they once shouted, '*Le brave général!*'" We need hardly warn Commandant Marchand and his friends against the danger of such ovations. Were he to listen to imprudent advisers, he would lose all that applause which has been given him by Frenchmen of all classes from motives of pure patriotism. He is reported to have uttered words showing little judgment. We will not judge him by these, but by his past actions."

Marchand himself is said to be a little overwhelmed by the manner in which men of all parties have sought his friendship for party purposes. His stereotyped answer to all demonstrative ovations so far has been "Let us be united!" His position is extremely difficult, as all kinds of excited people, like the poet François Coppée, compare his arrival with the return of Napoleon from Egypt, while some people even shout, "*Vive l'Empereur!*" "Marchand is worth something better than to be drowned in a sea of ridicule from which he can not extricate himself," writes George Duruy in the *Figaro*; and Urbain Gohier (whose attacks upon the management of the army caused his arrest some months

ago, but who was released because he proved all his assertions), says in the *Aurore*:

"Generally speaking, when a nation or an individual has suffered defeat, it endeavors to bury it in silence. We French are lacking in this sense of shame. We boast of our defeats as if they were victories. The commanders who caused our defeat in 1870 have been given statues. That old fool MacMahon, who made exactly the same mistake as Bazain, was made president. If the English think with pleasure of Fashoda, they are justified in doing so. But it is too much of a good thing that our whole nation is made to play the fool by certain people who call themselves patriots. All Europe will laugh at us."

Europe does think the behavior of France passing strange. *The St. James's Gazette*, London, says:

"Major Marchand has placed himself high in the ranks of African explorers, and if he had been an Englishman we too should undoubtedly have wished to make much of him on his return. He would have been met at Charing Cross by Sir Clements Markham, and perhaps by the commander-in-chief; he would read a paper in the theater of London University, and would receive the big medal of the Geographical Society. West End hostesses would compete for his presence at their houses; he would write a book, and then presumably he would go back to his work, and the British empire and the world at large would go on as before. But that is the last thing they think of in France, where M. Marchand, who seems personally to bear himself with modesty and dignity, is in danger of being made a great political personage. . . . The truth will soon dawn on him that he is simply being used as a pawn in a desperate political game, whose object is the destruction of the republic and the substitution for it of a military dictatorship; and, if he is wise, Major Marchand will reflect on the fate of General Boulanger and make his escape from a dangerous position before it is too late. . . . M. Loubet has seated himself pretty firmly in the saddle, the generals have been checked in their speechmaking, and it is clear that the army will not move without a leader who inspires some enthusiasm, whereas the present collection of generals and colonels have only succeeded in making themselves ridiculous. France may be tired of the republic, but she has not yet discovered a Napoleon—not even a Boulanger."—*Translations made for THE LITERARY DIGEST.*

THE ACQUITTAL OF DEROULÈDE AND HABERT.

DURING the funeral of the late President Felix Faure, February 23, M. Deroulède and M. Habert, two antisemitic deputies, made an abortive attempt to get the troops under General Roget to revolt against the Government. They were tried May 31, and acquitted by the jury amid great enthusiasm, altho they said openly that they would continue their agitation. The *Journal des Débats*, Paris, comments upon the affair as follows:

"That the jury should have acquitted the prisoners need surprise no one. They undoubtedly thought that the three months' detention preceding the trial was sufficient punishment, and the court agreed with them. When the instigator to revolt is a Deroulède, and the result of his agitation is *nil*, the authorities can afford to be extremely lenient.

"What these twelve good bourgeois never dreamed of is that they were at the same time condemning the existing form of government. With their *no* they condemned parliamentarism, and called upon the President to resign. But if one were to attach equal weight to similar acquittals which have taken place of late, we would be forced to admit that the voice of public opinion, as expressed by juries in political trials, is extremely incoherent. The truth is that we have passed through such a period of passion and violence, such an epoch of indiscriminate insult and instigation, carried on especially by the press, that we have forgotten what is permissible and what is not. The juries acquit indiscriminately the excited howlers of all parties. It is this weakening of the sense of justice, this decline of respect for law and order, which must be considered rather than the acquittal of a couple of prisoners who failed to harm the state."

The St. James's Gazette probably hits the nail on the head by saying that France needs, above all, a reform of her judiciary system, altho few Frenchmen will be willing to admit this. The paper says:

"France has the very worst judicial system in the world, and it is not aware of that fact. There are, it is true, individual Frenchmen who are far from satisfied with all that is done in their

THE KNIGHT OF THE SORROWFUL FIGURE.

—*La Silhouette. Paris.*

courts, but they are a mere handful, and as a rule Frenchmen believe their code and their tribunals to be the envy of surrounding nations. . . . The ruinous sin of the whole French judicial system is that it is an inquisition on the medieval and ecclesiastical model which has been vitiated by the introduction of a perfectly alien institution—namely, our jury, and is worked by a people who are naturally of a vain, ostentatious, and theatrical temperament. It is not we only who say that French courts are addicted to playing for effect. M. Cruppi, who is an excellent authority, has said so very candidly in his capital little book on 'the Court d'Assizes.' What M. Cruppi does not say, but what is the fact, is, that the presence of such a motive as this is ruinous to the administration of justice. The judge wishes to show off his skill in the interrogation of the accused, the public prosecutor wants to do the same, or to come off victorious in his combats with the counsel for the defense. The jury want to show their kindness of heart, or their patriotism, or whatnot. Everybody in fact has something more pressing to do than to get at the truth. And in the long run it is because the court-martial of 1894 worked in such an atmosphere as this that it found its monstrous verdict."—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

PAYMASTERS and commissariat officials of the German army receive special training in examining the quality of food supplied to the army.

GRAF GOETZEN, a celebrated African explorer, a promising officer of the German army, husband of an American woman, and well acquainted with the United States declares that, all things considered, our troops were fairly well looked after during the recent war.

As a contrast to the well-paying Russian colonies may be mentioned some French possessions in the tropics, where white men can scarcely exist. There is Yanaon, for instance, a remnant of French power in India. It has fifteen officials, but no colonists. A settler did go there once, but the officials governed him so much that he fled.

THE Danish Parliament is discussing a law for the better protection of the property of married women in case of the husband's failure in business. The property of a married couple is to be classified as follows: (1) Property of the husband; (2) property of the wife; (3) common property under administration of the husband, consisting of the earnings of the husband; (4) common property under administration of the wife, consisting of the earnings of the wife; (5) common property under administration of the husband, with special consent of the wife. Here's a chance for the lawyers, says *Politiken*.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

In reply to inquiries by the correspondent of a San Francisco journal (to whom copy of the report has been sent), Consul-General Gowdy writes from Paris under date of February 14, 1899, that he has had an interview with Mr. E. Ducretet, the noted inventor and constructor of electrical apparatus who stated that messages can be at present perfectly transmitted a distance of about 13 miles through space without wire. The messages are despatched and received by masts 30 meters (99 feet) high at the extreme ends of the distance. One of the principal obstacles encountered was the apparent impossibility of accomplishing the automatic registration of the message. This has been overcome by an instrument of Mr. Ducretet.

Consul Howe of Palermo, under date of February 4, 1899, reports the formation of a company, with principal office located at Palermo, which will, after August 1, 1899, control the entire output of sumac from Sicily. The company is organized under the name of "Societa per la Esportazione dei Sommacchi di Sicilia—I. and V. Florio & Co.," with a capital of 1,500,000 lire (\$289,500), and is to continue for the term of five years from August 1, 1899. This combine includes every manufacturer and exporter of sumac in Sicily, together with every factory for preparing sumac for market. All sumac exported from Sicily after August 1, 1899, will bear only the trade-mark of the new company, former trade-marks to be discarded.

Consul-General Gowey, of Yokohama, on January 30, 1899, says:

"An article in *The Japan Times* of yesterday gives the total amount of currency in circulation at the end of December, 1898, as 285,619,000 yen (\$142,800,000), against 339,445,000 yen (\$165,222,000) in 1897 300,445,000 yen (\$150,186,000) in 1896, and 281,997,000 yen (\$140,948,000) in 1895. The currency, at the end of 1898, included 197,399,000 yen in convertible notes, 18,135,000 yen in gold coin, 4,109,000 yen in government notes, 1,866,000 yen in bank-notes, and the balance in subsidiary silver pieces, nickel, and copper pieces, and subsidiary notes."

The following, dated Brussels, February 13, 1899, has been received from Consul Roosevelt:

"The expert commission for examining alimentary commodities recently reported that there were numerous contraventions of the law relative

to the trade in chicory and coffee. In consequence, the Minister of Agriculture has again called the attention of dealers and officers concerned to the fact that it is positively prohibited to sell or expose for sale chicory which at 100° C. loses more than 15 per cent. of its weight; chicory dried at this temperature leaving in the process of incineration more than 10 per cent. mineral matter in pulverized chicory or more than 8 per cent. in chicory in grain, the constituent parts of which, soluble in boiling water, will be less than 50 per cent. As regards coffee, no substitute whatever for this commodity can be sold under any denomination comprising the word 'coffee,' its derivatives mixed, or homonymous, or the names of origin of the natural coffee."

Consul Roosevelt, of Brussels, writes on February 14, 1899:

"The first international congress of doctors connected with life insurance companies will be held at Brussels from the 25th to the 30th of next September. All Europe and the United States will be represented at this congress, which proposes to establish universal formulae for the examination of persons desiring to be insured. As a result of the congress, it is hoped that permanent offices will be created in every country composed of five medical members, who will see that the decisions of the congress are observed, and whose work may serve to lessen the difficulties of application."

Consul Ridgely, of Geneva, on February 13, 1899, says that the steady decrease in emigration from Switzerland to North and South America seems to be a source of satisfaction to the Swiss press. The *Tribune de Geneve* says:

"It is satisfactory to note that the emigration from Switzerland to America is steadily diminishing. Already last year, there was a considerable falling-off in the number of emigrants, and it may be predicted that the figures will show a further decrease this year. There were during the month of January but 101 emigrants, as against 122 in January, 1898. In this fact may be seen an indication of an improvement in the economical status of Switzerland, particularly in so far as agriculture is concerned."

Consul Goding, of Newcastle, writes under date of January 27, 1899:

"On January 1 the selling-price of coal at Newcastle was raised from 7s. (\$1.70) to 8s. (\$1.94) per ton, and the miners' wages increased in proportion. It remains to be seen to what extent this will affect trade. At present the majority of the mines are working full time. The weighing question is still unsettled and the outlook is not too promising; but, as a meeting between the miners and the proprietors will be held shortly, many believe that matters will be so adjusted that the mines will continue to be worked. The fact that over 48,000 tons less of coal was exported to the United States in 1898 than during the previous year has attracted considerable attention. The Mexican trade has fallen off by 50 per cent. This is supposed to be due to the development of the coal-mines on the Pacific coast of America and the threatened labor troubles here."

Peanuts are grown in some provinces of China to the extent of about 1,000 tons. About 100 tons were shipped to Canton this year for the purpose of expressing the oil. Price ranges from \$2 to \$3 per cwt. Chestnuts are grown to the extent of about 500 tons, but not for export. Price ranges from \$3 to \$5 per cwt. Hazelnuts are grown at a great distance, and only a few hundredweight come to Newchwang for sale. Price ranges from \$4 to \$6 per cwt. Walnuts are grown to the extent of about 1,000 tons, of which about 500 tons are exported. Price ranges from \$3 to \$7 per cwt. The above are only used as an adjunct to food—not as a regular article of diet. Walnuts are sometimes eaten raw; sometimes used (like almonds) to flavor cakes; sometimes preserved in sugar. Hazelnuts are occasionally eaten raw; more frequently cooked as below described. Peanuts and chestnuts are always cooked. A quantity of sand, about the size of No. 2 shot, is heated in an iron pan over a wood fire. The nuts are stirred in the heated sand until sufficiently

VIOLIN TONE

Is of the utmost importance to violinists—amateur or professional. The correct quality of tone may be obtained in its highest perfection in our establishment. Our collection of violins is unequalled by any other stock in the world for tone quality and for preservation of individual specimens.

Among the violins now for sale by us most beautiful in tone quality are the following:

Antonius Stradivarius 1714 — large pattern, beautiful red varnish, marvelous preservation	\$6000
Nicolaus Amati, Cremona	\$2500
Lorentius Gaudagnini	\$3000
Very perfect specimen with tremendous tone.	
Joannes Baptiste Gaudagnini, very perfect, broad rich tone	\$1800
Francisco Ruggerius, Cremona 1700—large grand pattern (quite different from the ordinary type) very brilliant tone	\$1500
Dominicus Montagnana	\$1000
Francisco Stradivari	\$1000
Alessandro Gagliano	\$900
Jos. Gaudagnini	\$550
Francisco Ruggeri	\$500

and perfect examples of Gagliano, Bales-trieri, Zanoli, Eberle, Carcassi, Castagneri and others at from \$150 to \$500

Also a number of genuine old Violins suitable for students at from \$30 to \$100. Bows by Tourte, Vuillaume, Bausch, Henry, Dodd, etc., at from \$20 to \$150.

Authenticity of Every Violin Guaranteed.

Lyon & Healy,
Wabash Ave., and Adams St.,
CHICAGO.

Planetary Pencil Pointer

Needed in every office, school, home. Saves its cost in lead.

Mechanical perfection. No toy. Circumfers free. Made only by A. B. DICK COMPANY, 123-124 Lake Street, CHICAGO, 47 Nassau Street, NEW YORK.

ENGLISH COMPOSITION Teachers, Clergymen, Writers, Clubmen. Systematic course by mail. Harvard method. Free trial or literature given. MSS. corrected with H. Hawkinsthorne's Mass.

roasted. The sand, of course, may be used several times for this purpose.

Under date of February 3, 1899, Commercial Agent Stern, of Bamberg, writes that the exports of hops from Germany during the season of 1898 were 82,270 centners (9,049,700 pounds), against 113,942 centners (12,533,600 pounds) in the preceding year. The decrease is mainly to England, leaving Belgium Germany's best customer in this line. Exports to the United States decreased from 11,032 centners (1,213,320 pounds) in 1897 to 3,326 centners (365,860 pounds). The American article, says Mr. Stern, competes successfully with the German, especially in the English market, and it is only a question of time when exports to the United States will be reduced to a mere trifle. The full text of the report has been transmitted to the Department of Agriculture.

Consul Higgins, writing from Dundee under date of February 14, 1899, notes the use of a milking machine, known as the "Marchand" device, on a farm near the city. The machine has been in use for two years, and the owner indorses it as practical and successful. The cost, he thinks, is about equal to that of hand labor, and the device is most useful when reliable milkers are hard to obtain. Drawings and description of the machine are sent, which, with the full text of the report, have been forwarded to the Department of Agriculture.

Consul Hughes sends from Coburg, January 31, 1899, advice to Americans intending to reside in Germany for the purpose of studying, etc. The German way of living, he says, is not usually understood, and additional demands for food, fires, lights, or service are charged for extra at the boarding-houses, leading to trouble and sometimes to lawsuits. He would warn single ladies or families coming abroad to have a careful contract with boarding-house keepers, with all details specified. It should be remembered also that a written notice of intention to leave must be given in some places several weeks in advance.

OUR MAIL BAG.

An Aerial Suggestion.

Editor of THE LITERARY DIGEST:

If a balloon could be constructed so as to rise and fall at will without running out of sand or gas, it would be placed in the counter currents and the problem of aerial navigation would be solved. Inventors have seen this. The French method is to use water vapor instead of gas. Then by varying the amount of heat applied, they can raise or lower the balloon and thus accomplish the end. Their theory is good, but as the higher stratum is generally very cold, it would insure great loss of heat, which would cause the plan to fail.

The plan I wish to advance is this: Have two balloons with the volume of one about four fifths the volume of the other. Have the smaller form a division inside the larger. Then the smaller has no aerial displacement, but is contained in the displacement of the larger. Both divisions are filled with gas and the balloon rises; when it is desired to descend, some of the gas from the outer division is compressed into the inner by means of a pump placed in the basket. This lessens the aerial displacement of the balloon and the result is accomplished. When it is desired to have the balloon rise, gas is let back into the large division by means of a valve placed at the top of the smaller.

GO SOUTH AND KEEP COOL.

Somewhat contradictory, do you say? Not a bit. The reports of the mountains of Virginia are delightful from now until November. One important advantage over more northern resorts is a more equable climate—no extremes of temperature—delightful and health-giving day and night. Then you have in close proximity many famous healing mineral waters and those natural wonders Luray Caverns and Natural Bridge—also comfortably and quickly reached by the Norfolk & Western Railway.

Write for "Peaceful Scenes" and other Summer Resort literature to

L. J. ELLIS, agent, 398 Broadway, New York.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Have in the basket a quantity of sand, or, better, some gas-producing material to insure loss from leakage and the problem is solved. After careful study of this plan I see no reason why it would not prove a success.

ARTHUR DREW.

HOWELL, MICH.

Professor See's Claims Disputed.

Editor of THE LITERARY DIGEST:

In your issue May 13 is an article from McClure's in which Prof. T. J. J. See announces "A New Theory of World Formation," and a new law, viz.: "The temperature of a gaseous star varies inversely as its radius." The writer speaks of it as Dr. See's law, and nowhere in the article is there any intimation that any one else had anything to do with it. The fact is, however, that it does not belong to Dr. See, but was discovered by Mr. J. Homer Lane, and published in *The American Journal of Science* for July, 1890. Professor Newcomb in his "Popular Astronomy" (page 508, note) says of his paper: "It contains the most profound discussion of the subject, the theoretical temperature of the sun, with which I am acquainted."

It would have been only just had Professor See, like Professor Newcomb, acknowledged his indebtedness to Mr. Lane. The statement that our universe had a beginning, and will surely have an end, if left to itself, has passed beyond the hypothetical stage, and may now be regarded as a fact.

C. B. WARRING.

PERSONALS.

Mlle. ROSA BONHEUR (Rosa stood for Rosalie) was not without a sense of humor, so it is told of her that when presiding over a school of design in Paris, the pupils being girls, the artist was disgusted with the class because, imitative of their teacher, the young women had cut their hair short. "Grand Dieu!" cried Rosa Bonheur, "how horrid you all look! This is not a class of boys. You silly creatures, let your hair alone and do your best so as to retain all the advantages of your sex."

Now a poem, like Banquo's ghost, rises up before Bellamy Storer, who has just been appointed minister from the United States to Spain, says *The Cumberland Presbyterian*. As Webster and Ingalls, and many another distinguished person, have not considered it beneath their dignity to do a little riming, Mr. Storer indulged in the pastime during our war with Spain. Here are a few lines from his effort:

"O'er the Atlantic
Comes the roar of the ship guns—
The English-speaking ship guns—
Telling the 'Latin race,' frantic and old,
Telling all Russia, gigantic and young,
Telling the feudal boy-kaiser romantic,
What the Spanish Armada by Howard was told:
What the winds to the salt seas forever have sung.
Telling the powers:
'The ocean is ours,
Together we pull,
Nelson and Farragut,
Rodney and Hull."

"O'er the Pacific
Comes the roar of the ship guns—
The English-speaking ship guns—
Singing the beard of the don at Manila
As Drake at Cadiz three centuries ago.
Drake's message from Dewey: 'We sank their flotilla
In spite of their forts! As you did, we've done!
The ocean is ours,
The ocean is ours,
Together we pull,
Nelson and Farragut,
Rodney and Hull."

Naturally Spain is sensitive regarding references to singeing the don's beard at Manila. If this poem should reach that country, our minister's usefulness there may be materially curtailed, if his life be not made a burden.

In the June *Century* Professor Wheeler's eighth

"What you want when you want it"

Libby's Luncheons

Delicious, delightful, delectable meat dainties—always all ready—no fire, no bother—all you have to do is to serve—for home, for picnics, for everywhere.

Veal Loaf Ox Tongue (whole)

Potted Ham, Beef and Tongue

Wafer Sliced
Smoked Beef

Deviled Ham

Brisket Beef

Put up in convenient sized key-opening cans.

Drop Postal for Pork and Beans

We'll send you free a sample can of Libby's Home-Baked Pork and Beans, the kind which taste even better than those mother used to bake, and our book, "How to Make Good Things to Eat."

Libby, McNeill & Libby, Chicago

Add Milk

To a little Granola and you have a delicious, tempting meal ready in a second, at a cost of one cent a person.

Three times the food value of best beef, at one-third the cost. A muscle- and strength-making food, digested by the weakest stomach.

Free Sample

Send us the name of a grocer who does not sell Granola, and we'll mail you a free sample.

Battle Creek, Mich., Sanitarium Health Food Co.

paper on Alexander the Great describes "Alexander's Mightiest Battle," wherein at Gaugamela, with 47,000 men he overthrew Darius and his million. His pursuit of the Persian king, some months later, and his failure to capture him alive, were among the most striking incidents in the conqueror's history.

There was no time for delay. Men and horses were already fatigued by the forced marches, but there could be no halt. It was a race for a prize Alexander had set his heart upon gaining. On they went again over hill and valley, through the night and on until noon. Then they came to a village which the party had left only the day before, but with the intention of traveling by night. Still they were twenty-four hours ahead. Alexander's troop was almost exhausted. Did the villagers know of no shorter road? There was one, but through a desert country, with no water for horse or man. Quickly transferring five hundred selected infantrymen to as many horses taken from the cavalry, and directing the rest of the infantry to follow by the main road, he set off by the canter by the desert road. Men fell by the way, horses foundered, but all night long the mad chase was forced. Nearly fifty miles had been covered. Then in the gray morning light was discovered on ahead the straggling caravan. There was no preparation for defense. One glimpse of those dreaded horsemen, and then a wild scramble for life. The few who stayed to fight were cut down. Besus and his aids had tried to induce the captive Shah to mount a horse and flee, but he stoutly refused. Then they drove their javelins into his body and scurried off.

On down the dismantled line of the caravan the Macedonian riders came, no more than three-score able to keep pace with the leader. "They rode over abundance of gold and silver that lay scattered about, and passed by chariots full of women which wandered here and there for want of drivers, and still they rode on, hoping to overtake the van of the flight and find Darius there" (Plutarch). But nowhere was Darius to be found until at last a rider, straggling away from the rest, found a wagon far away from the road, by a valley pool where the frightened, misguided mules had dragged it. In it lay the dying Shah. "Still he asked for a little cool water to drink, and when he had drunk he said to Polystratus, who had given it to him: 'Sir, this is the bitter extremity of my ill fortune, to receive a benefit which I can not repay; but Alexander will repay you. The gods recompense to Alexander the kindness he has done my mother and my wife and my children. I give him through you this clasp of the hand.' With these words he took the hand of Polystratus and died. When Alexander reached the spot he was pained and distressed, as one could see, and he took off his own mantle and laid it upon the body, and wrapped it around" (Plutarch).

An American who visited the Stevensons at Samoa relates that the Samoans have a practise of begging. They boldly ask for whatever they may covet wherever it may be found. The novelist became tired of this practise, and therefore said one day to a Samoan friend who had acquired from him a necktie, handkerchief, and some other trinkets, "Is there anything else you want?"

The Samoan made a hasty survey of the room. "There is the piano," suggested Mr. Stevenson ironically.

"Yes," replied the native, "I know, but," he added apologetically, "I don't know how to play it."

Lowest Rates West.

Rates to the West are lower via Nickel Plate Road than via other lines, while the service is excelled by none. Three fast trains are run every day in the year from Buffalo to Chicago. The day coaches are of the latest pattern, are elegantly upholstered, and have all the modern improvements, such as marble lavatories, steam heat, lighted by Pintsche gas, while colored porters are in charge to look after the wants of passengers, especially the ladies and children. Versitubled buffet sleeping-cars are run on all trains, while the dining-cars and meal stations are owned and operated by the company and serve the best of meals at moderate prices. If your ticket agent cannot give you all the information you desire in regard to rates, routes, etc., address F. J. More, General Agent, Nickel Plate Road, 111 Main St., Buffalo, N. Y.

proached his grandfather, who was taking no part in the talk:

"Grandpa," said the child, "what is the difference between civilization and barbarism?" "Barbarism, my boy," answered the old man, "is killing your enemy with a hatchet at a distance of a step, and civilization is killing him with a bomb-shell twelve miles away!"—*Youth's Companion*.

Credit.—It is said that a contribution box in use in a church in Las Callas, N. M., has the spaces along the outside, inside, and bottom rented for advertising purposes. One of the advertisements reads:

"He that giveth to the poor
lendeth to the Lord."

Ashquith gives 60 days' credit on carpets, stoves, woodenware and furniture.

Another is as follows:

"The Lord loveth a
cheerful giver."
Benedict gives

Highest Prices for Butter.

"A Bird."—A parrot, in a remote country district, escaped from its cage and settled on the roof of a laborer's cottage. When it had been there a little time the laborer caught sight of it. He had never seen such a thing before, and after gazing in admiration at the bird, with its curious beak and beautiful plumage, he fetched a ladder and climbed up it with the view of securing so great a prize. When his head reached the level of the roof the parrot flapped a wing at him and said: "What d'ye want?" Very much taken aback, the laborer politely touched his cap and replied: "I beg your pardon, sir; I thought you were a bird!"—*San Francisco News-Letter*.

Current Events.

Monday, June 20.

—A report from General Otis, on conditions in the Philippines, is received at the War Department.

—Martial law at Pana, Ill., is revoked, and the troops withdrawn.

—British Colonial Secretary Chamberlain announces that England "will take a firm stand in redressing grievances of the Uitlanders."

—The German delegates at the Peace Conference announce that they will accept no proposals to reduce armament.

This game is full of blunders. White's 19th move is something wonderful in a correspondence game. He loses a piece and the game.

Pillsbury and the Press.

Comments and reports of various natures have been circulated since Pillsbury's reply to Janowski's challenge to play him a match when lately in America. Mr. Pillsbury's reply was reported as being couched in very rough terms, and to the effect that he would not play unless the public was excluded, and the games paid for by the papers using them. Time has brought forth a much more likely construction to be put upon Pillsbury's reply to Janowski, and which, in justice to Pillsbury, should be made known. The San Francisco Chronicle explains that Mr. Pillsbury's attitude has been misunderstood. He would be glad that any one really interested in Chess should be able to be present and watch the play. His wish

is to exclude certain New York "Chess-sharps," who take note of the course of the play, and then rush off to make bargains with the newspapers. If newspapers are to pay money for Chess-games, he thinks it ought to go into the pockets of the players who manipulate the pieces, and not to the "sharps," who "sneak" the scores.—*Leeds Mercury*.

Notes.

- (a) The usual move is Kt x P. The text-play may be an improvement, but it didn't result in anything to recommend it.
- (b) This seems like a risky move, as it allows the White Kt to occupy a very dangerous position. On the other hand, Schlechter's manœuvre is very ingenious.
- (c) Janowski prosecutes a splendid attack. Here is a fine lesson for students.
- (d) Notice this quiet move. Its purpose is to make room for R on Kt sq, and thus increase the pressure.
- (e) So that he can play R-K 4, and materially interfere with White's plan.
- (f) This is what Janowski was waiting for. Black should have played his Q right back to B 3.
- (g) Very fine indeed.

A Brilliant.

The following game took the prize as the best and most brilliant in the recent match, East vs. West of Scotland.

End-Game Studies.

To play an end-game well is, generally speaking, to play good Chess. Very many persons are familiar with the Openings, get along fairly well in the middle stage, but when it comes to an end-game they show their weakness. We recently heard a player say: "I might as well resign; for, altho the game looks like a Draw, yet I can't play an end game." On the other hand, we saw a game in which Black won. An expert present requested that the pieces be replaced, and he demonstrated to a certainty that Black had only a Draw. *The British Chess Magazine* is publishing a series of "End-Game Studies," from which we select the following:

White (7 pieces): K on L R 8; Rs on K B sq and K R 2; Ps on K B 5, K R 7, Q B 2, Q R 4.

Black (5 pieces): K on K 2; B on Q 7; R on Q B 6; Ps on Q Kt 5, Q R 2.

Black to play. What result?

Errata.

In the Hall vs. Amateur game (LITERARY DIGEST, June 24), Black's 17th move should be P-B 4, and 20th move, R-B 3.

Gunsberg calls attention to the fact that players who have achieved great distinction in tournaments have invariably played at an average of twenty moves an hour.

The Literary Digest

VOL. XIX., No. 3

NEW YORK, JULY 15, 1899.

WHOLE NUMBER, 482

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

RESULTS AT THE HAGUE.

THE American press takes a rather somber view of the prospects of any definite success at the disarmament conference. If the reports sent out by the newspaper correspondents are correct, the plan for limiting armaments will fail utterly, and even the American proposal for the protection of private property at sea will be "laid on the table" for the consideration of some future conference. An arbitration tribunal, temporary or permanent, seems likely to result, but there is much doubt whether such a tribunal will have any real force. Henry Norman, the London correspondent of the *New York Times*, for example, says of the proposed tribunal:

"What probability is there of first-class disputes being submitted to it? The great dangers to peace in Europe are three: First, the question of Alsace-Lorraine; second, the Eastern question, that is, the breaking up of the Turkish empire, precipitated by disorders in the Balkans; and, third, the advance of Russia; and in Asia, two, namely, the rivalry of Russia and England for predominance in China and the almost inevitable struggle between Russia and Japan. Would any one of these be submitted by disputants to arbitration? In view of the fact that England will not arbitrate about the Transvaal nor America about an Alaskan boundary, and that only with the greatest difficulty were Chile and Argentina coerced into referring to arbitration their frontier dispute, the answer must be obviously in the negative. The Czar's principal inspiration in calling the congress was for the arrest of armaments. This has totally broken down, altho the delegates have, with natural diplomacy, made the collapse as palatable to the Czar as possible in view of his undoubted sincerity and lofty aim. William T. Stead telegraphs to-day that many delegates forebode that the net result of the conference will be to make Social Democrats more confident than ever. 'The conference, they will say, has countersigned the confession of its own impotence. At the same time that it affirms the urgency of the need for a remedy, it is powerless to supply it.'"

No Laws in War.—"Of course any two or more of the powers could agree among themselves—and it could be done quite as well without as with this conference—to arbitrate their mutual differences, but it would have no effect or force upon those who refused to come into the scheme, not even upon the most insignificant of them. Nothing less than unanimity of the greatest powers could make such a scheme international law, and even at that it would be without effect unless the powers were also unanimously willing and determined to enforce it, in case of need, by a war of vastly greater proportions and greater disasters and calamities than the one it was intended to prevent, which would reduce the whole affair to a monstrous and horrible absurdity.

"The projected ameliorations of the conditions of war on sea and land are, most of them, equally beyond reach. All those which have heretofore been practised by the civilized nations by mutual consent are confined to the abstention from doing things, which are cruel in themselves, it is true, but which long experience has shown have no sort of offensive or defensive value. They have never extended to actions by which one belligerent can effectively cripple the other. The poisoning of wells, the slaughter or mutilation of prisoners, the use of explosive bullets, the sacking of captured cities, the seizure or destruction of private property of non-combatants, the covert assassination of the enemy's leaders, and similar savage acts, are no longer practised, not so much because public morality revolted at these atrocities, as because the experience of expert military men recognized that they have no value as means of crushing an opponent. The law of nations which prohibit them has, however, no force when a commander discovers that peculiar conditions make one of them effective, as, for instance, when a whole province is swept clean of all human sustenance to reduce an enemy to powerlessness, or when a city which proves to be otherwise incorrigible is reduced to ashes. The explosive bullet was tabooed because much more effective methods for killing or disabling are in the hands of every army. The explosive shell is a hundred times as cruel as the explosive bullet, but it is also a hundred times more effective, and consequently no one dreams of forbidding its use. Indeed, every modern weapon, every war invention our age has produced, is more savage and more cruel than any of the things which have been forbidden. What primitive war of savages ever presented so pitifully cruel a spectacle as the wretched Spaniards roasting alive in their burning ships at Santiago, fired by our fearful weapons? In short, the only object of war is to kill and to destroy, and the world will never give up any means, howsoever cruel, howsoever atrocious, by which one army may be more quickly and effectively dispose of its opponent and reduce him to helplessness. The conference may make some slight additions to the terms of the Geneva convention whereby the dum-dum bullet, a missile greatly inferior to those in general use as against modern armies, will be prohibited; but even that may still be continued by England against the savage peoples upon whom she now wars almost exclusively, because the ordinary bullets do not stop those virile savages as they do the more delicate European soldiers. And that will be the sum of the great Peace Conference's accomplishments."—*The News-Tribune, Detroit.*

Arbitration as an Apology.—"Not a single proposition of any consequence has been so far adopted by a full commission; and the most sanguine promoters of the conference begin now to despair of the adoption of any one important proposition. It is possible, of course, that, to escape the ridicule of the world, the delegates may agree in a general way to some quasi-millennial scheme, such as arbitration; but the agreement will be only for buncombe, it will not be intended to effect any genuine result, its sole object will be to save the credit of the delegates in the eyes of the nations. It would be a cause of laughter if the conference after several months of incubation could show no result

of its labors; and it will display an imitation chick if it can not hatch a real one.

"Arbitration is to be the last ditch of the conference. If the delegates can not make a successful stand anywhere else, they will make a stand there, for their own reputation. But the arbitration which they will adopt will not amount to anything; it will be a merely voluntary agreement to arbitrate the least important differences of nations, and it will not even call for the services of a permanent arbitration court. The delegates are to adjourn this week; and when they adjourn, it will not be of course because the conference has proved to be an utter failure; oh, no, its adjournment will be that the delegations may have an opportunity of consulting with their home governments! This ostensible cause of adjournment will save the delegates' *amour propre*, and will probably serve as an excuse for the egregious fiasco as well as anything else.

"But the conference is a flat failure, as it was bound to be."—*The Times-Democrat, New Orleans.*

Yet Its Moral Influence Counts.—"It is great gain to have exhibited, on the most conspicuous stage, the standard of public opinion in the most advanced nations on such subjects as arbitration and mediation, humane treatment of prisoners and wounded in naval battles, and respect for the rights of private property, whether enemy's or neutral's, on sea as on land. Few persons expected present agreement of the nations represented in the conference on these points, but their discussion has brought future establishment of them much nearer. The public opinion of one generation is the law of the next, even in the jurisprudence of nations, which grows more slowly than municipal law, because agreement to it must be unanimous; the majority can not make law for the minority. It is a long step forward, therefore, to have demonstration that most of the nations favor adoption of more just and humane rules of war on all these points, and the demonstration will have wholesome influence on public opinion, even in the dissenting states.

"It is certain that the moral influence of the Peace Congress will

*Frederick Crook
Rear Adm.
U.S. Navy*

Died at Washington, June 15.

be visible in the practise of nations that may go to war hereafter. Nations do many things in deference to the world's moral standards that they will not bind themselves in advance to do. A notable example of this was the adhesion of Spain to the principles of the declaration of Paris in the late war, as well as the zeal with which both combatants exceeded the obligations of the Geneva convention in saving the wounded after naval battle. The most stubborn dissenter from formal agreement will be under moral obligation to go furthest in efforts to avert, humanize, and limit war. Probably the next great conflict will do far more than The Hague conference could do in all these directions."—*The Commercial Advertiser, New York.*

American Influence Less than Supposed.—"The United States has not been humiliated, perhaps, by the other powers at The Hague, but it has been clearly demonstrated that the Washington Government has no influence whatever with the nations of Europe when it comes to advising the abandonment of long-established customs. With a good deal more of flourish than consideration for the intelligence of their fellow commissioners, the Americans entered the congress to tell the other powers how war should and should not be conducted. An elaborate plan was formulated to bind all nations to protect private property on the high seas, except contraband articles, in times of war, and the proposition was submitted to the congress with an air of self-sufficiency which implied no doubt whatever that the powers would quickly jump at the Americans' wise and glorious discovery. The Americans were listened to patiently and courteously as they unwound their theme from the reel of oratorical finish, and then came the response by all the nations of Europe, which was, in effect, 'Not any of that sort of thing for us.'

"Even Great Britain, our supposed confidential friend and co-partner in various prospective ventures, refused seriously to consider the proposition. Private property on land might be respected in time of war, but ships fat with rich merchandise, precious metals, and other things of value, including the ships themselves, should never sail past a British war-boat, and to this all the other powers of the Old World said amen. Great Britain's anxiety for an Anglo-American offensive and defensive alliance should have prompted her commissioners to give the Americans a 'tip' so that they might unreel their beautiful discovery with less self-important satisfaction to themselves, and thus escape a sitting down upon before all the world. But our British cousin-brother did nothing of the kind. He sat quietly but attentively through it all with a ready-made 'no' to drop upon the devoted heads of our distinguished representatives. And so the old rule to run down and appropriate the merchantmen of the enemy will remain in force, the eloquence of America's commissioners to the contrary notwithstanding."—*The Times, Kansas City.*

Nebraska's New Employment Law.—An example of the attempts of the state legislatures to deal with labor problems comes from Nebraska, where the working of a law that went into effect July 1, dealing with the employment of women, is attracting interest. The Chicago *Times-Herald* says of it:

"The dangers attending the attempts of legislatures to correct industrial inequalities and to govern the relations between employers and employees by legislation are illustrated by the new Nebraska employment law, which aims to regulate the employment of women in the various industrial and mercantile establishments of the State. The law . . . is sweeping in its provisions. It not only regulates and limits the hours of employment of women in manufacturing and mercantile establishments, but requires every employer to provide suitable seats for them to occupy during working hours. Heavy penalties are provided for infractions of the law.

"The law was doubtless conceived in a most commendable spirit to protect women workers from the oppressive exactions of inhuman employers. The motive behind its enactment was the amelioration of the hardships to which women employees are subjected, but, like all laws of this character, there is danger that its drastic provisions will defeat the purposes of the law, and instead of improving conditions of female labor will throw thousands of women out of employment. Proprietors of big mercantile establishments declare their inability to comply with the provisions of the law, and are therefore compelled to displace women with men. Even tho the women protest their indifference to the law and their willingness to work under former conditions, the employers can not afford to take the risk of being continually arrested and subjected to heavy fines."

WILL THE PHILIPPINES PAY?

MR. WORTHINGTON C. FORD, late chief of the Bureau of Statistics at Washington, doubts whether our islands in the far East will ever fulfil the rosy prophecies that have been freely made as to their commercial future. Many of the most earnest expansionists, notably Whitelaw Reid, one of the Peace Commissioners who negotiated for the islands, have based their expansion arguments upon the great commercial benefits supposed to be in store for us in the Philippines. Mr. Ford, who writes in *Harper's Magazine*, thinks that these expectations will not be realized. If wisely administered, the islands may sell considerable amounts of their products in Asia, but Mr. Ford sees little prospect that commerce will greatly increase between the Philippines and our Pacific coast. Our trade with the islands in 1898 was less than \$5,000,000; while in addition to the \$20,000,000 we paid for them, it is estimated that they have been costing us since February 4, in war expenses, \$2,000,000 a week or more. As to what figure the natives will cut in the commercial advance Mr. Ford says:

A population that can never be assimilated, and whose most active industry is rebellion against foreign domination promises little in the way of progress through internal change other than through extermination. This may be accomplished by war, by labor akin to slavery, or by contact with a higher civilization and its consequent disastrous results to the weaker race. Even if the native population be subdued, they will make unwilling toilers; if driven out of the larger and more fertile islands, some form of labor must take their place. It will not be American, it will not be European, for it can not be either. It must be Asiatic; and, if left to a free settlement, would be Chinese. Yet our laws as applied to the Hawaiian Islands prohibit the introduction of Chinese, and is it right to apply another rule to the Philippines—American territory? Yet this question of labor is the most important one to be faced."

The exact state of our trade with the islands before the Spanish war is briefly sketched as follows:

"Products take care of themselves. Climate and soil and mild pressure of commercial exchanges have determined that the Philippines should contribute to the world's trade a few leading commodities. The most important is hemp, a natural monopoly; for the many species of this plant are found in the tropics, none produces the same or as good a fiber as is obtained in the Philippines. More than that, attempts to raise this particular variety elsewhere have failed. The value of the exports of hemp in 1897 was \$8,500,000, and a nearly equal value of sugar was also exported (\$7,000,000). These two commodities making nearly 74 per cent. of the value of the total exports. If three other items be taken from the export tables—copra (\$2,687,978), tobacco in leaf (\$1,323,445), and cigars (\$805,000)—

about 97 per cent. of the entire export value is accounted for, and every leading article entering into the export movement.

"This is a narrow foundation on which to build a great export commerce in which the United States looks to have an immediate interest. It is well to remember that the best direction of our foreign trade is toward Europe, and in that direction moved in 1898 nearly 70 per cent. of the value of the total import and export commerce. Of the \$635,000,000 of imports, \$4,100,000 came from the Philippine Islands; and of the \$1,255,000,000 of exports, less than \$150,000 went to those new possessions, whose benefits to our commerce we hear sung on every side. Such a combined trade is not to be measured by percentages; it could disappear entirely and not be missed in the totals. The material of this trade, on examination, appears in quite as disappointing a light. Of Manila hemp, it is safe to say the United States gets all that it needs, and at as low cost as can be expected. Great Britain and ourselves are the only two buyers of this product, and while its uses may be extended, it is not likely to be in such a demand as to double its present importance in European and American markets.

"About one half of our imports from the Philippines is represented by hemp; and sugar will bring the average to 98 per cent. of the whole import. A little coffee, indigo, and tobacco will complete the count of articles entering into this trade. In 1893 the United States was third in importance among the countries receiving Philippine products, being surpassed by the United Kingdom (45 per cent. of the total), China, including Hongkong (22 per cent.). Counting in Spain, the four countries took a little less than 90 per cent. of all the exports of the islands. With Egypt, 95 per cent. of the total will be covered."

We have found that we can buy many Philippine products elsewhere cheaper than they can be produced in the Philippines:

"It is to be noted that some of these exports come to the United States in very small amounts, altho taken freely by other countries. A striking fact is the decline in the trade of the United States in certain commodities at one time favored. Coffee was for many years imported, but is not mentioned in recent returns, save occasionally and in small quantities. Indigo, hides and skins, dyewoods, and even tobacco have shown the same disposition to disappear. The imports of sugar were much larger between 1880 and 1890 than they have been since. This is not to be attributed to mismanagement by Spain so much as to the competition of other and more favorably situated producers. Hemp has always held its own—a monopoly. Sugar has been produced

MR. BRYAN: "I stand just where I stood three years ago."—*The Post, Washington*.

TEDDY: "That's right, Mac; help yourself to the pie and pass it on."—*The Journal, Minneapolis*.

PRESIDENTIAL POSSIBILITIES IN CARTOON.

in larger quantities, but its market in the United States is small, that in the United Kingdom, now about the same as our own, is shrinking, and the markets of Asia are growing. At present, as much as 600,000,000 pounds could be obtained from this source; but less than one fourth of that quantity is absorbed by the United States. All the copra is sent to Europe and Asia; Spain, where a strict monopoly exists, takes the larger share of the leaf-tobacco export, while Asia takes the cigars. To Spain is sent the sugar, and to China the dyewoods. When the entire trade is balanced, Europe and the United States have taken 68.5 per cent., and all the rest of the world 31.5 per cent. of the exports."

So much for the trade in the past; what of its future possibilities? Mr. Ford writes:

"With a change of ownership, and free trade, it may be assumed that the export interest remains as it is. What future has it? Hemp is unassailable and may double its output. Sugar, shut out from European markets, and not wanted in the United States, must seek an enlarged sale in Asia, and in competition with other islands—the Dutch and British—suffering from the same closure of the markets they once enjoyed. Copra promises well, but it must be multiplied five times in value to touch the ten-million-dollar mark. All other products combined will not give \$2,000,000. The magic of a sugar bounty will not work wonders here; and no favors of a free market will increase to an appreciable extent the exports of other products. It will be many years before the total can exceed \$25,000,000, and of that the United States can not take \$10,000,000.

"Nor does the import interest promise greater elasticity. The largest import on record was that of 1881, when it was \$18,500,000, and 4 per cent. of that sum was credited to the United States. As sufficient rice is not grown for the needs of the people, it is imported; but wines, flour, and provisions are also important food imports, but in none of these items, save some flour, do we have a share. More than \$7,000,000 in cotton goods is imported in a year, but that coming from the United States has never touched \$21,000. Spain and the United Kingdom held almost a monopoly between them. With Spain out of the race, and the same equal conditions of entry for English and American cottons as have existed in the past, what prospect is there of our wresting this trade to our mill products? In looking over the long list of imports into the islands from Europe, it is seen that they constitute what is required by the white man, and the increase will be slow, dependent upon the possibilities of a producing and commercial phase that has not yet been even approached."

"This phase," says Mr. Ford, "is one on which I have dwelt before, and which becomes clearer the more I study the question. Whatever profit is to be derived from these islands must be sought in Asia and not in Europe." He continues:

"This reverses our whole experience, for in Europe are found our best buyers and sellers. Yet on this reversal of policy alone can I see any future for these Philippines. We must grow what Asia wants, and establish factories to make what Asia will buy. The French recognize this, and have just floated a loan with which to build cotton-mills in Tonkin and Indo-China, employing Chinese cotton and Chinese labor. Even Japan, in the treaty of Shimonosaki, obtained an express concession of possible future importance: 'Japanese subjects shall be free to engage in all kinds of manufacturing industries in all the open cities, towns, and ports of China, and shall be at liberty to import into China all kinds of machinery, paying only the stipulated import duties thereon.' If the United States intends to make the Philippines great importing islands, it must be by centering the intention in Asiatic products. British India no sooner began to manufacture on her own account than she turned to China and Japan for a market.

"In this light it is useless to look for the rise of a great free port in the Philippines. 'Manila,' says an enthusiast, 'should be the mart of Eastern Asia.' No, I answer, for Hongkong and Singapore are already in possession, and offer every facility that Manila can afford. We have a great historical parallel. Was America made commercially from Cat Island or San Domingo? Have the West Indies of any power been a lasting factor in European trade? Have not such as were prominent become so only under prohibitions, trade monopolies, exclusive tariffs, and navigation laws? What open ports existed? The Havana rose to

importance because of the immense Spanish possessions near at hand, or monopolized trade. Yet with all England's possessions in North America no great port arose. Curaçoa and Carthage became ports through smuggling, as have some in late years on a smaller scale, through their endeavors to counteract Spanish restrictions. Under free competition one and all have lost this factitious advantage and found their level; but they cater to American rather than to European commerce. There is little reason to look for other results in the Philippines. They face toward Asia, not toward California, and face a coast bristling with undetermined claims of occupation, of protection, and of spheres of influence—containing promise of many things other than 'open ports.'"

Free trade, Mr. Ford thinks, is the logical policy for the islands. He says:

"What, then, must be the trade policy of the United States with the Philippines? It would be absurd to extend the navigation laws to them; equally absurd to apply the Chinese exclusion act. No system of bounties, direct or indirect, will suffice to favor the growth of solid trade connections in natural products. Native industries are of no account, and even with coal and iron it does not follow that rails or machinery could be made in competition with our home products. A native mill for making cottons would employ a small amount of capital, but beyond that can not favor the mother country. The markets for the cloths made in those mills must depend upon the favor of the powers who are parceling China among themselves, and whose claims have now preempted the whole Chinese coast and command all the leading ports on coast and frontiers.

"I can see but one policy to pursue—that of free trade in the Philippines, permitting the islands to find their place under the full stress of competition. . . . The example of a corrupt use of tariff legislation should not be extended to these new possessions."

RUSSIA AND AMERICA.

THE feeling of solidarity and mutual good-will that seemed to spring up spontaneously between the two great English-speaking nations with the beginning of the war with Spain, and the alliance or "understanding" that was freely talked of, have made a stir in Russia; and Mr. Vladimir Holmstrom, a Russian writer, appeals to us through *The North American Review* to beware of England's false friendship. Russia, he declares, has ever been a true and disinterested friend of America, her strategic situation is similar to ours, her political and ethical ideals are of the same high quality, and, most important of all, the benevolent attitude of the two nations toward subject-peoples is identical. He advocates, therefore, a Russo-American "understanding." England, he argues, is a rapacious nation, engaged in a ruthless career of conquest, and desires our friendship merely to aid her in her selfish schemes. He undertakes to demonstrate the avaricious character of the British expansion policy by reviewing, at some length, the British policy in China. England, according to Mr. Holmstrom, was the originator of the scheme to cut up China and divide it among the powers; and her slogan of "the open door" is raised merely to drown out the righteous protests of Russia, who would like to preserve China a nation. Russia's expansion is a "peaceful movement, bearing with it the seeds of culture for barbarous tribes."

After remarking upon the many symptoms of friendship and good-will between Russia and the United States, Mr. Holmstrom points out the qualities that the two nations have in common:

"The position of Russia and of the United States in their respective continents is identical. Both are self-contained, self-supporting communities, with a destiny naturally imposed upon them by the prominent place they occupy, each in its own sphere and within its boundaries. Their expansion in their respective continents has been a natural movement, paralleled only in the case of China; it has been peaceful in the main and brought enlightenment and the higher civilization in its train. I have shown elsewhere what the character of Russian expansion in Asia has

been. The wars that Russia waged in Europe were carried on in self-defense against the pressure of the Teutonic order, against the Swedes, the Poles, and the Turks. Russia saved Europe from the hordes of Asia, and the mere fact of her growth enabled the Balkan states to throw off the Turkish yoke, the weight of which was once felt as far as the walls of Vienna. The peaceable disposition of Russian Europe is evident from the fact that during the whole of the present century Russia has never been the aggressor in Europe: other nations have risen in arms against her, but with no success worth mentioning. Continuing to demonstrate the identity of the positions of Russia and the United States we must remark that both these countries, as well as China, are, each in its own sphere, a world, a universe, wherein various races and creeds are brought together into a harmonious whole, and I sometimes think that if ever the union of the churches were to become an accomplished fact, it would be in America. Both countries, too, afford opportunities for liberty in the highest sense of the word, as founded on genuine equality of rights, and certainly realize this idea more than any other country. The Czarism of Russia rests on a democratic foundation; the Russian

Czars have always fought for the masses against the classes, whenever the latter have shown a tendency to oligarchy and caste exclusiveness. The Czar is always the Czar of the commons, of the common people whom he has freed from serfdom, altho it is admitted that existence of the classes is a condition of regular and healthy life for the community. Our nihilists are maniacs in their good intentions, corresponding to the anarchists of Western civilization; as are the latter, so are the former, the expression of some unhealthy symptom in the life of the nation.

"The identity of interests between our respective countries springs from their requirements, as self-supporting communities, in the best conditions for the development of their faculties and the fulfilment of their destiny. Russia and the United States have a common interest in seeing the road they follow cleared from obstacles without their coming into conflict with one another."

The plan of the proposed *entente* is then outlined by Mr. Holmstrom as follows:

"The Russo-American understanding we now advocate is no

alliance, no agreement on all or some points or, indeed, on any particular point, but simply cooperation of a spiritual nature founded on mutual good-will and a strong inclination to keep the peace on every occasion. We have common foes, bent on mischief, as Americans will soon realize on their own continent; it would be well for us to reach one another a helping hand where needed."

There is a deep ethical side to the Asiatic problem, according to Mr. Holmstrom's view, which should influence America, with our strong religious and humanitarian principles. Religion has its springs in the East, and if we ruthlessly destroy the Oriental nations in our march of conquest, we commit ethical suicide by destroying the origins of our religion. He says:

"Our close relationship with the Asiatics imparts to our advance in their direction the character of a communion with the sources of our individuality, with the vital creative forces of spiritual greatness which were in a condition of dissolution for want of any inner creative work in the Asiatic native. We seek to unite in spirit with the races which carry in them the seeds of our national individuality. It is a brotherly union with a civilizing influence that we seek—one that has for its object the preservation to the Asiatic races of their originality, with a view to their participation in our common life and to their spiritual regeneration as well as ours. We must not forget that it was from Asia that the glorious principles of truth, of faith, and of love were sent into the world for the salvation of mankind. Accordingly, the idea of intercommunion with the Asiatic races should be the object of every Christian and really civilized nation."

If our expansion policy shall aim to preserve and help the peoples in its path, we shall ourselves be helped by it; if it becomes a career of conquest, we will feel its evil effects:

"The political forms inherited from the ancient world by the United States, in order to be living forms, the American democracy itself in order to be something whole and undivided, must

keep in touch with the spiritual forces which are the symbol of unity—yea! which are unity itself—and which underlay that ancient civilization; the Americans must look far back and far into the Asiatic East in order to shape their progress. As Emerson said: 'He that will do anything well must come to it from a higher ground.'

"If the Americans view their progress toward Asia and their participation in the Asiatic question in the way I have indicated, this movement will mean to them increase of power and spiritual renovation, and will be heartily welcomed by the Russians. On the other hand, if they follow the lead of Great Britain and view their advance in the Asiatic East in the Western Anglo-German sense, as that of conquerors coming with the 'mailed fist' to subdue the Oriental nations, dealing death and destruction to their spiritual individuality, then will they simply be committing suicide; they will destroy the foundations of their state and endanger their democracy, which will die out as Western imperialism gains ground.

"Psychological and philosophical conceptions, it is true, are rarely grasped by the masses, whose advance is guided by some catchword or truism. But a '*mot d'ordre*' may bear a special meaning and have a moral sense; in this instance siding with England will mean the destruction of China by revolutionary methods—and such destruction is not in the interests of the United States; it will also mean 'murder for gain' in the name of trade. On the other hand, cooperation with Russia, the interest of which in upholding the existence of China is of vital importance, will mean the preservation and strengthening of America's glorious traditions of peace and development along the lines of national conservatism, it will strengthen the true spirit of Christianity and healthy democracy.

"May Heaven preserve America from the curse of Western imperialism with which England is now tempting her!"

WHAT THE "SOCIAL SETTLEMENTS" ARE DOING.

THE "Social Settlements" in our great cities are pretty generally recognized as founded on the principle of studying a problem where it exists. Few of the general public, however, have definite ideas as to what the settlements aim to accomplish as a result of this study. They are sometimes spoken of as "sociological laboratories," as if the aim were to formulate a classified system of knowledge; sometimes they are considered as an advanced form of organization for charity disbursement, and again they are sometimes represented as an effort to help the poor to help themselves—to teach them to rise to higher planes of life and thought by their own efforts. This last conception, according to Miss Jane Addams, of the Hull House Settlement in Chicago, is the correct one. True, the aim of the settlements is scientific, artistic, literary; but only for the sake of people who can be helped thereby; not for the sake of literature, art, or science. Miss Addams, writing in *The Annals of the American Academy of Political and Social Science* (Philadelphia), says:

"The ideal and developed Settlement would attempt to test the value of human knowledge by action and realization, quite as the complete and ideal university would concern itself with the discovery of knowledge in all branches. The Settlement stands for application as opposed to research; for emotion as opposed to abstraction, for universal interest as opposed to specialization. This certainly claims too much, absurdly too much, for a settlement, in the light of its achievements, but perhaps not in the light of its possibilities.

"This, then, will be my definition of the Settlement: that it is an attempt to express the meaning of life in terms of life itself, in forms of activity."

The Social Settlement is not content with giving the poor more money, more light, better air, and less bacteria, but aims to raise and broaden the mental and spiritual elements of their natures:

"The application which I have in mind is one which can not be measured by its money-making value. I have in mind an application to a given neighborhood of the solace of literature, of the

MAJ.-GEN. JOSEPH E. WHEELER,
Ordered to report for duty at Manila.

uplift of the imagination, and of the historic consciousness which gives its possessor a sense of connection with the men of the past who have thought and acted, an application of the stern mandates of science, not only to the conditions of sewers and the care of alleys, but to the methods of life and thought; the application of the metaphysic not only to the speculations of the philosopher, but to the events of the passing moment; the application of the moral code to the material life, the transforming of the economic relation into an ethical relation until the sense that religion itself embraces all relations, including the ungodly industrial relation, has become common property."

In some cities attempts to better the condition of the poor are made by free lectures; but the Settlement workers find that the application of knowledge without the statement of it is better than statement without application. To show how far the Settlement idea is from that of many worthy educators, Miss Addams gives this illustration:

"Permit me to illustrate from a group of Italian women who bring their underdeveloped children several times a week to Hull House for sanitary treatment, under the direction of a physician. It has been possible to teach some of these women to feed their children oatmeal instead of tea-soaked bread, but it has been done, not by statement at all but by a series of gay little Sunday morning breakfasts given to a group of them in the Hull House nursery. A nutritious diet was thus substituted for an inferior one by a social method. At the same time it was found that certain of the women hung bags of salt about their children's necks, to keep off the evil eye, which was supposed to give the children crooked legs at first, and in the end to cause them to waste away. The salt bags gradually disappeared under the influence of baths and cod-liver oil. In short, rickets was skilfully arrested, and without mention that disease was caused not by evil eye but by lack of cleanliness and nutrition, and without passing through the intermediate belief that disease was sent by Providence, the women form a little center for the intelligent care of children, which is making itself felt in the Italian colony. Knowledge was applied in both cases, but scarcely as the statistician would have applied it."

It will be seen that the aim of the scientist engaged in learning for learning's sake is quite different. Miss Addams continues:

"The residents [of the Social Settlement] are actuated, not by a vague desire to do good which may distinguish the philanthropist, nor by that thirst for data and analysis of the situation which so often distinguishes the 'sociologist,' but by the more intimate and human desire that the workingman, quite aside from the question of the unemployed or the minimum wage, shall have secured to him powers of life and enjoyment, after he has painstakingly earned his subsistence; that he shall have an opportunity to develop those higher moral and intellectual qualities upon which depend the free aspects and values of living."

The Settlement is led by this aim to teach the poor a higher theory of politics than that taught by the ward politician; and the Settlement workers are themselves led to a realization of the fact that politics is politics in all gradations of society, and that the business man who "swears off" his taxes or helps buy the legislature is not very far different from the man whose political iniquities are less reputable. Miss Addams closes by saying of the Social Settlement that:

"Its social relations are successful as it touches to life the dreary and isolated, and brings them into a fuller participation of the common inheritance. Its teaching is successful as it makes easy and available that which was difficult and remote. Its most valuable function as yet lies along the line of interpretation and synthesis."

LETTERS AND ART.

MARIE BASHKIRTSEFF IN PARIS.

SOME new facts about Marie Bashkirtseff's life as an art student are given by Mr. J. J. Conway in the last number of *Quartier Latin*, based on the writer's personal acquaintance with several of her instructors and friends in the Julian schools of Paris. According to Mr. Conway, this remarkable young girl, who died at twenty-three, is still much talked of in Paris, and the

MARIE BASHKIRTSEFF.

studios she frequented are sought by many American and other literary pilgrims. He thus writes of her extraordinary mental powers:

"She was a female Admirable Crichton. It is said that Russian children have no childhood. Marie Bashkirtseff was certainly very precocious. She knew Greek and Latin, she spoke five living languages, she sang with all the art of a finished singer, she played six different instruments well. We read with astonishment of the marvelous memory of Lord Macaulay, who used to test and train that mental faculty by repeating Milton's 'Paradise Lost.' Marie Bashkirtseff performed feats of memory almost as wonderful. Often after having returned from a long visit to the Chamber of Deputies she amused her companions of the studio by repeating one of the *séances*. Taking the part of each speaker, she would reproduce not only his speech, but also his gestures and attitudes and mannerisms, the inflections of his voice and the various tricks of his oratory, to the uproarious delight of her fellow students."

Mr. Conway gives a number of anecdotes of Marie which he learned from M. Fleury, who is still an instructor in the Julian schools. The latter thus speaks of her reported love episode with her fellow pupil Bastien Lepage:

"There was something in her life which made her crave for change. Shortly before her death she went from painting to sculpture. The impression was that Marie Bashkirtseff had had a love affair, and that it left a strange impress upon her proud spirit. Yet it does not seem to have been a disappointment in love which sent her to study art as a distraction. Were distraction the impelling cause, she could never have succeeded so well. She loved art for art's sake. She had an exquisite voice, which somehow became impaired, and then she gave a more undivided

attention to her art. The girls at the studio used to gossip about an unhappy love affair, and because of it, they played the rôle of the magnanimous, and pretended to overlook what they called rudeness, but what was in reality the eccentricities of genius. One of the reasons why her fellow students reveled in a little feminine tittle-tattle about her was because she did not think women sufficiently intellectual, and preferred the company of men. Another reason was because the nude model used to have to take up attitudes at her orders, given in frank and fearless fashion, perfectly intelligible to a mind thoroughly imbued with the artistic spirit, but slightly shocking, perhaps, even to the average girl student. The name of Bastien Lepage is sometimes mentioned in connection with hers. There is no evidence that she was in love with him. The fact that he was extremely ugly would not have deterred her from loving him, for she liked extremes, and her artistic eye could see in superlative ugliness the point where it meets beauty. A commonplace man she could never love; an unqualifiedly ugly man, yes! The truth seems to be that she admired the talent of Bastien Lepage, and for this reason she liked to work with him. At all events she knew him for a short time only; and four weeks after her death poor Lepage followed her to the grave."

Indeed, in the opinion of her instructor, she was really incapable of feeling the influence of the blind god. M. Fleury relates some amusing anecdotes which he thinks show this. He says:

"Her intellectual development may have crushed the ordinary tendency of the young woman to have some hero of her heart. She was sought in marriage, but the wooing seems to have made no impress upon her further than to gratify a vanity. When a prince asked her for her hand she rejoiced, forgetful of the fact that Paris is the happy hunting-ground of all the European princes who are bankrupt in morals and in purse. Another evidence of her incapacity for romantic attachment is that when on a certain occasion two young and wealthy suitors presented themselves, she wrote to her father for advice, disclaiming all personal preference, and saying that both were the same to her. The woman who has outlived the susceptibility of early feeling, or the man who has passed his time amid the gay heartlessness of a dissipated life, could not be more apathetic to amorous attachment than was this lively young girl."

Mr. Conway concludes with the following story illustrative of her distaste for the thought of marriage and her high opinion of her own personal gifts, shown also so frankly in her letters:

"A hitherto unpublished anecdote told to me by one of her professors throws more light upon this aspect of the character of Marie Bashkirtseff. Her mother suggested marriage to her. She consulted her teacher, and the latter coincided with Mme. Bashkirtseff, whereupon the young woman said: 'What, you also! Can anyone find a husband to suit me? He ought to be my equal in rank, in fortune, in talent, in knowledge, in ambition. More than that, he ought to be my superior. Where can you find such a man?' The professor, evidently subdued by this sublime torrent of self-appreciation, quite meekly admitted that he did not know where such matrimonial timber existed. 'Quite true, there is Gambetta,' he continued, 'but you would be an ill-assorted pair. You are a delicate and refined creature; you would be disgusted by contact with this gross man, who, doubtless, will one day be President of the republic.'"

Two Authors Who Have Doubles.—A series of fairy tales entitled "The Lively City o' Ligg," by Mr. Gelett Burgess, a San Franciscan who has recently come to New York, is appearing in *The Criterion* in this country, and in *The Queen* in England. The similarity of his name to that of an English writer has caused not a little confusion in the literary journals, witness this letter from the English author to the American *Bookman*:

"SIRS: I do not demand your sympathy, but I ask for it in all humility. A gentleman who, I believe, hails from California, is possessed of a very ready wit. He loves children; so do I. He writes nonsense; so do I. He is fain to have kinship with the fairies; I am already one of their best friends; free of their craft. "Sometimes, in various periodicals, I sign my name; so does

he. We have even clashed in the same issue of the same paper. His name—one must be courteous in these matters—is GELETT BURGESS. Mine is horribly similar—GILBERT BURGESS.

"I recently wrote some signed art criticisms in a daily paper concerning the pictures that should never have been painted at the Academy and New Gallery. To him, in many quarters, was accorded the discredit. He, telling monstrous child tales in a paper devoted to the interests of women generally and fashion-plates in particular, has made a great success. But part of this has been accredited to me.

"What am I to do?

"Shall I go to California and become a humorist under his name, or shall I persuade him to stay in this country and become a critic under my name?

"I respect him; but I fear him, seeing that he gets the credit of all my worst work and I get the credit of all his best. And he is bound to have his revenge.

"Perhaps you, sir, can arrange a meeting between us, so that we may be able to effect a compromise. For instance, a bond might be drawn up thus: I, in future, will sign Harold Brown; he, in his turn, will inscribe himself John Smith. I am, etc.,

"GILBERT BURGESS."

Another case of mistaken identity in Anglo-American letters is that of Mr. Winston Churchill, whose novel, "Affairs of State," is running serially in *Macmillan's Magazine*, and Mr. Winston Churchill, author of "The Celebrity," and of the recently published and highly successful "Richard Carvel." The English Winston Churchill, who is a son of the late Lord Randolph Churchill, will probably hereafter add "Spencer" to his first name.

THE COST OF A COLLEGE EDUCATION.

ONE of the New York daily papers has recently been collecting information as to the cost of obtaining an education at the leading colleges of the United States. It appears from the statistics collected that while great diversity prevails between various institutions as to the amount of money required, the absolutely necessary outlay is moderate even in the more expensive colleges, and many men in all of these institutions are able to pay for their education in whole or in part by their own work while there. We quote from an article in the *Hartford Courant* based on the statistics given in the *New York Tribune*:

"The only Western institutions represented in *The Tribune's* returns are the Leland Stanford Junior University (California) and the University of Michigan. The former reports a nominal yearly tuition fee, \$20; average yearly expenditure of students, exclusive of clothing and railway fare, \$225 to \$300; no loan funds, no free rooms, no free scholarships; a faculty committee to assist students in getting work to do; 'a large number make their own way.' The University of Michigan reports small tuition fees, \$30 to \$45; a few free scholarships, 'no requirements'; many students at work for themselves in the city; yearly expenditure, \$300 to \$600."

Concerning colleges in the Middle States, *The Courant* says:

"The University of Pennsylvania last year gave 315 students \$43,242 in free scholarships and fellowships. No requirement except good standing. No money loaned, no free rooms. Many students support themselves in part, and a few wholly. Average expenditure per year, exclusive of clothes, railway fares, etc., \$450.

"Princeton University remits tuition and fees (\$150 a year these come to) to 'prospective ministers and other worthy men of promise.' The other worthy men are expected to pay up after they get out into the world and begin to earn money. Many undergraduates obtain work as tutors, newspaper correspondents, etc. Yearly expenditure, exclusive of clothes, fares, and vacation outlays, \$329 to \$663. . . .

"Colgate University has a number of free scholarships, \$60 to \$90 a year. Requirements, good character and good standing in studies. Free rooms for prospective ministers. Students can earn one third of their yearly expenses, which need not exceed \$250.

"Columbia University has 71 tuition scholarships in the academic department, 35 in school of applied science. Has also a loan fund; repayment of loans expected. Beneficiaries required to maintain good standing and good conduct. An employment committee assists needy students to get work. Average yearly expenditure per student, \$550.

"Cornell University gives free tuition and free rooms to seniors and juniors of good standing in their studies and good habits. Has 36 two-year scholarships (\$200) for freshmen, won by success in competitive examination. Has also 512 state tuition scholarships. Many students support themselves in part by waiting at table, shorthand, newspaper work, etc. A few pay their way entirely. Average yearly expenditure per student, \$500.

"Hamilton College has no loan fund; 50 tuition scholarships; holders of these must be 'faithful and orderly'; hardly any chance for earning money while in college; some boys get through on \$200 a year; it costs the majority from \$273 to \$380—clothes extra.

"Rochester University has free tuition scholarships, and makes loans (without interest) to needy students of good standing; abundant opportunities for earning money by collecting bills, waiting at table, taking care of furnaces, etc.; total yearly expenditure, \$300 to \$400, covering everything.

"Syracuse University has many tuition scholarships; makes loans; 'no special exactions'; one professor helps needy students to get work; yearly expenditure (clothes not included), \$250 to \$400.

"Union College reports many tuition scholarships and ten (\$50 to \$100) prize scholarships; beneficiaries required to maintain high rank in their classes; students who have employment just about earn their board; besides clothes and railway fares, their college year costs them \$280 to \$400."

As to the New England colleges, Amherst, Dartmouth, Brown, Trinity, Wesleyan, Bowdoin, Harvard, and Yale are represented in the returns:

"Amherst makes a free gift to prospective ministers of their tuition; has 100 tuition scholarships for other students of good character, habits, and standing; has some free rooms; makes loans at low rates; students have chances to earn money at tutoring, table-waiting, shorthand, care of buildings, etc., newspaper correspondence, agencies for laundries, sale of books, etc.; \$500 a year will defray all necessary expenses.

"Bowdoin has 80 scholarships, \$50 to \$75 a year; 'no limit placed on habits or social privileges of recipients'; students getting employment in the library or laboratories can earn about one fourth of their expenses; these will be for the college year \$300 to \$400.

"Brown University has 100 tuition scholarships and a loan fund; often remits room rent in return for services about the college buildings; studiousness and economy required in the case of assisted students; some students earning money in various ways; average yearly expenditure, \$500.

"Dartmouth has nearly 300 scholarships; those above \$50 conditioned on class rank; some rooms at nominal rents; requirements, economy and total abstinence; work of one sort and another to be had by needy students; a few get through on less than \$250 a year, several extravagant fellows spend more than \$550, average expenditure about \$400.

"Harvard: 206 scholarships, \$60 to \$400 apiece; large beneficiary and loan funds, distributed or loaned in sums of \$40 to \$250 to needy and promising undergraduates, freshmen (usually) barred; a faculty employment committee; some students earning money as stenographers, typewriters, reporters, private tutors, clerks, canvassers, and singers; yearly expenditure (exclusive of clothes, washing, books and stationery, laboratory charges, membership in societies, subscriptions and service), \$353 to \$1,035. 'I think it probable,' says the Harvard corresponding secretary, 'that the average student who belongs to societies and enters into college life generally spends about \$1,000 a year. Our Trinity College has some tuition scholarships and some larger scholarships, but no loan fund. Good class standing and good conduct are required of scholarship-holders. Students who need to do so can earn one fourth of their expenses, which are \$600 to \$750 a year.'

"Wesleyan University remits tuition wholly or in part to two thirds of its undergraduates. Loan funds are available. Beneficiaries must be frugal in habits, total abstainers, and maintain

good standing and conduct.' Many students entirely self-supporting; 35 per cent. of the whole undergraduate body earning money. Yearly expenditure, \$325.

"Yale is pretty well off now for fellowships and prizes; remits all but \$40 of term bills, in case of worthy students needing help; requires such students to be regular in attendance and studious; many such students earning money for themselves; average yearly expenditure about \$600. Yale's dean writes: 'I think well of our system, and only wish we had larger funds for this purpose. As a rule the men who receive financial aid at Yale are among the best scholars in college, and among the most successful and useful of our graduates. There are hundreds of prominent Yale graduates scattered over the country who could not have gone through college without this assistance.'"

One of the questions asked of the college authorities was, "Do self-supporting students lose caste with the other students, or are such efforts approved by their well-to-do fellows?" All the replies received to the first part of this query were an unqualified *No*. We quote from *The Courant* as follows:

"The Harvard corresponding secretary writes: 'Many of the men here who have attained high social honors, many of the most popular men, have in great part worked their way through the college.' The register of the University of Pennsylvania writes: 'The student body here is a very democratic one, and I am sure that there is no less respect shown to students who are helping themselves through college than to those who are not.' A Cornell don writes: 'A number of our faculty were self-supporting students. Our librarians shoveled sand in student days. A professor of history worked as a printer in the days when we had a university press, and not only supported himself in Cornell, but for a time his sister also. A distinguished alumnus, who has been president of two great universities, waited on table as a student. Such are the traditions of Cornell.' The dean of Yale writes: 'Students who support themselves by work do not lose any social standing. If they are worthy they are elected to societies and receive college honors on an equality with others. In one class not long since, out of the fifteen men admitted to the oldest senior society, seven were persons who earned their way wholly or in part.'"

PUSHKIN, THE FATHER OF RUSSIAN REALISTIC LITERATURE.

FOR the past year the Russian press has been filled with manifold details concerning the forthcoming celebration of the hundredth anniversary of Russia's greatest poet, Alexander Serghiewich Pushkin, which was to take place in May last. Hardly a magazine has appeared which does not contain some detail of his life, long-forgotten criticism of his works, or anecdotes of him or of his ancestors. Hundreds of volumes and brochures have been written about him, minute researches have been made. Hundreds of men were for months occupied with the vast preparations for the festivity in the Soyatogorsk monastery where he is buried. Great hotels were constructed for the occasion, and a large theater was built where his plays will be performed by the best Russian actors. Thus do times change and thus is greatness honored after the writer's bones have for long years moldered under the sod.

In his excellent essay on Pushkin, the famous Russian critic Bielinski said that he considered Pushkin one of the greatest artists, and that in this is contained the whole meaning, or, as he expresses it, the whole pathos of Pushkin's literary activity. It is easy to see that such an estimate belittles the real literary worth of the poet, as in such case the value of Pushkin as a writer would be wholly lost for those who are void of artistic sense. Other later Russian critics also spoke of Pushkin either in too vague a way, like Gregorovich, or in too shallow a way like Strachoff. Speaking on this subject the *Nedielia* says:

"The reader is thus thrown upon his own resources; he loves

Pushkin instinctively without taking account why he does so, simply because Pushkin's works call out his utmost sympathy; and he feels in accord with the writer. This is the reason why Pushkin is so extensively read in our day, while the works of authors who wrote long after him are deemed insipid and stale.

"Bielinski was mistaken in his belief in a narrow national art. In reality there is no such art, and Europe knows only of one common art and literature which first saw the light of day in Old Greece and develops continually, thanks to the new nationalities coming into and taking part in the historical life of Europe and contributing to it their inner content. But historical events help to clear and light up the everlasting questions of art from different points. Bielinski thought that the only merit of Pushkin was his creation of a Russian literature. In reality Pushkin brought in the first instalment of the Russian national spirit into European literature. Beginning with Pushkin, the Russian genius participates in the common life of the cultured nations and contributes to it his elements. Goodness of heart, fraternal feeling toward foreigners, tolerance for the opinions of others constitute some of the purely Slav features which Pushkin contributed to European literature. The love of bragging of the victories of Russian arms was entirely foreign to him. He dreamed of eternal peace between all nations, and of the time when they will all be but one family."

Like all other great poets, Pushkin selected as subjects for his inspiration the most everyday occurrences and the commonest feelings. He sang of love, of friendship, of the passions and the struggle with them, as well as of religion and of freedom of thought, and like other poets he also cared for details only so far as they were needed for lighting up the whole. We quote again from the *Nedielia*:

"But there is a great difference between Pushkin and other great poets like Shakespeare, Byron, or Goethe. In all these poets an interior struggle is easily discernible; the spirit is always at war with the flesh, and one or the other is perpetually the victor. On the contrary, in the poetry of Pushkin a perfect harmony is reigning; his soul is at peace with his body, and one helps the other.

"By his style Pushkin belonged both to the classic and the romantic schools; but by his way of grasping things he belonged neither to the one nor the other, since he always painted the common happenings of everyday life just as they are, only shading them in a poetical light. These are the attributes of a realist—not of a naturalist, of course, for the latter tries to bring forth all that is gross in human nature, while Pushkin always tried to bring out the noble qualities of human nature and all that distinguishes man from the animal.

"Pushkin left us a very small inheritance. It will hardly be more than a few volumes; but every word in them, every line is precious to us. It is with just such a mental outfit that one comes safely into the realm of immortality. In Pushkin we find crystallized the whole substance of Russian literature."—*Translations made for THE LITERARY DIGEST.*

Some Famous Books Under New Names.—One would hardly think of turning to a bookseller's catalog for humorous entertainment, yet an unconscious humor certainly pervades the following list of titles quoted by *The Bookman* (July) from a recent London trade publication:

TITLES GIVEN.	WHAT THEY SHOULD HAVE BEEN.
Shakespeare's Judith. Ed. by Black.	Judith Shakespeare. By W. Black.
The Curtain will not Rise To-night.	Thorpe's Curfew must not ring To-night.
By Thorpe.	
His Equals and other Poems.	Ezekiel and Other Poems.
Paradise of Burglars.	Burglars in Paradise.
Four Wings and an Arm.	Four Winds Farm.
The Newcomers.	Thackeray's Newcomes.
Harry Snoodle's Masterpiece.	Aristotle's Masterpiece.
Genaire.	Jane Eyre.
Darwin's Indecent Man.	Darwin's Descent of Man.
Galloping Midwives.	Galabin's Treatise on Midwifery.
Moses Hart's Twelve Masses.	Mozart's Twelfth Mass.
Homer's The Ills He Had.	Homer's Iliad.
How I Roasted Moses.	How I Reached the Masses.

THE NEWLY FOUND STORY BY DUMAS.

SOME further particulars of the unpublished manuscript by Dumas the Elder (see THE LITERARY DIGEST, June 24) are given in a recent number of the London *Outlook*. Mr. Home Gordon, in whose hands the custody and translation of the manuscript have been left, writes as follows of the scene and chief characters of the first of the two stories which were discovered:

"Dumas has indeed gone far afield for the scene of his romance. The action passes in or near the town of Derbend, an important port on the Caspian Sea belonging to the province of Darghestan. At the opening, the inhabitants of the town are suffering from a terrible drought. A venerable mollah addresses the townsfolk in the court of the mosque, and after reference to the ancient customs in time of a plight constantly recurrent in that torrid land, suggests a solution as poetic as it is new in literature. The task of achieving that solution is entrusted to the hero of the story, who sets out on a perilous journey accompanied by a

self-invited comrade, who provides most of the humor of the tale. This portly Hadji is a whimsical creation, own brother to Parolles, and a nephew on the literary side to Sir John Falstaff. He tells as many stories as Sancho Panza, but they are all to his own glory. A bigger poltroon was never sketched by a great writer, and even more comical than his encounter with the wife of the brigand chief is his subsequent narrative of his own prowess to his scornful but tormenting friend. The adventures are not only exciting, but often fantastic, and odd changes stimulate the attention of the reader. The brigand chief figures largely throughout the book. At the outset he is an object of terror, his very name frightening the children and terrifying the inhabitants of Derbend. Later he is disclosed as a mournful dignified outlaw, a man whom Dumas obviously intends to inspire pity, and who is Byronic in his outbursts of wrath, of sorrow, or of sardonic humor. A curious conclusion to his career is abruptly reached after he had appeared to fade out of the life of the hero.

"That hero is in love, and, needless to say, Dumas does not permit the course of his affections to flow smoothly. A broken pledge causes a fit of despair, in which Dumas subtly shows his sense of the difference between an Asiatic and a European. The latter would have been resolutely working to win his bride; the former gives way to passionate and childish despair. Yet so completely is the Oriental atmosphere suggested that the outburst seems perfectly logical, and the hero in no way loses what interest he has been able to inspire the reader with. The various actors in the earlier chapters are brought into the closing scenes, and the influence of the brigand chieftain proves paramount in determining the destiny of the lovers."

With regard to the general features of the story, Mr. Home Gordon says:

"But the story is far from being the sole attraction of this romance. Dumas has saturated himself in the customs of Darghestan. Not only is the manuscript bristling with Turkish, Russian, and Persian words—the majority of which have still to be deciphered—but the book is full of Eastern customs and habits.

The account of the play, the religious rites in the mosque, and numerous details of private life are detailed with graphic lucidity. Even more impressive is the description of mountain scenery. Dumas appears to have grasped the idea of presenting a mountain range under various aspects of light and weather. So careful is he to give reality to his sketch that, after translating the account, I feel as tho I had seen the mountains and have a general notion of something not unlike the Mediterranean Alps.

"Manner is much with Dumas. In the present tale he labors to catch the Oriental method of deliberation. His narrative proceeds without haste and with digressions full

of value to the student. The feminine interest is purely subordinate, and the heroine might have come from one of Moore's Eastern poems. But the male characters are sharply contrasted and boldly sketched. The task of estimating the literary value of this unexpected find is naturally not for me; indeed, a story must always suffer, while still in manuscript, by any critical survey. On a later occasion I shall have something to say about the other romance. But I may here be permitted to prophesy that it

will become the more generally popular of the two. Both can afford to court criticism on their own merits as well as because they are the posthumous literary legacy of the fine old French writer."

PART OF FIRST PAGE OF NEWLY FOUND DUMAS MANUSCRIPT.

IS KIPLING ON THE DOWNWARD TRACK?

MR. JOHN JAY CHAPMAN is not one of those who fall down and worship before the Kipling shrine. In the intervals of fighting the New York traction corporations and taking Governor Roosevelt to task for the things he has done and has left undone, Mr. Chapman has found time to pen a trenchant editorial article on Kipling in a late number of *The Political Nursery*. Kipling's recent illness has set the world to wondering what his work really stands for, and Mr. Chapman tries to answer this by an examination and comparison of Kipling's early and later literary product. He readily admits that Kipling is a figure before which to pause in wonderment:

"He is probably the most famous writer alive. He undoubtedly can reach a larger public with a bad thing than any man alive or dead ever has done. He has the greatest immediate political influence that has ever been seen in literature. He is like the Spanish war, a very sudden upheaval of passion, some of which we know to be good, which awakened masses of the English-speaking peoples and caused millions of men to think the same thought for a day. There is something overpowering and splendid about this, no matter what the thought may be.

"The natural history of Kipling's genius is much easier to follow since he left India than before. All we know about India we learn from his early tales. They must be true to life. The natives speak for themselves and the Anglo-Indians speak for themselves. The heroism and the slight social degradation of England in India, the power and the coarseness are given by magic. This is India. Kipling did not create this. It created him. A careful rereading of these wonderful things reveals some

claptrap in the midst of the vigorous hnrly-burly in which they are flung off. Nevertheless many of them are beyond criticism. They are revelation."

Kipling, the laureate of Anglo-Saxondom, appears to Mr. Chapman in this wise:

"Kipling knew more about the ways and means by which the Anglo-Saxons had been spreading than any other man; and when he began singing and story-telling, while Rhodes was prospecting, and Gordon and Kitchener were fighting, he was really an authority. All that was best in conquest and expansion he saw and said. Then he went to England, and there, by act of genius, he acquired the truly British religious note. He not only got it, but he got it right. He not only struck it, but he struck it true. The 'Recessional' is the finest piece of deeply felt British sentimentalism that ever has been struck off. The timeliness of this poem illustrates the wonderful receptivity and sympathy of Kipling. The Venezuela trouble, the African trouble, the French trouble had thrown England on her hanches and made her realize what was at stake. Not since the time of Chatham had she felt so much alone. Then she was triumphant, but now she is reflective. The man who could express this was to her a poet—a great genius—a great spirit. The 'Recessional' is in reality a bit of good reflective verse tinged with that deeply human and very familiar superstition, that pride goes before a fall and the gods must be worshiped or some disagreeable thing will happen. It is much too self-regardent to be great or permanent. It is not strong. But England was not at her strongest. In fact, she had recently been very much afraid. Inasmuch as everything that England has of value is as important to us as it is to her, we did well to give her all sympathy, and her support of us in the Spanish war made us more than grateful. As a piece of politics the 'Recessional' was a ten-strike. It is perfectly sincere and yet perfectly acquired. From this moment Kipling was an Englishman. He became the Pindar of the Pan-Saxon forward movement, and it is not only his license but his duty to write verses whenever all the world looks one way over an international episode. His philosophy of imperialism provides him with his attitude of mind, and his swinging rhythms, filled with biblical words, give him an excellent popular vehicle."

Yet Kipling has much to answer for, Mr. Chapman thinks, in preaching a gospel of force to the white races:

"The compass of imperialism is, however, limited, and therefore he sometimes strikes false notes. 'Adam-zad the Bear' is a bad-hearted, foolish poem, which brings out the seamy side of British imperialism, that is, its hostility to Russians, its disbelief in human nature. 'Take Up the White Man's Burden' is a sloppy and senseless lyric. It is a wonder the American householder does not laugh at it. The truth is, we have been so pleased at the idea of taking part in the world's history that we do not know the difference between Cecil Rhodes and Livingstone. 'Of course,' we shout, 'our duty, right or wrong!' When the Princess Eulalie of Spain was in Chicago in 1892, we stood her on a platform, and walked round about her, like countrymen at the Eden Musée. So with this Philippine affair. It is the novelty which excites us. 'We killed four thousand of them yesterday. White man's burden; glorious; more to-morrow! Kipling was born in India and understands these things.'"

Kipling is not only not a true political prophet, in Mr. Chapman's view, but his fame is doomed to eclipse, even to extinction:

"Since Kipling left India he has done nothing first-rate. It is all journalism and cleverness. Even the 'Jungle Book,' which is about India, is not as good as 'Plain Tales' and 'Soldiers Three.' 'The Day's Work' is a *series jeux d'esprit*, with some touches of the old power in the Indian stories. Permanent interest can not attach to anything which does not consist, from rind to seeds, of instructive truth. A thing must be interesting from every point of view, as history, as poetry, as philosophy; good for a sick man, just the thing for Sunday morning. It must be true if read backward, true literally and true as a parable, true in fragments and true as a whole. It must be valuable as a campaign document, and it must make you laugh or cry at any time, day or night. Lasting literature has got to be so very good as to fulfil all these conditions. Kipling's work does not do so since the time he began making money out of it. There is, moreover,

a harsh substratum in the man that genius can not atone for. It ruins his poetry. This is India, and in India it belonged. It is a part of the place. The man is a wonderful apparition of power, which every circumstance has combined to intensify, but in himself he is neither England nor America. He is the greatest product of journalism. He is flung out by conditions and reflects conditions, but they are not of the sort that remain comprehensible. They become a bore.

"He will vanish. If he had died he would have fallen like a bright exhalation in the evening and no man have seen him more. The obituaries would have sold another edition or two of his books, and five years would have ended his fame. But he lives, and what will he do next? He can not become a poet. He is not in the class. Kipling can not expand expansion into any cosmic force or solar myth. He meets Russia and barks. A poet must think he is the voice of humanity. He sings and sings, and it turns out afterward that he was the true spirit of Pike County. A man who schedules himself as the poet of Anglo-Saxondom is a littérateur. He is a class poet. We can not accept this race prejudice. There is nothing in it. Every one knows that the Emperor of Germany is a human being. He and his must be counted in. They are in already and affect our personal comfort, and are part of our destiny and of our problem.

"As for novel-writing, Kipling never got the stride of it. He has acquired the terrible habit of receiving large sums for his wares, and he is about to be torn to ribbons before our eyes by the vultures he feeds. At each trial more effort, less inspiration—disappointment. His talent is as doomed as that of Bret Harte. The thumbs are turned down on him already."

Mr. Chapman finds in Kipling neither the fidelity of Sir Walter Scott, who was content to serve his age "without becoming its lackey," "the cosmogony" of Tolstoy and Balzac, nor the equipoise and rationality of Thackeray and Fenimore Cooper. He has rather an insatiable itch to be an Admirable Crichton in the eyes of the world, and stands for nothing in particular except force, and the noise and fury that proceed from it. Mr. Chapman concludes thus:

"Kipling is lopsided. He is all turmoil and passion, but he is not all humanity. He is like a hull that is flattened on one side and can only go round in circles. Why could not Kipling have been—somebody else! This is what we always and most ungratefully ask of any newcomer, forgetting that what he is he must be; forgetting that he is only significant because he is the product of inherent powers, manifesting themselves inexorably, unfolding themselves continually, evolving like a plant.

"The accomplishment of this man is dazzling. He has covered the globe and run down the gamut of readers from the highest intelligence to the lowest before his first note has stopped sounding. But his work has no future. There is no beyond to his mind. There remains nothing but repetition. Meanwhile, whatever happens, he will have been a sort of rainbow, a strand of galvanic influence crossing the sky above the English-speaking peoples and to some extent qualifying their history."

NOTES.

THE new edition of "The Life of Charlotte Brontë" shortly to be published will contain the much-discussed suppressed portions which Mrs. Gaskell was induced to omit on account of the threats of the relatives and friends of the Brontë family.

M. LARROUMET, from whose article upon Sarcy we recently quoted, and who has succeeded the latter as the dramatic critic of *Le Temps*, belongs less to the "scientific school" of criticism than his predecessor, and follows Lemaitre rather than Brunetière. He is said to be quite ready to state that a play is "delightful" without adding "but unfortunately its construction is inartistic."

THE sale of "David Harnam" has now reached 175,000 copies, altho it was first published only last September. The average daily sale during April was 1,300, tho the sale often reached 2,000 a day, and on one day reached 5,500 copies. Some idea of the enormous amount of material involved, says the *New York Times*, may be gathered from the fact that if the number of copies of the book which has been sold up to the present time were laid end to end, they would reach from New York to Rye in the same State, a distance of twenty-two miles. The manuscript, after having been rejected by four publishers, was read by Mr. Ripley Hitchcock of the Appletons in December, 1897, and at once recognized as work of uncommon value.

SCIENCE AND INVENTION.

IS A GERMLESS WORLD DESIRABLE?

THE condition of things in a world destitute of all microbes is pictured by Dr. Henry S. Gabbett in an article on "Beneficent Germs," contributed to *The Nineteenth Century*, June. Dr. Gabbett reminds us that Mr. H. G. Wells in his "War of the Worlds" has described the planet Mars as a germ-free world. What kind of a world would such a one be? Says the author:

"Suppose that air, water, soil, animals, and plants have all been thoroughly *sterilized* in the bacteriological sense; suppose that by the universal application of an ideally perfect germicide every microbe has been killed, while higher living things remain unharmed; and suppose that no new agents have been created to perform the functions of the extinct families. What is the result?

"First, we observe with gratitude that we have done with a large number of diseases, acute and chronic, affecting beasts and men. Rinderpest and glanders have disappeared; anthrax no longer slays its thousands among sheep and cattle; tuberculosis in all its forms is unknown. The plague has vanished, never to reappear in East or West. Leprosy, the mysterious scourge of many ages and many lands, at last dies out. In all probability we may expunge scarlatina, measles, and all the common infectious fevers from our text-books; certainly no one need fear cholera, typhoid, diphtheria, or erysipelas. . . . In this changed world wounds and injuries are robbed of half their terrors, and surgeons take no precautions against septic trouble. Food-poisoning by ptomaines is never heard of. Sanitation becomes easy; evil odors are almost banished from our streets. Various minor sources of annoyance have been abolished; milk does not turn sour, nor butter rancid; eggs keep always fresh; in the hottest summer our meat never becomes 'high.' It would almost seem that everybody should be satisfied, except the bacteriologist, whose occupation is done.

"But very soon we begin to miss some things in our germless world. There is no beer, wine, or brandy, all the yeast plants having perished by the germicide. No doubt chemists will sooner or later devise a substitute, but natural fermentation is at end. For the same reason artificial methods of aeration must be universally employed in making bread; the leaven that has been used for so many ages has lost its potency. Our cheeses will not 'ripen,' owing to the absence of certain bacilli that used to effect the change; and there is a distinct falling-off in the flavor of our best butter. The manufacture of vinegar is stopped, because there is no longer a *bacillus aceticus* to work upon weak alcoholic solutions. Along with these changes in our diet we seem to notice some impairment of our digestive powers, which may be explained by the absence of those innumerable microorganisms which used to inhabit our alimentary canals and which assuredly had some influence upon the processes therein. Certainly the health of our herbivorous animals suffers on this account; they lose the power of digesting the cellulose which enters so largely into their food."

This, however, would not be the worst of it, for to the microbes of the soil we owe the nitrification and other chemical processes that fertilize it and that enable plants to obtain their nutriment from it. Says Dr. Gabbett:

"If the soil were rendered 'sterile' in the bacteriological sense—that is, if all the lower fungi in it were destroyed—it would soon be sterile in another sense also; our crops would perish, and agriculture would come utterly to an end. Neither grass, nor herb yielding seed, nor fruit-tree yielding fruit after his kind, could survive the deprivation of their natural nourishment; and as animal life is ultimately dependent upon plant life, the fatal consequences would not be confined to the vegetable kingdom.

"But, indeed, when we consider the matter from another point of view, it becomes still more evident that the activity of these lowly forms is a condition essential to the continuance of higher life on the earth. For nothing is more certain than the fact that the processes by which organic bodies, animal and vegetable, are converted after death into simpler combinations or into their ultimate elements—the processes known to us as putrefaction and decay—are absolutely dependent on microscopic organisms, espe-

cially bacteria. But if such processes did not take place, whence would be derived the materials for the construction of successive generations of animals and plants? The amount of carbon, hydrogen, nitrogen, oxygen, etc., available for the composition of living bodies is not an unlimited quantity, but is constantly utilized over and over again; there are necessary economies in the working of the laboratories of nature. At present all living things die and return to the earth from which they are derived; and their substances are again used to construct the substances of new living things. A part is at once assimilated by 'necrophagous' creatures, the scavengers of the soil; but the important economy consists in the slow decompositions set up by bacteria, resolving dead organic matter into elements available for fresh life. If these decompositions were to cease, if animals and plants were to remain incorruptible after death, how can we escape the conclusion that sooner or later the supply of such available elements must be exhausted, and life itself must come to an end?"

Dr. Gabbett's question answers itself. In his article, altho the items of information it contains are familiar to most of us, he has marshaled them so skilfully as to present the average utility of the microbe in a most striking manner, and few of his readers would vote to have this world of ours sterilized, even to gain immunity from leprosy and smallpox.

TOBACCO IN ITS RELATION TO ALCOHOL

IT is often stated that the use of tobacco leads generally to overindulgence in alcoholic drinks by creating a craving for them, but this has been strenuously denied. In *Modern Medicine*, July, Dr. J. H. Kellogg brings up numerous facts that seem to him to show a very close relationship between the two habits. He says:

"A very conspicuous fact in reference to these drugs is their exceedingly common association in use. Quite a considerable number of persons may be found who make use of tobacco without habitually using alcoholic liquors; but the number of persons using alcohol who do not use tobacco in any form is exceedingly small. This fact may be attributed to two causes:

"1. The use of tobacco is usually begun at an earlier age than the use of alcohol (this is true at least in the United States), the use of alcohol being later grafted on as a result of the associations to which the use of tobacco naturally leads.

"2. The use of tobacco creates a demand for the use of alcohol (a) by the production of a drug habit which naturally leads to the development of other habits of kindred sort, and (b) by the production of morbid conditions and discomforts from which alcohol affords temporary relief.

"If, as has been argued, the tobacco habit is a rival of the alcohol habit and a substitute for it, so that smoking and other forms of tobacco using should be encouraged as a means of antagonizing the use of alcohol, we should expect to see, as a result of the early acquisition of the tobacco habit, two general classes as regards the use of alcohol and tobacco—one large class using tobacco only, and another smaller class making use of alcohol only. But instead of this we find practically these two classes: those who use tobacco only, and those who use both tobacco and alcohol. It is evident, then, that the use of tobacco is not a protection against the use of alcohol, but rather an introduction to it."

Dr. Kellogg lays special stress on the fact that the physiological effects of tobacco create a distinct craving for alcohol, which is a temporary antidote for those effects. He says:

"Perhaps one of the most characteristic effects of tobacco is the excitation of the vasoconstrictors produced by it, as is evidenced by extreme pallor of the skin. Alcohol, on the other hand, produces, in moderate doses, the very opposite effect. The smoker finds himself suffering from dryness of the throat, thirst, general depression of spirits, perhaps slight giddiness, and some cerebral anemia. It requires but a single experiment to convince him that beer, wine, or whisky, or alcohol in some form affords very prompt relief from these distressing symptoms; hence the very natural association of cigars with wine or beer. The user of these two drugs, by their alternation, is enabled to secure a repetition of pleasurable sensations long after tobacco alone has ceased to

elicit pleasurable responses to its stimulus by reason of the development of its recognized toxic effects.

"These facts I have verified in the treatment of many hundreds of cases of alcohol and tobacco addiction."

Dr. Kellogg states his belief that the alcohol habit can not be radically cured while the patient continues to use tobacco, and that if we wish to check the growing tendency to alcoholism, which he regards "a disease of civilization," we must turn our attention first to the tobacco habit. He asks in conclusion:

"Has not the time fully arrived when those who recognize in alcohol a race enemy and one of the most potent causes of race deterioration, which at the present time is becoming so painfully evident, should also recognize in tobacco the strongest and most active ally of alcohol? And should not those whose efforts are directed toward the suppression of alcoholic intemperance seek likewise to oppose in every legitimate manner its brother evil, the tobacco habit, not only on account of its intimate relation to the alcohol habit, but also on account of the evils which are the direct outgrowth of tobacco intoxication itself?"

PERPETUAL MOTION AND THE X RAYS.

THE Roentgen ray, which now has a well-established reputation as a revealer of hidden things and an exposé of frauds, has just punctured a "perpetual-motion" bubble. As related in *The Scientific American*, July 1, one J. M. Aldrich, of Bradford, Pa., has for two years past been exploiting a perpetual-motion machine. A fellow townsman secured a model last March and sent it to the Patent Office, where it was found that the machinery is driven by clockwork hidden in the wooden base. The X-ray photograph shows the wheels and spring clearly enough. *The Scientific American* gives an interesting analysis of the probable steps by which this would-be inventor was led to become a swindler. It says:

"We can conceive it is quite possible that the builder of this 'perpetual-motion machine' did not set out with any deliberate

any external agency. The type of motor aimed at was one in which the force of gravity should supply the motive power, and it took the form of a rotating shaft, two transverse arms placed at right angles to each other, and jointed levers which should always present an excess of turning moment on one side of the shaft.

"Now we have no doubt whatever that Mr. Aldrich believed that his extensible arms with the weights flung far out on one side

X-RAY PHOTOGRAPH OF THE CONCEALED CLOCKWORK.

intention to deceive the public. Like many another, before and since, he was doubtless attracted by this will-o'-the-wisp of the inventor, and started with the honest intention and expectation of building a machine which would run without the assistance of

of the shaft and drawn snugly in on the other side, would not only insure perpetual rotation, but in a machine of sufficient size would exert a not inconsiderable number of horse-power. As a matter of fact, even in a frictionless machine there would be no turning moment whatever, and, as it was, Mr. Aldrich found that on starting his machine it was very quickly brought to rest by the energy consumed in overcoming the internal friction.

"If he had been content, as many another unfortunate had been before him, to consign his machine to the scrap heap, it would have been better for him and for his victims; but being of an ingenious and resourceful mind, and doubtless 'tempted of the devil,' he conceived the idea of overcoming the troublesome friction by means of concealed clockwork, and acting upon the thought he carefully carved and whittled out the wooden bed-plate of the machine and placed therein the springs and the train of gears shown in the illustrations."

IS ALCOHOL A FOOD?

IT was held by Liebig and the earlier physiological chemists that alcohol is a food. In recent times, however, it has been generally agreed that it has no food value whatever, but is a pure stimulant. Now comes Prof. W. O. Atwater, of Wesleyan University, with experimental proof that alcohol possesses at least some of the qualities of a food; that is, it yields energy, altho it does not form tissue. Thus, he asserts, it is as much of a food as sugar, starch, or fat. Professor Atwater's results were presented by him in a paper read before the Middletown [Conn.] Scientific Association, on June 12, and are thus described by *The Scientific American*:

"These experiments were conducted with the aid of his respiration calorimeter. . . . Sensational accounts of the experiments have appeared in newspapers from time to time, but Professor Atwater in his paper gave, for the first time, an authentic ac-

count of certain of his experiments which were conducted under the auspices of a committee of fifty for the investigation of the drink problem. The special objective of the experiments was to determine the nutritive value of alcohol. Pure alcohol was administered with water or coffee. Sometimes it was also given in the form of brandy or whisky, wine or beer. The alcohol was taken with the ordinary diet. The amount consumed was equivalent to $2\frac{1}{2}$ ounces of absolute alcohol or 5 or 6 ounces of average commercial liquor. It was found that the alcohol was oxidized as completely as bread, meat, or other form of food. In the oxidation all of the potential energy of alcohol was transformed into heat and muscular work, that is to say, the same use was made of alcohol as that of ordinary food materials. The alcohol protected the material of the body from undue consumption as effectively as the corresponding amount of sugar and starch. Alcohol, like the fats, starch, and sugar, does not form tissue, but it yields energy. To express it popularly, it serves as fuel for the system. Professor Atwater was careful to explain that his experiments were simply to get at the real facts in the case. Of course the conclusions which he deduces are not to be considered as advocating the use of alcohol. At the same time, it is no more than fair to state that the results of scientific experiments and the latest researches tend to show that alcohol is not a poison, but is a food."

THE STRUGGLE FOR CARBON.

UNDER this heading M. Charles Richet gives in the *Revue Scientifique*, June 10, what may be called a chemical view of evolution. His statistical estimates are so long, altho cleverly conceived, that we can not give them here, altho they form the basis of his whole article. His conclusions are contained chiefly in the paragraphs that we translate below. Says M. Richet:

"In order to move about, living beings need to accumulate in their tissues a certain amount of energy. We may conceive of the living creature in its simplest form, as an unstable chemical compound, capable at a given moment of liberating a certain quantity of energy under the influence of exterior stimulation. The source of this energy is of chemical origin, and the chemical phenomenon that produces the energy is generally one of combustion or of hydration.

"Each cellule is like a mass of explosive which, in detonating, sets free heat and force. an excitation of the nerves can be compared to a small explosion which, by the deflagration of carbon and hydrogen in the presence of oxygen, disengages force.

"Thus animals and vegetables need the elements that alone can give them strength; that is to say, oxygen on the one hand, and carbon and hydrogen on the other, in a form that enables them first to be assimilated, then burned.

"These elements are foods."

The struggle for existence, then, is, in its last analysis, a struggle for the possession of these three elements. Oxygen can be obtained easily, so abundant is it in our atmosphere. M. Richet estimates that only about 13,000,000 tons of oxygen are consumed daily by the whole sum of animal life on the globe—an unimportant amount in comparison with that contained in the vast atmospheric reservoir, which is at least ten million times as much. Even the combustion of fuel does not lessen it appreciably. Hence there is no struggle for oxygen. But it is different with carbon, which is relatively much less abundant. The earth's carbon is contained, first, in living beings, animal, and vegetable; second, in the atmosphere; third, in the earth, as coal and in the carbonates of various elements, forming rocks and minerals. The mineral carbon is not of direct use as food, and that of the air can be used thus only by the vegetable world. Animals can make use only of that which exists already in organized beings. The amount of animal carbon M. Richet estimates at 800 milliars of kilograms [800,000,000 tons]. The whole amount of available carbon he puts at about 3,290,000,000 tons, or only one three-hundred-thousandth part of the available oxygen, by weight. There must thus be a struggle for carbon. Our bodies contain

carbon that has been won from other organic bodies and by them from others still. Says M. Richet:

"At bottom, it makes little difference, from the point of view of general biology, under what form living carbon appears. Mollusk, fish, bird, or man, it is always the same mass of combined carbon, destined to give rise to motion and heat, and then, after passing into the state of carbonic acid, to return into plants, to become a new mollusk, fish, bird, or man. The struggle for existence consists in a contest to see what shall be the form of this organic carbon. If man, as seems probable, is to triumph over other living creatures, he can give what form he desires to this alimentary carbon, by cultivation and breeding on the one hand, and by the destruction of noxious creatures on the other. What was left to the chances of natural selection and the struggle for existence, before man's appearance on the earth, will become, by the fact of human intelligence, the result of men's will. The cereals, rice, coffee, the vine, palms, will be the only plants. Horses, dogs, cattle, sheep, goats, swine, will be the only living animals, besides such fish as a more skilful marine pisciculture shall learn to propagate.

"If life tends to a maximum, this maximum will perhaps be realized by man. . . . But, powerful tho he may be, he can not create carbon, and the quantity of carbon at his disposal is limited. It will not be oxygen that is lacking but assimilable carbon—carbon, source of force and energy.

"The limit of terrestrial life seems, then, to be the quantity of carbon that the earth contains. . . . Supposing that all the carbon of the air and the earth should enter into the composition of animal and vegetable bodies, the number of human beings could become a hundred thousand times as great as it now is. This is evidently a prodigiously distant limit—a limit almost absurd, and impossible to reach; but it is a definite limit, which can not be passed."

To answer the objections of those who may urge that other substances, such as nitrogen, are indispensable constituents of the animal body, and that perhaps there may be a struggle for these also, M. Richet shows that the necessary quantity of these is so very small, comparatively, that there would be a great superabundance after all the world's carbon should be exhausted. The struggle is, therefore, one for carbon and for carbon alone. Says the author in conclusion:

"Thus, life on the surface of the terrestrial globe appears to us under a very simple form. It is a small quantity of carbon, engaged in very complex and very varied unstable combinations, which are living beings with their innumerable forms and all the varieties of their aspects, colors, and habits.

"This mass of carbon, forming part of these unstable compounds, is continually burning, uniting with oxygen in slow combustion, passing from one form to another and finally ending up in carbonic acid. Then the sun's heat, through the intermediary of the chlorophyll of plants, decomposes this carbonic acid, and the carbon reappears, first as vegetable matter, then in the living animal, and so on perpetually. There is, then, in nature an incessant circulation of carbon that enables motion to take place in living creatures, and it is the sun's heat that maintains this circulation and restores the energy that has been transformed.

"The struggle for life determines the forms under which, at this or that moment, the carbon shall appear.

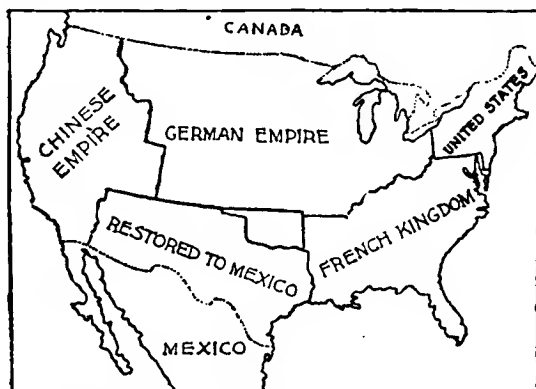

"Now we find that the struggle for life is a struggle for carbon. It seems, then, that there is, as it were, an incessant conflict between these molecules of carbon to form certain combinations rather than others, just as in a crucible where a series of successive chemical reactions are taking place.

"But, unlike what takes place in ordinary chemical action, it does not appear that this agitation of chemical molecules tends toward a stable state. The sun intervenes to modify it and add to it continually a new store of energy. We can not foresee, then, what will be the final form of combinations of carbon on the earth's surface. It is probable that stability will never be reached, and that the cooling-off of the sun will surprise living beings while still in a state of evolution.

"This evolution . . . is a conflict of the carbon molecules one with another; it is the struggle of carbon for carbon."—*Translation made for THE LITERARY DIGEST.*

PROPHETIC GEOGRAPHY.

A FRENCHMAN, M. Francis Laur, has recently made an attempt at geographical prognostication, which tho it is intended seriously as a contribution to ethnographical science, and is as seriously noticed in French scientific journals, will appear to Americans as the biggest kind of a joke. We gather from an abstract in *Cosmos*, June 24, that M. Laur believes that the real

American is a thing of the past. A crisis favoring disunion will come sooner or later, and then the country will break up into regions whose character will be determined by the nationality of the emigrants therein. Thus, says M. Laur:

"The concentration of Germans in the Northern States will form there a German empire.

"The French in the South will join together and form a kingdom of Orleans. And who knows whether the Chinese of the Pacific coast may not ask for the protection of the Celestial Empire?

"Then, too, we shall see Mexico retake the provinces torn from her in the time of her weakness. The poor Indians, too, will aspire, perhaps, after well-won independence."

In short, we shall be split up as shown in M. Laur's map. The capital of the German kingdom, he tells us, will be Chicago; that of the French, New Orleans; while New York will be at the head of the United States, now including only New England and the Middle States. San Francisco is to remain as a sort of free city in her Chinese environment. "Thus," comments *Cosmos*, "will end a great and beautiful experiment in democracy." All this is not from a humorous journal, but is put forth as a genuine deduction from sociological premises.—*Translation made for THE LITERARY DIGEST.*

Adoption of a Lamb by a Dog.—A correspondent of *L'Eleveur*, M. Lucet, a veterinary of Courtenay, France, relates an interesting case of adoption between different species of animals. "It is well known," says the *Revue Scientifique*, in noticing his article, "that in such cases extremes occasionally meet—as, for instance, when a cat adopts young rats, notwithstanding the proverbial enmity of these two kinds of animals. In the case cited by M. Lucet, the circumstances were less extraordinary, but they are still curious. The case is one of the adoption of a lamb by a female dog. The latter had a litter of pups, which had been killed, as the owner did not desire to keep them. On the same farm was a newly born lamb, whose mother had just died. The experiment of giving the dog charge of the lamb occurred to some one, and was very successful, the latter taking a great fancy to its mother by adoption. At the time when the case came under the observation of M. Lucet, the dog was running about in the courtyard, going from her master to the gate of the sheepfold and barking joyously. To her barks the bleating of the lamb responded from the inside of the fold. The gate having been opened, there ran out a little lamb, about three weeks old, which, bleating gaily and wagging its tail, ran toward its foster-mother and endeavored to nurse. The dog caressed the lamb, and, lying down, allowed it to take nourishment. The repast being finished,

the lamb remained lying between the paws of the dog, who set industriously to work to wash her adopted child."—*Translation made for THE LITERARY DIGEST.*

American Speed in Bridge-Building.—The English papers are still disturbed over the speed with which the Pencoed Works of Philadelphia prepared the Atbara Bridge for erection in the Sudan. *Engineering* remarks that undoubtedly the firm tried to make a record, but *The American Machinist* asserts that this is untrue, and that, on the contrary, the works made only their ordinary speed. *The Machinist* believes that English builders are habitually slow because of unsystematic methods. It says: "To particularize, the English bridge-builder shows a strange fear of the template system of locating the holes. American bridge works have developed a new trade—that of the template maker, whose duty is to lay out the bridge and locate the holes in wood, these pieces then becoming simple templates from which the holes are transferred to the iron. In English works the whole truss in iron is assembled and laid out in order to locate the holes, and is then taken down to have the holes made. The whole process of construction is necessarily at a standstill while this is being done, and it has to be gone through for every truss—in the most favorable case twice, for the two sides of the bridge, and where several spans are identical twice for each span, whereas for such cases a single template answers for all trusses that are alike, and the template making going on side by side with other work, it saves enormously in time as well as in cost. The template made, all similar parts of all identical trusses are put through together, whereas under the English system they are handled one at a time, with a resulting confusion and slowness that would drive an American mechanic mad. Excepting the far-reaching results of unified and consistent designs, it is probable that this template system has more to do with the quickness of delivery which puzzles our English friends so much, than any other single feature of American bridge practice."

SCIENCE BREVITIES.

A PRIZE having been offered by *The Electrical Review* for the best name to designate "the electrically propelled, self-contained vehicle for roads and streets," the judges selected the word "electromobile" from about 400 proposed terms.

"THE Merchants' Association of San Francisco has been trying the experiment of sprinkling a street with sea water," says *Appleton's Popular Science Monthly*, "and finds that such water binds the dirt together between the paving stones, so that when it is dry no loose dirt is formed to be raised by the wind; that sea water does not dry so quickly as fresh water, so that it has been claimed when salt water has been used that one load of it is equal to three loads of fresh water. The salt water which is deposited on the street absorbs moisture from the air during the night, whereby the street is thoroughly moist during the early morning, and has the appearance of having been freshly sprinkled."

LIQUID AIR AS A CAUSTIC.—According to *The Tri-State Medical Journal and Practitioner*, the use of liquid air as a cautery is already spoken of favorably. "It having a temperature of 312° F. below zero, its action is, to all intents and purposes, the same as that of the most powerful actual cautery. It does not really burn, but utterly kills the tissues, leaving a blister not unlike a burn. Hence it has been suggested for cauterization in surgical practice. It is not only a good deal cheaper than the ordinary cautery, but it is much more efficient, and its action can be absolutely controlled. A well-known surgeon has already performed a difficult operation on a cancer case with liquid air, and he has reported the case as cured."

ELECTRICITY NOT PROPERTY IN GERMANY.—"It seems," says *The Western Electrician*, June 24, "that the theft of electricity is no crime at present in Germany, there being no express law against it. In December last the provincial court at Elberfeld sentenced three mechanics each to one day's imprisonment for stealing electricity. The men had secretly attached wires to a circuit in the house where they lodged, and thus got their room lighted by electricity for nothing. The court decided that electricity possessed the essential properties of a movable object, but this was appealed against, and the case has finally reached the senate of the supreme court of the empire. The senate holds that the judgment of the provincial court must be quashed, for the reason that those properties are wanting in electricity which would be necessary to constitute it a movable object in the sense of the law. In the sentence it is stated that electricity must be reckoned as one of the energies of nature, like sound, light, and heat. As the law provides only against theft of movable bodies, it is inapplicable in the case. Damage to property can also not be pleaded, for this requires that the substance of the object must be affected. It can not again be said that a property has been withdrawn from the wire, for electricity is not one of the properties of copper wire. The senate came to the unanimous conclusion that, with the law in its present state, tapping an electric current is not theft."

THE RELIGIOUS WORLD.

MENTAL HEALING AND THE "MEDICAL TRUST."

THE principles of mental science—altho not that conception of it for which Mrs. Eddy stands—find an outspoken defender in the editor of *Mind*, who condemns the medical profession for what he terms their jealous persecution of mental healers. Demetrius, the silversmith and idol-maker of Ephesus, crying to his fellow craftsmen that this Paul hath persuaded and turned away much people and that their craft is in danger is, in the opinion of this writer, a type of the physicians of to-day. He writes (in *Mind*, July):

"For once in the history of medicine the doctors may be said to have agreed. They are practically a unit in declaring that Christian Scientists and all other 'irregular' practitioners of the healing art should be suppressed. To this end, during the last few months, they have carried on in this city an aggressive newspaper propaganda, the ostensible motive being the protection of the community against 'charlatany.' The new crusade received its initial impulse from the death of a woman while under Christian-Science treatment—a fact to which the doctors point as evidence of the 'danger' of allowing individuals to choose their own mode of treatment when ill. The same issues of the journals that lend their space to this medico-political persecution of a rival profession, however, contain daily an alphabetical list of scores of persons that have presumably died under 'regular' treatment; we are therefore constrained to believe that the 'danger' apprehended is really to medical incomes rather than to society.

"We do not presume to speak for the Christian Scientists. *Mind* is not in any sense a representative of the cult founded by Mrs. Eddy; yet we are convinced that, on the abstract questions of liberty and justice as interpreted in recent discussions, these people have by far the best of the argument. Their position is the more logical and tenable, whether the appeal be made to results or to theory. We are not unaware of the inconsistencies that may be pointed out in the dogmatic teachings of this school; yet it is our observation that it suffers more from misrepresentation and misconception than from the defects of its emotional method of presenting fundamental truths. For instance, by the medical and secular press Christian Science is almost invariably confounded with the theological 'faith cure,' when the truth is that these systems have absolutely nothing in common. And when the president of the New York Board of Health declares that sorcery, clairvoyance, incantation, necromancy, witchcraft, etc., should all be grouped under the head of Christian Science, it is evident that what he does not know about that system of religion and healing would fill several volumes."

With regard to the medical man's plea that mental healers should be subject to the same conditions and restrictions that govern graduates of regular, homeopathic and eclectic systems of *materia medica*, the writer says that the two cases are wholly different. Physicians are surrounded with restrictions because they deal in deadly poisons; while those who practise mental healing by the power of metaphysical enlightenment may be likened, he says, to those who merely turn on the electric light in a darkened room, or that connect the wires or the gas-pipes. It requires no architect to do this. He continues:

"But we are informed that these gentlemen propose to exempt the use of *hypnotism* in therapeutics from the operation of their intended infringement upon personal liberty, since 'healing by suggestion' has received the indorsement of the most eminent medical men. In such a modification, however, will be presented an inconsistency far greater than any that a Christian Scientist has ever been guilty of; for the doctors will then be conceding the metaphysician's basic claim, the very foundation of his system of cure—that in every case of genuine healing the direct curative agent is the *mind*. In view of the fact, moreover, that suffering humanity has learned that between the practise of *medicine* and the practise of the *healing art* there is often a very wide gulf,

we do not hesitate to predict that no legislation of the kind proposed will ever be enacted in the State of New York. The fundamental law of this commonwealth will never abridge the right of its citizens to choose their own religion, their own lawyer, their own reading matter—and their own physician.

"Less easy to understand than the self-interest of the medical fraternity in this agitation is the attitude of some members of the clergy on the general question of spiritual healing—as expounded in the New Thought. They generally uphold the position of the doctors; yet how they can reconcile their opposition with their New Testament is difficult to comprehend. They grant that Jesus healed the sick without medication, but are inclined to regard it as a miraculous performance. Yet the apostles accomplished similar cures, and our modern metaphysicians are doing likewise by the same means—frequently in cases that have been given up by the 'regular' practitioners. We know the means are the same as those employed in apostolic times, because the same results flow from the application of the identical principles that the Master inculcated in the minds of His hearers. The cures, therefore, are not and never were miracles; they are the effect of natural law, definitely understood and applied. Jesus Christ gave no lessons in chemistry, or anatomy, or physiology; He pointed instead to a deeper realm of truth—a storehouse of power beyond the pale of 'experiment' and accessible to the individual himself: the human soul, whose instrument is *mind*."

The writer offers the following semi-ironical explanation of the medical profession's hostility to the new healers:

"Perhaps in the psychology of suggestion we may find an indirect clew to the real motive of this latter-day persecution of believers in the unorthodox and unconventional. The startling increase in number and magnitude of the 'conspiracies in restraint of trade' known as trusts, which threaten the stability of American institutions and bid fair to rob the individual of his power of initiative in commercial intercourse, is certain to have serious consequences in reconciling the average mind to the idea of *monopoly*. The monopolist is becoming respectable. He that is 'first on the ground' is beginning to reassert his right to preempt everything in sight. Competition has been transmuted into combination in apotheosis of greed. And the injustice of exclusion, restriction, and absorption is no longer confined to industrial pursuits; it has seemingly placed its blighting finger on the learned professions. Are we to have a medical trust?"

A FACTORY BASED ON THE GOLDEN RULE.

AS an antidote to pessimism, and a cheering proof of the practicability of "Christian Socialism" applied to a great business organization, a visit to the factory of the National Cash Register Company, at Dayton, Ohio, will prove to be very efficacious, in the opinion of the Rev. E. W. Work. *The Independent* (June 29) contains an account of what he saw there recently. He says:

"A great factory system organized upon principles of brotherhood, openly professing the Golden Rule as its doctrine, advocating the care and training of men's minds and spirits, while employing their hands, is so unique, so altogether captivating, that it would require not above half an hour's inspection most effectually to silence for the time being the loudest grumbler at modern industrial conditions. Quite the most unique thing about it all, too, is the naive confession by the company that they find business profit in what they are doing for their people. Enter the women's dining-hall on the upper floor of the Administration Building, or the 'rest-room,' or the bath-rooms, or bicycle sheds, or the working-rooms, kept as clean as your mother's kitchen, painted in Colonial yellow to be easy for the eye—everywhere the same frank placard greets you—'It Pays.'"

"The company pays good wages and gives unusual attention to matters of sanitation, cleanliness, light, ventilation, heating, and ornamentation. The health of the employees is made a first consideration. Several years ago the president found a young woman heating coffee in a tomato can on a heater for the noon lunch. He promptly furnished a stove for heating lunches, and from this has grown the generous noon lunch provided to the

young women, at a cost of one cent. The dining-room contains flowers, rugs, pictures, a piano, and a 'rest-room' adjoining with couches and medicines. The lunch is estimated to cost *three* cents, but the company figures that the increased efficiency of this department amounts to *five* cents per person. The young women are required to wear white aprons and cuffs, which are furnished and laundered at the company's expense. They go to work an hour later than the men in the morning, and leave ten minutes earlier in the evening. There is a ten-minute recess each morning and afternoon for calisthenics or rest. They also have regular holidays. They receive ten hours' pay for eight hours' work. The chairs have high backs and foot-rests. The young women in the binderies and at the machines look as neat as high-school girls. The object-lesson in cleanliness is too plain to be mistaken. The men work nine hours and a half with ten hours' pay. Weekly baths are granted to all, on the company's time.

"It is believed that pleasant surroundings are conducive to the economical production of good work, while they attract a much better class of workmen."

Evidences of the attention given to pleasant surroundings are manifest on all sides, both within and without the buildings, and this attention is not a mere matter of taste but of business policy:

"Hence here and there a waving palm among whirling wheels and belts. The lawns and grounds were carefully planned by a landscape gardener. One of the streets near the factory has been pronounced in summer-time the most beautiful in the world. The section of the city in which the factory is located was formerly 'Slidertown,' disreputable and unsightly. Now it is 'South Park,' and is rightly named. The employees themselves have formed the 'South Park Improvement Association.' For many squares about the factory the effect of the factory's attention to beauty is seen in the homes, in a window-box of flowers, a vine-clad porch, a well-trimmed lawn, or a well-kept backyard. The company keeps a landscape gardener who instructs the people in the best methods of planting trees and training vines, and the company offers prizes, for example, for the best-kept backyard. Realizing the difficulty of occupying boys and of teaching them usefulness, a boys' garden has been furnished. Each boy has a plot of ground assigned him and is permitted to raise vegetables. Prizes are given for the best result. This year athletic grounds have been added and a club-house for the boys of the neighborhood.

"There are no strikes here and no lockouts. Why, indeed, should there be? A prominent German Socialist, visiting the factory, said: 'This is all I mean by Socialism.' Another said: 'You make money and happiness at the same time.' All this costs the company a large sum, but, besides getting its own profits, the lives of thousands of men and women are broadened and made more happy. When capital becomes generous to labor, labor becomes generous to capital. The employer realizes that it is to his interest to make the employee as much of a man as possible, physically, intellectually, morally. This represents a distinct advance in factory life. The workman is not merely a 'hand'; he is a 'soul.' Put more into his soul, give him more to think about, give him a better dwelling and better surroundings, open new vistas of life, and he will, out of his strengthened manhood, give you a better service."

The factory has no general manager or superintendent, but is directed by a committee of five experts, representing the different lines of factory work. Employees are encouraged to offer suggestions constantly for the improvement of any detail of the business, and for this purpose suggestion-boxes are placed here and there. The best suggestions receive generous prizes. The more valuable features of the business have been suggested and brought about in this way, and the originality and individuality of each employee are thus constantly stimulated, while courtesy is exacted of all.

Besides many other interesting features for the intellectual and moral improvement of the *souls* here employed, such as lectures, stereopticon talks, and Saturday half-holidays, there are two institutions of a social and partly religious nature:

"The House of Usefulness is the social settlement. Here re-

sides the deaconess, and here center all the social organizations—boys' and girls' clubs, musical organizations, kindergarten, mothers' meetings, relief associations. The leverage obtained here upon the lives of boys and girls seems incalculable."

As for the other institution, the Sunday-school, Dr. Work writes:

"It has seven hundred members, and meets on the third floor of one of the factory buildings. A printed program is used, with a Scripture lesson. First there is a drill of the Boys' Brigade; then a choir procession; then singing and responsive reading, and quotation of selected verses, Scriptural and otherwise; then a twenty-minute address, and remarks by the deaconess. The subjects of study are practical life lessons, such as 'Work,' 'Charity,' 'Child Life,' 'Liberty.' The basis of the study is the Scriptures, but illustrative material from every source is welcome. Often the stereopticon is used in the school to show scenes of travel, the beauties of nature, best methods of home-making or landscape gardening.

"There is nothing traditional, nothing hoary-headed about this factory system, not even in the Sunday-school. Walking amidst these new industrial conditions, one feels as if he had already pushed through the door of the new century."

WHO WILL BE THE NEXT POPE?

ALTHO the astonishing vitality of Leo XIII. makes it appear not unlikely that he may still see several years, yet his extreme age added to the general precariousness of human life renders the question of the succession to the papacy of immediate interest and importance. One of the most authoritative forecasts of the next conclave is given in *The Catholic World* (July). The writer thus prefaces his account of the several papables or papal candidates:

"As a word of preamble to the consideration of individual aptitudes and claims, it may be stated that, in forming conjectures regarding a conclave, an important matter is supposed to be the policy of the various members of the Sacred College with regard to the attitude that should be adopted by the church toward the state in Italy. It is believed that when, according to custom, they shall have been walled up by the stone-masons in that part of the Vatican where their deliberations are to be held, the cardinals will divide themselves into two main groups, according as they desire conciliation with the Italian Government, or wish a continuance of hostilities toward it as the despoiler of the temporal power of the Holy See.

"Should both these groups be strong, as the rules require that the person named to the pontifical throne must have a two-thirds majority of all votes cast, it might happen that the candidate of neither group would be elected. The suffrages would then inevitably converge on some one whose connection with a group was not explicit or definite."

The writer then gives a sketch of the nine leading candidates for the tiara. We quote as follows:

"By far the most conspicuous figure among the present members of the Sacred College is the pontifical secretary of state, Cardinal Mariano Rampolla del Tindaro. . . .

"This eminent ecclesiastic has already acquired for himself a world-wide reputation, and has the merit of being recognized as an able and conscientious lieutenant of Leo XIII. in all the latter's views and undertakings. In Italy Cardinal Rampolla is considered the leader of that policy of non-compromise toward the Italian state which has been brought out into much greater relief at the Vatican since his assumption of office. Cardinal Rampolla is also believed to be politically favorable to France and averse to the Triple Alliance. . . .

"One of the most conspicuous of those who are called Cardinals di Curia—that is, who have their residence in Rome and form part of the administration—is Lucidio Maria Parocchi, vicar-general of Leo XIII. for the diocese of Rome, and known as the 'cardinal vicar.' Cardinal Parocchi is sixty-six years of age and his life has been filled with stirring and important events. . . .

"Cardinal Parocchi's name has recently been kept prominently

THE LEADING CANDIDATES FOR THE PAPAL THRONE.

before the world from the fact that journalists and speculators in general name him as the prelate having most probability of being elected to succeed Leo XIII. Cardinal Parocchi has had his hand in politics, and it is well known that he is a conspicuous friend of France and an adversary, to a greater or less extent, of the Triple Alliance. He is in the same line of ideas with Cardinal Rampolla, the pontifical secretary of state.

"It is a rule of the church that two brothers shall not simultaneously be cardinals. Exceptions are sometimes made, and this has been the case in favor of the brothers Vannutelli, who are at present members of the Sacred College. Both have figured prominently as papal nuncios and pontifical representatives at important functions in various countries of Europe. What gives them their prominence among the papabili is the fact that the brothers Vannutelli are the most prominent members of that group within the Sacred College of Cardinals which has as its policy the conclusion of peace, or at least the arrangement of a *modus vivendi*, with the Italian state, as a means of furthering the interests of religion. The adherents of this group are called the Concilionisti (reconciliationists). The Triple Alliance of Germany, Austria, and Italy would naturally hail the arrival to power of a member of this group, and is consequently in favor of the candidature of one or other of the brothers in question for the pontifical throne. England has manifested similar sentiments, and many draw like conclusions regarding the sentiments of the United States Government in the matter from the fact that General Draper, the American Ambassador in Rome, is a close friend of both prelates, has had them to dinner in the Piombino Palace, and frequently dines with them at the table of common friends."

Cardinal Girolamo Maria Gotti is a Genoan. He early became

superior-general of his order—that of the Discalced Carmelites. When the relations between the new Brazilian republic and the Roman See had become strained after the downfall of Dom Pedro, Gotti was sent thither and did invaluable work in restoring a satisfactory understanding between church and state. Says the writer in *The Catholic World*:

"Cardinal Gotti has his residence in a palace overlooking the Trajan Forum. He is rather small in stature, of kindly features, and exquisite affability. He is still endowed with all the energies of youth and conversant with every subject under the sun. All the best qualities of the scholar, the diplomat, and the saint enter into his composition. Into Italian politics he has never thrust himself, and this fact, joined with his intrinsic qualities, makes him be regarded by many of the most qualified judges as the cardinal very likely to succeed Leo XIII. on the pontifical throne. He represents neither the Conciliationist party nor the Intransigents. He is not one of any group, but he is regarded as the outsider, or the 'dark horse,' who has many probabilities of winning.

"Since the death of Cardinal Bianchi, Cardinal Domenico Maria Jacobini is the only member of the Sacred College who is a Romano di Roma (Roman of Rome), as they phrase it. He was born in the Eternal City sixty-two years ago, and is a man of the most brilliant parts. As a young ecclesiastic in Rome, Monseigneur Jacobini resolved to dedicate himself to the service of the workingmen. In the face of obstacles of every kind, he began by founding artisans' clubs, afterward organized laborers' libraries, and later on established savings-banks and loan-fund institutions in various parts of the city. It is safe to say that the

popularity which Monseigneur Jacobini acquired with the public of Rome has rarely been equaled, and possibly never surpassed, by any ecclesiastical personage.

"Venice is the only city in Italy which has a patriarch as its hierarchical head. Its patriarch at present is Cardinal Giuseppe Sarto. . . . No one knows if Giuseppe Sarto is a Concilionista or an Intransigente, but they do know that if there is sickness or suffering in Venice he is there in the midst of his flock, ministering to them with his own hands. And they do know, too, that he is a man of great learning, for he preaches great sermons and has written important books on virtue and morality, and they know that when Cardinal Sarto enters into an undertaking, whether it be the building of a church or the waging of a fight with the purse-proud, he will never desist till his enterprise is crowned with success. He is a native of the north of Italy, was born at Riese, in the diocese of Treviso, in June, 1835. He was created cardinal in June, 1893.

"Cardinal Svampa is one of the 'young' cardinals. He was born at Montegrano, in the archdiocese of Fermo, June 13, 1851. Leo XIII. elevated him to the cardinalate in May, 1894. It may be stated, however, that even in face of the promising outlook by the Malachian prophecies, Cardinal Svampa is not oversanguine of his prospects of the papacy. He jests freely on the subject himself, and to the present writer he remarked: 'It would be all very well if it did not happen that there are two other cardinals alive to whom the prophecy applies no less clearly than it does to me.'

"Angelo di Pietro, now a prince of the church, was born in the charming village of Vivaro, among the Sabine Hills. But dire poverty was the lot of his parents, and many a day the child, as the cardinal now relates, traveled long miles to school and returned in the afternoon to break bread for the first time in the day. The parish priest of Vivaro early perceived that young Di Pietro was endowed with mental and moral qualities of a high order, and he accordingly had him received as a prospective ecclesiastic in the diocesan seminary at Tivoli."

During this period a prophecy was made by a peasant woman, it is said, that Di Pietro would one day "be ordained priest, become canon of the Cathedral of Tivoli, would fight the cholera, be prefect of the papal council, and finally Pope." Thus far, all but the last item in the prophecy has been fulfilled, says the writer. He continues:

"Is the plenitude of the prophecy to be fulfilled, and will Cardinal di Pietro be placed on the papal throne? Many who have followed his career believe so, despite the fact that he is now in his seventy-second year."

THE INDEX CONGREGATION OF THE ROMAN CATHOLIC CHURCH.

THE condemnation of the works of the Roman Catholic professor of theology at Würzburg, Dr. Schell, has, in connection with some other events of the day, drawn special attention to the institution known as the Index Congregation, with headquarters at Rome, of which the church makes use in order to publish to the world the list of books which she condemns as dangerous to the faith and which she will not allow her adherents to read. One of the best of the many articles that have lately been published concerning this body and its work is found in the *Christliche Welt* (Leipsic, No. 20) from the pen of Alfred Hegler. We extract from it the following data:

Since the invention of the art of printing and the spread of Protestantism the preparation of such an index of prohibited books was systematically made the work of a special body of ecclesiastics—al tho the oldest lists of this sort did not originate in Rome, but in England, followed by the Netherlands and by France, and later on in the Italian states. On more than one occasion great universities, such as Paris and Louvain, prepared such lists by command of the political authorities.

The first Roman Index constitutes the basis of the Roman Indexes down to our own day, and has been continually enlarged. Originally the Index consisted of three parts, one containing the

names of authors all of whose works are condemned; the second with a list of special works; and a third with books of anonymous writers. Editions of these lists have been repeatedly published, the last, in the year 1895, making a volume of nearly five hundred pages. Since 1571 the preparation of these lists is the work of a special Index Congregation, al tho in certain cases with the cooperation of another cardinal committee, namely, that of the Inquisition. The Congregation proper consists of twenty cardinals, who act with the advice and assistance of other ecclesiastics. At present, the chairman of this body is the German Jesuit, Cardinal Steinhuber. The secretary is appointed by the Pope and is always a Dominican, the office at present being held by Cicognoni. The decisions of the Congregation are subject to the approval of the Pope himself. As a rule, the Congregation passes judgment only on those books which have been reported as heretical. Al tho it is the duty of every good Catholic to report such works, yet practically this has become the function of the bishops, rectors of universities, the nuncios and papal delegates. The whole method of procedure has been regulated by a bull of Pope Benedict XIV. in 1753. The author of such a book has no right of appeal, nor can he ask to be heard in self-defense. The censors have the right of deciding on the merits of the books themselves. The constitution of Leo XIII., published in 1897, and entitled "*Officium ac munerum*," has inaugurated some new features in the procedure. A transgression of the laws of this constitution brings with it excommunication in its severest forms. Among the books prohibited are not only the works of recognized heretics, but also all translations and editions of the Bible prepared by non-Catholic authors, all religious books for devotional and kindred subjects from such sources, as also all from Catholic sources published without the special permission of the ecclesiastical superiors. By special permission Catholic scholars may make use of certain condemned books for particular purposes. The destruction of such condemned works is a most sacred duty. A leading commentator on this list, Hollweck, declares that the reading of even the introduction or table of contents of such a book is to be regarded as a grievous sin.

The history of the contents of this index is a most unique record of strange literary ups and downs. In the sixteenth century the works of Protestants were so energetically condemned that the Index contains the names of some who never wrote a book, and names of persons are mentioned who never existed. Catholic opponents of the Reformation quite innocently found their place on this list, because their names happened to be mentioned by some Protestant author. The selection was often made at random and in a purely arbitrary manner. In this way, as a rule, only those German and English books were placed on the Index which happened to exist in Italian translations. The best and the most wicked of books are found in close companionship. Side by side with the Bible are found the lewd productions of Boccaccio. Of Dante's works only the "*Monarchia*" is prohibited, al tho the "*Divine Comedy*" is anything but complimentary to the church. Hume, Hobbes, and Spinoza are found among the condemned, but not Leibnitz, Hegel, or Darwin, and of Kant only an Italian translation of the "*Critique of Pure Reason*." The great German classical writers are also not represented among the condemned, and the Protestant authors of the present century are conspicuous by their absence, the leading exceptions being Strauss and his "*Life of Christ*," and Ranke on account of his "*History of the Popes*."

If a Catholic author is placed on the list, he finds himself in rather good company, among them being such scientific authorities as Richard Limon, the great philosopher Pascal, and the mystical thinker Fénelon.

From 1890 to 1896 the total number of additions to the list has been one hundred and nine, and among them are to be found all the works of Zola, and about all the direct attacks made on the Catholic church during this period, and works in the spirit of modern naturalistic philosophy. Leading works of this kind are Renan's "*History of Israel*," Sabatier's "*St. Francis of Assisi*," Broughi's "*Life of Christ*." Nearly all of these authors are Catholics, and the books have nearly all appeared in French or Italian.

—Translation made for THE LITERARY DIGEST.

A NOVEL, the "*Marked New Testament*," is soon to be printed. Passages which are thought of especial interest to busy students of the Bible are to be underscored and made conspicuous by lines in red ink.

FOREIGN TOPICS.

EUROPEAN SYMPATHIES IN THE BOER TROUBLES.

A FEW moderate papers in England agree with Sir Henry Campbell-Bannerman, who declared in the British House of Commons that there is no reason for interference in the affairs of the South African Republic. But the great majority say that it is England's manifest destiny to conquer the Boers at this period, and they profess to be certain that France and Germany will re-

The Farmers in one of the Eastern States of America have found out that if they blow horns and trumpets under their fruit-trees the Caterpillars tumble to the ground, and can be destroyed with ease. Mr. Chamberlain wishes he could do the same with the Oom Caterpillar, which declines to tumble.
—*The Westminster Gazette.*

main at least neutral. The continental papers show that the British are the only foreigners in the Transvaal really desirous of British rule, and there is much speculation on the possible results of the war; and it seems very likely that the Boers, if they resist successfully in the beginning, will find assistance. The *Temps*, Paris, believes that "if President Krüger plays his cards well, he will have the majority of the foreigners on his side," and admits that the granting of a vote to people who do not intend to sever their old allegiance is out of the question. The Vicomte de Caix, in a work on "Fashoda, France, and England," writes as follows:

"It seems now that France made a grievous mistake when she stood coldly aside at that time when the Emperor of Germany boldly came forward in defense of the Transvaal. Very likely the mistake was repeated at a later date, for Germany, being isolated in her defense of the South African Republic, was forced to come to terms with England with regard to Delagoa Bay. The importance of that agreement is probably much overrated by the British press, as the terms are kept secret. Yet we made a mistake, that much is certain."

The writer advises his countrymen to adopt Bismarck's maxim as their own, *i.e.*: "Never launch forth upon a policy you can not carry through." The *Journal des Debats*, Paris, thinks the Boers have shown their unwillingness to cringe to England by referring to the damages of the Jameson raid, which never have been settled, "and any one knows that the English do not like their pockets to be touched," says the paper, "but there is danger to British rule in a conflict between the Boer and the Briton." Moreover, the *Journal des Debats* thinks "it's just as well to remember that, holding Madagascar, France is near enough to the possible scene of the conflict to influence it." The *Schlesische Zeitung*, Breslau, which is often used as a "feeler" by the German Government, expresses itself to the following effect:

The *Times* and its party are to some extent discredited in

England, and people know that news coming from that quarter is unreliable. Yet war is probable enough. The ordinary Englishman simply follows the rule: England may and should take whatever she is strong enough to obtain, moral impediments do not count. The "Kafir kings" want war, they believe that the ultimate victory of Great Britain is certain, and that victory must bring enormous profits. Salisbury, however, appreciates the danger of the situation, and he may prefer to part with Chamberlain rather than risk war. Germany certainly has no reason to smooth the path of the British Government for conquest in South Africa.

It is officially denied in Paris, Berlin, and Pretoria that other powers have advised the Boers to accept the British terms, yet the English papers continue to set afloat that rumor. On the other hand, French and German subjects have asked for military protection from their governments in case of war. A strong protest has been published by representative German-Transvaalers against the manner in which some German papers, notably the *Kölnische Zeitung*, side with the English. We quote as follows from this protest, as given by the *Tageblatt*, Berlin:

"The object is evidently to discredit the republic. It is not true that the prices of necessities in the gold-fields are rising, they are falling. The head tax is only 18 shillings per year, hence very low. The health of the people in the mining districts is good, and the administration very attentive. The Government is very kind to German immigrants, and we have no reason to complain. What we hate here in the land of the Boers is lying, and what we despise is British cant. We live very comfortably, and do not mean to act as traitors to the people among whom we have settled."

The *Hamburger Nachrichten* says that no fair-minded person can expect the Boers to give in without a struggle, and ridicules the English assertion that the Boers would welcome British rule if it were not for Paul Krüger. The *Süddeutsche Correspondenz* points out that one of the grievances of the English Uitlanders is that Paul Krüger will not pass an ordinance prohibiting German servant-girls from getting married before they are two years in the country! That even the British section of the Uitlanders are not all in favor of war is shown by the many protesting letters in British papers. One Charles Fox writes from South Africa as follows to *The Spectator*, London:

"We may regret, and perhaps we shall ever regret, Mr. Glad-

JOHN BULL AND THE TRAITORS.

JOHN BULL: "See them fellers there, Oom Paul? I don't know nothing about them. Every Englishman's a gentleman. Look at me, for instance."

—*The Amsterdammer.*

stone's quixotic surrender of our principal rights as suzerain; but if we are to maintain our self-respect, we must hold to our word, and not allow our honor to be undermined by our after-thoughts. . . . No one's life or liberty is imperiled. Order is well preserved, and personal security is as perfect in Johannesburg as in Birmingham. All this cry of the 'oppressed Outlanders' is simply on account of *their pockets*. . . . The simple fact

is that these men have gone to dig gold in a country belonging to Dutch farmers, to whom we guaranteed the right to govern themselves as they think proper. These Outlanders (*i.e.*, foreigners) are allowed to come as visitors, but the Dutch farmers intend to keep the management of their country in their own hands, which they can not do if they once give the franchise to this crowd of visitors."

The St. James's Gazette publishes a complete account of General Joubert's movements in case of war, but the Amsterdam *Handelsblad* says that so far it is doubtful whether the Boer commander-in-chief is in the habit of telegraphing his plans to English newspaper offices. Another evidence of the errors of the English editors with regard to the Boers whom they write so

A PERILOUS PASTIME.

much about is the assertion met with in every British paper that German officers have trained the Boers. This is absolutely incorrect. The Boers are altogether unfit for German military drill, but have a very good system of their own. The nearest approach to the Boer on the war-path was the now defunct scout of our prairies. A few German and Austrian officers are in the artillery, but the men are all Afrikanders. The Uitlanders who side with the Boers—chiefly Dutch and Germans—are formed in volunteer companies in which no Boers are admitted.—*Translations made for THE LITERARY DIGEST.*

CRITICS OF OUR PHILIPPINE OPERATIONS.

NOT a word is heard abroad of an attempt on the part of the Filipinos to obtain the recognition of their republic at the present stage of the war, and the natives do not seem to take great trouble to communicate with the rest of the world. Some of the European papers are printing letters reflecting on the conduct of the campaign, somewhat similar to the letters printed in the American press two months ago (see *THE LITERARY DIGEST*, May 27). Thus *Ostasien*, a monthly published in Berlin by a Japanese, gives the text of a letter by J. Taga-Maynilad, a rebel sympathizer, which shows a native view of the struggle. He writes:

"The rainy season will soon be here, and the American army will be incapable of operations. It will be difficult for General Otis to feed the imperialism of his nation by daily reports of victories. Our faithful allies—fever, dysentery, lockjaw, and other tropical diseases—will reduce the American army of 'liberators' 40 per cent. The same thing happened in the Ratipunan rebellion, when General Polavieja resigned because he could not get 25,000 men sent to fill up his ranks on short notice, and his successor, Primo de Rivera, was forced to conclude the peace of Biak-na-Bató. Yet only a few provinces revolted then, and we could not command above 1,000 rifles. To-day the whole people are in arms against the invaders. We have an army of 62,000 men, better disciplined than the slouchy warriors of Uncle Sam. No wonder that Schurman by his proclamation tried to obtain an armistice from us! But we will not grant an armistice, which would only benefit the Americans. Now is our time to carry on a guerilla war."

The Outlook, London, prints a letter from an Englishman in the Philippines who says that the reports of the looting of which he writes have been suppressed. He says:

"After the shelling of this place [Iloilo] on February 11, a fire party was landed from the American war-ships to try to save the burning houses. The rebels by this time had been driven into the country, and the whole town was swarming with American regulars and volunteers, who commenced to loot right and left. All the horses and cabs were taken and utilized. Needless to say, Iloilo was soon run out of whisky and other alcoholic drinks. The looting was a disgusting sight for an Englishman to witness; but the Americans had got beyond the control of their officers."

"One Englishman found a man wearing a pair of his best riding top-boots, who, on being remonstrated with, said: 'Well, I am much obliged to you, stranger; I guess they are a better fit than those darned clodhoppers,' pointing to his cast-offs."

"Another Englishman who had saved his horse from the rebels by a bold face, came back from his 'go-downs,' and found some American soldiers in his dining-room, swilling liqueurs neat from the bottle. Being kindly disposed to them, he offered them some whisky and soda as a more suitable drink for that temperature. This was declined; but they parted friends, and, with the usual Anglo-Saxon 'blood-is-thicker-than-water' salutation, wished one another good luck. The Englishman then went into his bedroom, only to find, after he had managed to pick up the broken fragments of furniture and personal effects, that everything he had of any value had disappeared. The remnants lay in a mass on the floor. His stock of cigars was too large to carry away, so some were strewn over the floor. What an American soldier wants with a silk-faced dress suit is a problem. Well, the Englishman's kindly feeling received a check and his language may be passed over; but, being a fairly elephantine youth, he sauntered forth, and, I believe, had something to say to his 'cousins' during that day."

Similar accounts are given by many foreign correspondents. All agree that the Filipinos have no intention of giving up the struggle. Hence the European papers hope the United States Government will realize that it has a fairly large-sized war on its hands, and furnish adequate means for its successful conclusion. *The Speaker*, London, says:

"The Roman Catholic clergy, in particular, fear for the religious orders, whom the Filipinos would assuredly exterminate if they could. We believe these orders—vicious as clergy, grasping as landlords—will eventually have to be bought out, and the American Congress is hardly a fit body to elaborate a measure which will present as many difficulties as an Irish Land Act. For the present, however, it can hardly be doubted that America must stick to her task."

The Spectator fancies that our troops are even less able to stand the hardship of a tropical campaign than British soldiers. The reason, it thinks, is that the American climate saps the constitution. It adds:

"Our cousins are more nervous, more dyspeptic, and peculiarly liable to heat-apoplexy, which, indeed, during every 'hot spell' is a serious cause of mortality in New York. Bad whisky is a frequent explanation, but the animals display the same liability, and are strict teetotalers."

The St. James's Gazette says:

"The Americans are at last constrained to admit that they are not having it all their own way in the Philippines, and the sooner this is officially recognized by General Otis and the United States Government the better it will be for the welfare of the country. . . . The Americans actually hold little beyond Manila and the country immediately surrounding it, and the ground which the operating columns happen to occupy at the moment. The Filipinos have simply adopted the elementary tactics of guerilla warfare. Having lured their enemy far enough, they attack his rear, so that having fought his way forward he has now to fight his way back. The same cocksureness which marked the campaign in Cuba is the prevailing feature of the campaign in the Philippines, and the same faults of underestimating the strength of the enemy, and thinking undisciplined and untrained volunteers, personally brave tho they may be, can do all that is required, are manifest in the war in the far Eastern archipelago."

Meanwhile business is at a standstill in the Philippines. *The Vossische Zeitung*, Berlin, points out that the imports of Manila consist of supplies for the troops only, while exports are almost nil. It says further:

"The business of the great European trading firms is seriously hurt by this continual war. These firms have united into a trade chamber, for the purpose of devising some means to avert utter ruin, for the fact that the islands have changed hands has not benefited them. Under American rule the difficulties placed in the way of business men are increased, and the war coming on top of these difficulties, the entire European and American trade is likely to vanish."—*Translations made for THE LITERARY DIGEST.*

AUSTRALIAN FEDERATION.

AUSTRALIAN federation is at last almost an accomplished fact. New South Wales has declared in its favor, and soon the few millions inhabiting that enormous island will form themselves into a nation after the manner of the United States. *The Speaker*, London, says:

"It is true they might have gone further, and made their federation after the Canadian rather than the American model. As it is, their central government will only exercise the specific powers delegated to it by the constitution, and will not have that general power of supervision and control possessed by the Dominion Government over the constituent provinces. But that was made possible only by special circumstances in Canada, and was out of the question in Australia, and that it should be so is a healthy sign. As Home Rulers, we distrust the abiding patriotism and the stability of the citizens of a state so centralized that its local institutions have not a considerable degree of independence. . . . The union will fulfil the manifest destiny of the Australian race. It will give an adequate political organization to a new nation which at present forms a part of our empire. And it will go far to insure the continuance of that nation in permanent autonomy even should our empire be fated ever to disappear."

"The establishment of the federation means the establishment of a new British empire at the Antipodes," says the *Edinburgh Scotsman*; and the *Birmingham Gazette* remarks:

"If Australia is to prosper as one great country using one speech and acknowledging one sovereign, it must follow the example shown by the United States of America and by the Dominion of Canada. That the existing local governments should be preserved is essential to the federation scheme, but it is as easy to realize America as a mere muddled conglomeration of independent States as to believe that Australia can become powerful or develop as it ought to do if federation be rejected."

The Daily Graphic, London, thinks South Africa should learn unity from the Australian example, but *The Daily Chronicle* admits that, whereas Australia is a country settled chiefly by Britons, South Africa is largely inhabited by people who do not like British rule. *The Times* points out that some time must elapse ere the fiscal arrangements of the new Dominion are complete, but is confident that no serious discord will retard the actual federation on that account. *The Standard*, London, says:

"A federation, which includes the two great pastoral and agricultural states of the island-continent, with their metropolitan cities of Melbourne and Sydney, and which may comprehend also West Australia, with its gold-fields, and South Australia, with its vast undeveloped resources, will have all the elements of a splendid and prosperous commonwealth, well worthy to take its place among the united peoples of the empire, alongside the existing Dominion of Canada and the future federation of South Africa. The first century of Australian history will close triumphantly with this successful achievement in constructive statesmanship."

Doings in Poland.—The Polish press is very downhearted on account of the condition of Galicia, where the Lemberg Savings-Bank, managed purely by Poles, has burst. As Galicia, the Austrian share of Poland, enjoys a large measure of political independence, the Poles again doubt their own ability to manage their affairs. *The Orendownik*, Posen, says:

"In such cases it is really necessary for us to pause and consider whether we are able to take care of ourselves when a certain amount of political independence is granted to us. What is happening in Galicia would seem to show that we are not. The Polish element appears to be less capable than others to organize itself, from a social as well as a political point of view."

Hundreds of country gentlemen and thousands of farmers and small tradesmen are ruined. The late Austrian premier Badeni alone is said to have lost \$1,000,000. The Cracow *Czas* admits that thirty-nine years of autonomy have produced no good results

for the Poles. The *Liberal Reforma*, Cracow, remarks that the lower classes are ignorant and starving, and the upper do not know how to work, and live beyond their incomes. Much of the emigration at present directed to Canada is said to be caused by the failures connected with the breaking of the Lemberg Bank.—*Translations made for THE LITERARY DIGEST.*

OUR DISPUTES WITH CANADA.

THE English papers, when referring to the breakdown of the negotiation between Canada and ourselves, throw the blame upon us. Mr. Smalley's view of the question, as given in the *London Times*, has not been accepted as impartial, either by *The Times* itself or by other British papers. We quote the following from *The St. James's Gazette*, London:

"When his weighty message is stripped of mere verbosity, when due allowance is made for the influence which the one, the only Blowitz has had on the style of his colleagues, when we discount the desire of the modern correspondent to play the diplomatist, it is not difficult to get at the meaning of this despatch from New York. What it says is, when interpreted into current English, pretty much this: We Americans, of the party called Republican, are well disposed to make a friendly arrangement with you English, but it must be on the condition that the terms are so favorable to America that the other side—to wit, the Democrats—shall have no excuse for saying that we have yielded the interests of America to the British Government. We have met to discuss matters with the Canadians, and have shown ourselves most reasonable. You can believe that because we say so. But Canada will not listen to reason. . . . The evil consequences of the present relations between Ottawa and London, as understood in Washington, are far-reaching. They threaten to affect disastrously those other relations between England and the United States the recent improvement in which both nations hoped would be permanent. . . . 'To this Government that seems an unfortunate state of things.' Here we quote the very words, for no paraphrase can give the full beauty of the message which American affection sends us by the well-authorized mouth of *The Times* correspondent. We have heard something not unlike this before. There are Frenchmen who have a real admiration for this country and would willingly be its friend, if only it would assume its true position, which ought to be one of respectful deference to France, and of instant acceptance of French views of British interests. When it will not conform to this one indispensable condition—then 'an unfortunate state of things arises.'"

The Westminster Gazette says:

"Mr. Smalley amazed us by telling us that the Canadians, as a condition precedent to any arbitration over the differences between the two countries, insisted that the United States should surrender to Canada practically 'all that they had ever asked for in the conferences of the Commission.' This seemed an extraordinary thing, but we have now a definite statement by Sir Louis Davies:

"(1) That in the first instance Canada proposed a compromise *in re* Alaska, rejected by the Americans.

"(2) That 'then Canada proposed to refer the whole question unconditionally to arbitration on the terms of the Venezuelan boundary arbitration.'

"We are glad to have this reassuring statement, which seems to indicate that for once in a way Mr. Smalley is too 'good' an American."

The *London Outlook* remarks that "Mr. Smalley is conveniently ignorant of many things," including the fact that the Canadians refuse to be jockeyed. "America's absolute insistence on arbitration in regard to the Venezuela boundary dispute," says *The Spectator*, "and our agreement to her demand, binds her in honor not to refuse arbitration in the present case. That is a fact which we can not believe will be ignored by the American people, who have never wavered in their support of arbitration."

The Saturday Review remarks:

"The delusive and elusive attitude of the American negotiators is now only too clear. Arbitration is to be permitted if we first

concede their claims to everything of importance. . . . The Canadian assertion that the United States claimed that all places in the occupation of their own citizens should be admitted to be outside arbitration is absolutely correct, astonishing as it may seem. This is the direct opposite to the attitude we have assumed with regard to Venezuela. There we have consented to submit all disputed territory to arbitration, however clear we believe the title of our citizens to be. Naturally we negatived this suggestion."

The Speaker wants to know if *The Times* will apologize for having been fooled into publishing Mr. Smalley's account. The paper adds:

"The mere continuance of American political control over what Canadians believe to be Canadian territory would be of little moment if the Americans allowed a reasonable amount of economic freedom. The complaint of the Canadians is that they do not. The custom-house at Dyce is exacting as against Canadian goods. The American navigation laws prevent any goods, American or British, being carried from San Francisco or Portland to Dyce in British bottoms. It is part of the coasting trade which is reserved to American ships. Thus the political possession of the coast strip between the new gold-fields and the sea is made the means of inflicting infinite economic annoyance."

It is the Alaskan boundary dispute which comes most to the fore just now, and even an observer somewhat partial to Canada must confess that her case appears somewhat weak. Cool heads among the Canadians themselves seem to think it so. *The Monetary Times*, Toronto, says:

"The British commissioners proposed to adopt the rules laid down for the Venezuela arbitration; but the Americans sought to modify them by making it a condition precedent that, in any case, the settlements on the Lynn Canal should be considered as being within the republic. Under one of those rules, fifty years' possession would give a title to the territory. We are afraid that this might be turned against Canada, before the arbitral tribunal, in an embarrassing way. We have, it is true, our treaty rights under the agreement with Russia, from which the United States derives its title, and if Sir Wilfrid is on sure ground in contending that they would not be affected by the rule of prescription laid down, it would be all right; but there is reason to fear that the American counsel before the arbitral tribunal would insist that the treaty was subject to that rule. We do not say that the contention would be good, but it is desirable to guard against the possibility of its being made so."

The paper would be glad to find that at least the "piece of territory of which the ownership is in question were known as the disputed territory." But most Canadian papers do not take the trouble to enter into the merits of the question. They content themselves with abuse. *Saturday Night*, Toronto, says:

"No one has had to do with Washington without feeling that the Yankees are determined to have their own way and to have the best of the bargain no matter what may happen. Uncle Sam has not a friend in Europe, for he has 'done to a finish' every government that has been foolish enough to try to trade horses with him. Great Britain appears to be a friend, and no doubt is sincere, but what is Great Britain getting out of the bargain except an occasional after-dinner speech or some flim-flam message from the President? . . . The Yankee hog still squeals at the trough; untruth and unneighborliness still prevail at Washington. The result will be that the United States will have no friend anywhere, for no man or nation can always successfully demand the best of it and refuse to recognize the rights of others. Canada, I imagine, may yet be the means of imparting to Washington some sense of the delicate nature of international complications. We may not be secure from bombardment or a retaliatory commercial war, but we are safe within the environment of Great Britain, backed as we are by our own resources and the friendship that all nations must feel for a country which dares to peremptorily refuse the bulldozing of people who apparently know no gratitude, ignore justice, and rely entirely upon aggressive strength, selfishness, and wholesale untruth."

Prof. Goldwin Smith admits in the *Toronto Weekly Sun* that powerful private interests may have prevented an understanding so far as Canada is concerned. He says:

"Absolute free trade in minerals, an enlargement of the free list of forest products, an important concession of duty on lumber and on most agricultural products, a liberal adjustment of the sealing question, an amicable method for the settlement of the boundary question, an acceptance of Canada's views in respect of alien labor and the lake fisheries, together with reciprocal mining privileges—all these things the Americans ever were offered by them and rejected by the Canadians, who, they say, rode off on the Alaska boundary question, obstinately insisting upon that as an indispensable part of the settlement. It is not unlikely that fear of the Canadian protectionists, to whose influence our Government has yielded at home, may have operated upon them in their negotiations at Washington."

Events, Ottawa, says:

"It will be remembered that the tribunal proposed by the Americans for the settlement of this burning question was to be composed of six arbitrators, the why such an absurd number should have been chosen, especially as three men were to be nominated by President McKinley and three by the English Privy Council, it is difficult to understand, unless it be on the assumption that an agreement was not desired. One is led into the disagreeable suspicion that our American cousins do not want the boundary settled. Do they want the whole continent?"

A BID FOR FRANCO-GERMAN FRIENDSHIP.

THERE can not be any doubt that the French people, who for twenty-five years hoped that the German empire would once more fall to pieces, have now become used to the idea of a nation on their Eastern frontier as solid as their own. This has encouraged many Frenchmen to speak of a possible Franco-German alliance; with hesitation at first, more boldly now. If we remember that no one in Germany wishes a war with France, and that the Germans are only held back from openly advocating an alliance with the "hereditary aggressor" by historical studies, the international importance of the following summary of Chapuis de Manbou's "*L'Alliance Franco-Allemande et ses Conséquences*" will be appreciated:

Germany is the natural ally of France. The policy of England is the greatest danger to the peace of the world. Inconsiderate egoism, brutal greed, and a megalomania which approaches insanity rule the British Government. The chief aim of the English is to suck the marrow from the bones of the people they manage to conquer. Under the mask of humanity, Christianity, and civilization they follow the nefarious practices of a robber. Any nation that trusts England is lost, for it will surely be left in the lurch as soon as England can gain by making common cause with the enemy. The war of 1870 is, no doubt, a serious obstacle to a Franco-German Alliance. But this hindrance can be overcome if only the French people will consent to be just to France. It will be found that the Germans have, to say the least, as much reason to complain of France as France has to be angry with them. The Napoleonic wars must be regarded from this point of view.

No doubt the German armies made themselves felt in France. But justice demands an acknowledgment of the fact that the Germans were, on the whole, very humane enemies; their soldiers, being fathers and husbands themselves, showing much kindness to French women and children. That the German doctors made no difference between French or German wounded is a fact too well known to need comment. The Alsace-Lorraine question may be a serious obstacle to an alliance. But if Germany took those provinces by force of arms, so did Louis XIV. Frenchmen must learn to accept the inevitable consequences of their defeat. Alsace is German, as every one knows, and the Germans will not be likely to give it up. Lorraine, partly French, may be constituted into a buffer state, if the Germans believe they can trust France to keep the peace.

How necessary is an alliance between France and Germany is shown by the connections of the two nations abroad. German and French outposts treat each other with great courtesy in the colonies, and there is never any complaint of encroachment, of the influencing of native chiefs against the government to which they owe obedience, or of the machinations of missionaries. How the English are in this respect every one knows.

As a matter of fact, prudence demands that France should stand on good terms with Germany. Germany will not attack her. To attack Germany, the help of Russia is imperative, and Russia, moving slowly, may be too late to help France. On the other hand an alliance with Germany would, without a doubt, strengthen France in every part of the world, while the pleasure of revenge is extremely barren, and not at all certain to repay its cost.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Consul Erdman writes from Breslau, 1899: "The export of kid gloves from this consular district has amounted to \$736,587.67 per annum. The glove leather is tanned, dyed, and the gloves are cut at the factories here; but most of them are sewn by girls in Austria, especially in Bohemia. German girls have never been taught the art. There is now an arrangement by which free sewing-schools will be started by the Prussian Government, one to be located in the province of Silesia and the other in the Rhine province, where are located most of the glove factories, the sewing for which has been done in Belgium."

In reply to a letter from a Massachusetts board of trade, Consul Moulton writes from Demerara, April 22, 1899: "Imports into British Guiana are mostly from England; some come from the United States, Surinam imports from England and Germany; Cayenne from France. Men's low shoes sell here at \$1.20 to \$1.68; a few at \$2.40 to \$3.84. Boots sell up to \$5. Split hide and satin hide are used; calf quarters and kid uppers in black. Tan shoes are popular. Footwear for this market must have wide fittings, 4 and 5 English. The Portuguese, who number about 12,000, universally wear shoes made on the Mexican last, which is pointed and has an upward curve to the toe. Out of a total population of 278,000 in this colony, 217,000 people are either black, colored, or East Indian coolies, a majority of whom go barefooted a great portion of the time, for the reason that their occupation or their personal comfort does not require them to be shod; nor will their limited means permit the expense. Hence the conformation of their feet is such that to crowd them into the elegant and fashionable American boot, on the special occasions like Sundays or holidays, would induce such a fine frenzy of misery that neither religious devotion, peace of mind, nor graceful deportment would be promoted. It is estimated that about 5,000 pairs are made by hand in this city. Probably, not more than 30,000 of the total population wear shoes habitually the year round. During the year ended March 31, 1898, boots and shoes to the value of \$137,590 were imported into British Guiana, of which \$10,000 worth came from the United States and the balance from England. A portion of this importation went to Surinam, Dutch Guiana."

From the tables of the trade and navigation of the Dominion of Canada for the year ended June 30, 1898, recently issued, may be gathered some data of interest to the manufacturers of bicycles in the United States. The total number of bicycles sold in Canada during the year is estimated at 50,000, of which 27,262 were imported from the United States and 46 from Great Britain. In addition to this large importation of complete machines, the value of bicycle parts imported was \$279,752 (of which the United States furnished \$271,175), which is held to represent 12,000 complete machines at \$27 each. In round numbers, the total of imported bicycles sold, complete or in parts, was 40,000, averaging in cost \$22.20, on which a duty of 30 per cent. was assessed and \$179,250 collected, while on bicycle parts the duty collected was \$83,534. In 1897, the importation of completed bicycles was 22,553, or 2,750 less than in 1898. The average cost in 1897 was \$32.40, against \$22.20 in 1898; and the duty, per machine, \$9.72, against \$1.66. These figures show that as the American manufacturer decreases the cost, the demand increases. During the year ended June 30, 1898, 18,617 bicycles were manufactured in Canada, of which only about 10,000 were sold at home. While the United States were encroaching on this market, Canadian manufacturers were reaching out for the trade in foreign countries, and sold 8,617 bicycles for \$373,383, Australia taking 5,229; Germany, 1,441; Great Britain, 616; France, 400; and

the United States, 307, as their largest customers. The prices seem to have been varied for each country as follows: Great Britain and Australia, about \$46; France, about \$41; United States, about \$35; Germany, about \$30.

"A series of questions having been put to me," writes our consul at Marseilles, France, "concerning the possibility of introducing factory-made window sashes and doors in France, I wish to say first that the method of interior construction in this country does not resemble our own, and any manufacturer desiring to do business here should visit the country and study the local peculiarities. All building is done to stay, and the light pine doors and sashes often used in America would not do here at all. Furthermore, there are no window frames in France that slide up and down as they do in the United States. The sashes are as long as doors, a double sash being made for each window, opening inward, clamped with a special fastening, and provided with interior and exterior blinds. In this southern country, where winds are severe, the outside shutters have immovable slats and are very heavy. Taking up the questions in detail, I have to say: There is no existing demand for factory-made doors. The notion prevails that ready-made doors are inferior to the hand-made article, and a demand would have to be created. As to shapes and styles in use, they are many. Sliding doors are unusual. As a rule, even large double doors swing on hinges. The dimensions of single doors of the ordinary type are: Height, 2.20 to 2.25 meters (7.22 to 7.38 feet); width, 80 to 90 centimeters (2.6 to 2.8 feet); thickness, 3½ centimeters (1 ¼ inches). Doors generally are hung on simple hinges. As no factory-made doors are sold, prices can not be quoted. For hand-made doors of the ordinary variety, the ruling price is 7 francs (\$1.35) per square meter (10.76 square feet), or for double doors, 10 francs (\$1.93) per square meter. One builder ventures to say that from three to five thousand doors are used annually in Marseilles. No dependence can be placed on the guess. The consumption obviously depends on the amount of building. Doors used here are of local manufacture, the lumber generally coming from Sweden and Norway. There are no special door factories in this city. I have no suggestions to make as to packing for exportation. No doors are imported. There are no local exporters of doors. Among the most important local contractors are the following: L. Gassier de Bastide, Rue Consolat, 63; H. Beranger, Rue Clotilde, 36; Jauffret Frères, Rue de la Rotonde, 23; Andre Capel, Rue Consolat, 138.

Vice-Consul Taylor writes from Ensenada, May 20, 1899, in regard to the discovery of very rich gold placers near San José and Santa Clara mountains, within one league of the Pacific coast. The port is Ascension Bay. There are already, says Mr. Taylor, about 2,000 persons on the ground. The mining camps at Santa Rosalie, San Iawa, and Calmalié are deserted. The placers are three leagues wide and twelve or fifteen leagues long.

Passenger transit in Paris is effected by electricity, steam, compressed air, and horse-power. There are three tramway lines serving Paris and the suburbs, and omnibuses are generally used throughout the city. One of the above-mentioned tram-lines belongs to the Compagnie Générale des Omnibus, and the other two are practically controlled by the same company; so that it can be said to have a monopoly of the entire passenger transit, exclusive of cabs and carriages. It is a stock company, organized in 1855, having obtained from the city by conventions of July 15, 1856, and June 18, 1860, the exclusive right to transport passengers from one point to another in the city of Paris. This concession expires on the 31st of May, 1910. The omnibuses are of two sizes and drawn by two or three horses respectively. The smaller model is arranged for 28 or 30 places (14 outside, 14 inside, and 2 on the platform). The larger model affords accommodation for 30 on top and 30

Reduced Prices

WE wish to close out our Summer suitings and skirtings during the next few weeks in order to make room for Fall goods. We have therefore made decided reductions on almost every suit and skirt. You now have an opportunity of securing a fashionable garment at a reduction of one-third from former prices.

No. 642.

No. 642.—Dress walking gown, consisting of single-breasted loose front jacket and new Victoria skirt. The entire garment is lined throughout and is handsomely stitched as illustrated; the tailoring is perfect; you may select from fifty all-wool fabrics for this costume. The stores ask \$19 for a suit of this kind. Our price has been \$13.50.

Reduced price for this Sale, \$9.00.

Pique Suits, reduced from \$4 to \$2.67.

Pique Skirts reduced from \$3 to \$2.

We tell you about hundreds of other reduced price garments in our Summer Catalogue and Bargain List, which will be sent, free, together with a full line of samples of materials to any lady who wishes them. Any garment that is not entirely satisfactory may be returned and your money will be cheerfully refunded.

Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

inside, including 4 on platform. The fare on the top is 15 centimes (nearly 3 cents); inside and on platform, 30 centimes (nearly 6 cents). The payment of the last mentioned fare entitles the passenger to a "correspondence" or transfer ticket to another connecting or intersecting line. No passengers are taken on when the places are filled, either at a station or *en route*. At the starting-points, numbered tickets are handed to the passengers, and when there are more than enough to fill one conveyance the preference is given to those holding the first numbers. The next omnibus or car starting begins with the number last uncalled on the previous vehicle. The same system prevails at the fixed stations *en route* for vacant places. No standing in the aisle is allowed. It is impossible to say what the company paid for the concession, as the remuneration to the city is based upon a percentage and a royalty on the number of vehicles working.

Consul-General Holloway sends the following from St. Petersburg, May 13, 1899: "The Russian Government has, after many years' discussion, determined to abandon the old-style or Julian-Greek calendar, which is twelve days behind the now universal system of the Gregorian cycle, and which has been a source of annoyance to Russians doing business with other countries, who were compelled to use both dates, as well as to foreigners trading with Russia. The St. Petersburg Astronomical Society has taken the matter in hand, and with the cooperation of the ministers will appoint a commission to be composed of sixteen persons, nine of whom are to be members of the Astronomical Society, who will arrange all details. It is expected that the new-style calendar will go into effect in 1901."

Consul-General Gowey writes from Yokohama to a Pittsburg Company:

"The customs returns show that during the year 1898 there were imported into Japan 224,941 pounds of copper plates, sheets, and rods, valued at \$29,243, and 93,925 pounds of yellow-metal sheathing, valued at \$9,070. What proportion of rods were included in the foregoing, the returns do not indicate. Under the heading of exports, copper sheets and plates do not appear; but of refined copper there were shipped abroad during last year 35,709,650 pounds, mostly in the shape of slabs and ingots, valued at \$3,553,245. Exports of manufactures of brass, at the same time, were valued at \$9,856. The efforts made to produce sheet copper in Japan, I am informed, have not been encouraging, and the press has lately reported the failure of one of the largest concerns in this line of trade at Osaka. Japanese copper, while of fine appearance, has produced much dissatisfaction as sheathing on vessels—salt water destroying it in a very short time. An American vessel was sheathed at this port with Osaka copper purchased from a prominent Tokyo firm during the past year, and in about two months thereafter the metal was discovered to be entirely eaten through in so many places that its removal was made necessary, and Muntz metal substituted. For the latter article or its equivalent, there is undoubtedly a growing market in the Orient."

Consul-General Holloway writes from St. Petersburg, June 2, 1899, that he has been informed that the Minister of Finance will allow a duty-free entry of foreign exhibits for the International section of the dairy exhibition, to be opened in St. Petersburg September 1, 1899. The exhibits which will be sold at the exhibition, as also those which will remain in Russia after it is closed, will have to pay the regular duty levied on such articles.

United States Hotel, Saratoga Springs, N. Y.
Is perhaps the brightest and most cheerful as well as the most extensive and elegant hotel in the Western Hemisphere. It is preeminently the favorite resort for recreation, pleasure, and health, and is patronized by leading people from all parts of the world. This grand hotel, with its extensive and fairy-like grounds, is situated in the most eligible and fashionable part of this most fashionable Spa.

OUR MAIL BAG.

Helping a London Editor.

Editor of THE LITERARY DIGEST:

You will recall that the London *Academy* originally reviewed Selma Lagerlöf's *Gösta Berling's Saga* as if it were the work of a man. This had to be corrected in a following issue when the discovery was made that she was a woman. In the number just received (April 29) *The Academy* seems to have made still other discoveries as to the Swedish novelist, and reproduces her picture and a half-column of matter—taken verbatim from THE LITERARY DIGEST—and no credit whatever given. It reads as if *The Academy* reviewer himself had seen the Berlin *Echo*, but his words are those of THE DIGEST which kindly did the work for him.

Also, the production of the picture of Selma Lagerlöf in *The Critic* for May seems influenced by the prior production of the same in the article in THE LITERARY DIGEST already mentioned. *The Critic* had already had its shy at Gösta Berling.

The Academy and other English papers condemn American papers for using the material of others—surely here is a case where a part of the account has been balanced. The wonder is that it is *The Academy* that forgets to use special type or quotation marks.

As the writer of the article in question for THE DIGEST, I feel I have a right to call your attention to the dissemination of this bit of seed sown in THE DIGEST's garden. By their fruits ye shall know them.

JOHN B. HENNEMAN.

KNOXVILLE, TENN.

PERSONALS.

THE civil authorities of Santiago on June 13 renamed one of the city streets after General Wood, bestowing upon it his Christian name as well. They propose to name the road over which the American troops entered the city after the surrender "Shafter Avenue."

THE United States Court of Appeals has rendered a decision in the famous case of Mrs. Hetty Green, of New York, who has been fighting for twenty years to have her title perfected to a part of the old Gage farm in Chicago, now valued at one million dollars or more, upholding her claims to the property. When notified of the court's decision in her favor, she made this characteristic remark: "This snit is part of the almost ceaseless litigation which began one year before my father's death in 1865, and has pursued me ever since. I do not court public notoriety, but never shirk my duty when I feel that I am being persecuted. The judges of our courts are all right when you can get at them, but the lawyers hamper litigants where money is involved. They want it all. I am a thoroughly determined woman, and the entire Seventh Regiment with shotted guns can not keep me off when once I start in to defend my just rights."

A BASHFUL Chicago man courted a girl for three years without daring to propose. Finally, while he was visiting in St. Louis, he decided to propose by mail. He sent the letter, and for two hours was one of the happiest men in Missouri. Then he began to believe he had been precipitate, and was assailed with doubt. That night he did not sleep. He thought all sorts of things, and vainly wished he could intercept the letter before it reached her. But that was manifestly impossible. It was not until noon the next day that he received an inspiration as he was passing a telegraph office. Rushing in he seized a blank and

GOUT AND RHEUMATISM...

A prominent physician writes:

DEAR SIR: Replying to yours on the use of TARTARLITHINE as a remedy in the treatment of gout, I will say that I have used it in the treatment of about a dozen cases with results that are a little less than wonderful. The characteristic feature of its action is the rapidity with which patients improve under its use. An improvement is noticeable within 24 hours. One of the most striking cases was that of a physician suffering from gout, muscular rheumatism and frequent bilious headaches. I prescribed Tartarlithine, and in one week there was absolute disappearance of all of the uric acid manifestations. The nervous irritability disappeared, and he stated that he had done the best week's work which he had accomplished in years.

nervously penned the following: "MISS MARY —, Chicago: Mailed you wrong letter yesterday. Please do not open and deliver to me on my return." After that he breathed freer. That evening a telegram was awaiting him at the hotel. It read: "JOHN —, St. Louis: No; you mailed right letter. It was about time."

COL. R. S. MACKENZIE, of the Fourth United States Cavalry, was regarded in 1874 as the next candidate for the appointment of brigadier-general; but another wearer of the silver eagle on his shoulder-straps came into prominence about that time in the person of Col. Nelson A. Miles, of the Fifth Infantry. It is an old story but will bear repetition. In Colonel Mackenzie's regiment there was a grizzled veteran, Captain Napoleon B. McLaughlen. One starlight night he and Colonel Mackenzie were together in camp on a scout upon the plains in Texas. Colonel Mackenzie was walking up and down near his tent, snapping his fingers, and showing many signs of inward excitement. Suddenly he stopped and gazed up at the sky. "What are you looking for, colonel?" inquired Captain McLaughlen, stepping out from his tent, from which he had been watching the officer's movements. "Oh, I'm only looking for a star," said the colonel, with some embarrassment. "Colonel," said the veteran gravely, "I fear there's Miles between you and that star!" Events proved that there was reason in his words.

JOHN ARMSTRONG CHANLER, former husband of Amélie Rives, now the wife of Prince Troubetskoy, who has been an inmate of Bloomingdale Insane Asylum since 1897, has finally been declared incompetent by a New York sheriff's jury, and an application for a committee of his person and estate will now be made to the supreme court.

PRINCESS HELENE of Orleans, wife of the Duke of Aosta and sister of the Duke of Orleans, has sold a considerable part of the valuables in her Turin, Genoa, Milan, and Paris houses, and placed the money thus realized at the disposal of her brother, to be used in the Orleanist cause.

PRINCE LUIGI, the Duke of Abruzzi, who is now on his way to the North Pole, sailed in his ship, *Stella Polare*, on June 12, from Christiania, Norway. He is accompanied by the Crown Prince and Princess of Italy, who will go with him as far as North Cape. Prince Luigi is taking with him twenty-one persons, including Count Quiri, a lieutenant in the Italian navy, Dr. Cavilli-Molinelli, two Italian sailors, four guides, ten Norwegian sailors, and one Eskimo.

MISS SELINA FITZHERBERT FOX recently took honors in the examination for bachelor of medicine at the University of Durham, in England. She headed the list of candidates, who, with the exception of herself, were all men. Miss Fox studied at the London School of Medicine for Women and at the College of Medicine, Newcastle-on-Tyne. This is the first time in the five years that the qualifications have been open to women that advantage has been taken of the privilege.

As is well known, Mendelssohn was a great favorite of Queen Victoria and the Prince Consort, and during his visits to London was frequently their guest, playing for them and accompanying the Queen, who possessed a good voice, and who often would sing for him. In "Fragments of an Autobiography," recently published by Felix Moscheles, son of the great pianist, and a god-son of Mendelssohn, a pleasing anecdote of the composer, and his association with her majesty is told. It was in 1847, the year of his death, that Mendelssohn had once more, as in 1842, been "making music with the Queen," and had been genuinely delighted with her rendering of his songs. As he was about to leave, she said:

"Now, Dr. Mendelssohn, you have given me so much pleasure, is there nothing I can do to give you pleasure?"

He answered that he was more than amply re-

warded by her majesty's gracious reception, and by what would be a lasting remembrance of the interest she had shown in his music; but when she insisted he said:

"Well, to speak the truth, I have a wish, and one that only your majesty can grant."

"It is granted," she interposed.

And then he told her that nothing could give him greater pleasure than to see the nurseries and all the domestic arrangements connected with the royal children. The most consummate courtier could not have expressed a wish better calculated to please the Queen. She most cordially responded and herself conducted him through the nurseries. Nor was the matter treated lightly; she had to show him the contents of the wardrobes and give him particulars of the service, and for the time being the two were not in the relative position of gracious sovereign and obedient servant, but rather of an experienced materfamilias and an enlightened paterfamilias, comparing notes, and giving each other points on the management of their respective children.

ON the 23d of May one hundred years ago Thomas Hood was born, and he died May 3, 1845. To those of an older generation familiar is the name of Tom Hood, for the "Thomas" does not seem to concert with his joyousness. His life, says the *New York Times*, must have been in a measure a troubled one, for he had to fight against bad health and poverty. How he did labor for his bread and cheese, working off trifles for the red satin bound ephemeral volumes, which were called "Keepsakes," or "Friendship's Offerings." There is a disposition to slight Tom Hood, and it is because the critic of to-day is in doubt as to whether the man was better in his merry or in his more serious moods. For ten years Tom Hood worked away at "comic annuals." Is he only to be remembered for these? Because he forced us to laugh, are we to forget how he could make our eyes to be dimmed with tears? Are we to forget the pathos of his "Song of the Shirt," or the sadness of "The Bridge of Sighs"? Are we to pass over the epigrams he wrote, perfect or their kind? Why, some of these are alive to-day and pass from mouth to mouth, and those who say them are ignorant of their source. There was that uncommon stuck-up person Rae Wilson, who abused Hood for what Rae Wilson affirmed was his flippancy. Hood wrote what he called an ode as a reply, and in it are four famous lines:

"A man may cry 'Church! Church!' at every word
With no more pity than other people—
A daw's not reckon'd a religious bird,
Because it keeps a-cawing from a steeple."

Walter Savage Landor, who was a most difficult man to please, wrote the most perfect appreciation of Hood that we know of:

"I tried at wit—it would not do;
At tenderness—that failed me too;
Before me on each path there stood
The witty and the tender Hood."

MORE OR LESS PUNGENT.

Two Steps.—"When is their marriage to be solemnized?" "As soon as it has been financed."
—*Puck*.

No Other Time.—"Henry, why do you smoke continually from morning until night?" "It's the only time I get. I sleep from night till morning."
—*Tit-Bits*.

The Size of It.—EDITH: "What does a man mean when he says that comment is useless?"
DAVID: "Means that he can't think of anything else to say."
—*Puck*.

Abreast of the Times.—TEACHER: "What does the abbreviation 'lb.' mean?"
DICKY: "It means 'Lanky Bob,' ma'am."
—*Chicago Tribune*.

Over the Fence.—MRS. RILEY: "Are yez on callin' terms wid our new neighbor?"
MRS. MURPHY: "Av coorse I am. She called me a thafe, and I called her another."
—*Tit-Bits*.

Even.—MRS. BUSYBODY: "Your husband goes out a great deal, doesn't he?"
MRS. GOODWIFE: "Oh, I don't know; he doesn't go out any oftener than he comes in."
—*Yonkers Statesman*.

Used to It.—"When I rejected Dick he didn't seem a bit put out. I can't understand it." "Well, I can. Dick is used to it. He used to write poetry, and get a dozen rejections every week."
—*Chicago Tribune*.

Met His Superior.—HARDENED SCOUNDREL: "How'd you make out at robbin' the train?"
DESPERATE VILLAIN (in disgust): "Done first-rate till I go into the Pullman sleeper. Then the porter held me up!"
—*Harlem Life*.

Quite Easy Then.—"Do you think," said he, "that one can live in New York and remain absolutely ignorant of the ways of this wicked world?"
"No," was the answer, "not unless he happens to be chief of police."
—*Washington Star*.

Covert Enemies.—"Dorothy has quit making me uncomfortable by telling me my hat wasn't on straight." "What stopped her?" "Every time she did it I told her she had too much powder on her nose."
—*Chicago Record*.

Comforting a Friend.—VERISOPHT: "That brute Snodgrass called me a conceited idiot, don't cher know?"
HUNKER: "Is that so? You never struck me as being particularly conceited."
—*Tit-Bits*.

Corned Beef.—JOHNNY: "I know how corned beef is made now, grandpa."
GRANDPA: "How?"
JOHNNY: "I saw the man giving the cows rock salt."
—*Brooklyn Life*.

A Chance.—HUSBAND: "I am going to join an other club to-night."
WIFE: "I don't suppose I shall see you at all after this?"
HUSBAND: "Oh, yes! They have a ladies' day."
—*Puck*.

Making a Choice.—"Which do you prefer?" asked her indulgent father. "It is so hard to decide," she answered, "but at the price quoted I think the duke is a better bargain than the count. I guess you may buy me the duke."
—*Chicago Post*.

Just Comfortable.—Uncle inquired of little Bobby if he had been a good little hoy.
BOBBY: "No, I haven't."
UNCLE: "Why, I hope you haven't been very bad."
BOBBY: "Oh, no; just comfortable."
—*Tit-Bits*.

A Rational Argument.—"You once said you would die for me, Jonas, and now you refuse to

cut the grass." "That's perfectly logical, Minerva. If I died for you I'd be done with it, but if I mow the grass once you'll make me do it every two weeks."
—*Chicago Record*.

Alternative Hypotheses.—"I love you," he whispered. Ernestine trembled, and regarded him perplexedly. "Do my ears deceive me?" she asked herself; "or does my complexion deceive him?" For it was her misfortune to lack confidence in herself.
—*Detroit Journal*.

As Pants the Hart, Etc.—"She felt the strong arm of the law," he said, speaking of a woman who had got into trouble. "How delightful!" commented the demure young thing. "What is delightful?" he demanded in surprise. "To feel a strong arm," she answered softly.
—*Chicago Post*.

Unreasonable Women!—Mrs. Fimsby says that men are so changeable. Fimsby used to tell her that she was worth her weight in gold. When she had to sit on his knees in the coach the other day he said he wished she wasn't so confounded heavy.
—*Boston Transcript*.

At the 'Phone.—Agitated papa at 'phone. "Hello! hello! hello! hello!" "What number, please?" "Two." "Two?" "Two, of course." "Two what." "Twins, confound it. How many do you think—" Finds he has been rung off. Goes away cursing the trusts.
—*Cleveland Plain Dealer*.

Brooklyn.—HICKS: "What a talker that man Brown is! I always regarded him as such a gloomy, reticent fellow until two or three days ago."

WICKS: "Yes, I understand that his baby just begun to laugh for the first time last week."
—*Brooklyn Life*.

Preparation Needed.—"Mamma, what would you do if that big vase in the parlor should get broken?" said Tommy. "I should spank whoever did it," said Mrs. Banks, gazing severely at her little son. "Well, then, you'd better begin to get up your muscle," said Tommy, gleefully, "coz papa's broken it."
—*Harper's Bazar*.

Such Sticky Weather, Too!—"I don't like Snaggs's idea of a joke," said Hiland. "No?" replied Halket. "No, I don't." "Tell me about it." "The other night I called to see him, and he said: 'I'll get a small bottle.' 'All right,' I said, 'get a bottle with a 'stick' in it.' So Snaggs went out and presently returned with a bottle of mucilage."
—*Pittsburg Chronicle-Telegraph*.

GO SOUTH AND KEEP COOL.

Somewhat contradictory, do you say? Not a bit. The reports of the mountains of Virginia are delightful from now until November. One important advantage over more northern resorts is a more equable climate—no extremes of temperature—delightful and health-giving day and night. Then you have in close proximity many famous healing mineral water—and those natural wonders Luray Caverns and Natural Bridge—all comfortably and quickly reached by the Norfolk & Western Railway. Write for "Peaceful Scenes" and other Summer Resort literature to

A Hobby of His.—An old country sexton, in showing visitors round the churchyard, used to stop at a certain tombstone and say: "This ere is the tomb of Thomas 'Ooper an' 'is eleven wolves." One day a lady remarked: "Eleven? Dear me—that's rather a lot, isn't it?" The old man looked at her gravely, and replied: "Well, mum, yer see it war an 'ohby of 'is'n."—*Tid-Bits.*

Egging Her On.—SHE (after some not infrequent domestic disturbance): "I have nothing to say, Keziah."

HE: "So I see, my dear, but—eh—"

SHE: "But what, Kesiah?"

HE: "Oh, nothing, except that I am amazed to realize that you don't follow your usual custom under such circumstances and say it."—*Richmond Dispatch.*

Association of Ideas.—"I'm looking for a man that's in business somewhere along this street," said the perplexed stranger, "and I've forgotten his name. Had it at my tongue's end five minutes ago. Say, what's the name of that suburb this side of Evanston?" "Buena Park?" hazarded the policeman whom he stopped to question. "No, that isn't it. Isn't there another one." "Edgewater?" "Edgewater! That's right!" delightedly exclaimed the stranger. "Got it now. The name of the man I'm trying to find is Banks. Know him?"—*Chicago Tribune.*

Didn't Even Hesitate.—An Englishman traveling in Maryland had occasion to investigate the running time of the trains that passed through the small place where he was stopping. Carefully searching a time-table, he found apparently that there would be an express train due at four o'clock that afternoon. The Englishman was on time with his grip, *et cetera*, and so was the express train. The intending passenger watched it approach and thunder by the station at top speed. The traveler was annoyed, and turning to a colored man who stood near, remarked: "That train didn't stop!" "No sir," replied the colored citizen, cheerfully, "didn' ev'n hes'tate."—*Exchange.*

Current Events.

Monday, July 3.

—A special despatch from Washington says that "while the army of the Philippines has been successful, the commanding general has been a failure."

—Judge W. S. Cox, of the Supreme Court of the District of Columbia, who presided at the trial of Galtman, resigns.

—The Spanish Senate ratifies the terms of the treaty of peace and adjourns.

—The British Government grants a subsidy for the establishment of a freight and passenger line between Jamaica and Great Britain.

Tuesday, July 4.

—In a speech at the Tammany Hall Fourth of July celebration, ex-Governor Hogg of Texas declares that "Democracy ought to renew its fight for free silver, with Bryan as the candidate."

—A silver wreath, the gift of the United States to the Netherlands, is laid on the tomb of Grotius, "the father of international law," at Delft.

—Disastrous floods occur in Texas.

Lowest Rates West.

Rates to the West are lower via Nickel Plate Road than via other lines, while the service is excelled by none. Three fast trains are run every day in the year from Buffalo to Chicago. The day coaches are of the latest pattern, are elegantly upholstered, and have all the modern improvements, such as marble lavatories, steam heat, lighted by Pintsche gas, while colored porters are in charge to look after the wants of passengers, especially the ladies and children. Vestibuled buffet sleeping-cars are run on all trains, while the dining-cars and meal stations are owned and operated by the company and serve the best of meals at moderate prices. If your ticket agent cannot give you all the information you desire in regard to rates, routes, etc., address F. J. More, General Agent, Nickel Plate Road, 391 Main St., Buffalo, N. Y.

No. 83.

Readers of THE LITERARY DIGEST are asked to mention the publication when

—Assistant Secretary of War Melklejohn announces his candidacy for the United States Senate for Nebraska, to succeed John M. Thurston.

Wednesday, July 5.

—The annual convention of the Christian Endeavor Society meets in Detroit.

—By floods on the Brazos River, in Texas, more than 800 lives and a vast amount of property are lost.

—The Michigan supreme court declares unconstitutional the law under which the city of Detroit proposed to buy its street railways.

—Bishop John P. Newman, of the Methodist Episcopal Church, dies at Saratoga.

—The American delegates at the peace conference secure a unanimous vote in favor of having the question of private property at sea in time of war dealt with at a special conference, to be summoned hereafter.

—Two attempts are made to assassinate the Ameer of Afghanistan.

At the Henley regatta, Howell, the American oarsman of Cambridge, wins the second heat of the Diamond Sculls.

Thursday, July 6.

—The War Department makes public a formal order for the enlistment of ten regiments of volunteers for service in the Philippines; Major Gen. Joseph Wheeler and his son, Lieut. John Wheeler, Jr., are assigned to Philippine commands.

—Robert Bonner, editor and horseman, dies in New York City.

—An attempt is made to assassinate ex-King Milan of Serbia.

—Mrs. May Wright Sewell is elected president of the International Council of Women, to succeed the Countess of Aberdeen.

Friday, July 7.

—Another shooting in the Howard-Baker feud takes place at London, Ky.

—The draft of the proposed convention providing that a permanent international arbitration court be established is submitted to the peace conference, which adjourns until July 17.

—The American oarsman Howell wins the Diamond Sculls cup at Henley.

—The assassin of the Filipino General Luna is acquitted on the ground of self-defense.

Saturday, July 8.

—The Insular Commission renders an opinion that "the islands acquired from Spain as a result of the war are not United States territory."

—Christian Endeavorers at Detroit adopt a memorial to the peace conference at The Hague.

—Governor Roosevelt calls on the President at the White House.

—Secretary Alger denies that he was interviewed in New York as to his relations with Governor Pingree.

—Severe rains are causing distress to American troops in the Philippines.

—German and French newspapers comment favorably on the German Emperor's visit to the French cruiser *Iphigénie* in the harbor of Bergen.

—The cup challenger Shamrock makes a successful trial spin in the Channel.

Sunday, July 9.

—The British parliamentary committee on Indian currency recommends a gold standard for India with the British sovereign as legal tender.

—The governor of Devil's Island, upon which Dreyfus was imprisoned, has been removed.

—President Krüger, of the Transvaal, telegraphs to the Pope: "Our crisis is over, tho the settlement is still distant."

CHESS.

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST,"]

Problem 396.

By. P. G. L. F.

From *The British Chess Magazine*

Black—Six Pieces.

White—Nine Pieces.

White mates in two moves.

Problem 397.

BY VALENTINE MARIN.

First Prize *Ruy Lopez* Tourney.

Black—Twelve Pieces.

White—Eight Pieces.

White mates in three moves.

Solution of Problems.

No. 396.

Key-move, Q-K 4.

Solution received from M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; Prof. C. D. Schmitt, University of Tennessee; the Rev. F. H. Johnston, Elizabeth City, N. J.; R. M. Campbell, Cameron, Tex.; C. R. Oldham, Moundsville, W. Va.; the Rev. J. G. Law, Waltham, S. C.; F. S. Ferguson, Birmingham, Ala.; Dr. L. A. Le Mieux, Seymour, Wis.; Dr. F. M. Mueller, Lawrenceburg, Ind.; M. Marble, Worcester, Mass.; G. Patterson, Winnipeg, Man.; T. R. Denison, Asheville, N. C.; E. A. Carpenter, Plano, Tex.; H. R. Horwood, Hoboken, N. J.; R. H. Bolster, Roxbury, Mass.; C. F. McMullan, Madison C. H., Va.; D. E. Thomas, Center, Ind.; Dr. C. S. Minnich, Palmer, Neb.; J. H. M., St. Albans, Vt.; Dr. H. W. Fannin, Hackett, Ark.; M. Crown, Waco, Tex.; W. H. Philbin, Archbald, Tex.

Comments: "Bold, crisp, and bright; deciphered at sight"—I. W. B.; "Neat; but key-move soon found"—C. D. S.; "Not difficult—R. M. C."; "Unexcelled for number and beauty of variations"—F. S. F.; "Dead easy"—L. A. L. M.; "These Queen-sacrifice problems are too common to be

difficult"—G. P.; "A splendid sacrifice for position"—E. A. C.; "Most excellent"—C. F. M.; "Fine piece of Chess-work"—H. W. F.

The *R. C. M.*, commenting on 388 and 390, says that "General opinion" would transpose their positions. In 388 there is a "construction flaw." "The variations depending on the K Kt P and Kt on K R 6 are inane." These two pieces and the White Kt on R 5 should be removed.

No. 397.

13 B x Kt ch	Kt x B	27 Kt-R 5 ch	Resigns.
14 P-K B 4	K-Q 2		

Notes.

(a) This move, while it used to be considered as a strong and somewhat perplexing play, has been discarded, because, with the proper defense, it is supposed to give Black the better game. Nowadays, Kt-B 3 is preferred.

(b) Here is where Black made his great blunder, and permitted White to get an attack which is almost, if not altogether irresistible. Black should have played Kt-Q R 4.

It is not necessary to give any further notes, as Black hadn't a ghost of a show after he permitted White to get the attack he was after.

End of the London Tournament.

LASKER FIRST.—PILLSBURY SHARES SECOND PRIZE.

The final games of the Tournament were played Monday, July 10. Lasker takes first prize, \$1,250; Pillsbury, Janowski and Maroczy divided second, third and fourth prizes, each receiving \$575; Schlechter was fifth, \$325; Blackburne sixth, \$250; Tschigorin seventh, \$200; Showalter eighth, \$150; Mason ninth and final prize, \$100.

The score, stood as follows at the close:

Won.	Lost.	Won.	Lost.
Lasker.....22½	4½	Showalter.....12½	14½
Pillsbury.....18	9	Mason.....12	15
Janowski.....18	9	Steinitz.....11½	15½

A Little Skit.

In this game, the white pieces were played by our youngest solver, Murray Marble, only 15 years of age. He also furnished the notes, which are characteristic of this bright boy.

Black, evidently thinking that White is no good, makes a crazy defense, which proves to be no defense at all.

He should attack less and defend more. Kt-B 3 is the move.

If K-K sq White mates in two. His only alternative gives White a "fork" to win the Q. White ignores the "fork."

At last; but now it is useless.

The Literary Digest

VOL. XIX., No. 4

NEW YORK, JULY 22, 1899.

WHOLE NUMBER, 483

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

ARMY APPOINTMENTS FOR MERIT.

THE announcement following the call for more troops to go to Manila, to the effect that the officers for the new regiments will be chosen solely on the basis of experience and proved ability, has brought out much favorable comment. Governor Roosevelt, after his interview with the President, July 8, made the following statement in an interview:

"The President has told me that he wishes only recommendations based upon the efficiency of the men recommended, and that he will pay heed to no others. Most certainly I should give no others, and I feel that the President's attitude in the matter in the face of the terrific political pressure to which he is and will be subjected is such as to entitle him to the support of all men who feel that politics has no place in the army, who feel that it is in a peculiar sense the property of the whole country, and that in the giving of commissions and promotions alike absolutely no consideration should enter outside of the merit of the men as soldiers."

Many of the papers which have criticized the President bitterly in nearly everything he has done since he took office have a good word for him on this occasion. The *New York Evening Post* (Ind.), for example, which has censured the President with great freedom and vigor, particularly in respect to his expansion and civil-service policies, says:

"The Administration has given us a striking example of how well the affairs of the army can be run if politics be left out of consideration. The list of regular officers thus far selected as field officers for the new volunteer regiments is one that does unlimited credit to the War Department and to the army. If one of the fortunate officers is a 'son of his father' whose service in the late war was of no particular distinction, he is thus far only the exception to prove the rule of merit which has evidently governed the selection of the others. Of the eight colonels thus far chosen, Kobbé has distinguished himself in the Philippines, where

he has had an independent command, altho but a major; Rice, Hardin, Pettit, Hare, and Gardner commanded volunteer regiments with signal ability and success last year; Captain Craig made his mark as an able and conscientious officer long before a war with Spain was thought of, and Major Bell, a veteran of the Civil War, was badly wounded at Las Guasimas. With the exception above noted, every officer of the seven majors chosen has made his mark, one as the most dashing of the artillery subalterns and another as the best horseman in the cavalry. It is among men of this type that our future generals are to be looked for, and if chosen as such on their merits they will do as well if not better than our Lawtons and Woods and Chaffees. Perhaps the minor places in the new regiments will be distributed in the true Alger fashion. If so, the country will still have had a forcible lesson in the value of the merit system as applied to the army, and a plain demonstration of the ease with which even so important a department as Secretary Alger's could be conducted as one conducts a great business—with an eye single to the results to be attained and to the interests of the employer."

The *Springfield Republican* (Ind.) is another paper that has opposed the President's policies frequently. Its compliment on this occasion is characteristic of many of the comments of the opposition press, in tincturing its praise with a word of disparagement. The *Republican* says:

"The President merits the fullest praise for his excellent start in organizing the ten new regiments now being raised for the Philippine war. This start consists in nominating regular army officers as colonels of all the regiments. Whatever may be the qualification of the subordinate regimental and company officers, the regiments as a whole, commanded by such colonels, can not miss being efficient and soldierly bodies of men. The story that the President sought General Miles's advice in selecting officers for the new colonelcies seems reasonable, because the first regimental commander appointed was Col. Edmund Rice, who, at General Miles's recommendation, took command of the 6th Massachusetts infantry in Puerto Rico. No one in Washington could better advise the President in such a matter than General Miles, for his military life has been spent with the line. General Corbin, on the other hand, has been so many years in a department bureau that his knowledge of the merits of line officers could not equal General Miles's. It is a pity that the regulars can not be given the first chance at the commissions under that of colonel, yet the President's compromising faculty here asserts itself, and many of the under officers of the regiments will capture the prizes through political pull."

The *New York Times* (Ind. Dem.) says:

"The *Times* has criticized the President so freely upon the performances into which he allowed Alger to lead him at the beginning of the Spanish war that it is bare justice to note his good deeds in the same field. . . . The President seems to be doing the very best that a mean and stupid statute, instigated by Gorman, allows him to do for the efficiency of the army. The country owes him thanks."

The *Washington Times* (Dem.), which has been unsparing in its criticism heretofore, says:

"Whatever may justly be said in criticism of President McKinley's course in delaying the call for volunteers, now that it has been issued after a fashion, it must be conceded that he has done well to select his commanding and superior regimental officers from the regular service."

The *New Orleans Times-Democrat* (Dem.) says: "The President will have the approval of the country if he adheres to this rule he has enunciated." The *Detroit Free Press* (Ind. Dem.)

and many other papers that have criticized the conduct of the war freely, join in complimentary comment much similar to that already quoted. The Republican press rejoice that the President has disarmed his critics.

The Philadelphia *Public Ledger* (Ind. Rep.), however, learns that the President's break with the spoilsmen is not complete, and feels disposed to judge him rather harshly. After quoting Governor Roosevelt's statement, *The Ledger* says:

"In the face of this declaration comes a despatch from Washington notifying Pennsylvania soldiers that if they want commissions they must apply to Senators Quay and Penrose, who, of course, will use even this petty patronage to promote Quayism in the State. The despatch says:

"Senators Quay and Penrose were in the city this morning, and called at the War Department and had a conference with Secretary Alger and General Corbin in regard to the appointments of officers in Pennsylvania. They were told that Pennsylvania would have from about twenty-four to twenty-six officers in the new regiments, and the Senators stated to General Corbin that they would consult to-day with the Pennsylvania delegation, and submit to-morrow a list of officers they would indorse. They were given a list of officers picked out by the President who had seen meritorious service."

"The intimation is that the choice of officers is to be made out of a list of eligibles prepared by the President, and that is a distinct advance upon the old method, but the choice is to be made by politicians, and commissions are to be given out not for military merit alone, as Governor Roosevelt hoped, but because of the political influence of the appointees or their backers. Such a method of appointment and promotion is demoralizing to the army, even tho care should be taken to limit appointments to qualified men who have seen service. The soldiers who have no political influence hack of them are discouraged, and those who receive appointments must feel that they have not won them by merit alone, but are under obligations to their backers for a favor that must be returned. The President could well afford to break with Quay and all the other spoils-seeking politicians on this subject. The people would sustain him by an overwhelming vote if he should holdly break away from all political influences, and determine to manage the army and the war in the Philippines according to his own sense of right and responsibility. It is a shame to have the brave soldiers of Pennsylvania denied commissions unless they can go to the War Department handed by Quay."

Rejection of Austria's Arbitration Proposal.—The comments on our refusal to arbitrate Austria-Hungary's claim for damages arising from the death of Austro-Hungarian subjects during the Hazelton, Pa., riots in September, 1897, show no disposition to dispute the correctness of our Government's position. As an example of current opinion on the case, we quote the following comment from the *Baltimore American*:

"The demand of Austria-Hungary for damages for the killing of Hungarian miners at Latimer, and the subsequent request for arbitration of the claims, were characterized by *The American* when they were made as inadmissible. These claims differed radically from those made by Italy for outrages on Italians at New Orleans, or for the mobbing of Chinamen in the West, in each of which instances the Government paid a sum of money. In the Latimer case the Hungarians were conspiring with other miners not only to defy the law, but to abrogate all law, and impose their own will on an entire community.

"A more flagrant case has never occurred in this country, and the punishment was severe—more severe, many thought, than it ought to have been; but it is a difficult matter to put a limit to the laws of vengeance when once it has been provoked by a ruthless mob, bent upon destruction. After a long and exhaustive trial, in which the rage of the mob was fully represented by very able counsel, the sheriff and his deputies were acquitted, and that should have ended the incident. The trial ought to have been sufficient evidence that there were no valid grounds for interference.

"The Latimer incident was of great service to that class of foreigners who imagine that they can benefit by this country, and make a living out of it, and defy its laws, because they have a

government across the seas that will ward off punishment. They discovered at Latimer that when they band themselves into a mob to terrorize a community they will be treated with the same stern severity which is meted out to Americans under similar conditions, and they now learn from Austria's failure at interference that their governments are powerless to protect them in their lawlessness. It is a good lesson all around, and will bear fruit."

COLLEGE PROFESSORS AND FREE SPEECH.

THE resolution adopted by the University of Chicago "congregation," June 30, has led to a discussion in the daily press concerning the right of a college professor to express opinions contrary to those held by the other authorities of the college. The resolution adopted ran as follows:

"Resolved, 1. That the principle of complete freedom of speech on all subjects has from the beginning being regarded as fundamental in the University of Chicago, as has been shown both by the attitude of the president and the board of trustees and by the practise of the president and the professors.

"2. That this principle can neither now nor at any future time be called into question.

"3. That it is desirable to have it clearly understood that the university as such does not appear as disputant on either side upon any public question, and that the utterances which any professor may make in public are to be regarded as representing his own opinions only."

—The Record, Chicago.

The immediate cause of this is said to have been the fact that at an anti-expansion meeting in Chicago, Professor Laughlin and Professor Hale, of the University of Chicago, made the leading speeches. It was then proposed that a resolution be passed by the University congregation warning the professors to be more guarded in expressing on controverted matters opinions that might involve the university. That resolution failed, however, and the one quoted above was adopted.

Socialists and Populists Compromise the Colleges.—"It is of course a delicate question how far the right of a college professor to utter everything in his mind is to be restrained, but it can hardly be denied that some restraint ought to be applied to professors if they do not have enough sense of propriety to exercise it voluntarily. When Professor Bemis was forced out of the faculty of the University of Chicago he claimed it was because of his attacks on trusts and other combinations of capital, and tho this was denied by the university authorities it may be that his statement was the truth, and that it was Mr. Rockefeller's proprietary interest in the university that made it expedient to unload Mr. Bemis. But there can be no doubt that in the public estimation the university was being hurt by the hardly disguised Socialism that Professor Bemis was uttering in speeches to labor unions and like audiences. Nobody would have interfered with the currency notions of President Andrews had he not taken an active part in a political agitation that in the estimation of most of the people living around Brown University was idiotic theoretically and ruinous practically. It was asking a good deal of public forbearance to demand that he should be allowed to advocate silverism wherever he got a chance. That was no part of his college work, and yet it was his college status that gave a sort of authority to his opinions.

"It is no great hardship to a man whose only claim upon the public attention is his connection with the public service, or a public institution, to remember that he has no right to misrepresent

sent or to compromise the institution of which he is a very small part. He has no right to go before the public in his official or representative capacity and then insist on his right to express himself in his individual capacity. The latest announcement of the university authorities is that the professors may say what they please, but they must not be understood to speak for the university; they must be held to express only their individual views. But Professors Laughlin and Hale would not have been invited to speak for the Filipinos but for their connection with the university, and no university can escape being compromised if its professors are Socialists or Populists, or sympathizers with a public enemy."—*The Journal of Commerce, New York.*

Don't Muzzle the Professors.—"When a university muzzles its professors in order to attract either students or money it makes itself unworthy of public confidence. Any limitation upon the right of a professor to give expression to his views must tend to impair confidence in the freedom of the universities. Of course college professors, like other human beings, sometimes say foolish things. The right of free speech means the right to speak nonsense when the speaker has no sensible views to impart. Little harm is done thereby. The foolish and the untrue pass away, and the truth remains. Let the college professors go on speaking their minds, without other restriction than that which their own sense of propriety imposes, and the people will soon come to understand, if they do not now, that the speakers are giving their own views, and not those of the universities with which they may be connected."—*The Record, Chicago.*

"Apropos of the proposed gagging, or 'guarding' as it was gently put, of the professors of Chicago University in their utterances on politics, it is pointed out that the freezing out of President Andrews of Brown University for his political opinions has not yet been followed by a rush of legacies or endowments by Brown's wealthy friends."—*The Transcript, Boston.*

"It is a shame that anybody should question the right of a college professor to express his own individual opinions upon the subjects which are engaging the attention of his fellow citizens; it is a humiliation that persons who question that right should need even to be taken into account."—*The News, Baltimore.*

RAILROADS CONSOLIDATING.

THE lease of the Boston and Albany Railroad by the New York Central, and the announcement, a few days later, that the New York Central and the Pennsylvania systems, old-time rivals, were working in harmony, has provoked much interesting comment upon the general effects of railroad consolidation, the prospects and expediency of government ownership, and the tremendous power wielded by such men as J. P. Morgan, A. J. Cassat, and W. K. Vanderbilt. The accompanying map, from the New York *Tribune*, gives a very conservative showing of the

lines under the control of the Central and Pennsylvania systems. Some of the other maps, which accept unconfirmed rumors of New York Central and Pennsylvania control, represent the two systems as covering the territory from Boston to Seattle and from Winnipeg to Jacksonville, Fla., representing over \$2,500,000,000 capital and covering over 40,000 miles of track—enough to go one and three-fifths times around the earth.

Consolidation a Public Benefit.—"Commerce has little to fear from railroad consolidation. It has certainly suffered more from the unregulated competition of the transportation lines than from any efforts they have made to maintain uniform rates. Railroad discrimination has been the parent of monopoly; the means by which the organizers of 'combines' have grown rich at the public expense. A strict adhesion to the published rates would mean a vast increase of prosperity for the railroads, no less than equality of opportunity for all shippers, great and small. The management of the New York Central system is a fair example of what consolidation can accomplish in this direction. The managers of the great parallel roads of the system use all proper means to get each for his own road as much freight as possible, but they do not bid against each other by secret rebates, discounts, or commissions. They may have to meet a cut in rates made by another trunk line, but among themselves they observe strictly the conditions demanded alike by law and the common interest. This simply marks the difference between responsible and irresponsible control; between the possibility of holding some one to account for the failure to observe certain rules and the absence of any effective means of punishing their violation. There is no reason, therefore, why the tendency toward railroad consolidation should not have results entirely satisfactory to the people at large, who have as little to gain by compelling railroads to do their business at a loss as they have from the low rates of which the great shippers monopolize the benefit. Till railroad managers are strong enough to compel the shipper of a thousand carloads to pay the same rate for like service as the shipper of five carloads, their methods of doing business must be a constant handicap on the development of legitimate trade, and anything which tends to elevate them to this standard of independence must be welcomed as a public benefit."—*The Railway World, Philadelphia.*

How They do it in England.—"The voluntary union of strong competing systems, to put an end to costly struggles for business, by which the money of stockholders is dissipated in needless service, is an old story where the development of railroads is further advanced. The great railroad amalgamations of England, by which the very problems that have vexed railroad managers and the public for so long in this country were finally solved, were of this nature, and their result was the substantial divisions of Great Britain into districts, in each of which practically the whole railway service is under one control. Those regions served by the Great Northern and the Great Western are the most important of these. The amalgamations were authorized by Parliament and the roads are managed under strict state

RAILROAD LINES WORKING IN HARMONY.

supervision, for protection of the public, both stockholders and shippers.

"The problem of division of territory and union of competing lines is more complicated here than in Great Britain, and neither the federal Congress nor any state legislature has found the secret of the businesslike supervision exercised over railroads by the British Parliament. But the law of tendency is at work, and the union of the New York Central and the Pennsylvania would exemplify it conspicuously. This would not restrain destructive competition completely in the trunk-line region, tho it would bring strong moral influence to bear. Curiously enough, the most immediate effect of the union would be outside of its own territory. It would put an end to the rivalry that has sustained competing systems in New England and pave the way for consolidation of all of the roads in that region with the united-trunk-line system. Probably New England is the place where the British plan of amalgamation will first be completely tried."—*The Commercial Advertiser, New York.*

Is Mr. Vanderbilt Bigger than the United States?—"When anybody suggests that the railroads of the United States should be *owned* by the United States Government and *managed* by the United States Government in the interest of all the people, a splendid American howl goes up.

"The Government is not capable of such work, we are told. The Government can not undertake such a task. The men whom Americans elect to office are not fit to manage such big interests, and so on and so on, until the advocate of government ownership is made to think that he is indeed an anarchist and a worm in the dust.

"But now comes William K. Vanderbilt, a youngish man, of pleasant face, neat clothes, and average intellect. The fact is revealed that he has been buying controlling interests in the various great railroads of the country. He controls the New York Central and more other railroads than one ordinary man can remember by name. He has got control, through foreign investors' holdings, of the great Pennsylvania road. He is reaching out for a railroad trust, which would mean the control in one individual's hands of all United States railroads.

"Does this cause a howl? Does this make people say that Mr. Vanderbilt is incapable of running the combined railroads of the United States? Does this make cautious business men announce solemnly that the favorites, parasites, and appointees of William K. Vanderbilt are incapable of running all the railroads of the country?

"Not at all.

"Our 'respectable men,' our 'solid interests' are quite well pleased. To them it seems reasonable and proper that Mr. Vanderbilt, between trips from Paris to Newport, from the Chantilly race track to the Southampton golf links, should pause occasionally to manage, and incidentally to absorb the earnings of, all the railways of the United States.

"The United States Government, the people of the United States, are not able enough or big enough to own their own railroads.

"But W. Kissam Vanderbilt, the mildly intellectual descendant of a Staten Island Dutchman, is well able to do that work which is above the collective powers of the United States.

"Truly, Mr. Vanderbilt must be a very great man, or the people of this country, especially the 'solid interests,' must be very great idiots."—*The Evening Journal, New York.*

Government Ownership Coming.—"The concentration of power is also the concentration of responsibility. The unification of the railroads will mean either the establishment of justice in the treatment of shippers or the disappearance of all private control in the assumption of the roads by the Government. There are many incidental evidences that the railroad kings have this latter event in mind. There has been a noteworthy disposition evinced of late in conservative quarters toward stock-watering. Lake Shore was a case in point. The Vanderbilts required the stockholders to relinquish their stock, but for every dollar of capital surrendered they gave back two dollars. If the Government ever comes to deal with that problem it will come up face to face with twice as many dollars of nominal capital as if it dealt with the stock.

"Government control is extremely obnoxious to most people who reflect on the matter, but the question is whether they would

not find it still more intolerable to have one man laying down arbitrary and unequal rates which nobody could appeal from and the ultimate aim of all of which was to increase his own wealth and power."—*The Courant, Hartford.*

"These immense concerns can not afford to knock their heads together in competitive warfare on long-distance traffic, and if the laws of the United States forbid rate agreements between them, they will come together under some form of common ownership. But even then long-distance traffic will only be served as local traffic now is, for every railroad holds a full monopoly over its local traffic. The railroad is a natural monopoly, and competition as a regulator is out of the question. We must look solely to government control."—*The Republican, Springfield.*

"The moral effect of such an arrangement between these two leading systems must inevitably be to promote the spirit of legitimate open-face rivalry among the lesser companies whose affairs are now in many cases suffering the ruinous consequences of unrestricted and irresponsible competition for business. When the leading railway companies of the country mutually agree to abandon the foolish custom of rate slashing and conduct their traffic in accordance with the principles of sound business competition, it is morally certain that the lesser and tributary corporations will soon begin to do likewise."—*The Mail and Express, New York.*

"The deal between the New York Central and Pennsylvania railroads looks very much like an effective move toward the great railroad trust, in which the private masters of the transportation facilities of the country will be masters also of the lives and property of all its people."—*The Social Democratic Herald, Chicago.*

POPULARITY OF BRYAN AND McKINLEY.

ALTHO several Democratic papers have suggested that the silver question be given second or third place in the Democratic campaign next year, no one has seriously questioned the leadership of Mr. Bryan. Now comes a tribute to him from the *Chicago Times-Herald*, one of the most uncompromising Republican papers in the country. *The Times-Herald* says:

"The same day that ex-Governor Hogg was carrying Tammany by storm with his reference to Bryan, Mr. Bryan himself was received with tremendous enthusiasm both at Atlanta and at Barnesville, Ga. Everywhere it is the same story. The man seems to have suffered not at all in the esteem of the masses of his followers because of his defeat in 1896. True, he has found in several States that the Democratic Party leaders consider the silver issue a disastrous one, and in those States the popular vote would certainly be hostile to his silver policy, but wherever he goes he meets with manifestations of an almost fanatical personal loyalty. Very few American politicians have been the objects of such general or intense devotion.

"What, then, will explain this extraordinary phenomenon? It may be referred to a combination of causes, each potent in its way. Mr. Bryan has character, sincerity, a winning personality, intellectual brilliancy, eloquence, and the elements are so mixed in him as to produce the best possible effect. He is, besides, the leading exponent of a principle which gives him a remarkable influence where the principle is held, while his character, gifts, and attainments secure him the liking of people who regret the principle.

"At one time there was a very natural disposition to ascribe his prestige to a single speech, but the speech was merely his opportunity. Since delivering it he has proved his powers as an orator many times, and he has stood the closer scrutiny of the public, which is attracted but not dominated by oratory. We have known men even more brilliant on the platform who never got beyond the part of performers in a campaign show. With all their ability they could not command respect because they did not possess those moral qualities which the American people desire in their political leaders of the Presidential class.

"Mr. Bryan is clean of speech and act. He has nothing to explain. He is honest in his convictions. What he lacks most is a lively humor, and this sometimes does a politician more harm than good, as S. S. Cox used to confess ruefully. Much as Americans enjoy a joke, they prefer serious men in high places.

"When, therefore, all things are taken into account, it is clear

why Mr. Bryan is popular, and no one should now feel disposed to grudge him the position he has won. Whether he may succeed in commending his political ideas to the voters of the country is another question."

The *Atlanta Constitution*, strongly Democratic, sees in this tribute a growth of the spirit that "permits the recognition of the true merits of men in public life, regardless of their party affiliations," and, as a further illustration of it, continues: "The era should be welcomed in which the Republican *Times-Herald* can say such pleasant things of Mr. Bryan, and when the Democratic *Constitution* feels no hesitancy in saying equally as much for the personal character and qualifications of Mr. McKinley. All this, too, without a sacrifice of political opinion by either."

PIG IRON AND PANICS.

A STRIKING argument by Mr. George H. Hull to show that our disastrous financial panics are principally due to advances in the price of pig iron has attracted considerable attention in the past few weeks; and in spite of the many theories set up in years past to account for these periodical business depressions, such is the force of Mr. Hull's reasoning that hardly any one has ventured seriously to dispute his conclusions. Most papers which do not accept all that Mr. Hull says agree, like the *New York Journal of Commerce*, that even if the advances in iron prices are not the direct cause of "hard times," they are at least warning signals of danger ahead.

The great importance of this argument, and of its practical acceptance by financial thinkers, lies in the fact that exactly such an advance in the price of pig iron as Mr. Hull fears has just taken place, iron which was selling at six dollars a ton not long ago now selling at twelve dollars. If his view is correct, therefore, we are on the verge of another great business depression.

Mr. Hull, who writes in *The North American Review*, begins by showing that the years of financial panics since 1854 have invariably followed advances in iron prices:

"In the recent enormous advance in the price of pig iron, the people of the United States have another opportunity of studying the cause of such advances, and realizing the controlling and disastrous effect they have upon

business of all kinds throughout the entire country. It is well known that this advance is not an unusual occurrence, being only a repetition of what took place in 1854, 1864, 1872, 1880, and 1889. It was not disturbed finances, or loss of confidence, which turned the tide of prosperity in those years. It was the advance of from one hundred to three hundred per cent. in the price of pig iron. The loss of confidence and disturbed finances came months afterward, and were the effects of the turn in the tide. Each of these advances, and its results, were object-lessons, from which we might have learned much if we had seized the opportunity, while the cause and its effect were passing before us.

"The advance of 1899 is a fact of the present moment. It is here, the evidences of it are everywhere around us, and, if history repeat itself, the events which follow its culmination will be a vivid and instructive picture."

He then draws attention to the almost universal use of iron—in the preparation of food and clothing, in building, in water, gas and other pipes, in all forms of transportation, and, indeed, in all the machinery of war and peace. Its use, too, is growing rapidly:

"Fifty years ago one hundred pounds were consumed in the United States annually for each of its inhabitants; ten years ago there were three hundred pounds for each person, and to-day we are consuming iron at the rate of four hundred pounds yearly for each one of our seventy-five millions of inhabitants.

"Whatever restricts the consumption of iron limits, to that extent, the growth of the people in wealth and prosperity."

The natural limit of prosperity comes when every worker is employed, and such a condition has none of the causes of "hard times" in it. "It is the natural condition," says Mr. Hull, "of an industrious people: it is, in effect, simply the whole people at work." He continues:

"Nothing short of war, pestilence, or famine should check such a condition, and yet without any of these causes it is invariably checked in this country after a few months' duration. Is it merely a coincidence that this has occurred, in each case, a few months after an abnormal advance in the price of pig iron, or is there some connection between the two? Is one the cause and the other the effect? This is at least a clew—let us follow it. In the center of growth in this country, iron advanced from nineteen dollars to fifty dollars a ton in 1854; from eighteen dollars to seventy-five dollars in 1864; from thirty-five dollars to sixty dollars in 1872; from twenty dollars to forty-five dollars in 1880; from nine dollars to

THREE NEW COLLEGE PRESIDENTS.

seventeen dollars in 1889; and iron which was sold a few months ago at six dollars in Alabama, is selling at twelve dollars to-day, with an advancing tendency and a visible supply of but six days' production."

Iron is the chief factor in our greatest enterprises, and most of them pay so small a margin of profit that when the price of iron rises 100 per cent. or more, these enterprises have to stop. The end does not come suddenly, for the large buyers of iron carry several months' supply, hence the general public does not connect the rise in price with the shut-down several months later. The shut-downs soon increase in number, however, business slackens, failures increase, and a panic is the ultimate result. It is plain that whatever is responsible for stopping great enterprises and for the discharge of the men employed is responsible for the panic. Mr. Hull, to answer those who think there may be some other cause, asks:

"If it is not iron, what is it? There is no other article of importance which is subject to such a condition of inadequate supply or excessive advance in price. It is profitable to carry lumber for seasoning purposes, hence we have a stock of two or three years' production, piled up in every town, city, and village; extraordinary demands can be made on this stock without inordinate advances in price. The output of brick and stone can be increased quickly to meet any demand, by increasing the force in the brick-yards and stone-quarries; buildings can be put up to-day, exclusive of the iron used, at an advance of five to ten per cent. It is not food or clothing; there is no great advance in any of these articles. Pass in review every other article, and you find no such famine and famine prices as take place in pig iron from time to time. The more it is studied, the more one will be impressed with the conviction that the unnatural price attained by iron is the cause which puts a stop to our natural flow of prosperity.

"Every great staple, except iron, is either carried in large quantities, or its output can be increased to any desired degree, at short notice; consequently, we have no famine or famine price in the other staples. The average stock of iron carried in the United States, during the last ten years, has been less than twenty-three days' product, and it takes practically a year to build new furnaces. What wonder, then, that as the books of consumers fill up with orders for months ahead, they become alarmed about the supply of iron, and in the scramble that each one makes to get enough to supply his individual wants the price is carried to enormous figures."

The only remedy for the disastrous advances in price, Mr. Hull argues, is to carry an ample supply. The iron men of the country are now laboring under the delusion, it seems, that a twenty-three days' stock of iron is overproduction, and, indeed, a score of efforts have been made within twenty years to restrict the output. Mr. Hull confesses that in 1884 he was himself at the head of one of these unwise attempts.

How to carry an ample supply of iron, then, becomes the problem. The solution, according to Mr. Hull, lies in dealing in iron upon the exchanges, and he argues from the example of other products to show that the great fluctuations in price would thus be stopped:

"At one time there was no profitable system for carrying large stocks of grain, cotton, mineral oil, etc., and, during that time, these articles were subject to enormous fluctuations in price. Means of storage existed, but even then the carriage was attended by loss of the cost of storage and interest, and the price of these articles was inordinately low at the time of harvest. Later on, certificates representing these articles came to be dealt in on exchange; as the dealings in these certificates grew to be large, this carriage, through modern exchange methods, became profitable, and the extreme fluctuations in price were eliminated. The most pronounced instance of this change is found in the price of mineral oil, which fluctuated during the nine years before it was dealt in on exchange from 52 cents to \$7.88 per barrel at the wells as against a fluctuation of from 64 cents to \$1.06 during the nine years after it was dealt in on exchanges. The largest stock carried during the first period of nine years was five hundred thousand barrels; the average stock, after it was dealt in on Ex-

changes, was thirty-six million barrels. In other words, before exchange dealing existed, a stock of five hundred thousand barrels carried the price down to 52 cents; after exchange dealings were inaugurated, a stock seventy-two times as large was easily carried, with 64 cents as the lowest price reached. Could there be a stronger illustration of the beneficial effect of exchange dealings?

"A three weeks' stock of pig iron in the United States during dull times carries prices below the cost of production. With active dealings in pig iron on exchanges a six months' stock could be easily carried, without forcing prices to as low a point."

Scotland affords an example. Pig iron has been dealt in on the Exchanges there for fifty years or more. Mr. Hull says:

"For thirty years out of the last fifty the stock carried in Scotland, by exchange dealing alone, has amounted to more than six months' production, and at one time, for five years in succession, the stock amounted to more than twelve months' production. . .

"A forced sale of 20,000 tons in the United States during the last twenty years under normal conditions would have caused a decline in price of from 25 cents to 50 cents a ton; the same amount forced off on the Glasgow exchange would have caused a decline of perhaps a half-penny. On the occasion of a very depressed market, within the last three years, a forced sale of 10,000 tons in the United States caused a decline of \$2 a ton; 30,000 tons were sold on the Scotch Exchange at the same time at a decline of one penny and half per ton. . . .

"In this age, an ample supply of iron, and stability in its price, are second in importance only to a stable government. We may avoid the disasters resulting from a scarcity of money in times of an extraordinary demand by inaugurating a flexible currency system, but we can not build flexible furnaces."

The Manufacturers' Record, Baltimore, says of Mr. Hull's article:

"The fact that Mr. Hull is president of the American Pig-Iron Storage Warrant Company lends additional force to his arguments in favor of the warrant system, whatever difference of opinion there may be about the connection of the movements in iron with fluctuations in industrial life. The system has been found exceedingly useful, particularly in the South, where it has already gained firm foothold. To put it into general operation upon a basis of six months' stocks of iron, however, would require an accelerated output of iron, inasmuch as at present the iron output is upon a margin nearer six days than six months. The general adoption of the warrant system would, we believe, be of great value to the country, as the iron situation would be materially strengthened in being rid of extreme tendencies in either direction, no matter what conditions in other departments of industry might arise."

The Iron Age, New York, says of the iron situation:

"The predicted shortage in pig iron is beginning to be felt, particularly in foundry irons in the West. Instances are coming to light of foundries being obliged to shut down for several days awaiting receipts of needed raw material. So far it is believed that the trouble has been caused by the non-arrival of special brands desired for the usual mixture on which the foundry has been running or to the deferring of purchases a little too long to secure shipments in time to insure steady operation. But it is nevertheless a fact to be considered that the stoppage of foundries for lack of any kind of pig iron is a new experience in the trade which points to further trouble of the same character."

Where is the Center of Population?—An interesting prediction as to where the "center of population" of the United States will be found in 1900 is given by the *New York Sun*, with a sketch of its travels since 1790. *The Sun* says:

"By the first national census taken in 1790, when the population of the country was not much greater than of New York City to-day, the center of population was twenty-three miles east of Baltimore. It was still in the neighborhood of Baltimore, tho to the west of that city, in 1800. In 1810 it was near Washington. In 1820 it was at Woodstock, Va., and in 1830, 1840, and 1850 in the present State of West Virginia. In 1860 it was a little to the

south of Chillicothe, Ohio, this being the first official appearance of Ohio as the center of population, tho it has remained the political center of population steadily ever since.

"In 1870 the center of population was on a line in Ohio between Chillicothe and Cincinnati; in 1880 it was in the neighborhood of Cincinnati; and in 1890, the year of the last national census, it was in Decatur county, Ind., near the Ohio boundary, and on a line between Cincinnati and Indianapolis. The government estimate of the present population of the United States, exclusive of countries over which its sovereignty has been extended, was 75,000,000 on June 1, and all sections of the country have participated, tho not equally, in the growth of population since 1890, when it was 62,000,000.

"By the coming census the Ohio and Mississippi Valley States will probably be shown to have gained less from direct foreign immigration than in any previous decade, while the citizens of the Middle and New England States have relatively gained more. There has been a substantial increase in population, larger probably than in any period since the close of the Civil War, in the Southern and South border States, and a much larger increase in those of the Southwest, most notably in Texas the total vote of which increased from 230,000 in 1880 to 340,000 in 1890 and 550,000 in 1896. The population of Texas (2,200,000 in 1890) is probably near 3,600,000.

"A state census taken of Kansas in 1895, on the other hand, showed the population of that State to be less than in 1890, while in the same period the population of New Jersey had increased 16 per cent. Between 1890 and 1895 the population of Florida increased from 300,000 to 465,000, while the population of South Dakota (328,000 in 1890) was returned as 330,000 five years later.

"The growth of population in American States between 1890 and 1900 will be in accordance with the increase of the urban population in each rather than with the gain in agricultural districts. As a majority of the cities are in the North, it appears likely that the 'center of population' in 1900 will be on or near the banks of the Wabash in the State of Indiana, at some point northwesterly from the present center and nearer the Illinois than the Ohio State line."

HOMES AND STREET-CAR FARES.

PROBABLY few of the immense number of people who use the trolley-car in the United States realize what an advantage we have over the people of Europe in the simple fact that our fare is no more for a ride of five miles than for one of five blocks. Mr. Edward E. Higgins, editor of *The Street Railway Journal*, points out that this difference between uniform and graded street-car fares makes the difference between a city comfortably distributed over a wide area and one crowded to the limit of endurance. In an address before the Franklin Institute of Philadelphia published in *Municipal Affairs* (New York), he says:

"In this country a uniform five-cent fare is almost universal; in other countries a variable fare, based on distance traveled, is

equally universal. There is something more than a mere financial policy involved in the discussion of the fare problem. Broadly speaking, a uniform fare means depopulation of the tenement house districts and settlement of the suburbs—means a clear happy life in purer air and better surroundings—means individual homes and plenty of room for the children. A graded fare means enormous density of population in the heart of the city, scanty suburban settlements, pale faces, sickly children, and a miserable home-life for the masses. These words are not too strong, nor is the influence of street railway fares upon these living conditions exaggerated. The difference between the street-railway track mileage and investment in our principal cities and those of equal size abroad is something amazing. Compare, for example, Brooklyn, Glasgow, and Boston, three cities of about the same size. Brooklyn with a population of about 900,000, within 5-cent fare limits, has over 500 miles of track, Boston, with 700,000 population, has 325 miles of track, while Glasgow, with 800,000 population, has but 77 miles of track. The total street-railway investment in Brooklyn is nearly \$100,000,000, in Boston is over \$25,000,000, and in Glasgow less than \$4,000,000. The 800,000 people of Glasgow are distributed over but 23 square miles, Brooklyn's 900,000 inhabitants live in a 45-mile area, and have a population density of but 25,000 per square mile, while Boston's 700,000 inhabitants are happy in 122 square miles of area, with a population density of but 5,700 per square mile. Is not the uniform-fare principle justified by these figures alone?

"For 5 cents a citizen of Brooklyn may travel more than 10 miles. A citizen of any of our great cities can travel 10, 15, or even 20 miles. In doing so he inflicts a loss upon the company, and if there were a large proportion of the total number of passengers carried who traveled so far, or even 5- or 10-mile distances, our city railway properties would be continually unprofitable and probably insolvent. It is in the short-distance riding that the losses are made up, and it must therefore, in frankness be admitted that the short distance rider pays part of the fare of him who rides the longer distance. This is an apparent injustice, which can not, however, be remedied unless the whole principle and policy of American street-railroading be radically changed, and the effect of the change would be undoubtedly disastrous from a sociological point of view, tending to check the expansion of cities into the suburbs and increase the congestion of life in the centers."

RESIGNATION RUMOR IN CARTOON.

LETTERS AND ART.

MRS. SOUTHWORTH AND THE NOVEL OF SENTIMENT.

MRS. EMMA D. E. N. SOUTHWORTH, who died at Washington on June 30, was undoubtedly the most voluminous writer of fiction in the literary history of America and probably of the world. Something over eighty novels are credited to her, and at one time her vogue was very great among lovers of the

MRS. E. D. E. N. SOUTHWORTH.

sensational and sentimentally romantic type of literature. The *New York Sun* (July 2), gives the following account of her career:

"Her father, Captain Charles Nevitte, was a native of Alexandria, Va. She was married in 1841. She separated from her husband in 1843, and was thrown upon her own resources. She wrote stories and short sketches for weekly newspapers and taught in the Washington public schools. Her first novel, 'Retribution,' was printed in the *Washington National Era*. It was begun as a short story, Mrs. Southworth has explained since, but lengthened itself out week after week until it became a novel, which was published as a whole by Harper & Brothers in 1849. The story became popular, and she followed it with many others in rapid succession. Among them were 'The Widow's Son,' 'Ishmael,' 'The Deserted Wife,' 'The Discarded Daughter,' 'The Changed Brides,' and 'Beautiful Fiend.' She wrote eighty novels in all, and most of them for Bonner's *New York Ledger*. The work was profitable. Mrs. Southworth, after the third or fourth year of her literary career, lived in comfort and might have lived at ease.

"It was Mrs. Southworth who sent to Whittier the Barbara Frietchie incident from which the poet evolved his poem of that title. Since the ballad was written the name and truth of the incident have been disputed, but from the evidence of the case there is but little doubt that there were actual events very much like those told in the poem. At the time of her death Mrs. Southworth had in her possession the letter which she wrote to Whittier relating to the incident, and his reply. Whittier's letter was as follows:

"AMESBURY, 9 Mo., 8, 1863.

"MY DEAR MRS. SOUTHWORTH: I heartily thank thee for thy very kind letter, with enclosed message. It ought to have fallen into better hands, but I have just written a little ballad of Barbara Frietchie, which will appear in the next *Atlantic*. If it is good for anything, thee deserves all the credit for it. I wish I could accept thy kind invitation to be present at thy cottage home, but I am too much of an invalid to undertake the journey. I

thank thee none the less, however, for asking me. I shall go there in imagination, if I can not go otherwise.

"With best wishes for thy health and happiness, I am most truly thy Fr',
JOHN G. WHITTIER."

Speaking of Mrs. Southworth's great popularity at the time of the War of Secession, the *Chicago Times-Herald* tells this story:

"So fond were the soldiers of Mrs. Southworth that at the close of the war it was customary for military men visiting Washington to go over to the Georgetown cottage and call on the writer, who did not, however, appreciate her popularity, and would keep out of the way if possible. On one occasion a party of soldiers were told by the colored housekeeper that Mrs. Southworth was not in. They loitered about the place, looked over the cliff at the river view, and finally approached a plain woman who was weeding in the yard, her face hidden under a sunbonnet.

"Do you think if we wait Mrs. Southworth will be home soon?" asked one of the soldiers, 'we would like very much to see her.'

"She isn't much to look at, but you can judge for yourself—I am Mrs. Southworth," was the pleasant reply, and she invited the soldiers in and talked with them about their experience in the war, making notes that she afterward used."

The *Detroit News-Tribune* says of her:

"In the days of her prime Mrs. Southworth was wont to grind out a 'three-decker' in as many months, and even at this rapid rate she could not produce stories fast enough to satisfy the demand.

"In their way they were very good stories, too. She might have lacked George Eliot's erudition, and George Sand's art; but her public was not captious, and the sneers of the critic counted for naught with the thousands that eagerly waited for each instalment of her tales of love and chivalry. Mrs. Southworth knew nothing of the problem story. She fashioned no psychological mazes for her readers to wander through. No hereditary influences had to be explained. The heroine was a real heroine and the hero was a real hero. The villain was always thwarted before he had accomplished his hellish purpose, and when the right triumphed it triumphed for keeps. The heroine did not meet an untimely fate in the last chapters. Neither was the hero disposed of by methods that no honest novelist has a right to use; for Mrs. Southworth took no liberties with the confidence of her readers. As a rule the principals in her story were married and lived happily ever after, just as they should have done. The young wife did not compromise herself, or place herself in situations that the young person has no business to know anything about, and a dissecting-room was not a necessary appurtenance to the plot.

"And after all, perhaps her stories are no sillier than many of those that appeal to public taste to-day. They were mediocre and harmless, but we may forgive her much because she did not prattle about her art."

The *Omaha World-Herald* thus speaks of her title to kind remembrance:

"The death of Mrs. E. D. E. N. Southworth will be deeply regretted by the older generation of readers, to whom her name was familiar. Mrs. Southworth is not well known among the younger generation, but thirty years ago her name was a household word. It can not be said of Mrs. Southworth that she was a great author, but if success is to be measured by popularity, then Mrs. Southworth achieved marked success. She was one of a number whose contributions made the old *New York Ledger* famous under the management of the elder Bonner, and no writer of the last score of years has been more widely read than Mrs. Southworth was twoscore years ago. To modern readers her stories are stilted and unnatural, but it must at least be admitted that while her novels were not of a high literary order they were more moral in tone than the bulk of novels now flooding the market. She wrote to lift common people away from their humdrum surroundings and give them a peep into life they could never hope to live. She did not write to educate, but to entertain, and while entertaining did not descend to writing stuff that would tend to demoralize. Her novels were all tragic and tearful, but to her readers they brought joy, for at last virtue always triumphed, the right parties wed, and wrong was exposed and punished.

"Among her novels, and the ones that achieved the greatest

popularity, were 'Ishmael, or From the Depths,' 'The Hidden Hand,' 'Retribution,' 'The Deserted Wife,' and 'The Haunted Homestead.' Of these 'Retribution' was the first and 'The Hidden Hand' the most popular. The latter was first published in the New York *Ledger* about 1854, and was reprinted in that paper no less than three times in response to earnest requests. It was dramatized and a few years ago no repertoire dramatic company failed to include it. The character of Wool, the old and faithful negro servant; Capitola, the heroine; Black Donald, the villain, and Colonel Black, the good old man, were well drawn and a never-ending source of amusement to old and young."

SIX CRITICS ROLLED INTO ONE.

THE long-standing quarrel between critic and author has just taken a curious and unexpected turn in England. The parties to the controversy are Dr. Conan Doyle and Dr. Nicoll, editor of the London *Bookman* and English correspondent of the American *Bookman*. It appears that Dr. Nicoll, who is also editor of a nonconformist weekly journal, writes book reviews for these and several other papers—six in all. Worse still, in the opinion of his literary victims, he writes under different signatures in each. Thus if he disapproves of a book he can say so six times, to six different circles of readers, under six different names, creating the impression in the minds of those who chance to see or hear of all these opinions that the consensus of literary criticism is overwhelmingly against the unfortunate author who does not happen to appeal to his critical taste. Mr. William L. Alden, himself a critic who expresses his literary opinions with sufficient strength upon occasion, takes the part of Dr. Doyle in this controversy. Writing from London to the New York *Times*, he says:

"The critic of whom Dr. Doyle complains has of course answered his accuser. His answer is perhaps good, considered as repartee, but it is hardly argument. He says that he recently found fault with a book written by Dr. Doyle on the ground that it contained a chapter calculated to bring a blush to the cheek of the conscientious nonconformist. Hence these tears on the part of the aggrieved author! The critic, however, does not deny that he is six critics rolled into one, tho he declines to admit that he is guilty of any offense.

"There certainly does seem to be more or less justice in Dr. Doyle's complaint. In spite of what Miss Corelli says, criticism has ordinarily an important effect upon the sale of a book. The sort of people who admire Miss Corelli's productions probably do not know what criticism means, and it is extremely improbable that any one of them ever reads a criticism in any of the leading weeklies. The average reader of Dr. Doyle's books, on the contrary, would be almost certain to read criticisms of any new book from his pen, and if those criticisms were unanimously adverse, he would not buy it. If the critic of *The Bookman* points out in six different papers that Dr. Doyle's last book is unfit to be read, there are hundreds of people who will say 'The critics all agree that the book is bad, and so I will not read it.' It does not seem fair that one man should have this power, but what can be done to remedy the abuse?"

Mr. Alden does not think that anything can be done, since the "free-born Briton," and presumably also the free-born American, has an inalienable right to pen as many criticisms of the same work as he can find acceptance for.

Mr. Alden, tho himself a critic, does not entertain a high opinion of the value of literary criticism, which he thinks in nine cases out of ten represents no more than the generally very limited taste of the critic himself, or the mood in which he happens to be when he sits down to write. Then, too, really trained and scientific literary criticism, the outcome of the literary study of a broad and well-balanced mind well versed in literary history, is as rare, it has been said, as is a similar quality of dramatic or art criticism:

"Criticism is something which can never be made perfect in this imperfect world. It is all based upon the false assumption

by the critic that he is infallible. When an honest critic writes of a book that it is a feeble and worthless production, he is giving merely his own opinion, but unless he is morally certain that such opinion is right he has no right to express it. Of course he is perfectly certain that his opinion of the book is a just one; in other words, he is certain of his infallibility. As a matter of fact, we all know that critics are not infallible. Of what value, then, is criticism based upon the fallacy that when a critic declares *ex cathedra* his opinion of any book such opinion is infallible? The more one thinks of what criticism is, of what it ought to be, and of what it never can be, the more nearly one approaches to the confines of insanity."

Mr. Alden therefore proposes, as the only remedy for "plural criticism," that the public cease from reading criticisms of new books except such articles as contain a bare statement of the book's contents or extracts which will give a just representation of its character. He concludes:

"Once in a century there is born a man whose opinions about books are worthy of attention, but what is one real critic among such an intolerable quantity of books? Even our cleverest men merely express their own likes and dislikes when they write what they call criticism. Mr. George Moore honestly regards Kipling as a hideous blot on our civilization. Mr. Andrew Lang thinks that Mr. Moore can not write a novel that is worth reading, but at the same time he regards Mr. Rider Haggard as one of the greatest novelists of the day. If the public accepts the opinions of these critics what an extraordinary mental condition the public must be in!

"One would naturally fancy that Sir Edwin Arnold would know a good novel from a bad one. And yet look at the list of 'the one hundred best novels in the world' published by *The Daily Telegraph*. This list was selected by Sir Edwin Arnold with the assistance of Mr. H. D. Trail and Mr. W. L. Courtney. In the list we find 'Guy Livingstone,' 'The Wide, Wide World,' 'Valentine Vox,' 'The Deemster,' and books by Miss Amélie Rives, 'Ouida,' Whyte-Melville, and W. H. Ainsworth, not one of which deserves a place in any library. When Messrs. Arnold, Trail, and Courtney agree in classing the books I have mentioned among the 'one hundred best novels in the world,' of what value is their critical judgment? Is the opinion of a man who regards 'Valentine Vox' as one of the best novels in the world entitled to any weight when he brings it to bear on a new novel?"

A Curious Case of Literary Parallel.—One of the most singular literary parallels ever brought to light has just been discovered by a correspondent of *Literature*. Lord Robert Ure, in Hall Caine's novel, 'The Christian,' thus describes the dramatic effect produced by John Storm's prophecy of the impending destruction of London:

"I counted seventeen people on their knees in the streets—upon my soul, I did! Eleven old women of eighty, two or three of seventy, and one or two that might be as young as sixty-nine. Then the epidemic of piety in high life too! Several of our millionaires gave sixpence apiece to beggars—were seen to do it, don't you know? One old girl gave up playing baccarat and subscribed to 'Darkest England.' No end of sweet little women confessed their pretty weaknesses to their husbands, and now that the world is wagging along as merrily as before, they don't know what the devil they are to do."

In Swift's "True and Faithful Narrative of What Passed in London during the Great Conflagration" the following description is given of the scenes following the preacher William Cheston's prediction of the coming end of the world:

"I . . . counted at least seventeen who were upon their knees and seemed in actual devotion. Eleven of them, indeed, appeared to be old women of about fourscore; the six others were men in advanced life, but (as I could guess) two of them might be under seventy. . . . It was remarkable that several of our very richest tradesmen of the city in common charity gave away shillings and sixpences to the beggars who plied about the church doors. . . . Three great ladies, a *valet de chambre*, two lords, a Custom-House officer, five half-pay captains, and a baronet (all noted

gamesters) came publicly into a church at Westminster and deposited a very considerable sum of money in the minister's hands. . . . I forbear mentioning the private confessions of particular ladies to their husbands."

The London *Academy*, in commenting on this remarkable parallelism, says:

"Mr. Hall Caine's reply has yet to come. The likeness between the two descriptions may be purely accidental and Mr. Caine may never have seen Swift's document. But if he has intentionally adapted an actual account of such a panic, it is a great pity he did not acknowledge the loan. No one would think less of his own narrative powers."

ROBERT BONNER, THE FATHER OF LITERARY ADVERTISING.

THE career of Robert Bonner, who altho an Irishman by birth is said to have been more American than the Americans themselves, is an instructive example of the value not only of persistence and sagaciousness but of the high art of advertising as applied to literary undertakings. Mr. Bonner came to this country at the age of sixteen, and beginning as "printer's devil" he rose with great rapidity through the grades of printer, foreman, proofreader, and editor to a commanding position in the journalistic world of forty years ago. The following sketch of the busier portion of his life is given in the *New York Commercial Advertiser*:

"In 1844 he came to this city and took a place as proof-reader and assistant foreman on *The Evening Mirror*, published by Morris, Willis & Fuller. It was while here that he made his record as a rapid typesetter, which, it is said, had never been equaled. Several attempts had been made to set 24,000 ems in twenty-four hours, and \$10 was offered to Robert Bonner if he would make that record. In twenty-hours and twenty-eight minutes he set 25,500 ems of solid type. At this time he occupied his leisure hours in writing for *The Courier*. He also wrote for Albany, Boston, and Washington papers.

"After several years' service on *The Mirror*, Mr. Bonner, who had accumulated some money, bought *The Merchants' Ledger*, a weekly financial journal. Almost from the start of his new venture Mr. Bonner began the introduction of fresh features. The publication of a financial newspaper was not exactly to his liking, and gradually he changed its character so that the journal which had been of use only to business men was adapted to the home. Many of the old features were retained, however, and it was not until 1855 that Mr. Bonner found that the time had arrived when he could take a decisive step in the direction in which his judgment told him lay the way to a fortune. In that year he dropped the name 'Merchants' from the title of the publication and substituted for it 'New York,' and from that day to the present the paper has been known as the *New York Ledger*. At this time he announced that he had engaged Fanny Fern, then at the head of women story-tellers, to write a story at the rate of \$100 a column, what seemed a fabulous sum in those days. It was at

ROBERT BONNER,
At the age of Seventy-one.

this time that Mr. Bonner began his system of extensive advertising in the newspapers that made his paper famous. He filled whole pages in the newspapers, and on one occasion *The Herald* had to double its size in order to accommodate Mr. Bonner's advertisement.

"Mr. Bonner's methods bore rich fruit. The circulation of *The Ledger* reached 500,000 and made the owner rich. He secured the leading writers of the world as contributors for his journal. He secured his first contribution from Edward Everett by offering a \$10,000 subscription for the fund for the purchase of Mount Vernon. He gave Tennyson \$5,000 for a poem, Beecher \$30,000 for the novel 'Norwood,' and Longfellow \$3,000 for some verses."

The Baltimore *American* calls him the father of present-day methods of advertising, and says:

"His success was due solely to the fact that from his first venture he reposed his trust in the value of printer's ink, and had the courage to expend hundreds of thousands of dollars in presenting the merits of his literary wares. He took an insignificant paper, paid fabulous sums to popular authors for stories, and then proceeded to acquaint the world with his doings.

"It was not sufficient to announce merely that he had paid Fanny Fern \$100 a column for a story. He must make a sensation of it, and in this purpose he succeeded admirably. Thousands were spent in creating the sensation, but the reward came with the first instalment of the story, when the circulation of his paper jumped from nothing to 50,000 in one week. He had people talking about and wanting to see and read his paper, and its success was made. He made his millions by spending fabulous sums in interesting the public in his projects, and by always keeping faith with the public on the promises he made. Since he took the initiative thousands have followed in his wake, and merchants the world over now know the true value of printer's ink as a money-maker. They know that value simply because Robert Bonner taught them that the public would demand the thing, no matter how insignificant, in which it had become interested by judicious advertising."

The Boston *Advertiser* says of him:

"The topic is not one which calls for lengthy comment, altho a topic more inviting to reminiscence and moralization has seldom been offered. His work was in one sense ephemeral. His personality was attractive and interesting without being commanding. Neither the paper which he brought from insignificance to a circulation of 500,000 copies per week, nor any other achievement of Robert Bonner's, can be regarded as an enduring monument to his fame. Nevertheless, he did a very great deal for American literature. Not that he published anything which will live, or ought to. Not that he was the means of introducing to the world great writers. Not that the character of the reading which he sent into so many hundreds of thousands of homes was such as to be in any degree worthy of enthusiastic mention, to refine and elevate the public taste; tho it is to be said, to Mr. Bonner's honor, or to his credit for business shrewdness, or both—probably both—that the stories in *The Ledger* were invariably free from moral taint, and intellectually were a great deal above the dime novel and yellow-kid level.

"But what he really did for literature was to help make it an independent profession. For the first time in American literary history authors began to be well paid when Robert Bonner began to pay them. Some of the sums which he paid were extravagantly out of all proportion to the real merits of the men and women who were lucky enough to receive the droppings from his Fortunatus's purse. Those enormous sums were, of course, paid, more often than otherwise, as advertisements for *The Ledger* rather than as just remuneration to the authors. All the same, not only those authors but authorship in America reaped great benefits; and because they did so, literature to-day in our country is better established, and established on a higher plane, than, in all probability, would have been possible if Robert Bonner had not lived."

Kipling's Case against the Putnams.—One of the first things Mr. Kipling has done after his arrival in England has been to give out a carefully prepared statement of the facts relating to his pending suit against Messrs. G. P. Putnam's Sons for infringement of copyright, so that the English public might

understand the principles which are involved in it. Referring to the Putnams' allegation that he refused specifications, he says that at any time between March 13 and April 22 a settlement could have been made if it had been desired by them. He concludes with this indictment of them before the bar of public opinion (as reported in the *New York Times* of July 8) :

"They have, under cover of following the routine of trade, produced an incomplete set of books, which they wish the public to accept as a complete edition of my books. They have attempted, both by the title they selected for their edition and by placing on every volume my autograph in facsimile and an imitation of an elephant's head, which is the distinguishing mark of my 'Outward Bound Edition,' to make the public believe that their venture had my sanction.

"They have used, in part, matter written and authorized by me, in part matter written but not authorized, in part matter neither written nor authorized by me.

"They have appropriated copyright material for their own uses in their specially prepared index.

"They have tampered with a copyrighted book three years after publication.

"They have made me responsible before a public to whom I do peculiarly owe the best and most honest work that I can turn out for an egegrions, padded fake.

"And all these things they did, taking advantage of that public's interest in my illness when I lay at the point of death.

"I do not see how I can permit their action to pass without challenge. It establishes too many precedents which will do evil to the honor and integrity of the profession that so far has given me countenance and profit."

PARODIES OF MARKHAM'S MAN WITH THE HOE.

EDWIN MARKHAM'S poem, altho first published this year, has already been the subject of more comment and controversy than has probably any American poem written in twenty years. Mr. Markham's reputation as a poet has been increased by his new book of verses, which has won much warm commendation from critics of note, but the poem entitled "The Man with the Hoe" still continues to be the main subject of discussion. It has received so much high praise that Mr. Markham can well afford to be satisfied if it meets with some misunderstanding and detraction. Doubtless Mr. Markham intended that we should take Millet's peasant as a type representing roughly the results of the inequality of opportunity which so largely prevails among all classes of toilers, and naturally he selected an extreme type

THE REAL MAN WITH THE HOE.

as a more distinct and impressive illustration of what this inequality can and often does bring about. Having been himself bred on an American farm, it is highly improbable that he wishes us to accept the gaunt and pathetic figure in Millet's painting as a

fair type of the American agricultural laborer. Yet a number of his critics have so understood the poem. Mr. Ralph E. Jenkins, of the Chicago bar, has, for example, written a poem in defense of the "Real Man with the Hoe," holding up to admiration the qualities of self-respect, independence, and intelligence to be found in the American rural classes. With considerable heat he writes :

"Markham's 'Man With the Hoe' is an insult to every farmer and every farmer's son in America. It draws a picture that has no foundation in fact. It is utterly vicious, in that it degrades honorable labor and promotes contempt for work, and dissatisfaction, unrest, and despair where there should be hope, happiness, and courage. It and all similar woful wailings are worse than worthless trash."

We append one of the best parodies of Mr. Markham's famous poem :

THE MAN WITH THE LOAD.

Bowed by a weight of fiery stuff, he leans
Against the hitching-post and gazes 'round!
Besotted emptiness is in his face,
He bears a load that still may get him down.
Who made him dull to shame and dead to pride,
A thing that cares not and that never thinks,
Filthy, profane, a consort for the pig?
Who loosened and let down that stumbly jaw?
Whence came the scum adhering to those lips?
What was it clogged and burned away his brain?

Is this the thing the Lord God made and gave
To have dominion over sea and land;
To love and to be loved; to propagate
And feel the passion of Eternity?
Is this the dream He dreamed who shaped the suns
And pillared the blue firmament with light?
Down all the stretch of Hell to its last gulf
There is no shape more hideous than this—
More tongued with proof that Darwin didn't know—
For where in all the world of brutish beasts
Is one from which this monster might have come?

His blood flows in the frail, disfigured babe
O'er which the pale, heart-broken mother bends.
But what to him are those hot tears she sheds,
What cares he for the taunts his children bear,
The hungry cries they raise; their twisted limbs?
Through this dread shape the devil boldly looks,
And in that reeling presence mocks the world!
Through this dread shape humanity is shamed,
Profaned, outraged, dragged down and brought to scorn—
Made to inhale fumes from the slime he spews
And hear him jest at Virtue and at God.

O masters, lords, and rulers in our land,
Must this foul solecism still
Be tolerated in an age when men
Grasp power from the circumambient air
And speak through space across the roaring gulfs?
Must this vile thing be left to wed at will
And propagate his idiotic spawn,
A shame upon the age in which we live,
A curse on generations to be born?

O masters, lords, and rulers in our land,
How may we hope to reckon with this "man"?
How get along without the vote he casts
When there are public offices to fill?
How will it be with candidates when he
No longer hangs upon the reeking bar
Prepared to fight, to stab, to murder, and
To vote for him who furnishes his drinks?

S. E. KISER, in *The Chicago Times-Herald*.

One aggrieved individual apparently thinks that there are still worse things in life than men with *hoes*, to wit :

THE MAN WITH THE LAWMOWER.

[With suitable explanations to Edwin Markham.]

Bowed by the meanness of the act, he leans
Upon the handle, gazes on the ground,
With empty stomach—'tis but 5 A.M.—
And on his back naught but an undershirt.
Who made him dead to other people's rights,
A thing that cares not how much woe he makes,
Stolid and selfish brother to the ox?
His is the hand that shoves that thing along
Whose loud, infernal racket breaks the sleep!
Is this Thing, made in likeness of a man,
To have dominion o'er the neighborhood;
To end the tired dreamer's morning nap;
And shall no victim have the right to shoot him?
Is this the Dream of all the ages past,
For whose sake bends the spacious firmament?
Down all the block to its remotest house
There is no dread so terrible as this—
More potent to overwhelm the soul with wrath,
More filled with portent of a day's unrest—
More fraught with emphasized profanity!

O masters, lords, and aldermen, give ear!
How will ye deal out justice to this Man?
How answer when some gaunt, long-suffering wretch
Whose slumbers he has murdered craves the right
To punch his head off and once more bring peace
To a distracted neighborhood? Ye men—
Ye men who rule the town, 'tis up to you!

—Chicago Tribune.

Woman must of course be given her say in the discussion, and she takes it thus:

THE WOMAN UNDER THE HEEL OF THE MAN WITH THE HOE.

"Down all the stretch of Hell to its last gulf
There is no shape more terrible than this."

From "*The Man with the Hoe*."

Look into that "last gulf," O Poet! I pray thee,
Down, down where its nether carcase leans,
And find there—God help us!—a "snape" to gainsay thee,
A shape that affrighteth the fiends,
And listen, O listen! For through all the thunder
A voice crieth—heavy with woe—

"I, I am the woman, the woman that's under
The heel of 'The Man with the Hoe.'"

She is the begotten of derelict ages,
Of systems secescent the flaw;
She is the forgotten of slugs and ages—
The creature of lust and of law.
The tale of the "Terror"—the ox's brute brother,
Can never be told overmuch,
But she is the vassal, and she is the mother,
The thrice-accursed mother of such.

Look up from that last gulf, thou newest evangel,
Thou builder of ladders for men,
Look up to the pleading, pale face of the angel
That wooeth a Prince of the Pen,
And sometimes, a little, the half the world wonder,
And critics cry high and cry low—
Sing out for the woman—the woman that's under
The heel of "The Man with the Hoe."

HESTER A. BENEDICT, in *The Pacific Ensign*.

Bernhardt's Views of Hamlet's Madness.—Sarah Bernhardt does not believe that the melancholy Dane was mad; neither does she believe that he was fat, as is often alleged. During her impersonation of Hamlet at the Adelphi Theater (see *THE LITERARY DIGEST*, July 8), an expression of opinion from her on these two vital points was obtained by the London *Chronicle*. The following is a part of the interview as given in that paper:—

"Your idea of Hamlet, I take it, is that of a slender, willowy youth?"

"Because the original impersonator of Hamlet was a fat man, therefore the tradition has remained that the noble Dane was of stout proportions. Here again, according to my lights, is an absolute error. He was slender and supple of limb, a man of nerves and intellect, dramatic and passionate in temperament. His hesitations and perplexities are mostly assumed, for as an avenger he

must act a part and appear not to feel the storm of rage and indignation that runs riot in his blood."

"Then," I exclaimed, "you do not believe that Hamlet was really mad?"

"Mad," said Sarah Bernhardt slowly, as she bent down and clasped her hands in her ruddy hair, and her voice was like that of one in a dream. "What could those who said he was mad be thinking of? He feigned madness to effect his purpose, and carry out his ends. Observe, too, how he was all things to all men. Boisterous and amusing in his frolics with Polonius; wicked with Rosencrantz and Guildenstern because he knew them to be evil. Terrible with the king. He suits his moods to his purpose. It is all clear as day! With Ophelia there is no feigning, he is always real with her." And here the cadence of Sarah's incomparable voice changes to the softest music. "No need to speak of love, or pity poor Ophelia. She is Hamlet himself with one tender spot in his seared heart for the beauty he bade depart to a nunnery lest she should turn him from the path of vengeance he has mapped out for his own."

"The great actress knows the secret power of things unsaid, which is more potent than the eloquence of speech."

"Hamlet's insanity would give the lie to the very keynote of his character," continues Mme. Bernhardt. "Remember, too, he was not an Englishman but a Dane. I have endeavored to make him what he was. Perhaps you will be very angry if I tell you that Shakespeare is not English! He belongs to the world. His genius was what genius ever is, universal—cosmopolitan! He spoke in words that have reached the farthest corner of the earth, and found an echo in every heart! So profoundly am I imbued with the religion of Shakespeare that I cut out much less of Hamlet than you do on the English stage."

"Did you consider it a venture to play Hamlet in London?"

"I did, and a very bold venture, too, for a Frenchwoman. But I was accorded a most generous and cordial reception."

"Can any man," I ventured to ask her, "quite grasp the inner nature of Hamlet?"

"Perhaps not," smiled Mme. Bernhardt. "There is so much that is feminine in it. True, it takes the brains of a man, and the intuitive, almost psychic, power of a woman to give a true rendering of it."

NOTES.

It is said that the late Johann Strauss left an estate valued at \$200,000. According to *Music Trades and Musical America*, it is to be divided among his wife, his two brothers, and the Vienna "Gesellschaft der Musikfreunde." His last work was a ballet, founded on "Cinderella," but partly finished, which was to have been produced next season at the Royal Opera in Vienna. One of Strauss's latest waltzes was called after the artist Lehnbach, who had painted portraits of the composer and his wife, and then refused to accept a fee for them.

OPERA in Russia is sometimes subject to unexpected interruptions. The following incident, which recently occurred at the Court Opera-House in Moscow, is related by *Music Trades*: "'Carmen' was being produced, and the commanding general of the garrison had kindly lent a number of privates to represent the Spanish soldiers in the piece. When, in the second act, at the command of Don José, the privates marched on to the stage, they were thrown into confusion by seeing their commander-in-chief sitting in the front row of the stalls. They forgot all about the play, and stood still at attention before the general, as required by military discipline. Regardless of the wild entreaties of the stage manager and the despair of the principal actors, the dutiful soldiers remained thus until the general shouted: 'All right, my children, play away.' 'At your command, general,' answered the men, and then took their part in the piece, the production of which suffered, however, somewhat from the unforeseen interruption."

OF the late Augustin Daly and the possible closing of his theater, the *Baltimore News* says: "But Mr. Daly as a manager was as far removed as possible from the contemporaneous type of the theatrical speculator. He thought always of his art first; to elevate and advance it he sacrificed thousands of dollars. In consequence of this devotion he was enabled to establish the finest theater in America—one whose reputation was world-wide. The desire in London to see Mr. Daly's company was so great that he paid several visits there, and the American verdict upon the organization was warmly indorsed. It would have been a matter of deep regret if the death of Mr. Daly should have scattered this admirable group of performers and have closed the house with which, for so many years, they have been associated. Happily it is not to be; Mr. Daly in his will makes provision for the maintenance of his theater and very generously sets aside a portion of the profits for division among certain of his actors and actresses who served him faithfully while he was manager. The good will of the theater should be very valuable, to say nothing of the copyrights of plays, the costumes, scenery, and properties. It would be a misfortune if a house with such a history and reputation as Daly's should fall into the hands of the speculative element which now has such general control of theatrical affairs in New York."

SCIENCE AND INVENTION.

WHAT IS THERE AT THE NORTH POLE?

THIS is a question that can not be answered with perfect accuracy, as no one has yet set foot on the northern end of the earth's axis. Yet one or two venturesome explorers have come within a few hundred miles of doing so, and their reports, added to our general knowledge of physical geography, can

assist us in getting a general idea. In *The Youth's Companion*, June 22, Admiral A. H. Markham of the British navy, himself an Arctic explorer of no mean reputation, treats the matter as follows:

"We all know that the term 'North Pole' is the conventional name given to an imaginary spot situated at the northern axis of our terrestrial sphere. What we shall find there it is difficult to say. At one time I was under the impression, and it was also the view held by many eminent Arctic authorities, that an archipelago of many islands would probably be found to exist, extending from Franz Josef Land and Greenland across the Pole toward the northern coasts of America and Siberia; or perhaps, as the diurnal rotation of the earth has caused all our continents to be formed along meridians rather than in an equatorial direction, a large continent, like Greenland, might have been found to extend right across the Pole. This conjecture has, however, been effectually set aside by the recent wonderful voyage of Dr. Nansen, who saw no land of any description to the northward of Franz Josef Land.

"It is therefore probable that a large frozen sea, studded perhaps with a few islands, will be found by the venturesome explorer who first succeeds in reaching the Pole. Many singularities and peculiarities connected with it will very forcibly be brought to his notice when he gets there."

The first of these singularities relates to the confusion of directions, both apparent and actual, at the Pole. Says Admiral Markham:

"As the terrestrial pole is situated some twelve hundred miles to the true north of the magnetic pole, it follows that on passing the magnetic pole and continuing toward the terrestrial pole, a southerly course by compass will necessarily have to be followed, because the north point of the needle will be attracted toward the magnetic pole, which will be to the true south of the observer.

"When, in 1876, I was sledging over the frozen sea in my endeavor to reach the North Pole, and therefore traveling in a due north direction, I was actually steering by compass E. S. E., the variation of the compass in that locality varying from 98° to 102° westerly.

"It is not, however, to bearings by compass that I desire to call attention, but to what is termed *true bearing*; that is, the bear-

ings of places on the earth's surface determined by the relative positions that they occupy with reference to the terrestrial poles.

"If our explorer has succeeded in reaching the North Pole, he will be able to assert . . . that he has reached a position where nothing could be to the north of him. For instance, had Herr Andrée succeeded in reaching the North Pole in his plucky and adventurous halloon voyage, he would have had no difficulty, provided there had been any wind, in returning to the south, for the simple reason that he could not have been blown farther north, for every wind would be a fair wind; that is, it would blow him south. Obviously the North Pole differs from any other place in the Northern Hemisphere, inasmuch as it can not possibly have any place situated to the north, to the east, or to the west of it."

Next, Admiral Markham tells us, there is no time at the Pole, or rather it is all hours at once there. He argues thus:

"Those who are conversant with the use of globes know that all the meridians of longitude starting from the equator converge toward and meet at the Pole. They know, too, that longitude signifies time, and that difference of longitude is difference in time. They know very well that when it is noon in London it is about seven o'clock in the morning in Boston, and that when it is noon in San Francisco it is about quarter past three in the afternoon in New York.

"Now as the meridian of London extends to the North Pole, it necessarily ensues that when it is noon in the English capital it must also be noon at the North Pole. In a similar manner, when it is noon at Boston, or in San Francisco, or at Peking, or any other place situated in the Northern Hemisphere, it follows that it must also be noon at the Pole, because all the meridians of those places unite at the North Pole; therefore it is noon all day long at the Pole! Thus there is an entire absence of time at the Pole; but it would be just as correct to say that it is a place where there is a preponderance of time, for it is, practically, any time of day during the whole twenty-four hours, or indeed through the year. In fact, a resident at the North Pole could make it any time of day he might choose to select, with the consciousness that it would be the *right time*!"

The sun, of course, is very near the horizon the year round at the Pole, being just above it during half of the year and just below it during the other half. In conclusion, the admiral reminds us that as the earth is a flattened sphere the Pole is nearer its center than is any other point on its surface, and consequently all bodies weigh more there. He says:

"According to Newton, a body weighing one hundred and ninety-four pounds at the equator would increase one pound in weight at the Pole, simply because the Pole is thirteen miles nearer to the center of the earth than any place situated on the equatorial belt."

The admiral does not advise his youthful readers to start out to see all these wonders, yet it is quite within the bounds of possibility that some one of them may be the first to stand at latitude 90° north and to realize that all directions are merged in one, for him and for him alone.

THE PLAGUE AND THE TRANS-SIBERIAN RAILWAY.

A WRITER in *La Semaine Medicale* says that the plague, or a disease very like it, already exists in Siberia, and that the approaching opening of the Trans-Baikal section of the Trans-Siberian Railroad is a menace to Europe. He reminds us that several years since, two Russian physicians, Drs. Billiarsky and Rechetnikoff, announced the existence in the Akcha district, near the Chinese frontier, of a malady that bore a striking resemblance to the bubonic plague. This disease has recently been studied closely by Dr. Favre of Kharkoff, who finds the likeness still more striking. After reciting the points of similarity in the symptoms the writer goes on to say (we translate from an abstract in the *Revue Scientifique*):

"Besides these clinical points the malady resembles the plague in the part that is played in its propagation by a little animal of

the family of rodents, which is known in Siberia by the name of 'sarbagan'—a part analogous to that attributed to rats with regard to the classic plague. The disease of which we are speaking differs from the latter in never having assumed a clearly epidemic character. Small 'house epidemics' have taken place since 1898, and altho lack of bacteriological data prevents us from positively affirming the identity of the two diseases, we must at least admit that the malady observed in the Trans-Baikal is nearly related to the true plague.

"From what has just been said, it follows that on the day when the trains begin to run in this region Europe may be exposed to infection from this disease, which the natives call 'the sarbagan plague.' But the danger will be even greater when the whole railway is in operation, that is to say, in five or six years, and when a 'far-Eastern express' is running weekly, putting the coast of the Japan and Yellow seas within fifteen days of Paris or London. . . . It may be, then, that China will shortly occupy the attention not only of the diplomats but of the medical profession, and that we may have to call a hygienic congress to deal with the situation."—*Translation made for THE LITERARY DIGEST.*

THE STORY OF SMOKELESS POWDER.

UNDER this head Hudson Maxim contributes to *Cassier's Magazine*, July, a historical account of the invention and development of smokeless powder. According to Mr. Maxim the first step toward the invention of such a powder was taken in 1832 when Braconnot of Nancy discovered that starch and similar bodies were rendered highly combustible by treatment with nitric

acid. This discovery led to the preparation of a true guncotton by Schönbein in 1846 and of nitroglycerin by Sobrero in 1847. Of course none of these high explosives can be used as gunpowders in their ordinary state. But as early as 1866 Frederick, now Sir Frederick, Abel patented in this country a modification of guncotton, which, if we are to believe Mr. Maxim, was a very respectable smokeless powder. He says:

"In a patent secured in the United

States in November, 1866, Abel describes a method of making solid masses of a mixture, in a fibrous pulped state, of soluble and insoluble guncottons, by subjecting the material to a solvent of the soluble guncotton, thus making the solvent serve as a binding medium for the insoluble guncotton, either in conjunction with or without pressure. In this way grains are formed, of sufficient density and hardness to adapt them for use in guns.

"The import of this invention is better realized when we take into consideration the fact that the introduction and employment of modern smokeless powders has brought about a complete revolution in firearms and in projectiles. Abel's invention was as great a step as could well have been made in smokeless powders in advance of radical improvements in firearms. Smokeless powder could be made to-day exactly according to his above-mentioned invention which would give very good results, indeed, in the smaller caliber shoulder arms now in use; while none of the recent smokeless rifle powders could be made to give much better results in the old Martini-Henry rifle than were then attained by

Abel with his powder, particularly if we except nitroglycerin compounds."

The next step, Mr. Maxim tells us, was the patenting in 1875 of nitrogelatin by Alfred Nobel. This substance, a combination of nitroglycerin and guncotton, was very similar to the modern cordite and ballistite, and the inventor is regarded by Mr. Maxim

as having anticipated these compounds. Forms of smokeless power for sporting purposes were also made by Colonel Schultz, an Austrian, in 1860, by Prentice of England in 1866, and by Reid and Johnson in 1880. All of these were guncotton mixed with some substance to make it explode slowly. The Lebel powder, made for the French

UNBURNED AND PARTIALLY BURNED GRAINS OF MAXIM-SCHUEPPHAUS SMOKELESS CANNON POWDER.

Government about ten years ago, whose manufacture was kept mysteriously secret, is now known to have been guncotton softened in a solvent and then dried in sheets and cut into grains. Says Mr. Maxim:

"The French powder thus made was exceedingly dense, hard, and horn-like; so much so, that it did not ignite readily, except with a very strong primer, and it would not burn through a sufficient thickness to permit of a granulation coarse enough to enable the use of the charges requisite to give desired velocities. Nevertheless, the most exaggerated accounts were current at the time of results attained with this product."

Mr. Maxim in this country and Messrs. Abel and Dewar in England began working at the problem of producing a practical gunpowder by combining guncotton and nitroglycerin about the same time—in the late eighties. A contest in the courts was ultimately the result, which ended in invalidating both Maxim's and Abel's patents, owing to the earlier patent of Nobel, altho there is no evidence that the latter intended his compound for anything but a blasting agent. Mr. Maxim then turned to the employment of some inert sticky substance with the guncotton, to prevent its burning too rapidly. Says Mr. Maxim:

"This was the primary reason for adding oil and other substances known as 'deterrents' for the purpose of slowing combustion and for lessening susceptibility to detonation.

"However, it was found that the hard guncotton colloid, instead of burning too rapidly, was too slow, and would not burn through a sufficient thickness of material to permit of coarse

enough granulation to enable charges large enough to be employed to give requisite velocities without dangerous pressures.

"The best of all softening agents is nitroglycerin. The reason for the employment of so large a quantity of nitroglycerin in cordite as 58 per cent. is to so soften it and increase the rapidity of combustion that rods or sticks of the material may be made large enough to reduce the initial area presented to the flame of ignition to a minimum per unit of weight."

The writer claims to have been "the first to introduce to the United States Government any form of smokeless powder," and likewise to have been "the first to make smokeless powder in America." In 1893 he joined forces with Dr. Robert C. Schüpphaus, who had already invented several kinds of smokeless powder, and they have since worked in concert. Their present product, which has been adopted by the United States Government, is marked by the use of gelatin pyrox-lylin with acetone, which renders the mass plastic, so that it can be molded into grains as desired. Says Mr. Maxim:

"In 1894 the writer applied for a patent on an invention which has since been patented all over the world—a process and a die for the manufacture of multi-perforated smokeless powder grains, whereby the dense and stiff, tho plastic, material, with a minimum of solvent, could be practically and rapidly formed into multi-perforated grains of any desired size and with any desired burning thickness between the perforations to adapt the grains to use in cannon of all sizes."

The writer concludes with a few general remarks on gunpowders and other explosives. He says:

"In the popular mind many erroneous impressions prevail concerning the combustion of gunpowder and the meaning of the word explosion. There are two ways in which explosive compounds are consumed. One is called detonation, which is a form of reaction, so rapidly propagated through the explosive body that it is termed an explosive wave. By the other method, the

explosive body is burned from exposed surfaces, and is merely a form of rapid combustion.

"Detonative substances are usually termed high explosives. Those which burn from surfaces may be termed combusive explosives. Combustive explosives, requiring an appreciable time for their consumption, are adapted to use as gunpowder by giving the projectile time to be moved forward in the bore of the gun

before the complete consumption of the charge, thus providing space for the products of combustion and obviating dangerous pressures.

"The best form of gunpowder grain is one whose consumption will be completed at the instant before the projectile leaves the gun, and one so formed as to present the minimum surface to the flame of ignition, and the maximum surface at the instant before complete consumption. Such forms of grains produce what is called progressive combustion, by which the pressure is well maintained behind the projectile throughout the entire length of the gun. Such progressive combustion is best secured by multi-perforating the grains, as is done in the Maxim-Schüpphaus smokeless powder.

"Smokeless explosives are compounds in which the oxygen is in chemical union with the combustible elements—carbon and hydrogen. Associated together in the same molecule is nitrogen, an element of weak affinities. Such bodies,

when liquid, like nitroglycerin, are easily detonated.

"If guncotton, however, be dissolved in a suitable solvent and dried, a very hard and hornlike substance is formed, which, if made into grains of a suitable size, is absolutely safe against detonation under all conditions to which it may be subjected as gunpowder.

"A pure guncotton colloid, however, is too hard, and will burn through too small a thickness of material to adapt it to use as gunpowder, because it requires such fine granulation that full charges can not be employed without giving dangerous pressures. If, however, a small quantity of nitroglycerin, say 10 to 15 per cent., be added to the guncotton solution, the grains will burn much faster and consequently may be made larger, and more of the material may be put into the gun without exposing so much

burning surface as to be dangerous. The larger the quantity of nitroglycerin that is added, the more rapid will be the combustion, and the larger may be the grains. The British Government has found it necessary to employ as much as 58 per cent. of nitroglycerin in order to secure sufficiently rapid combustion to adapt cordite to large guns. If, however, the smokeless powder compound be multi-perforated, as is done in the Maxim-Schüpphaus powder, the material may be made much harder, on account of the reduction of initial burning areas per unit of weight.

"The products of combustion of smokeless power being practically all gaseous, it is easy to understand why it is so much more powerful than black gunpowder, only 44 per cent. of the products of combustion of which are gaseous. Smokeless powder is more economical than black powder, altho costing twice as much. During the last six years the United States Government has conducted exhaustive experiments with the Maxim-Schüpphaus smokeless powder in the form of multi-perforated cylinders, and it has been adopted in both branches of the service."

Fighting Hailstorms with Artillery.—"In London some twenty-five years ago," says the Roman correspondent of *The Lancet*, "a fog of almost unprecedented duration and density inflicted such damage, notably on a great cattle show held at Islington, that it was seriously proposed on future visitations of the kind to clear the air by artillery, even at the cost (as then estimated) of £10,000 [\$50,000]. The proposal, transferred to Italy and applied to her hail-storms, has quite lately been energetically carried out—mainly on the lines recommended and practised in Styria by Signor Stiger. At Turin a member of Parliament largely interested in agriculture, Signor Ottavi, has shown that the mortar used in Styria, and still more the 'Unger cannon,' also in use there, may be constructed in any well-appointed Italian foundry—so simple are they in construction and operation. The mortar, for example, with a charge of from 80 to 100 grams of gunpowder, rammed in not very tightly and plugged at the mouth with a stopper of unseasoned wood, can when fired off in repeated volleys keep a hail-cloud at bay and even break it up and disperse it. Throughout Italy, but more particularly in the more robust, wealthier, more enterprising North, one reads of experiments tried with the most gratifying results in this new method of dispersion of hail. Let me quote an instance just communicated to me. In various districts of Monferrato in the Alta Italia a violent thunder-storm accompanied by hail was devastating a series of inland farms at Trino Vercellese, Camino, Pontestura, and Quarti. The storm was signaled to the people of San Giorgio Monferrato as 'terrible,' so they lost no time in preparing to give it a 'warm reception.' They had quite a park of artillery prepared, the cannon, as described by Signor Ottavi, being in great force. On came the storm-cloud and out flashed the volleys in rapid succession, till after two hours' bombardment the cloud revealed to the eye-witnesses a large rent through which the blue sky was visible. It thereafter drifted away, leaving the 'colles apertos' [open hills], of which, according to Virgil, 'Bacchus' [the grape-vine] is so enamored, in full possession of all their menaced riches and smiling at the destruction they had escaped. Not a hailstone fell, but from the ragged edges of the retreating cloud there dropped a gentle and not unwelcome dew, hardly amounting to rain. The vine-dressers, turned artillery men for the nonce, find the practise more amusing and less costly than insurance. Of the two 'charges' they prefer that of the 'Unger cannon.'"

Is the Climate Changing?—This question is answered in the negative by Prof. H. A. Hazen, who writes as follows in *Popular Science*, July: "This subject is of the extreme interest and merits a most thorough study. We find the 'early' and the 'latter' rain to-day in Palestine precisely as described 3,500 years ago. 'Jordan overflows all its banks' in February to-day exactly as it did in Joshua's time, 33 centuries ago. Plants taken from mummy cases in Egypt, which must have been gathered more than 5,000 years since, are practically of the same size and have the same appearance as those growing to-day. Records of vintages in France for over 700 years show practically the same dates as to-day. Actual observations of rainfall for over 200 years in France show no change. Observations of temperature for almost

200 years at St. Petersburg show no change appreciable to us, tho of course the earliest observations were extremely crude and somewhat unreliable. Facts of this kind might be adduced to fill a small volume. On the other hand, we have records of most extraordinary cold weather in ancient times. One winter, the light wine in Italy froze. Another winter the river Po froze over so as to bear teams (an unheard-of phenomenon to-day). In this journal for June, it is stated that 'Parnassus and Soracte, now free from snow, were covered with it in classic antiquity.' Also, 'the name, Greenland, which strikes us as so singularly inappropriate, was not inapplicable at the time it was named, in the fourteenth century.' It is entirely probable that descriptions of the cold in ancient times were much exaggerated. Parnassus and Soracte have snow at times, and, in earlier days, when protection against the cold and snow was much less than now, a little snow would go a long way. The early voyagers from Iceland, more than 1,000 years ago, leaving a land of almost perpetual ice and snow, and reaching a land in the summer with its beautiful green color, to their unaccustomed eyes, would very naturally give the name Greenland to it. At the summer-time, it is said, that Greenland presents a most beautiful green near the Danish settlements, to this day. Our oldest inhabitants, who have been wont to describe the terrible cold and deep snows of their boyhood days as incomparably greater than anything which does or can occur to-day, have completely lost their reckoning the last winter when reading of a ship that had sunk in New York harbor by weight of the ice upon it; also that Washington had had 34 inches of snow on a level, and the lowest temperature ever noted in that fair city. I am sure a careful study will show no appreciable change in the climate of this earth since the early historic times. Of course, nothing here adduced touches climatic changes in glacial times, or in prehistoric times, which changes have been established beyond question."

Thermometer Scales.—"According to the usual practise," says the *Revue Scientifique*, June 24, "the graduations on thermometer scales and levels are marked by scratching the surface of the glass in some way, at each point where there is to be a graduation. But the glass is weakened in each of these points, and is very apt to break, which is dangerous in the case of boiler levels. It is evident that this could be avoided by softening slightly the surface of the glass at the desired points and mixing some coloring matter with it. An American firm asserts that it has obtained this result under the best conditions by passing over the tube, where a graduation is to be marked, an iron disk turning at the rate of 2,500 revolutions a minute. The friction causes a rise of temperature sufficient partially to melt the glass, and at the same time small particles of iron are detached from the wheel and become incorporated in the softened glass."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

"A FEW days ago in Paterson, N. J.," says *Electricity*, "the X-ray was probably the means of saving the life of a fifteen-months-old child who had swallowed a nickel which had lodged in its throat. The X-ray picture showed the exact location of the coin and enabled the delicate and dangerous operation known as esophagotomy to be successfully performed."

In a recent clinical lecture, Dr. Stewart McGuire exhibited a patient who illustrated the fact that skin-grafts do not always acquire the color of the individual on whom they grow. "Some of you," said the lecturer, as quoted in *The Southern Medical Record*, "will remember this negro, whose leg was amputated in the clinic over a year ago. Owing to an effort to save too much of the limb, sloughing occurred in the flaps, and a raw granulating surface resulted over six inches in diameter. You will recollect that as soon as active suppuration ceased he was brought before you again, and the defect covered by Thiersch's method of skin-grafting. Usually skin-grafts are cut from the individual's thigh, but in this instance they were taken from the leg of a white man which had been amputated a few moments before. I remember telling you that it seemed a shame to mutilate black skin when so much white skin was going to waste, and expressed my belief, based on the investigation of Karg, that pigmentation would occur and that the white skin would gradually become black. The operation of skin-grafting was a perfect success, and the patient was discharged in two weeks with a well-healed stump. He comes back for exhibition to-day. The artificially formed skin is firm, pliable, and painless, but as white as the day it was implanted. Fortunately, owing to its position, it is a matter of no consequence. Had it been upon the face, and had the colors been reversed, there might be a lively suit for malpractice."

THE RELIGIOUS WORLD.

CARDINAL VAUGHAN ON AMERICAN EXPANSION.

THE speech of Cardinal Vaughan, Archbishop of Westminster, at the banquet of the American Society in London, was one full of hope for the outcome of free institutions and Christian civilization as applied to the Oriental races. He said in part :

"It seems to me from the evidence of past years, and from the manifestation of friendly feeling expressed at this table by your Ambassador and Senators who have spoken, that we are preparing the American and English peoples for the great work before us in the century to come.

"You no longer, if I may speak to my American cousins, you no longer are a self-contained power. You have come forth from your continent, forced by the circumstance of the acquisition of lands abroad. You stand with your foot on the threshold of the vast continent of Asia. You have entered into the comity of nations that has declared itself in many ways interested in the welfare and future of the Asiatic continent. You will never be able to withdraw the influence you have, and it will be greater in the future than ever it was in the past. It must make itself felt on the tremendous population of Asia, which is waiting for the advent of true Christian civilization."

CARDINAL VAUGHAN.

The Washington Times (July 6) thinks Cardinal Vaughan's speech an impressive and important utterance. It says :

"When his eminence, as a Briton, and with all a Briton's love for Anglo-Saxon civilization, said : 'I have in my heart the deep-seated and mature conviction that the welfare of the Christian world, especially those parts which have not yet been brought into the pale of civilization, depends, in a great measure, on the good feeling and cooperation that shall exist between the American and English peoples,' he spoke what every thinking man who uses our common language, and who lives under theegis of Anglo-Saxon institutions, must feel and know to be true.

"But, Cardinal Vaughan went further, and directly invoked the cooperation of Anglo-Saxon peoples in spreading the freedom and civilization which they enjoy, among the teeming millions of Asia, as a means to prevent the subjugation of these same millions to the autocracy of Russia. In this we are able to see the ideas, ideals, and principles of the British citizen, rather than the official views of the Roman cardinal.

"It will be asserted that such pregnant speech could not have been made by a member of the Sacred College, unauthorized by the Vatican ; but we do not regard a point of that kind as well put. If the Roman side of the Archbishop of Westminster is to be taken into account at all, it must be so taken with strict reference to the tendencies and policy which have marked the pontificate of Leo XIII. for the past twenty years or more. During that time we have seen the Pope detach the French hierarchy from the cause of monarchy and admonish it to support that of the democratic masses. We have witnessed a growing disposition on the part of the papacy to actively espouse the cause of the people against oppression, whether of political or economic character.

It is very possible, then, that a prospect of the religious freedom which Anglo-Saxon civilization promises to the pagan hordes of Asia and Africa may appeal to the head of the church as a golden one for the spread of Christianity, and Cardinal Vaughan may indeed have been exhorted to help along the good work.

"However that may be, it is satisfactory to know that a force in Europe which in times past we have been inclined to regard as conservative, if not reactionary, is in some sense committed, by the words of Cardinal Vaughan and other exponents of its sentiment and authority, to an indorsement of America's new position as a progressive, developing Asiatic and world power. It amounts to fresh evidence that the *bona fides* of the American people, in their radical departure from the segregated provincialism of their old system and policy, is recognized and appreciated among the intellectual and civilizing forces of the Old World."

The New York Commercial Advertiser (July 5) thinks the speech indicative of a great change in the relations of republican Government and the Roman Catholic church :

"The most momentous utterance of yesterday was Cardinal Vaughan's speech in London indicating that the Church of Rome would unite with England and America against Russia in the future of China. With the ending of the temporal power of the Pope, and with the growing hostility of royalty in Europe, the Catholic church is realizing that its greatest power in the future must be in the free countries, through the people whom it knows so well how to sway. This in its turn has counteracted on the church, making it broader and more liberal, and adapting it to the form of government between which and itself there was formerly the greatest mutual antagonism."

BISHOP JOHN PHILIP NEWMAN.

NOT only as a preacher and administrator, but as an example of a modern Protestant ecclesiastic and diplomat, was Bishop Newman notable, and the religious and secular press unite in expressing the opinion that his death is a loss to religion and to the Methodist Episcopal church. Bishop Newman first attained prominence in the reorganization of the church in New Orleans just after the war. The New York Sun thus speaks of his work at that time and of his later career :

"He displayed great energy and executive ability, qualities that aided him notably in his later life. In 1869 he was assigned to the newly formed Metropolitan church in Washington, and from that time dates his success in getting what he wanted. He met General Grant, then President, and his fortune was made. When his term as pastor of the Metropolitan Church ended, the President appointed Dr. Newman to an office created for him and held by no one since his time, the office of traveling inspector of United States consulates. This post Dr. Newman held for two years, long enough to travel leisurely around the world and take notes for a second book, called 'The Thrones and Palaces of Nineveh and Babylon.' In the course of his official travels he located, to his own satisfaction, the site of the Garden of Eden. Whether he made any report on the consulates of the United States does not appear from the list of the publications of the Government.

"On his return 'Parson' Newman went again to his old church in Washington ; then he engaged in journalism for a time, and then went for a third term to the Metropolitan Church. In 1880 he made his first attempt to secure an election as bishop at the General Conference of the Methodist church held in Cincinnati. He failed there, however, and in 1882 accepted a call to become pastor of the Madison Avenue Congregational Church in this city. He held this pulpit for a time, but left it by resigning after he had been removed from the pastorate. The church is not now in existence. In 1884, after leaving this Congregational church, Dr. Newman visited California, and during his stay there preached a funeral oration over the young son of Senator Leland Stanford, for whom later the Leland Stanford Junior University has been named. This sermon is said to have brought Dr. Newman a present of \$10,000. It was eulogistic to the last degree, and is said to have compared young Stanford with the Founder of the Christian religion. In 1885 Dr. Newman was invited by General Grant, then dying of cancer, to stay by his side. He was present

at the general's deathbed and preached at his funeral. He was a preacher at the funeral of General Logan a few months later.

"In 1888 Dr. Newman made another effort to obtain a bishopric in the church to which he had returned after his misadventure with Congregationalism. At the General Conference of the Methodist church, held in the Metropolitan Opera-House in this city, Dr. Newman at last got his prize. His success was the result of long and well-directed efforts. Nothing that could aid him was neglected. Social influence, the influence of the Grand Army of the Republic, the influence of a well-directed lobby, the influence of a house packed with applauding friends; all these were used by the man who wanted to be a bishop. The bishops of the church disapproved Dr. Newman. It was reported that fraudulent ballots were found in the boxes, tho the tellers never disclosed the real facts. But the candidate's power was too great; nothing had been left undone, and Dr. Newman was elected. The Reverend Doctor had directed his campaign from a box in the Opera-House, where his lieutenants on the floor and in the galleries reported to him constantly; and after the announcement of success on the fourteenth ballot, the new bishop received his admirers as a triumphant general.

"As a bishop Dr. Newman disappointed his detractors and opponents and pleased his friends. His executive ability stood him in good stead and his work was well done. He conquered much of the distrust that his methods had excited, and won a reputation that his career for the preceding fifteen years made unexpected."

The *Rochester Post-Express* thus speaks of his gifts as an orator, writer, and diplomat:

"He was an orator of the old type, the type of the days of Clay, Calhoun, and Webster. He studied the best models the United States Senate could afford, mastered and appropriated as far as possible their best in manner and in diction, and transferred them to pulpit and platform. In person Bishop Newman was always commanding; in conduct always dignified. He did not hesitate to say things which he knew would awaken antagonistic utterance. He had measured the result of his words and deeds and was always composed when contention was provoked. He had a cosmopolitan mind, and his extensive travels in the lands of the five great monarchies of the East furnished him material for creditable work in Assyriology and Egyptology. His knowledge of affairs fitted him for practical politics, in which he did not disdain to exert his influence as opportunity offered. While he was Republican in his politics, he never ceased to be broad and statesmanlike. He was a partizan, but not in a narrow sense."

The *Baltimore Herald* says of him:

"The death of Bishop John Philip Newman, of the Methodist Episcopal church, has removed from his earthly labors a notable figure in the religious history of America. He was distinguished as both a preacher and a writer, and was conspicuous for being one of the most eloquent of pulpit orators. He will long be remembered for the part he played in the progress of his church during the last thirty-five or forty years.

"While there is no doubt that Bishop Newman owed much of his celebrity to his intimate association with public men at the capital, he was, withal, a man of force and character, one who would probably have distinguished himself even if his lot had not been cast in a city which was the seat of government and the center of official and exalted influence. It may be remarked as rather singular that Bishop Newman's death occurred at a place not far removed from the spot where General Grant breathed his last."

The *Buffalo Evening News* says:

"Political opponents of General Grant, during his occupancy of the Presidential chair, turned their sarcasm upon 'Grant's pastor,' as they delighted to style Rev. Mr. Newman in the days when the same political critics created what was styled President Grant's 'Kitchen Cabinet.' But amid all the political stories of a deceptive character, which no party ever made more bitter toward their opponents than the Democratic Party, Bishop Newman stood undismayed and unscathed. He was a man of attractive manners and of great personal magnetism. To know him was to love him. Without contention and free from animosity, he brought the most intelligent men of the country captive to his influence, for he was eminently a man of peace and good-will. His learning carried him into the Society of Biblical Archaeology, and he enriched the library of the society with several works of great merit. His descriptions of Oriental travel remain as proof of his fine style of description and intelligent observation."

Bishop Newman's name is not without honor in his own city. The *Washington Star* says of him:

"Dr. Newman was perhaps more thoroughly identified with the capital than with any other city. His

eloquence and his splendid Americanism endeared him to the people even beyond the confines of his denomination. His association with President Grant, too, was a factor in his fame, which in time spread to other parts of the world. Bishop Newman was a fine type of the American religious worker, intellectual, zealous, tactful, and sincere. He breathed the spirit of uprightness, and whether in sermon, in prayer, or in literature he touched a chord which gave helpful vibrations to the hearts of his hearers."

The editor of *The Northwestern Christian Advocate*, writing just before Bishop Newman's death, said:

"Bishop Newman's services have run through many long years. His early ministerial training and actual work were thorough. He then aimed at highest excellence. Some of the early-morning addresses he has made during annual-conference sessions have indicated what are the elements of success upon which he depended and upon which he urged young ministers to depend. He glorified hard work and untiring devotion to that which a man pledges himself. We heard many of the lectures alluded to, and we are sure that the bishop's high standards, fervent exhortations, and earnest appeals made deep impressions upon many,

BISHOP JOHN PHILIP NEWMAN.

and particularly upon those who were in the flush of their early ministry. The church now has many bishops, and they individually stand for contrasting and varying types. Bishop Newman is of his own valuable kind, and as such has made a useful and valuable impression. He has cultivated some fields of thought and culture into which few others have cared to enter. His knowledge has given him brotherhood and influence among many kinds of men. He has traveled far and wide, and during every voyage he seems to have gathered stores which were disregarded or overlooked by the majority of other travelers. He has friends among scholars and thinkers of high degree, who always are glad to listen to him in pulpit and on platform."

IS PRESBYTERIANISM DECLINING IN NEW YORK?

THE statement has been made more than once of late that the Presbyterian church is not maintaining its hold in the metropolis. In particular the New York *Sun*, which is always interested in questions of religious and social as well as of political morals, has recently printed a number of articles and letters in proof of this assertion. *The Sun* points to the fact that at the present moment there are ten Presbyterian churches in the borough of Manhattan which are without pastors or are in a distracted or declining condition. Others which were once notable and prosperous churches are maintaining themselves only with the greatest difficulty. "Dr. Hall's old Fifth Avenue Church, once the richest and most powerful Presbyterian church in the world, remains without a pastor." The Brick Church is soon to be deprived of Dr. Van Dyke, while a Jewish congregation is to buy Calvary Church in 116th Street.

These statements were lately disputed in the New York *Observer* but have apparently been confirmed by the New York presbytery itself, which very recently referred to the facts in dealing with the McGiffert case, hoping by this means to induce Dr. McGiffert to retire voluntarily from the church without further weakening it by the turmoil and animosities of a heresy trial. Thus far, however, Dr. McGiffert has shown no signs of yielding, and has reiterated the statement that his faith is not in conflict with that of the Presbyterian church. As to the causes of this decline, *The Sun* is disposed to think that Dr. McGiffert and the type of thought he represents are largely to blame. It says:

"Various explanations of this decline of Presbyterianism in New York are made, but, undoubtedly, it is a distinct lapse of faith which is at the bottom of the trouble. The church of the Westminster Confession gets its sole vitality from earnest conviction, for its manner of worship is comparatively bare, with few appeals to merely esthetic tastes. People must believe heartily in the Presbyterian doctrine in order to be content to remain in its simple fold. An unusually brilliant preacher may hold together a large congregation as a personal belonging, but he is always a very uncertain reliance. He may go, or he may lose his popularity with advancing years, for tastes in preaching change, and the less the distinctive faith of a church is the more likely it is to be captious in its criticisms of its pulpit. Only when the appetite for the doctrine preached is hearty is the permanent success of the preacher assured.

"Social influences, consequently, have drawn away from the strength of the Presbyterian churches of New York. People who have lost devotion to tenets peculiar to their own denomination and become indifferent to them are easily subject to such distractions. The teaching of one church satisfying them as well as that of another, they are free to select their religious home according as it appeals to their fancy in the matter of decoration or the more agreeable social character of its inmates; and Presbyterianism, comparatively bare and ascetic, suffers accordingly.

"That is the real reason of the decline of Presbyterianism in New York; it is simply a decline of faith both in the pulpit and the pews. The movement for a revision of the Westminster Confession showed the growing indifference to doctrine once stoutly held, and then came the theological assault on the old belief in the Bible. The second may have affected the clergy more than

the laity, but its destructive influence on a church like the Presbyterian, whose life is altogether in its doctrine, aided by socially disruptive tendencies, goes on with increasing force. The only remedy is a revival of genuine and profound faith in the doctrines which once made the Presbyterian denomination the most powerful in New York."

A number of *The Sun's* Presbyterian readers have expressed their views of the case. One correspondent attributes the decline to three causes: that Presbyterians are too much inclined to controversy; that there is an inordinate zeal in behalf of foreign missions; and that a "cold Calvinism" prevails, which no longer appeals to the people of this age. Another correspondent, the Rev. Dr. F. P. Mullally, who is a member of the New York presbytery, disputes all three of these allegations, and says:

"It is not true that Calvinism 'does not appeal to the people.' What is Calvinism but the doctrine of the living, sovereign, absolute, unconditioned Creator, of man's immortality and subjection to moral government, of sin, of justice, of mercy, of redemption, of a judgment to come, of the Cross of Christ? These great truths have ever appealed to the people, attracted their attention, won their faith, and excited their emotions, as no other ideas have done. It is not the 'people,' but the critical few, distinguished by sophistry and worldly advantages, that turn from Calvinism. The common people have ever heard its teachings gladly. The things which it declares are often hid from the wise and prudent and revealed to babes. To counsel the Presbyterian church to give up Calvinism in order to save her life is to counsel her to go out of existence in order that she may live.

"The preachers of the New York presbytery ceased to preach Calvinism before the decadence of Presbyterianism began in this city, and accordingly it can not be the cause of the disease. Before, when Calvinism was preached, the condition was healthy. Would not a true science of ecclesiastical pathology recommend a return to that which seemed conducive to progress, to gaining popular favor, and obtaining the divine blessing?

"Your correspondent asserts that it is 'works' and not 'faith' that 'the world is looking for,' but can there be any works worth 'looking for' if there is no faith to supply motive and guidance? It is by believing that all which is worthy of the name work lives and moves and has its being. Anything which men do when not prompted by belief is not rational human performance at all, any more than are the movements of a brute; in all philosophy faith and works, while distinct, are inseparable and not opposed.

"He attributes the trouble to the form of worship in the Presbyterian church, but the adversity to be accounted for has been coincident with a decided departure from the simplicity of our ancestors, and a growing imitation of Prelatists and Catholics. If ornate form has anything to do with the malady it must be as a symptom of the disease, not as something to be encouraged and fostered, but to be checked and cured. The best form of godliness is that which best expresses the power thereof, and in view of this end it were better to err on the side of simplicity than of gorgeous display. He who is thoroughly indoctrinated in Presbyterianism would prefer the real and spiritual in a barn to the apparent and imaginary in a grand temple. If the hearer and the preacher are truly Presbyterian, no mere outward beauty of form can separate them. The right prescription for New York Presbyterianism is not more form, but more of the distinctive truth of the Gospel. The remedy, compendiously expressed, is Calvinism in our pulpits and in our heads and hearts—more of 'the good old religion.'"

The writer just quoted also disputes the claim that there is too much controversy in the church, and asserts that Paul and Jesus Christ were themselves constant controverters. Another Presbyterian writes to show that Dr. Mullally is wrong. He says:

"Dr. Mullally seems in his combative spirit to countenance church quarrels, for that is about what a controversy in a church amounts to. Does anybody deny that the recent controversy within the church 'has left an aching void'? Presbyterians are tired and wearied of the diabolical controversies. The 'peace and unity' of the church never have been maintained through controversy, but by the adherence to 'the faith delivered to the saints.'"

There has been no little confusion in the church ever since the adjournment of the Washington Assembly. Is it from heaven? 'God is not the author of confusion, but of peace.'

"What, Christ a controvertor? Not by any means. Altho 'He was Himself a Jew,' Christ was a Jew after the flesh, not after the spirit. Christ never controverted with those Jews who believed in His Messiahship. He says of the Jews in His day, 'Ye are of this world; I am not of this world.' The Jews believed one thing and Christ another; hence they were not one among themselves. When Jesus controverted with the Jews it was because they did not believe in His divinity and the cause He founded and represented. On the other hand, Jesus never controverted with His beloved disciples. He taught them, but did not debate with those who believed that He was the 'Christ, the Son of the living God,' viz., the Apostles and disciples. They, too, were Jews. Christ was 'constantly in open disagreement' with those who believed Him in league with Beelzebub, the prince of devils. Christ never controverted with the early Christians. He invariably taught them, not as a scribe, but as one having authority."

"Nowhere in the New Testament can Dr. Mullally cite Paul as controverting with the churches that he organized. On the other hand, he continually taught them, but controverted with the Felix, the men of Athens, or the shrine worshippers of Ephesus. So with the New York Presbyterianism. When the presbyters are at peace with each other the Master will show them His work.

"Dr. Mullally does not need to tell me what 'cold Calvinism' is, for I have Calvin's Institutes and have had three years' training in the citadel of American Presbyterianism, and know the system quite thoroughly. If I went down on the Bowery or over in 'Little Africa' or elsewhere to preach to the 'toiler' or the 'submerged tenth,' would I preach Calvinism? No; but Christ, the Son of the living God. When Christ is made the central theme, instead of doctrinal differences, New York Presbyterianism will take a new lease of life, for, 'if I be lifted up,' says Christ, 'I will draw all men unto Me.' No, Calvinism 'does not deny that Christ died for all mankind,' but it asserts that Christ died for the 'elect.' His death, says Calvinism, had a particular reference to 'some' that it did not have to all. Sinners care little about hearing anything else save Christ and Him crucified. Dr. Mullally, I fear, would do with Calvinism as the Christian Scientists do with 'Science and Health'; they put it ahead of the Bible.

"If, indeed, the decadence of Presbyterianism in New York is due to a 'decline of faith in the pulpit and in the pews,' what is it that brought about the declension, if it is not doctrinal controversies and assaults on the foundation of faith itself? Let us, like the Episcopalians, make the services of the grand old Presbyterian church more ornate and beautiful, more attractive, so that they will appeal to the esthetic tastes of the people. Then there will be a marked increase in interest in all lines of Christian activity."

A Samoan's Logic.—The untutored savage is sometimes more logical than the most orthodox Puritan in his application of biblical doctrine or story. A correspondent of the *San Francisco Chronicle* tells the following tale of his experience with one bright South Sea Islander. He says:

"While in command of a guard protecting the United States consulate at Apia, the writer was furnished with a native force of Malietoa warriors, whose familiarity with the environment was supposed to recommend them for use as scouts. During the night of one of the first Sundays passed on shore, while my entire force was lying behind the barricades expecting momentarily to be attacked, these gentle and guileless Christians requested permission, through a missionary who was a refugee at the consulate, to sing a few hymns. It is hardly necessary for me to add that they were refused.

"Imagine my surprise and disgust a few days later to see one of these meek and lowly converts, hideously bedaubed with paint and stripped nearly naked, triumphantly carrying through the streets the head of an enemy (who, in this case, was said to be his own cousin) as a mark of Christian spirit and brotherly love, the aforesaid head having been severed by the then possessor in a skirmish that morning. Expressing somewhat strongly my surprise to the missionary that one of his flock should so quickly

have lapsed into semi-barbarism, I was told, with an expressive and deprecating shrug of the shoulders, that it was Faa Samoa, and could not be helped. 'But,' I asked, 'do you not tell them that such an atrocity is unchristianlike and abhorrent to our religion?' 'Oh, yes,' replied Mr. —, 'but they answer by quoting the fifty-first and fifty-fourth verses, seventeenth chapter of the first book of Samuel, and the Gospel according to St. John, and ask, with a devout air of truth and triumph, if, as the Scripture says, David, one of God's chosen, cut off the head of his enemy, the Philistine Goliath, whom he killed in battle, and exhibited it, while Simon Peter, the Apostle of Christ, drew his sword and smote off the ear of the high-priest's servant, and it was not right, why then did God approve?'"

Mr. Markham's Remedy for the "Man with the Hoe."—At a church gathering in San Francisco lately, Mr. Edwin Markham offered his own solution of the problem suggested by his famous poem. His solution is in part a subjective and in part an objective one. It begins with a readjustment of the heart, which when consummated must of necessity blossom into deeds of human sympathy and brotherhood. The following report of his words is taken from a recent number of *Signs of the Times*:

"I have been asked to say a few words about 'The Man with the Hoe,' and my solution of that problem. I have no new solution. The problem is as old as humanity. The men who built the pyramids struggled with that problem. The men who are building London are struggling with it to-day. I have but one solution—that is the application of the Golden Rule. We have committed the Golden Rule to heart; now let us commit it to life. [Applause.] That is the only solution.

"As to what steps should be taken, I can not say. Various solutions are offered. The Republicans offer one solution, the Democrats another, the Socialists another, and the single-tax people have their solution. In my judgment it is wise for us all to consider all these questions, and try to find some way of enlarging the sphere of justice for all men.

"I believe that the industrial question is a religious question. [Applause.] I believe that everything that has to do with the welfare of men, in politics, in industry, is religious at the bottom; that everything shows our relation to one another and our relation to the Father of life.

"I believe that Jesus of Nazareth is the Father, the Savior of the human race. In His principles of justice, in His principles of brotherhood, we find the solution of these questions. Fraternity to me is the dearest of all words, and in that word is the hope of the human race."

RELIGIOUS NOTES.

IN India there are 80,000,000 Hindus who hold neither the Hindu nor the Mohammedan faith, and are looked upon, it is said, by the Hindus as despicable and by the Mohammedans as accursed.

THE Temple Emanu-El Sisterhood for Personal Service, a society among Jewish women corresponding to deaconesses in other religious bodies, has raised \$25,000 for the erection of a sisterhood home.

THE *Christian Advocate* of Nashville predicts: "Signs are not lacking that the movement to collect \$1,500,000 during the closing years of the century for the better equipment of our educational institutions will prove a great success. Some large gifts have already been made and others are forthcoming."

THE Philadelphia *Bulletin* has been making a comparison of the number of people in that city who attend the theater and those who attend church, and finds the church attendance far in excess. The weekly attendance at the different places of amusement, it says, is not more than 170,000. It is hard to compute the church attendance exactly.

THE *Christian Observer* (Louisville), one of the leading journals of the Southern Presbyterian church, is frank to say that it does not favor the movement for a reunion of the two branches of the Presbyterian church, North and South, at this time. "If we understand the sentiment of the great majority of our people in the Southern church," it says, "there is now no serious desire to have this question of reunion reopened. They rather wish to be allowed to continue their work in their present separate organization. They feel that the Lord is blessing their labors in many ways, and is setting His seal of approval upon their present relations. Hence they can not see that anything could be gained, and not a few fear that something would be lost, by an attempt at the reunion of the two bodies at the present time."

FOREIGN TOPICS.

WHAT THE PEACE CONFERENCE HAS DONE.

THE European press think it now plain that the International Peace Conference at The Hague will accomplish very little, less, perhaps, than other conferences of former years, at which the lessening of the horrors of war was the main object. The

PEACE, PEACE, PEACE.

THE HARVEST.

—Der Wahre Jacob, Stuttgart.

Hague correspondent of the *Handelsblad*, Amsterdam, who has probably as good facilities as any one else, writes to the following effect:

The Germans continually point out how difficult it would be to secure adherence to any agreement that may be arrived at. Thus with regard to the matter of military budgets Colonel von Schwazhoff showed that it is not easy to define what is military and what is not. Germany and France, for instance, have finished their strategic railroad lines, Austria and Russia have not. If the military budgets are fixed for a period of five years, and railroads are included, Austria and Russia would be much at a disadvantage. Disarmament, or even a check to armaments, can not be secured without international supervision, and no nation will be willing to submit its sovereignty to such restrictions. The German delegates further point out that the idea of a permanent arbitration tribunal is very difficult. Sufficiently trustworthy, fair-minded, unprejudiced men are not easy to find.

It seems that the Russian delegates are not men of such great knowledge, strength of character, and personal magnetism that they can lead the movement begun at the suggestion of their Government. Sir Julian Pauncefote exercises much more influence than Baron de Staal. This circumstance does not assist the work in hand.

That hardly any nation, certainly none of the great powers, is willing to bind itself, is shown by the press everywhere. In England even Mr. Stead of *The Review of Reviews*, who is considered the peace apostle *par excellence*, claims that England must have a fleet strong enough to overcome with reasonable certainty the two next strongest powers. But the English profess to be indignant that Germany refuses to tamper with her military organization. The Germans, on the other hand, point to the historical fact that they, of all nations, always had their fields trodden by invading armies until they became strong enough to defend themselves, and that the English have always ridiculed them for

their disposition to submit to the laws of any country in which they settle, rather than subject to German rule the peoples to whose lands they emigrate. But England's attitude toward mitigating the horrors of war is not encouraging. Nearly all the "jingo" papers are up in arms against the suggestion that needlessly destructive bullets should be prohibited. "The best thing we can say about the suggestion to abolish the dum-dum bullet is that it will be ignored by this country," says *The Saturday Review*, London. Still, some papers feel a little uncomfortable about the matter. *The St. James's Gazette* says:

"It may seem a little too emphatic to speak of the condemnation of the dum-dum bullet, seeing that the conference was content to condemn unduly destructive projectiles at large. But we know very well what the delegates were after—and it was the dum-dum bullet. . . . If the world is persuaded that the bullet is a particularly cruel one, the reason is largely because one school of scientific soldiers has gone very much to tongue. Finally, seeing that the matter was sure to be discussed, it was by no means intelligent in her majesty's Government not to have a packet of dum-dums to show the delegates, instead of coming forward with the tame-looking excuse that there were none in this country, which, of course, left everybody at the conference with the conviction that we were afraid of our own projectile. Still, when all is said and allowed for, it is curious that we were singled out for condemnation."

Many English publications are disgusted with the whole conference, denounce it as a sham, and say no good can come of it. "Will the arbitrators be honest?" asks the London *Spectator*. "It would take a long time for the nations to cease being suspicious," says *The Speaker*. In *Blackwood's* Mr. Frederic Greenwood writes:

"The ruse of the Peace Conference (no reflection on the good Czar intended) was prepared for one country alone; for in no other was it likely to succeed, and in no other had it an hour's success. That country, of course, was our own, where a glorious

DR. JEKYLL AND MR. HYDE.

—The Free Press, Ottawa

reception for it was prepared long since by the phrase-enslaved, phrase-enslaving emotionalism which has no effective existence elsewhere."

Some hold that the conference so far has only increased the existing hatred between Germany and Great Britain. The German papers bitterly resent both the editorials and news in the English press, and aver that England is trying to place them in a false

position in order to embroil them with Russia. An example of this acrimonious wrangling, caused by a Peace Conference, is seen in the charge by the Berlin *Echo* that the speech of Professor Zorn against arbitration, as reported in the London *Daily News*, is "pure swindle." According to the *Norddeutsche Allgemeine*, Professor Zorn merely made a short remark to the effect that Germany was willing to support the Russian suggestion of a new arbitration tribunal for each case, but could not accept the idea of a permanent court, as no nation would permanently submit to it. The *Hannoversche Kurier* says:

"Any one who has a chance to see *The Daily News* will be convinced of its anti-German aims. It continues its nasty attacks upon the person of the Emperor, and publishes its 'telegrams' from The Hague with quotations from the doggerel which Captain Coghlan made famous, as motto. This continual mobbing of the German Emperor is as cheeky as it is stupid. The only pleasant thing about it is that *The Daily News* thereby shows its hand and stamps its news as lies."

"The proof of the pudding is in the eating," remarks the *National Zeitung*. "Germany has no quarrel with any one just now. England has picked a quarrel with the Transvaal, but refuses to arbitrate." According to the *Frankfurter Zeitung* the English version that the American delegates are for permitting the use of explosive bullets is incorrect; the Americans vote for the abolition of the dum-dum.

The French press, which seems to be on better terms than ever before with Germany, also delights in an occasional fling at the British. "It is England herself who constitutes the greatest danger to the peace of the world," says a writer in the *Revue des Deux Mondes*; "the England of to-day goes with Jameson, Lugard, Kitchener, and Chamberlain." And the *Journal des Débats* says:

"It is not so much the exclusion of the press from the deliberations of the conference that irritates Germany as the partiality and error of the news published in the papers of some countries. Especially has the insinuation that Germany systematically opposes the work of the conference aroused the authorities in the Wilhelm-Strasse. Even when exact versions are given the journalists in question do not curb their imagination."

It seems, however, that nearly every country represented at the conference hinders the good work by its anxiety to profit individually. The *Kölnische Zeitung*, Cologne, says:

"In circles which may be trusted to possess reliable information, the attitude of the Russian delegates is very favorably commented upon. The Russians seem chiefly anxious to preserve the possibility of agreement among the delegates, hence they are neutral with regard to individual amendments to the plans originally suggested. On the other hand, the action of most of the smaller states renders practical results very doubtful. The delegates of these states endeavor to create an ideal condition, under which the difference of power between the countries represented will be made to disappear. This is not likely to further the work. It is said that upon one occasion such countries as Germany, Austria-Hungary, France, and the United States formed a minority. Any resolution adopted under such circumstances must naturally remain a dead letter."—*Translations made for THE LITERARY DIGEST.*

Why No Papal Delegate was Invited to the Hague.—The omission of the Vatican from the list of invitations to the Peace Conference is regarded by some as an illustration of the fact that in the eyes of the European governments the Pope has become a political *quantité négligeable*. The energetic protests of the Italian Government are probably the chief reason for the omission. The *Tageblatt*, Leipsic, endeavors to give additional explanations. It says:

"The program of the Russian Minister of Foreign Affairs, as he described it in the invitation, deals exclusively with the curtailment of armaments by land and sea, with weapons, with pro-

jectiles, and explosives as used in war; further, with arbitration as regards warlike measures. With all these the Pope has nothing to do. The religious or moral side of the question will not be touched upon at all. Were this phase to be considered, the heads of other religious communities could not well be ignored. The head of the Prussian state church and the Greek Patriarch in Constantinople would have precisely the same right as the Pope to send delegates."—*Translation made for THE LITERARY DIGEST.*

WILL SPAIN PAY HER DEBTS?

THE riots that have taken place in Spain on account of increased taxation show that the people are beginning to become restive under the burden with which their unprofitable wars have encumbered them. It is especially the extravagance which Spain exhibited in guaranteeing colonial debts that makes her burden almost insupportable now. The *Vossische Zeitung*, Berlin, sketches the financial situation of the country as follows:

"The late insurrections and the war with the United States cost Spain nearly \$400,000,000. A guaranteed debt of \$300,000,000, contracted in the interest of the colonies, must be added to this. Further, there is a consolidated debt of \$300,000,000 of moneys borrowed by the colonies themselves, sums which the Americans refuse to take over, and which were guaranteed by Spain. The Spaniards retain of their colonial empire nothing but the obligation to pay \$50,000,000 interest annually out of their own diminished resources."

The *Epoca*, Madrid, remarks that Spain need not default if her chronic deficits are stopped now. To do this, Señor Villaverde proposes a tax of 3 to 20 per cent. on public debts. The Spanish bondholders will have to submit, but the foreign holders are not likely to favor this arrangement. The English, on the whole, consider that the matter does not seriously affect them. *Money*, London, says:

"One is driven to the conclusion that the bondholder will have to consent to the proposed tax. We do not see what he is to gain by a refusal. Spain clearly can not continue to pay the full interest upon the external debt, and unless terms can be arranged default simple and unredeemed must take place. The best that can be hoped is that in return for consenting to the tax some compensating concession may be obtained from the Spanish Government, such concession to take effect at some future time when Spain shall have outlived the misfortunes and embarrassments which have been her lot for some time past. In some fashion or other Spain has got to accomplish the big task of balancing revenue and expenditure, and the bondholder will not be the only person to suffer. . . . To a very considerable extent any tax on metals in Spain would be a tax on foreign industries, and on the foreign shareholders of the copper and iron companies working in Spain. . . . With the loss of her West Indian possessions she has shed the last shred of her old greatness, and finally frittered a magnificent inheritance. Her future policy should be to develop Spain itself, to open up the vast resources of the country, to introduce honest and capable government. In this way it would be possible, but not very probable, for Spain to become not only a solvent, but a prosperous country. And in the hope of some such happy consummation those bondholders who make sacrifices to-day are fairly entitled to ask that in return there shall be accorded them some charge on future revenue."

The *Investors' Review* also points out that British bondholders have thrown off what they held of the Spanish debt, and welcomes the idea of an agreement between the Spanish Government and its original creditors in London. It says:

"We can have no objection to a tax of 50 per cent. on Spanish 'Fours' coupons, because at one and the same time it would give the 'bears' here their long-looked-for opportunity and cripple the French market. So it is to our council of foreign bondholders that Señor Villaverde is going to address himself, and we can assure him beforehand that he will meet with the utmost success there. We are all 'friendly to Spain' in her straits over this

matter. . . . Doubtless, unless the French intervene and make effective protest, communications will run smoothly on over this part of the debt; we shall soon cheerfully behold it bearing its share in the sufferings imposed on all Spain's creditors by her hopelessly bankrupt condition.

"On France it is that the sorrow will fall. The French banks and some of the French public hold perhaps £150,000,000 to £200,000,000 of the Spanish debt at the present time."

But this does not lead *The Investors' Review* to consider the plans of the Spanish Minister of Finance free from objection. Indeed, it says pointedly that this "taxation" of bonds means state bankruptcy. It says:

"First of all the sinking funds on every form of amortizable debt are to be suspended, then a 20-per-cent. tax is to be imposed on all the colonial debts, except the Philippine one, on which the tax is to be 15 per cent., and on the internal bonds. Further, the colonial debts are to be subjected to a discount of 20 per cent. That is to say, the Government wipes off one fifth of its capital obligations on these debts at a stroke, and the only consolation offered to the miserable bondholder is that upon the present prices these debts would still produce more than 5-per-cent. interest. This is a most excellent argument for a defaulting state to employ, and might be applied in a variety of ways. Why not, for example, cut down the interest upon the 'sealed' bonds right away to half its present amount, and tell the holders of the stock that it would still pay them more than 3.5 per cent. on the market price, which is a better return than can be got from the debts of Italy or France? The argument is irresistible, if you take it the right way, and do not put yourself in the position of a defrauded creditor."

The French indeed enter a mild sort of protest against the ruse of the Spanish Minister of Finance to make use of the former connection with London for his purposes. But they are evidently convinced that one can not draw blood from a stone, and are preparing themselves for heavy losses. *The Journal des Débats*, Paris, says:

"Señor Villaverde's proposals may cause some disappointment in certain circles, and especially in France, but on the whole it must be admitted that they are reasonable. . . . He has, moreover, good reason to hope that it will be considered in the interest of Spain's creditors to favor the relief of that country rather than to insist upon the clause which exempts 'Spanish Fours' from taxation. One can not well refuse to negotiate on this point. But nearly all the Spanish debt is held in France now, and French holders should be consulted. If it is in the interest of the bondholders to make concessions to Spain, it is surely also in the interest of Spain to come to terms with the people who hold the obligations which are to be taxed. Considering the present delicate state of Spain's national credit, it is of utmost importance that the good-will of the creditors be preserved."—*Translation made for THE LITERARY DIGEST.*

CHINESE AS SOLDIERS.

IN view of the fact that our troops are not well fitted to the climate of the Philippines, it has been suggested to substitute colored for white soldiers. It may, however, be interesting to note that competent authorities attach a high value to Chinese disciplined by European officers. *The Hamburg Correspondent* recently remarked that the Chinaman is a failure as a soldier. Major von Reitzenstein, who trained some Chinese for their government, denies this. He writes in the main, as follows:

Left to themselves, the Chinese soon lose whatever discipline has been instilled into them. But as long as European officers command them, European noncoms. continue the drill, and punishment threatens everywhere, the Chinaman is a good soldier enough. That is to say, if he is paid well. The yellow man becomes a soldier solely "for what there is in it." *Esprit de corps* he knows not, military orderliness he hates, and the profession of arms is despised. But he is brave, easily trained, and possessed of steady nerves. His eye is not ruined by civilization, and he becomes an excellent shot. He is, moreover, very obedient.

Whether he has any patriotism is not easy to determine. It is certain only that his code differs markedly from that of the Westerner, or the Japanese. The indifference of the Chinese with regard to national affairs is perhaps best explained by the Confucian maxim that those who are not in office should not do the work of an official. If leaders were to be found who have the full confidence of the men, patriotism may be awakened. Foreign powers must pay Chinese levies well, and especially pay them with great regularity. The principles of Frederick the Great regarding the payment and care of soldiers are of utmost importance with such troops.—*Translation made for THE LITERARY DIGEST.*

SITUATION IN AUSTRIA-HUNGARY.

AN agreement has at last been concluded between the governments of Austria and Hungary, and no sudden rupture of the bond which unites the two need be expected for some years to come. Austria continues to pay, as before, the lion's share of the expenses of the union, and Hungary has the financial backing of a united Austro-Hungarian Bank, and the privilege of establishing a separate customs tariff gradually. The Hungarians are thoroughly satisfied, and the Austrian Government declares that the Austrians ought to be. The official *Allgemeine Zeitung*, Vienna, says:

"Economical union is now assured until 1907, the union of the banks until 1910 if the fiscal arrangements are continued after 1907. The Hungarian separatist tendencies are therefore silenced. The clause which provides that Hungary may make her own terms in the case of commercial treaties which terminate after this is of purely academical value, for if a new fiscal and commercial agreement is concluded before 1903 the economical stability of the Dual Monarchy is assured until 1913. This has been a pleasant surprise to Austria, for the Austrian Parliament has now an opportunity to make sure of the Customs Union until 1913."

The best summary of the situation for the benefit of readers who are not, like the Germans and Austro-Hungarians, compelled by self-interest to study the question continually, we find in *The Saturday Review*, London. We take from it the following:

"It is the fashion to dismiss the present situation as incomprehensible. No doubt the constitution, like the empire itself, is exceedingly artificial, but there is no reason why the rights and wrongs of the case should not easily be grasped. There are only two main issues, each plainly intelligible. The Hungarians may be likened to a cantankerous and exacting wife, the Germans of Austria to an indulgent, deprecating husband. The Ausgleich is their marriage settlement, and, as it has been drawn on a temporary basis, it affords constant opportunities for bickering. The virago hints at a judicial separation, while her lord alternates between sulky references to the marriage vow and ungraceful concessions on every important point. The Slavs are their bond-servants rather than their children, and are bullied by both in the intervals of henpecking and recrimination. . . . As for Hungary, no doubt she possesses a high-sounding past, and zealous historians have taken more than their usual license to embellish it. But she has long remained stationary in all the essentials of national development, arrogance and commercial greed have condemned her to friendless isolation, and with all her outward show of robustness she has every symptom of internal decay. Her character is that of a bully, and her loud voice has often procured undeserved triumphs, but the hollowness of her pretensions is already beginning to be laid bare. It is only her overwhelming pride which blinds her to the poverty of her future and makes her willing to postpone a final settlement, tho with every year's delay this must be less advantageous for her. No doubt, with her narrow conception of patriotism, she trusts that the increasing difficulties of Austria will enable her to extort better and better terms, but this is to ignore the rapidity of her own progress downward. The original Ausgleich of 1867 was far more favorable to her than she had any right to expect, and, tho its perfections on paper developed every sort of confusion and deadlock in action, it remained a splendid lever for constitutional pressure."

The Germans of Austria are, however, so little satisfied with the treatment accorded them by the imperial Government that

they are rapidly losing interest in the preservation of the empire. They declare in pretty plain language that, if they instead of the Slavs are to be the "bondservants," they had rather see the purely or chiefly German provinces annexed to the German empire, leaving the Slavs and Hungarians to shift for themselves. The ratification of the Ausgleich may therefore be rendered impossible by obstruction, and the constitution be suspended in Austria. The Germans have now given up their party squabbles, and have formulated a common program which may be summarized as follows:

German must remain the official language of the army, parliament, and government offices so far as the central bureaus are concerned. The alliance with Germany must be maintained. In the German crown lands of Austria, Germany must be the dominant language. Where Germans and Slavs are in equal numbers an agreement which satisfies both should be sought. In the provinces where the Slavs predominate, their wishes must be respected.

The *Frankfurter Zeitung* says to this:

"This is the minimum of German demands, and without it their position would become untenable. It can not now be said that the Germans do not know what they want, as all their parties have united in these demands. But there is no longer a patriotic German party, which cares chiefly for the welfare of the monarchy. For the welfare of the House of Austria no one cares now. The Government must take care of that, if it can; and the Government must now be as willing to consider the wishes of the Germans as of other nationalities, for the Germans will not respond any longer to an appeal to make sacrifices for the sake of the empire."

That the Slavs will be satisfied with this, is to be doubted. If the Government uses the elastic "§ 14" of the constitution to institute a benevolent kind of absolutism under which all parties and nationalities are treated fairly, no internal conflicts need take place. But the emperor favors Catholicism and the Slavs, who are more easily managed by the church than the Germans. The latter represent all Liberal elements, from the progressive German noble to the Socialists. An attack upon them to please the Slavs seems likely to lead to rebellion, and the sense of racial unity has become so strong among the Germans that an attempt to abandon the eight millions of Germans in Austria to their fate for the sake of peace would endanger Kaiser Wilhelm's throne. But the revival of a second German empire in Central Europe, in which a Slav majority is ruled by a German minority, is impossible. The *Journal des Débats*, Paris, a paper noted for the logical value of its deductions, says in effect:

The program of the German-Austrians is moderate enough, and they do not claim to recover the ground already lost. They only wish to preserve what rights remain to them. That they will succeed is doubtful. Since Austria was cut off from the German empire, the predominance of the German element has been doomed. All their endeavors will be in vain. They resemble, in the midst of the Slav agitation, a man who stands on a rock in the middle of an angry and rising sea.—*Translations made for THE LITERARY DIGEST.*

THE NEW FRENCH MINISTRY.

FRENCH ministries change so often that generally little interest is attached to them, especially as they have long since allowed the powerful bureaucracy of France to render them almost powerless. But the ministry which has just been formed differs somewhat from the rest. Its avowed purpose is to preserve the republic, as the form of government at present most popular in France, from the attacks of irresponsible agitators. It contains men of the most extreme political parties, yet personally moderate enough to subject their own political aspirations to the welfare of the community. It is composed as follows:

Premier, and Minister of the Interior.....	WALDECK-ROUSSEAU.....	(Republican.)
War.....	GENERAL DE GALLIFET.....	(Monarchist.)
Marine.....	DE LAMASSAN.....	(Radical.)
Justice.....	MONIS.....	(Republican.)
Foreign.....	DELCASSE.....	(Republican.)
Trade.....	MILLERAUD.....	(Socialist.)
Finance.....	CAILLAUX.....	(Very Conservative Republican.)
Education.....	LEYOUES.....	(Republican.)
Public Works.....	BAUDIN.....	(Socialist.)
Colonies.....	DECRAIS.....	(Republican.)
Agriculture.....	DUPUY.....	(Radical.)
Postal and Telegraph..	MOUGEOT.....	(Republican.)

What astonishes most is to find Milleraud, the Socialist, and Gallifet, who was always hated by the Socialists for the extreme rigor with which he put down the Commune, in the same boat, hence the new cabinet meets with much suspicion. The *République Française* says:

"M. Waldeck-Rousseau has admitted in his cabinet the enemy of order and of private property, the prophet of social revolution. He himself has sometimes told us that the republic will be in danger when it has to accept the help of revolutionaries. For behind the red specter lurks the spirit of reaction, and reaction means the definite loss of liberty in France."

The *Liberté* fears the republic is likely to lose by the "unholy union of Milleraud and Gallifet, the Red Terror and the White." The *Temps* says:

"What the country needs and what we hoped for is a strong ministry. How can a cabinet be strong which is composed of so many conflicting parts? M. Waldeck-Rousseau has judged otherwise. He has grouped around himself men of whom he has demanded nothing but that they should agree with him as regards the Dreyfus affair. The names of the men he has chosen impress one only by their juxtaposition."

On the other hand, Charles Malo, the military writer of the *Journal des Débats*, professes satisfaction with the choice of General Gallifet as Minister of War. He writes, in the main, as follows:

We may be assured that strict justice will be done. What worries the country is not that half a dozen men have misused their authority, but that this fact has been used by the enemies of our institutions to undermine the respect for the thousands of other officers who quietly do their duty, and upon whom our welfare at home and abroad depends. France needs her army, no one will deny that, but the enemies of order continue to sow hatred, distrust, and suspicion against the officers. How can such an army be expected to serve its purpose in time of need? Any ministry that restores confidence by putting the unlucky Dreyfus affair out of the world deserves our confidence as a nation.

The most interesting figure in the cabinet certainly is General Gallifet. He is one of the few French commanders whose reputation, like Canrobert's, passed unscathed through the trying ordeal of 1870. The *Deutsche Tages Zeitung*, Berlin, speaks of him, in the main, as follows:

He is a soldier born and bred. He served with distinction in the Crimean War, where he earned his medal of the Legion of Honor for conspicuous bravery. He served with success in Africa, Mexico, and Italy. At the battle of Sedan he led, after General Margueritte had fallen, the famous charge of the French cavalry at Floing, which all but turned the fortunes of the day. Returning to France after he had been a prisoner of war, he was made brigadier-general, and he served the republic as faithfully as the Emperor. Tho a Royalist at heart, a well-ordered France is his chief aim, and he earned the reputation of somewhat relentless rigor in dealing with the Communards. He loves the army, but he will see fair play in the Dreyfus affair, for he believes that justice only can uphold the prestige of the army.—*Translations made for THE LITERARY DIGEST.*

AN AUSTRIAN VIEW OF AMERICAN EXPANSION.

—Kiberiki, Vienna.

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

[From the Atlanta Constitution.]

The United States consular service is becoming more effectual in furthering our commercial interests abroad in suggesting practical methods for the introduction and sale of American products. The official consular reports are not over-attractive to the busy manufacturer, and are as a whole often ignored, while they always contain items of profitable interest. THE LITERARY DIGEST, in its broad purpose to do the most good to its thousands of readers, makes it a point to rescue these profitable items under the above appropriate caption, and every weekly issue of THE DIGEST collects and condenses all that is of interest to American producers.

Consul Dudley sends an undated report from Vancouver as follows:

"I have for several months observed the fact that very few sailing-vessels are coming to this port to load lumber for China, Japan, Australia, South America, and South Africa. When I first assumed charge of this consulate, there were a number of such vessels engaged in this traffic. Many boats are needed here and would be chartered immediately if they could be obtained, as the shippers of lumber find it impossible to secure them. The increase in exports of lumber from Washington and Oregon in part accounts for the change. The large wheat crop of last year and the immense foreign demand have also taken up much of the shipping formerly engaged in the lumber traffic, the owners of vessels preferring to carry grain rather than lumber. If there are sailing-vessels on the Atlantic coast seeking employment, I feel very certain they could obtain it by coming to this coast. The export of coal from Vancouver Island is steadily increasing, and sailing-vessels find employment there, altho the largest quantity of coal is carried by steamships. Owners of vessels can secure full information by addressing any of the shipping firms at this port, at Seattle, Wash., or at San Francisco, Cal."

Consul Brodowski writes from Solingen, April 22, 1899: "Millions of knives, razors, etc., are manufactured in this consular district, and the material for the shields is imported from all parts of the world, to the value of tens of thousands of dollars monthly. Any kind of hard wood (walnut excepted), bones of horses and other large animals, deer and buffalo horns, ebony, etc., are used. Canban

ebony and hard woods are preferred, and it seems in general that the American imports give the most satisfaction. A good deal has been lately imported from the Chicago stock-yards. The largest firms in this branch here are Wilhelm Flucht and Carl Schürmann. I believe that I could do a good deal to further our export trade in this direction if fair offers were made to importers here."

Minister Loomis writes from Caracas: "The Venezuelan Congress, which adjourned on Saturday last, enacted a new tariff law; but, owing to the numerous amendments made to the original bill, it is not possible for me to get a corrected copy for transmission by this mail. It can be said, however, that there will be an average increase of 25 per cent. on existing duties, a very few articles—four among them—being excepted. In addition to the advance in duties made by the new law, power is given the President to add 25 per cent. more to any or all of the new schedules, as he may see fit. In short, the new law makes it possible for the President to regulate the tariff pretty much as he deems best. The new duties will probably not be imposed for sixty or seventy days. No date, I think, has been fixed for putting the tariff into effect."

Consul-General Pratt, of Singapore, transmits to the department a copy of a letter addressed by him to General Otis, at Manila, in which he states that upon relinquishing his position in the consular service he contemplates the establishment of a line of steamers under the American flag, to ply between Singapore and the different ports of the Philippines, especially the southern ones, which can be reached with special facility by way of British North Borneo. Such a line of steamers, of sufficiently light draft to enter the shallower island harbors, would, Mr. Pratt thinks, be useful for the transportation of troops and supplies. The boats would, in the first place, be at the disposal of the Government, and serve, secondarily, for the convenience of the public.

Consul Le Bert writes from Ghent, May 19, 1899: "I have this day received from Mr. A. Heynsens, Rue Hant Port 12-14, a letter asking the names and addresses of important firms in the United States manufacturing dairy machinery, such as churns, separators, butter workers, dairy articles, refrigerators, cheese-making machines, etc. He desires firms not as yet represented in Belgium and asks that catalogs and circulars, with conditions of sale, be addressed directly to his firm. This house is one of the oldest and largest of the provinces of East and West Flanders handling the line of goods mentioned. Upon inquiry, I learn that none of these articles are manufactured in Belgium. The importations to both Flanders are chiefly from England and Denmark. Considering the vast dairy industry of the Flanders and our improved apparatus, there should be, with proper representation, a wide field for our manufacturers of dairy machinery and utensils."

In reply to a correspondent, Consul-General Gowdy, of Paris, under date of February 14, 1899, writes as follows:

"The paving of the Paris streets and boulevards dates as far back as the end of the twelfth century. In the year 1184, Philippe Auguste commenced replacing the beaten ground by stone paving. The localities first treated were the square of the Chatelet, the routes of St. Antoine, St. Jacques, St. Honoré, and St. Denis. It is considered that the department of streets and alleys, as we would designate it in the United States, is one of the most important services in the city administration. The streets of the city of Paris are supplied with four different classes of paving, viz., stone, macadam, asphalt, and wood. There are some streets still remaining of ordinary earth composition, but they were originally the property of individuals and are fast being replaced by other compositions, as they come under the control of the municipal authorities.

"On January 1, 1896, the total amount of stone paving was 1,410,300 square meters (1,686,719 square yards); in 1897, 1,396,400 square meters (1,670,004

THE PRUDENTIAL HAS THE STRENGTH OF GIBALTAR

Reduced Prices

WE wish to close out our Summer suitings and skirtings during the next few weeks in order to make room for Fall goods. We have therefore made decided reductions on almost every suit and skirt. You now have an opportunity of securing a fashionable garment at a reduction of one-third from former prices.

No. 682.—Summer suit, consisting of short, jaunty jacket and new style skirt, made of thoroughly shrunken crash, duck, pique, or denim; jacket and skirt made with lapped seams. The stores ask \$6 for a suit of this kind. Our price has been \$4.

Reduced price for this suit, \$2.67.

All-wool Tailor-made Suits, reduced from \$10 to \$6.67.

Pique Skirts, reduced from \$3 to \$2.

We tell you about hundreds of other reduced price garments in our Summer Catalogue and Bargain List, which will be sent, free, together with a full line of samples of materials to any lady who wishes them. Any garment that is not entirely satisfactory may be returned and your money will be cheerfully refunded.

Write to-day for Catalogue, Samples, and Bargain List; don't delay—the choicest goods will be sold first.

THE NATIONAL CLOAK & SUIT CO.,
19 and 21 West 23d St., New York.

"LINENE" Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

Reversible Collar Co., Dept. 19, Boston, Mass.

RUBENS DANTE TASSO MURILLO ANGLO RAPHAEL

Long Trade Mark

IMPROVED BREATHING TUBE

Unequalled for prevention and cure of throat and lung diseases, also for strengthening voice. Sent post paid for \$1.25 including the best work ever published on the great value of lung gymnastics, by Dr. Patchen. Send 2-cent stamp for testimonials to

O. HYGIENIC SUPPLY CO., BOSTON, MASS

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

square yards). The decrease between the years was accounted for by the replacing of this paving by wood.

"In 1896, the total surface of asphalt paving was 357,650 square meters (427,749 square yards); in 1897, 372,950 square meters (446,048 square yards)—an increase of 15,300 square meters (18,299 square yards).

"In January, 1896, the total surface of wooden paving was 907,400 square meters (1,085,250 square yards); in 1897, 1,120,000 square meters (1,339,520 square yards).

"On January 1, 1896, the total surface of earth roads was 40,750 square meters (48,737 square yards); in 1897, 40,500 square meters (48,438 square yards).

"The paving stones are generally in block form, 16, 18, or 20 centimeters (6, 7, or 7.9 inches) high, of hard stone. Paving blocks of porphyry are not used now, being considered too slippery. The cost of putting down this paving includes the sand bed, from 15 to 20 centimeters (5.9 to 7.9 inches) thick. Its great fault is the noise it produces. It was estimated that up to 1897, the stone paving of Paris had cost the city 110,484,000 francs (\$21,323,412).

"*Macadam*.—The cost of cleaning and watering is included in the price of maintenance of this paving. The cost quoted is for a depth of broken stones of 35 centimeters (13.7 inches), reduced to 30 centimeters (11.8 inches) by the rolling cylinders. The macadam paving had cost the city of Paris, up to 1897, the sum of 6,448,750 francs (\$1,244,607).

"*Asphalt*.—These roads have a foundation 15 centimeters (5.9 inches) thick of mortar, called "béton," composed of lime, sand, gravel and water, and broken stones, over which is placed the layer of asphalt 5 centimeters (1.9 inches) thick after compression. The asphalt used in Paris comes from Ragusa (Sicily), de Mons (Department du Nord), and Val-Traverse (Switzerland). The asphalt, having been reduced to powder by the action of heat, is transported while warm to the roadway, beaten down with hot metal stampers, and afterward subjected to the cylinder rolling.

"The principal advantage of asphalt is that it produces no noise. The objectionable features are its slippery condition in wet weather, and that it can only be used in level streets. It is chiefly employed in narrow streets or where there is great traffic. Up to 1897, asphalt paving had cost the city 6,448,750 francs (\$1,244,607).

"*Wooden Paving*.—Wooden blocks 12 centimeters (4.7 inches) high and 15 centimeters (5.9 inches) long are placed upon a foundation of "béton," as described above. The blocks which have given the best results are from the pine-trees of the Department of the Landes, and these are mostly used. However, on many of the main thoroughfares the pitch pine of Florida has been employed with marked success. Within a few years, trials have also been made with the hard exotic woods, such as the kauri and teak of Australia and Java, the lime of Anam, the stringy bark, etc.; but these trials have been of so recent a date that they can not be used for purposes of comparison. It is estimated that up to 1897 the wooden paving of Paris had cost the authorities 16,386,027 francs (\$3,162,503).

"The maintenance department of the streets and alleys of Paris is composed of 3,6 agents, including one chief engineer, 8 ordinary engineers, and 387 assistants, with a pay-roll of 1,350,261 francs (\$260,600) per annum.

"The city spends for the maintenance of the streets, 12,644,592 francs (\$2,440,406); for sidewalks and alleys, 2,009,611 francs (\$387,855); for cleaning the streets and alleys, 9,340,082 francs (\$1,802,635), making a total expenditure for streets and alleys of 24,094,285 francs (\$4,630,897). The figures, as above given, include the salaries of the maintenance force.

"The number of permanent workmen is: For maintenance, 1,902; for cleaning, 3,694; total, 5,596."

The following is a copy of a letter from Consul Dent, dated Kingston, April 27, 1899, to a Pittsburgh correspondent:

"The imports of sheet copper and brass into Jamaica are very small, and come mostly from England. I append a memorandum showing the importations last year. This memorandum shows the values also, from which the prices here can be calculated, tho I am informed the price is regulated by the value in England. The ordinary English measurement is used, not the metric system. Sheet copper for guttering is imported from England in limited quantities in lengths of 5, 10, and 100 feet (the latter made up of 10-foot lengths seamed in widths of 18, 20, 22, and 24 inches; weight, 16 ounces to the square foot. When the sugar estates were more numerous and more prosperous, sheets of copper were imported for repairing stills and teaches, in thicknesses from one sixteenth to three eighths of an inch; sizes of sheets, 6 by 2 up to 8 by 6 feet; but it is now very rare that any are required, and the importation in this line has almost ceased. Copper for sheathing ships' bottoms is no longer used here, being superseded by yellow metal. Yellow sheathing metal is used here in limited quantity. Sheets are 4 feet by 14 inches, 12, 14, 16, and 18 ounces to the square foot. For any further information of this character correspondence may be addressed to Messrs. E. Lyons & Sons, or D. Henderson & Co., Kingston, Jamaica."

PERSONALS.

A GOOD Greeley story is told by a writer in *The Youth's Companion*. He says:

Horace Greeley's sympathy with the working classes was intense, and his indignation toward those who oppressed them was not unlike the "perfect hatred" of the Hebrew king. A graphic illustration of this sympathy and indignation is given in the "Personal Recollections" of James R. Gilmore, who was formerly one of the editorial corps of *The Tribune*.

One winter night two thin and poorly clad women entered the room of the managing editor and asked to see Mr. Greeley. Mr. Gilmore, who was reading proof-sheets, answered that Mr. Greeley was very busy, and a half a dozen gentlemen were waiting to see him; but if they could wait, he would probably give them audience.

They were willing to wait, and Mr. Gilmore ushered them into the great editor's apartment, where he sat at his desk, with his back to the door, absorbed in an editorial.

Curious to see what kind of a reception he would give the women, Mr. Gilmore lingered near the doorway. As soon as Mr. Greeley had finished his editorial, he turned around and glanced at his visitors. The gentlemen were well known to him, for each man was a prominent politician; but, giving them scarcely any attention, he rose and said courteously to the women:

"Ladies, what can I do for you?"

The younger of the two stepped timidly forward and explained their errand. They were employes in a hoop-skirt factory, where the workwomen had the day before suspended work and demanded an increase of wages.

"What pay do you get?" asked Mr. Greeley.

"Three dollars and a half a week," was the timid answer.

"And how much of that goes for board?"

"Three dollars."

"Do you mean to say that you have only fifty cents a week for your clothes and other necessities?"

"That is all."

"It's a shame—a burning shame!" said Mr. Greeley, quickly. "You wish me to expose these men, I will do it. They shall have a column in to-morrow's *Tribune*."

Libby's Pork and Beans

The best beans baked the best—in famous New England style, and even more delicious than mother used to bake. Drop us a postal and we'll send you post-paid and free our "How to Make Good Things to Eat" book which tells all about and how to serve the fire-saving, time-saving, trouble-saving, delicious, dainty Libby's Luncheons. OUR OFFER FULLY EXPLAINED IN LITERARY DIGEST, MARCH 25TH.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Then, seeing Mr. Gilmore standing in the doorway, he said: "Be kind enough to show these ladies to the stairway, and" (drawing his ear down to him and speaking in a lower tone) "look at their clothes! Give them ten or twenty dollars; I'll pay it."

"Did you hear what Mr. Greeley said to me?" asked Mr. Gilmore of the younger woman, as they reached the door of the outer editorial room.

"Yes, sir; but we don't want alms—we ask for justice, not charity," she answered.

"He does not consider it charity. He thinks it a duty to divide his larger earnings with those who are underpaid. He will be offended if you refuse the money," answered Mr. Gilmore.

"We wouldn't offend him for the world," said the woman, reluctantly taking the offered bank-note. "I shall pray God to bless him."

"Did those women take the money?" asked Mr. Greeley, after his visitors had left.

"Yes; a twenty-dollar bill—I had nothing smaller. But I'll compromise with you for ten," answered Mr. Gilmore.

"No, you won't," said Mr. Greeley, fumbling in his pockets for the money. "But I haven't a dollar. You'll have to get it of Sinclair (the cashier); and mind, if you don't collect the whole we'll have a row."

SVEN HEDEN, the distinguished Swedish explorer, whose work in Central Asia won for him European reputation, is leaving soon for the heart of Asia. He starts from Kashgar for Lob-nor, and hopes to reach that famous lake by the northern route and make a map of Yarkend Daria. He will spend next winter at Lob-nor, and make a special study of the varying bed of the lake with the view of settling the long-standing dispute regarding its character and movements. In the summer of 1900 Dr. Hedin will begin the exploration of Northern Tibet, and the winter of 1900-1 he will spend on the Tibetan highlands, not less than 15,000 feet above sea level, making a complete series of meteorological observations. In the spring of 1901 he proposes to return to India and Europe.

DURING the winter months the little colony of sixty or seventy English people at Teheran organize concerts for one another's amusement. When the weather is cold, of course there is skating. Skating is the greatest marvel of all to the Persians. A few years ago the late Shah, Nasr-i-Din, saw twenty skaters twirling and curling and spinning gracefully on the ice. He was amused; he thought it wonderful. The next day he sent to the legation and borrowed a dozen pairs of skates. These he made his ministers put on and attempt to skate on the lake in the palace grounds. The poor ministers were terribly discomfited, but it was twice as much as their heads were worth to refuse. His majesty was more amused than ever, and he nearly had a fit from laughing.

MRS. BARBARA MOON, who lives at the Kentish village of Rolvenden, says a Dover correspondent, has an interesting history, having been present as a child at the battles of Quatre Bras and Waterloo. She was born at Gibraltar in March, 1811, christened at Malta, and when her father, after the Peninsular War, went with his regiment to Waterloo, the child and her mother accompanied him. Her father was wounded at Waterloo and died from the effects. The old lady is now eighty-eight years of age, and has had eleven children, five of whom are alive. An extraordinary thing is that up to the age of seventy she could not even tell one letter from another, but she then began to learn at a Bible class, and can now read with facility. She still retains possession of all her faculties, and has a good memory. She says she

"THE FINEST HOTEL IN THE WORLD"

is what most widely traveled people say of United States Hotel, Saratoga Springs, N. Y. On account of its colossal size the quadrangle about which it is built is quite a large park and grown with lofty and beautiful forest trees. At night when echoing the sweet strains of music and brilliantly illuminated with vari-colored lights, electric fountains, etc., these magnificent grounds become a veritable fairy bower.

remembers, as they were leaving Waterloo in a baggage wagon, one of the spare horses following would put his head into her lap.

SIR ALFRED MILNER, who represented Great Britain in the recent conference at Bloemfontaine, Orange Free State, is a master of politics. In his earlier life he succeeded but indifferently as a journalist and a member of Parliament. But as under-secretary of state for finance in Egypt he made a brilliant record, and his mastery of finance and all details connected therewith is remarkable. He understands the Dutch temperament, and no Englishman is better adapted to settle the Transvaal problems than himself.

MANY stories about the career of Cecil Rhodes are getting into print. He was barely twenty when he left his father's rectory at Bishop Stortford for South Africa, because the doctors told him that only by this change of climate could his life be prolonged. His brother, who accompanied him, met a tragic death while hunting elephants. Cecil set out to earn his living and something more in the diamond mines, but he kept up his studies, and, by returning for a time each year to England, was able to take his degree at Oxford. He was highly esteemed by General Gordon, and only by a mere chance was prevented from accompanying Gordon on his last fatal journey to Khartoum.

MILES B. MCSWEENEY, formerly lieutenant-governor of South Carolina, who succeeds the late Governor Ellerbe as governor of the State, was left an orphan when four years old, and at the age of ten was earning his living by selling newspapers in the streets of Charleston. Afterward he attended a night school and was employed in a printing office. He won from the Charleston Typographical Union a scholarship offered to the most deserving young printer in the city, but owing to lack of means was able to remain at the university only a short time. With a capital of only sixty-five dollars he started a newspaper in a small town, and in this venture was successful.

MORE OR LESS PUNGENT.

A Poser.—"Never ask a girl if she dislikes your kisses. What could she say?" *San Francisco News-Letter.*

Unspeakable.—"Yes, poor Mrs. Gabber died an unspeakably hard death." "What killed her?" "Lockjaw."—*Philadelphia Bulletin.*

THE TREATMENT OF RHEUMATISM.....

The editor of the New Albany (Ind.) Medical Herald recently published an article on Rheumatism in which he said:

"But not until lately, when Tartarilithine has been employed by us, have we attained results that were even fairly satisfactory in the treatment of gout and rheumatism. By the employment of this drug I have been able to relieve some of the most distressing afflictions of this class, and now regard Tartarilithine as the most valuable remedy at our disposal in the treatment of this class of affections. In rheumatism and in gout Tartarilithine can be administered with confidence."

Regular package \$1.00.

her look prettier than she did when I met her, Jane?" "Of course, ma, the artist paints so much better than she does."—*Pick-Me-Up*.

Pneumatic Sausage.—SQUIFF: "The cycle is superseding the horse everywhere."

BIFF: "Yes; I found a piece of pneumatic tire in my sausage this morning."—*Tit-Bits*.

Using It.—MAMMA (at the breakfast-table): "You always ought to use your napkin, George." GEORGIE: "I am usin' it, mamma; I've got the dog tied to the leg of the table with it."—*Exchange*.

Particular.—THE GROCER: "Yes, sir, this grano-grino is the best breakfast food on the market. It is predigested!"

MR. FADSBY (shuddering): "Bless my soul! By whom?"—*Exchange*.

It's Use.—"Say, I wouldn't be as superstitious as you for forty dollars." "Who's superstitious?" "W'y you, Carryin' a horseshoe to de hall game." "Aw, go on. Dat's to soak de un-pire wit'."—*Anonymous*.

An Exception.—ORATOR: "No, gentlemen; I tell you that if you want a thing done well, you must always do it yourself."

VOICE FROM THE CROWD: "How about getting your hair cut?"—*Exchange*.

The Postage.—"The first writing was done on stone," remarked the wise man at dinner. "Great gracious! Think of the postage!" involuntarily exclaimed the rising poet, with a shudder that rattled the dishes.—*Anonymous*.

A Contractor.—FLIM: "What's your business?"

FLAM: "Contractor."

FLIM: "What line?"

FLAM: "Debts."—*Town Topics*.

Didn't Know.—ATTORNEY (sternly): "The witness will please state if the prisoner was in the habit of whistling when alone."

WITNESS: "I don't know; I was never with the prisoner when he was alone."—*Exchange*.

More Penetrating.—"As I understand it, an X-ray will go straight through a man's head. There is nothing quite so penetrating, is there?" "Oh, I don't know. Did you ever hear my daughter sing?"—*Cleveland Plain Dealer*.

Anonymous.—"Adolph, where is the letter I left on my desk?" "I mailed it, sir." "But I hadn't put the name and address on the envelope." "That's just it, sir—I supposed it was an anonymous letter."—*Le Petit Journal pour Rire*.

Bad for Him.—MAMMA: "Bobby, if you saw a man starving, would you give him a piece of your pie?"

BOBBY: "No'm. You said a person shouldn't eat pie on an empty stomach."—*Anonymous*.

Manual.—"I'm in trouble again," said the new reporter. "Here's a story of a debate at the Deaf and Dumb Institution. What head shall I put on it?" "That's easy," suggested the snake editor. "Make it 'Hand-to-hand Contest.'"—*Exchange*.

Better Phrased.—AMATEUR POET: "How's this line of my Ode to My Sweetheart: 'Thy bright eyes outrival twin diamonds?'"

Lowest Rates West.

Rates to the West are lower via Nickel Plate Road than via other lines, while the service is excelled by none. Three fast trains are run every day in the year from Buffalo to Chicago. The day coaches are of the latest pattern, are elegantly upholstered, and have all the modern improvements, such as marble lavatories, steam heat, lighted by Pintsche gas, while colored porters are in charge to look after the wants of passengers, especially the ladies and children. Vestibuled buffet sleeping-cars are run on all trains, while the dining-cars and meal stations are owned and operated by the company and serve the best of meals at moderate prices. If your ticket agent cannot give you all the information you desire in regard to rates, routes, etc., address F. J. Moore, General Agent, Nickel Plate Road, 201 Main St., Buffalo, N. Y.

for fear you might be worrying over the subject." By clever maneuvering he reached the front door first.—*Chicago Times-Herald.*

A Regular Customer.—SCENE: Residence of one of our best-known doctors.

LITTLE BOY: "Please, I want the doctor to come and see mother."

DOCTOR'S SERVANT: "Doctor's out. Where do you come from?"

LITTLE BOY: "What! Don't you know me? Why, we deal with you—we had a baby from here last week."—*Exchange.*

Didn't See Them.—"We tried to keep the railway carriage to ourselves from Liverpool to London," writes a young American bride; "the steamer was so crowded we really had not had a moment to ourselves. At Busby, the guard opened the door, and, in spite of Fred's scowls, lifted a small girl into our compartment, making a lot of apologies about having no place else to put her. She was a real little tow-headed English girl of about seven, and she sat down on the edge of the seat and stared about her. 'What is the matter, Miss Victoria?' asked Fred. 'I don't see the birds,' said the small girl, plaintively. 'Birds? What birds?' asked Fred. 'When I came from my other train, your guard said to my guard: 'Shove her in along wif the love-birds.' 'Where are they?'"—*Exchange.*

Current Events.

Monday, July 10.

—The President appoints officers to the new volunteer regiments.

—The Christian Endeavor convention in Detroit closes its sessions.

—Captain Watkins, of the American steamship *Paris*, in his report, assumes full responsibility for the grounding of the vessel; his license is revoked for two years.

—The United States Government refuses to arbitrate the claims of the Austrian Government for damages arising from the death of Austrian subjects in the Haxleton riots in 1897.

—The Grand Duke George, brother of the Czar, and heir apparent of the Russian throne, is dead; the Grand Duke Michael is declared heir to the throne.

—Lasker wins the Chess Tournament in London.

Tuesday, July 11.

—The United States civil-service commission begins a hearing in Concord, N. H., on charges against Senator Gallinger.

—The President issues an order extending the protection of the American flag to vessels owned by residents of Puerto Rico and the Philippines.

—The National Educational Association opens its annual convention in Los Angeles, Cal.

—The American Line steamer *Paris*, which

Spanish-American War Panorama

is one of the war books which is likely to be in continuous demand. It is a panoramic record of the triumph of Yankee Doodle. The eagle flaps his wings on every page, and "Old Glory" waves around and above the scene. Prominent officers connected with the war are here portrayed, as well as many of the "men behind the guns." Military life is pictured to the eye, from recruiting to the guard mount and skirmish line. Nor is the ludicrous omitted. The company cook receives the attention due to his importance; the mess is shown; cavalry scenes are given; the hospital arrangements are depicted; the heroines of the Red Cross service are displayed; street scenes in Havana, Santiago and elsewhere are unrolled, the new citizens or subjects (which are they?) of Uncle Sam appear and disappear as the leaves are turned.

In a word, the gazer visits the new localities and sees the tumultuous new life, without the risk or expense of a sea voyage.

The Album is 4 5/8 x 8 inches, weighs 12 ounces, printed on finest coated paper.

Sent FREE to any address in the United States, Canada or Mexico, for 12 cents in stamps or coin, to cover postage and packing. Copy may be seen at any ticket office on the Big Four Route.

Order at once as the edition is limited.

Address WARREN J. LYNCH, General Passenger and Ticket Agent, "Big Four Route," Cincinnati, Ohio.

Mark envelope "War Album." Mention DIGEST.

went ashore in the British Channel on May 21, is floated by the salvagers.

—Two British batteries of artillery are ordered to South Africa; the governor of Queensland offers a force for service in case of war with the Transvaal.

Wednesday, July 12.

—Secretary of War Alger again denies rumors of his intended resignation and declares that he will remain in the Cabinet for the full length of his term.

—The Kentucky Republican State Convention is begun at Lexington.

—The steamer *Paris* is towed into Falmouth.

—General Wood quarantines the city of Santiago; the yellow fever seems to be under control.

—Admiral Dewey reaches Snez.

—Agninaldo makes a speech in which he declares that "many of the people and many statesmen censure President McKinley . . . for having ordered his representatives to seek means to bring about hostilities with the Filipinos."

—At the hearing of the charges against Senator Gallinger for having violated civil-service laws, a violent altercation, nearly coming to blows, takes place between Senators Gallinger and Chandler.

Thursday, July 13.

—Kentucky Republicans nominate Attorney-General Taylor for governor.

—A committee of the G. A. R. has a conference with President McKinley with regard to the pension policy of the administration.

—Herr Rose, formerly German consul-general at Apia, attends a conference in Washington on Samoan affairs.

—The Spanish Cabinet accepts the Queen Regent's offer of 2,000,000 pesetas for the civil list.

—The Boer Volksraad adopts a preamble on the new franchise law.

Friday, July 14.

—Secretary Hay instructs the American minister at Peking to "make representations to the Chinese Government in favor of the continuance of railway concessions made to Americans."

—A dispatch from Kiel says that the German cruiser *Geiger* has sailed for Guatemala to join Great Britain in a demonstration in behalf of the foreign creditors of that Republic.

—The anniversary of the fall of the Bastille is celebrated in Paris, with much enthusiasm in favor of the army and the Republic.

Saturday, July 15.

—The transport *City of Para* sails from San Francisco for the Philippines, with 44 officers and 978 men.

—W. K. Vanderbilt states that there is no truth in the report that there is a plan on foot to make a through railroad line from the Atlantic to the Pacific.

—The mill firemen at Fall River strike.

—The New York State Bankers' Association asks Congress to enact a currency reform measure.

—The Pingree plan for municipal ownership of street railroads in Detroit is believed to have failed.

—Secretary Gage again defends the President's Civil Service order.

—It is said in Washington that the three powers concerned will agree to the abolition of the kingship in Samoa.

Sunday, July 16.

—A negro is lynched in Louisiana, altho not definitely charged with any crime.

—A large number of the employees of the Brooklyn street railroads strike.

—A serious fire occurred in the Brooklyn Navy Yard.

—Col. William Preston Johnson, president of Tulane University, New Orleans, dies in that city.

The joke of the problem is to discover the reason that the B on any square of the diagonal will not do as well as on R 8. For instance: why will not B-K 5 or B-Kt 7 do? Several solvers tried Q-Q 2 and the Q-K sq, mating by Q x Q or Q x B; but they overlooked Black's answer:

Q-Q 2	Q-K sq
1. P x P	2. P-Kt 7 ch

A. K. and Dr. R. H. M. got 390 and 391. C. D. S. W. J., E. D. Evans, Chicago, Dr. G. Suttie, Detroit, were successful with 390. Prof. C. D. S. should be credited with 387.

Twenty States represented in to-day's solvers.

The probability is that 386 has a second solution: R x P.

Black to play. What result?

This position is taken from a game in the Tournament of 1862 (the Rev. J. Owen vs. Mongredien), Black played R-K 4 and lost.

Modern Chess.

The New York Times, in an editorial, says that the games of recent tournaments remind one of the "strife of the two paupers for a shilling."

"The modern game, Mr. Steinitz observes, consists in the accumulation of small advantages." Exactly. That is to say, each player strives to get a Pawn to the ending, and then to win with it.

"And yet those curious creatures, the performers, think the public ought to take an interest in this performance. The fact that the more of these games are played, the less interest can any rational being taken in the game, unless he be condemned like the contestants, to play it for his living. It is no longer a game at all. It is a 'cut-throat competition.' There is really no interest in it except to competitors, and their interest is not sportsmanlike, but commercial. . . . There is often, in a whole tournament, not one of the brilliant finishes which the student can find in almost every recorded game of the old players, who played Chess for amusement and not for a living, as Philidor and Labourdonnais, and MacDonnell and Morphy and Anderssen. The usual thing is the 'accumulation of small advantages' and the final winning by the accumulation on account of the inability of the other man to stop the progress of the odd Pawn. It is 'two paupers fighting for a shilling.'"

"In other words, that has happened to Chess which happens to every sport when it becomes professional. It is no longer a game, but a busi-

ness. 'I never was, I am not, I never will be a professional player,' wrote Paul Morphy. And that is partly why, as a recent commentator has said, there are more brilliant endings in Morphy's games than in all the rest of Chess put together."

The London Tournament.

THE FIRST-PRIZE WINNER.

Emanuel Lasker is not only Champion of the World, but he is, without doubt, the strongest Chess-player in the world, and probably the greatest since Morphy vanquished every antagonist. Lasker's latest victory ranks among the most brilliant achievements in the history of Chess, and his wonderful score has never been surpassed: *He lost only one game out of twenty-seven.* This borders upon the marvelous when we consider the fact that, with the exception of Tarrasch and Charousek, the greatest masters in the world were his opponents. Lasker is a most conservative player, and while his games may not be called brilliant, they all show a machine-like precision and freedom from errors.

The Literary Digest

VOL. XIX., No. 5

NEW YORK, JULY 29, 1899.

WHOLE NUMBER, 484

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

PROTEST AGAINST MANILA CENSORSHIP.

THE "round robin" of the American newspaper correspondents at Manila, drawing a picture of the military situation there darker than most people here had supposed to be warranted, has created considerable stir in all parts of the country. The press seems to be almost a unit in upholding the correspondents in their protest and in demanding a change in government policy. A large number of papers ask that General Otis be recalled, and that General Miles, General Brooke, or General Merritt be substituted. The statement of the correspondents runs as follows:

"The undersigned, being all staff correspondents of American newspapers stationed in Manila, unite in the following statement:

"We believe that owing to official despatches from Manila made public in Washington, the people of the United States have not received a correct impression of the situation in the Philippines, but that these despatches have presented an ultra-optimistic view that is not shared by the general officers in the field.

"We believe the despatches incorrectly represent the existing condition among the Filipinos in respect to internal dissension and demoralization resulting from the American campaign and to the brigand character of their army.

"We believe the despatches err in the declaration that 'The situation is well in hand,' and in the assumption that the insurrection can be speedily ended without a greatly increased force.

"We think the tenacity of the Filipino purpose has been underestimated, and that the statements are unfounded that volunteers are willing to engage in further service.

"The censorship has compelled us to participate in this misrepresentation by excising or altering uncontroverted statements of facts on the plea, as General Otis stated, that 'they would alarm the people at home' or 'have the people of the United States by the ears.'

"Specifications: Prohibition of hospital reports; suppression of full reports of field operations in the event of failure; numbers of heat prostration in the field; systematic minimization of naval operations, and suppression of complete reports of the situation.

"John T. McCutcheon, Harry Armstrong, Chicago Record.

"Oscar K. Davis, P. G. McDonnell, New York Sun.

"Robert M. Collins, John P. Dunning, L. Jones, The Associated Press.

"John F. Bass, Will Dinwiddie, New York Herald.

"E. D. Skeene, Scripps-McRae Association.

"Richard Little, Chicago Tribune."

It was announced at the War Department last week Tuesday, the day the "round robin" was published, that the Administration would pay no attention to it; but the next day Senator T. C. Platt gave out a long statement, which has been generally accepted as the President's reply. This reply points out what some are likely to overlook, that the news the President receives from Manila is not censored:

"The Government's means of information concerning what has occurred in the Philippines is not confined to General Otis. The Navy Department has its agents there. The President is directly represented by Mr. Denby, who was for fourteen years our Minister to China, and by Professor Worcester, who resided in the Philippines for four or five years, who speaks the Tagalog languages, and who knows the native character and habits. The Philippine campaign is receiving the President's constant personal attention. He is in direct cable communication with Manila and receives daily reports from all sources. The possibility of his being misled about the facts in the case is scarcely worth considering."

With these sources of information, the President has, according to Mr. Platt's statement, pursued the best possible course, ever since the war with Spain began. No one else could have done better. Mr. Platt summarizes his manifesto by saying that he has shown:

"First, that the President had no right, in honor and good faith with Spain, to send to the Philippines one single man more than was there, or on his way there, when the peace protocol was signed last August, nor until the ratifications of the treaty of peace were exchanged on April 11. On that day the Philippine Islands became the property of the United States.

"The facts show, second, that he could have sent to the Philippines, assuming that the obstacle of good faith with Spain had been removed, only a body of men whose enlistments expired with the proclamation of peace, and whose despatch out of the country was consequently of no avail.

"The facts show, third, that he had assembled, while the right to do so was still existent, an army much larger than his military advisers thought necessary, and large enough, as the event has proved, to maintain our position and greatly to extend our authority.

"And the facts show, fourth, that since the proclamation of peace with Spain and the passage of the new army bill he has reorganized our military forces in their entirety, and is now possessed of an army with two years of service to run, amply competent, as he and his advisers believe, to bring about the pacification of the islands.

"There is nothing for which any American need apologize in this record. It is a record of sagacity and competency. It is a record of consistent and unparalleled success, a success that began with the message to Dewey, 'Go and destroy the Spanish fleet in Manila Bay,' and that will not end until the possessions which duty and fortune have confided to our care are firmly advanced on the highroad to peace and prosperity."

It will be seen that Senator Platt's presentation is intended not only as a reply to the "round-robin" signers, but as an answer to the newspapers, many of them of his own party, which have been criticizing the President's conduct of the Philippine campaign. Senator Platt announces it as a fact that the native forces are badly demoralized, and will soon give up the fight if they cease to receive encouragement from American critics of the Administration.

Almost the only papers to oppose the course of the correspondents—except the New York Sun (Rep.), which has ignored the

matter entirely—are the *New York Times* (Ind. Dem.), the *Chicago Times-Herald* (Rep.), and the *St. Louis Globe-Democrat* (Rep.). *The Times* says:

"In some States of this Union the statement of the correspondents' interview with General Otis will be read with hot indignation. They demanded the simple, God-given right of an Ameri-

—The World, New York.

can citizen to prepare and transmit 'complete reports of the situation.' He coldly refused. This is militarism rampant. This uniformed satrap is keeping things from us. He must have something to conceal. A general in the field who refuses to invite the newspaper correspondents to his tent every night to go over his plans with him, and who excludes them from his councils of war, must be looked upon as a menace to our institutions.

"Yet there are or have been generals, Kitchener, for one example, and Sherman, for another, who would have packed the correspondents out of Manila bag and baggage to Hongkong, with an emphatic warning that they would have been careful to heed. The type of mind that looks upon the statement of the correspondents as something that 'will shock the country' is incapable of comprehending the difference between war and backgammon. The plain truth of the matter is that newspaper correspondents with an army engaged in actual war have no rights at all. They are barely tolerated. Nearly every military man charged with great responsibility looks upon them as a nuisance and source of danger. Every prudent general keeps a rigid hand on them. The pretense that there is anything unusual or improper in refusing the Manila correspondents permission to send 'complete reports of the situation' proceeds either from great hardihood or great naivete. . . . The notion that the people also are entitled to full reports without evasion or suppressions is an outgrowth of the modern yellow-journal spirit, which respects the privacy neither of citizens nor of governments."

The Times-Herald says:

"Not since the three tailors of Tooley Street addressed the House of Commons a petition of grievances, beginning 'We, the people of England,' has there been anything to equal the vanity, effrontery, and impertinence of the statement of the eleven correspondents censuring the censorship of their despatches at Manila. In the entire outfit there is not a man, unless it be John F. Bass, who before the outbreak of our war with Spain knew a flying battery from a flying kite, or a twelve-pounder from a twelve-pound baby. . . .

"The American people had bitter experience of the folly of relaxing the censorship of newspaper correspondence during the campaign in Cuba. The public mind was abused and harrowed by ignorant and insolent criticisms of every military movement. Conditions were misrepresented, and a campaign which performed the miracle of driving Cervera's fleet out of Santiago ten days after a landing was effected at Daiquiri was described as a disaster and a fiasco by men who scarcely distinguished between a sutler and a trooper. . . .

"It is worthy of note that General Miles, who has been the idol of the critics of General Otis, does not mince words in speaking of the acts of the correspondents. 'The newspaper correspondents are in Manila by sufferance,' says he. 'They are camp followers like any other hangers-on of an army, and they are liable to be court-martialed if they transgress too far.'"

Some of the most loyal Republican papers, like the *Philadelphia Inquirer* and the *New York Press*, do not come out strongly against the Administration's policy in the Philippines, but intimate that a change of generals might be wise.

Will the Administration Survive?—"President McKinley's Administration should not, and, we think, will not, put itself in a position adverse to the entire press of the United States and, sequentially, to the people of the United States. No administration ever has survived such a position; none ever could, and none ever will.

"Such evils as the correspondents at Manila pronounce to be grave will have to be regarded as grave by the Administration and will have to be corrected. If they are not, the Philippine question will carry in it such complications as will overthrow this Administration and as will involve the choice of new instruments for the national purpose in the archipelago. The national purpose will not change. The insurgents will be put down there. The national authority will be established and enforced there. But the instruments to do it, if not supplied by this Administration, will be secured by the choice of another Administration, whether at the hands of the Republican or the Democratic Party. . . .

"The censorship of suppression has operated as falsification. That had resulted in deception. The deception is apparent now, and national indignation is the consequence. The campaigns of General Otis in the field may have been as successful, in the form of displays, as has been stated, but they have been failures, all the same, in long respects. The Peace Commission has made no record on which the American people can come to an intelligent conclusion. The whole thing is in a condition of muddle, and the Administration is not strong enough to stand against the consequences which the correspondents set forth.

"A new policy, new commanders, overwhelming force, and the desert of public confidence are at once necessary. Without such

GENERAL OTIS TRIES TO KEEP THE TRUTH AT THE BOTTOM OF THE WELL.—The Record, Philadelphia.

a change, the people of the United States will choose new instruments for their will."—*The Eagle* (Ind. Dem.), Brooklyn.

The Censorship of Vocal Organs.—"It is right that the people at home should have accurate information as to the real situation in the Philippines. The disposition of those far away insular possessions must be determined largely by popular sentiment in the United States, and it is necessary that popular sentiment be educated so that it may form itself intelligently. Congress will

be influenced in its action by what it deems to be the wishes of the country. If the censorship maintained by General Otis is of a nature to mislead the people at home in this matter, it should be radically modified.

"It is quite possible that General Otis has permitted a too optimistic belief to be entertained in regard to the seriousness of the problem confronting him. His predictions as to the early suppression of the insurrection have not been fulfilled, and his representations as to the number of soldiers required for the work have been discredited. Making due allowance, therefore, for the natural irritation of news-gatherers at any sort of restriction upon their enterprise, it is altogether probable that the correspondents at Manila have some ground for complaint. We shall know more about this when the volunteers return home; there will be no censorship on their vocal organs."—*The Journal (Rep.)*, Kansas City.

Let Us Have the Truth.—"This formal indictment of the management of the campaign in the Philippines is made, it must be borne in mind, by men whose probity is unquestioned, and who represent the greatest news association in the world and several of the most influential journals in this country. . . .

"The truth, however discouraging, is at all times better than misrepresentation. If we are engaged, as we now have reason to believe, in an unpromising contest with an enemy more formidable than was thought, let us know it flatly, that we may be able to force the problem intelligently and courageously, and plan together for its satisfactory solution. If Otis is unequal to the occasion, let us send a man to the Philippines who can cope with the situation and master it. We want no more shuffling equivocation and petty prevarication from Manila. We want FACTS, and now that the true state of affairs has been revealed to us, the Administration will be wise if it mistakes not the temper of the people, but deals with them frankly, no matter how injuriously its revelations may reflect on its past policy.

"A debt of thanks is owed the patriotic newspaper correspondents who have at last shaken off the shackles of military despotism and given the nation a right conception of the task that lies before it. It comes as something of a shock, but the people are sturdy enough to withstand it, and they will see to it that differ-

ent methods are inaugurated and pursued in the war of subjugation that is on their hands."—*The Times-Union (Dem.)*, Jacksonville, Fla.

"The policy of suppression of news, of slurring over mishaps, and exaggerating the importance of successes, never pays. No censorship can keep the truth hidden long, and when the truth does leak out finally there is much more irritation than if the facts had been given fully at once. Americans want to know, and have a right to know, all that their soldiers are doing and suffering in the Philippines. They have to sit in judgment sooner or later on everything that has been done in Luzon. No censor should be allowed to keep the truth from them, and no military officers should be allowed to gull them with deceptive bulletins."—*The Tribune (Rep.)*, Chicago.

"The press censorship maintained at Manila under the orders of General Otis has gone beyond the justified limits, by preventing the sending of despatches to American newspapers which revealed the true situation of affairs. The truth can not be concealed or suppressed. Newspaper correspondents who are expected to serve their papers faithfully will manage in some way to communicate the facts to them, and it would have been better to let the truth be told in an open way and under proper supervision."—*The Leader (Rep.)*, Cleveland.

"When General Otis, as alleged by the correspondents, attempts not only to conceal from the American people a knowledge of the true situation of affairs, but even to color it and make it appear more favorable than it really is, he is taking an unwarrantable and unwise course. It is unwarrantable because this is a popular government, and except when it is clearly detrimental to their interests as at a critical military juncture, the people are entitled to know the facts fully and promptly in all public matters. It is their army that is doing the fighting, and it is they who pay the bills."—*The Advertiser (Rep.)*, Portland, Me.

"A campaign of deception must result disastrously. The people of the United States want the truth. They demand the whole truth, and nothing but the truth, and the correspondents at Manila have given the Administration something to think about."—*The Journal (Rep.)*, Syracuse.

"The martyred Lincoln was not mistaken when he said it was always safe to trust the plain people. President McKinley has called for the people's voice on the Philippine question. They must know, in order that they may speak."—*The Advertiser (Rep.)*, Boston.

DELEGATES TO THE DISARMAMENT CONFERENCE.

At the entrance of "The House in the Wood."

SECRETARY ALGER'S RESIGNATION.

NO one, whether friend or foe of General Alger, seems to think that he should have remained in the Cabinet longer than he did remain. The Administration's critics continue to assert that he should have resigned or been forced from the Cabinet long ago; the Administration's friends defend his conduct of the war, but urge his alliance with Governor Pingree as sufficient reason for his retirement; and General Alger's friends declare that when the President surrendered to the storm of criticism, the Secretary resigned from the Cabinet "to preserve his own dignity and self-respect." Governor Pingree gave out a statement last week Friday telling of the relations between the President and Secretary, in which he says that General Alger repeatedly offered to retire, but that the President would not consent to it. On June 2, however, before the alliance with Pingree, Secretary Hay, so the statement runs, requested Vice-President Hobart to intimate to General Alger that his resignation would be acceptable to the President. Mr. Hobart declined to do so. The statement continues: "After that General Alger, entirely ignorant of this miserable conspiracy, several times offered to end the attacks by submitting his resignation, but still the President did not have the courage to express himself to his Secretary. General Alger finally did hand his resignation to the President, to take effect on January 2. The President dared not face the general in a manly way and ask him to retire, and give his reasons for making the request. He finally accomplished by indirection what he dared not do in open and frank manner himself."

Governor Pingree states that Mr. Hobart was finally prevailed upon by Attorney-General Griggs to suggest to the Secretary that his resignation was desired, and "gave my alleged alliance with the Secretary as a pretext." He adds: "I am told on the very best authority that General Alger made very few appointments of officers during the war, and that the commissions were issued almost entirely upon the orders of the President." The governor alleges that the more recent attacks upon Alger in the East were caused by his frank declaration of opposition to trusts, and he adds that "there is a decided odor of trusts around the present Administration, with Mark Hanna as the acknowledged 'king-maker.'"

General Alger's home organ, the *Detroit Journal*, says of his resignation:

"The maligners of General Alger have never been able to make specific charges assailing either his integrity or his competency.

The abuse of him has been based on malice, hate, and partizan blindness only. When he took upon himself the duties of the office he found confronting him conditions which had been established by the traditions of the department or by acts of Congress, and which he was powerless to modify or change. War came unexpectedly. The department was unprepared. It was necessary to put a big army in the field in a short space of time. The department had neither arms, equipment, ammunition, nor supplies for so vast an army. Chaos reigned in the department, but with a clear mind and a steady hand General Alger directed the mobilization of the troops, supplied them with necessities as rapidly as they could be produced and procured, and won for the country the splendid triumph over Spain under difficulties and discouragements which would have utterly appalled one less resolute and patriotic.

"He has been hounded out of office by the yellow journals of the East, but he will come back to his home neither discredited nor disgraced. The people of Michigan know General Alger. They respect and love him for his broad and chivalrous manhood, for his unselfish love of country, for his spotless character, and for his absolute integrity and purity of purpose."

It is noted that only three are now left of the original Cabinet with which Mr. McKinley began two and a half years ago. The portfolios and the men who have filled them are:

State.—John Sherman; William R. Day; John Hay.
Treasury.—Lyman J. Gage.
War.—R. A. Alger; Elihu Root.
Attorney-General.—Joseph McKenna; J. W. Griggs.
Post-Office.—J. A. Gary; C. E. Smith.
Navy.—J. D. Long.
Interior.—C. N. Bliss; E. A. Hitchcock.
Agriculture.—James Wilson.

COMMENTS FAVORABLE TO GENERAL ALGER.

No Foundation for Charges.—"Month after month it has been charged that the War Department has been run as a political machine, but there has been no evidence of any such abuse of power.

"There has not been a single specification of dishonesty and corruption in the handling of public money.

"American soldiers have not been killed by the thousands on American soil or elsewhere, by embalmed beef, bad sanitation, or any other agencies.

"In the fifteen months since the declaration of war with Spain there have not been 2 per cent. of deaths from all causes among our 300,000 enlisted men in the United States army.

"Regular army officers have been appointed to commands as far as they would go, and fitness has been the rule for advancement among volunteers, and not political pull.

"Honesty, intelligence, and administrative ability have been

RUSSELL A. ALGER GAVE \$100,000 TO ELECT M'KINLEY.

"I'VE PAID MY FARE—NOW LET'S SEE YOU PUT ME OFF."

OFF HE GOES!—*The Journal, New York.*

shown without a solitary exception wherever the American army has carried American authority.

"There has not been a single case of corruption brought even by the anti-imperialists against what the [London] *Times* calls the new imperial policy. The Carter case antedates the war.

"The public condemnation of Alger is largely a pigment of yellow newspaper imagination. The same newspapers which denounce Alger have not hesitated to say that Theodore Roosevelt is only honest and fearless when it pays him to be."—*The Times-Herald (Rep.)*, Chicago.

Compared with Stanton.—"The American people can not escape their responsibility by electing Alger their scapegoat. They must bear the responsibility for years of warlike talk unaccompanied by the slightest preparation against the eventuality of hostilities. They allowed the regular army to be the shadowy force it was when the war opened, and the militia to be a merely paper reserve, something that was statistically rather imposing, and in parades rather spectacular, but capable of military service only after being recast at great expense of time, labor, and money.

"We believe that ten years hence the public estimate of Secretary Alger will have been greatly softened by reflection. By that time people will realize that 'Algerism' was to a certain degree the result of the volunteer army's inability to do a lightning-change act and convert itself from militiamen into regulars in the twinkling of an eye. Nowadays everybody admires Stanton. Without comparing Alger to Stanton, we respectfully suggest to those who did not touch the public opinion of Civil-War times that they consult the files of the illustrated papers of 1862 and 1863 and study the caricatures of Stanton. They bear witness to the fact that a Secretary of War we now know to have been a great administrator was then so regarded by millions that caricaturists hit the popular fancy by depicting him as a goat who had no other idea than to butt everybody, occasionally the enemy."—*The Transcript (Rep.)*, Boston.

Alger Not to Blame.—"It is only fair to ask ourselves how many other men in public life we can think of who, in his place, could have been relied upon to master instantly and absolutely the tasks, responsibilities, and perplexities with which he had to grapple. We do not hold any brief for him. He made great mistakes and sad failures. The situation was too much for him from the start. But we hate injustice, and we know that it is grossly unjust to hold Alger accountable for the age-long divorce between the staff and the line, for the conversion of department bureaus into depositories of red tape, for the retention of antiquated methods dating from before the Civil War, for the criminal negligences and follies of sixteen Congresses, or for appointments which were neither of his making nor of his suggesting."—*The Courant (Rep.)*, Hartford.

His Misfortune, Not His Fault.—"In every war there is some high official on whom the people lay all the sins of mismanagement. Yet the worst that can truthfully be said of Russell A. Alger is that his job was too big for him. No dishonest acts have been traced to his door. He has been industrious and patriotic. He would have been an acceptable Secretary of War in times of peace. But it would take a civilian of exceptional powers to conduct the War Department during such a crisis as the country has just faced, and even General Alger's warmest admirers would not claim that he is in the first flight of statesmanship. The civilian secretary necessarily trusted too much to his military bureaucrats, and they undid him."—*The Express (Ind. Rep.)*, Buffalo.

GENERAL ALGER'S CRITICS.

"Thank God!"—"To the people of this region and State, especially to all who had to do with the work of the Massachusetts Volunteer Aid Association, or with the individual-relief work performed at Montauk Point, the resignation of the Secretary of War called out a deep, heartfelt, 'Thank God!' The 2d Regiment, which went out of this part of the State, made us all know and realize the terrible shortcomings in the War Office, we saw how the Secretary of War was bent on glossing and denying the abuses that we knew and felt, and the fact that he was sustained in this by the whole power of the Administration can not be forgotten. 'War is hell' always and everywhere, but the camps at home and the transports that carried our volunteers need not have

been as bad or worse than the tropical scenes of battle in their deadly work. Human memories are short, but there are some things so horrifying and repellent that they never pass from mind. None of the Springfield people who did all in their power to remedy the governmental shortcomings at Camp Wikoff can speak of what they saw and learned there without emotion. An incompetent public official is a thousand times more an offense when his lacks are responsible for such things as there took place. He is not to be excused. No friendly relationship can palliate him, and his continuance in office is not the less blameworthy because time has passed since the first keen sense of his unfitness burned itself upon the hearts of the people. The passing of Secretary Alger means very much to the people of Massachusetts."—*The Republican (Ind.)*, Springfield.

Should Have Been Done a Year Ago.—"The thing should have been done a year ago. The proofs of his incapacity were then heaped mountain-high. Reviewing them, even the subservient and whitewashing commission of inquiry was forced to report that the Secretary of War had failed to 'grasp the situation.'

"How had he failed? In almost every way in which an executive could fail. He had vacillated like a school-girl, issuing orders in the morning only to countermand them in the afternoon. He had established army camps on sites ill-chosen, and filled them with soldiers badly equipped, badly fed, and killed by the thousand through official negligence. He had flung the army helter-skelter in Tampa, and dumped it down hugger-mugger at Santiago. He had written that amazing despatch, when warned after half the men, that the troops must nevertheless stay in their pit of death, and let the fever 'run its course.' He had been forced to bring the soldiers home, but exposed them in their own land to such horror after horror of slipshod contract and shocking neglect that the country rang with denunciation of the head of a great department of the Government responsible for such monumental blunders worse than crimes.

"That was the time for President McKinley to act, if he really wished to rid himself and his party of the incubus of Alger. Prompt and sharp decision a year ago would have retrieved, in the public mind, the original mistake of ever making Alger Secretary of War. But Mr. McKinley never decides; he drifts."—*The Evening Post (Ind.)*, New York.

More than Incompetent.—"The people feel that Alger's failure is not wholly due to incompetence. He would probably have made at least a respectable Secretary of War if he had devoted his energies wholly to his proper work, and had made that work his only care. His mistakes have, in many cases, grown directly out of his efforts to play politics. . . .

"The trouble is that Alger is, as he always has been, a narrow-minded, vengeful, and unscrupulous politician, without proper conception of the relation that a public officer should sustain to the people. He did not like General Miles, and so he would listen to few or none of his suggestions, and spared no opportunity to humiliate him. He sent Shafter to Cuba when we believe it to be generally admitted that that officer was unfitted, physically at least, for service in a tropical country. In spite of the brilliant results of the Santiago campaign, it is known that the expedition was wretchedly equipped—or at least that the army did not get regularly and promptly and in sufficient quantities what was provided for it. . . .

"But Secretary Alger was the responsible head of the department, and he cannot escape all blame. Nor will the country forget how skilled officers, veterans of the Civil War, pleaded for employment, and how they were passed over for inexperienced young men with 'pulls.' The country was full of officers who would have been glad to accept the most subordinate places in the volunteer army, and who, if they could not have gone to the front, could have performed most valuable service in drilling the recruits. These men could have instructed the raw volunteer officers in the practical work of caring for their men. With intelligent supervision over the volunteer regiments we should have escaped much of the disease and suffering in camp.

"But the country is rid of Alger, and it will rejoice that the Administration which is charged with such delicate and important duties is relieved of him."—*The News (Ind.)*, Indianapolis.

At Last!—"So long desired, so little expected, but come at last! What might have been saved to the President and to the

country had General Alger left the War Department long before! How infinitely better it would have been for President McKinley and the American people if he had never been called to it! Whatever the obligation which compelled his appointment to a place in the Cabinet, it has been discharged at heavy cost to both President and people. Let him give a full receipt and go as soon as possible.

"Now that the War Department is to be relieved of Alger, it should be also purged of Algerism. President McKinley can not do better for himself politically than by weeding politics out of the army. There is a great opportunity for reforming the department, repairing as far as possible the errors of the Philippine campaign, and restoring the prestige of the army and of the Administration, both of which have suffered greatly from the blight of Algerism."—*The Plain Dealer (Ind.)*, Cleveland.

A Warning to Presidents.—"The people have felt that Alger's actions as Secretary of War were often directed by personal interest and narrow favoritism rather than by the needs and interests of the public. They have blamed him for the swarm of unskilled civilians who were commissioned to do things the wrong way in the Commissary Department and elsewhere during the American-Spanish war because they had political influence. They have felt that the War Department was being run at all times for Alger and his friends rather than for the people of the United States.

"Now Alger is going out of the Cabinet. He should never have gone into it. His fate should be a warning to Presidents and to Cabinet officers that high position is not to be used to further selfish ends."—*The Record (Ind.)*, Chicago.

Failed.—"From the beginning of our troubles with Spain to the moment of his final disagreement with the President, he conducted his office on political lines, without regard to the interests and dignity of the country or the welfare of the soldiers in the field. His administration has been distinguished by profligate expenditure and shameful intrigue. He has sought the punishment of his personal enemies and used his office to promote the fortunes of those who were useful to him in the attainment of his ends. He had a great opportunity and failed to meet it."—*The News and Courier (Dem.)*, Charleston.

ELIHU ROOT APPOINTED SECRETARY OF WAR.

THE appointment of Elihu Root, of New York, to the war portfolio, made vacant by the resignation of General Alger, seems to be, with few exceptions, received with favor by newspapers of every political complexion. The following sketch of his career appears in the news columns of the New York *Sun*:

"Elihu Root was born on February 15, 1845, in Clinton, Oneida Co., the son of Dr. Oren Root, until a few years ago professor emeritus of mathematics, mineralogy, and geology in Hamilton College. Dr. Root was a man of fine taste in literature and of solid and varied learning. He was succeeded in his professorship by his son, the Rev. Oren Root. Elihu Root was graduated from Hamilton in 1864, valedictorian of his class. Altho distinguished in college by literary and scientific tastes, and proficient in classics and abstract science, he early determined to study for the bar. He taught for a year after leaving college in the academy at Rome, not far from Clinton, and then came to New York. Here he studied law under John Norton Pomeroy. He took a course in law at the New York University and was admitted to the bar in 1867. Since that time he has practised law continuously in New York.

"The first case of importance in which Mr. Root was retained was the suit of the People *vs.* Ingersoll, in which he successfully contended against Charles O'Connor's theory that the State instead of the county was the proper party to sue for money alleged to have been taken from the county. He exhibited such readiness of resource and such a thorough knowledge of the technicalities of law that his abilities were never after allowed to lie fallow. In many of the important cases which have since aroused the public interest he has been employed. He conducted the defense of Stephen B. French, president of the Police Board, and obtained a legal triumph. He has been retained by many of the great corporations, and has been especially prominent in railroad and will cases.

"Mr. Root was a candidate for judge of the Court of Common Pleas in 1879. In 1886 he was made chairman of the New York County Republican committee. For a number of years he was the executive member from the Twenty-first Assembly district. He is now president of the Union League Club. He was vice-president of the Bar Association for a number of years and vice-president of the Grant Monument Association. He has been a Hamilton College trustee since 1883, and he has been president of the New England Society. He received the degree of LL.D. from Hamilton in 1894. He was one of the most prominent members of the State constitutional convention, and was chairman of the judiciary committee. He has been one of the most earnest of Republican campaigners. His name has been prominent in past years when the party was looking around for mayoralty and gubernatorial timber. He was prominently mentioned this year for United States Senator and later for Ambassador to Great Britain."

The New York *Journal* (Dem.), one of the most bitter opponents of General Alger, says of Mr. Root:

"The only question with which we have to concern ourselves is whether he is a good man of his kind, and that he certainly is. He is no soldier, but he is so infinitely superior to Alger that we have a right to expect him to institute a revolution in the conduct of his department.

"The President has done a good thing, and as long as he does good things *The Journal* is with him. He has wiped off the slate and made a fresh start. He has a right to ask the country to reserve judgment until he makes some new mistakes."

The New York *Tribune*, which does not hesitate to criticize the Administration upon occasion, does not express an approval as unqualified as some other papers, but takes a hopeful view:

"The President has consulted his personal preferences in selecting General Alger's successor, but if, as is understood to be the case, Mr. Elihu Root's private ties and professional interests in New York have not deterred him from accepting the Secretaryship of War, there is no reason to doubt that his appointment will be kindly regarded by the country. Mr. Root is a successful lawyer whose practise has been large and diversified for many years, and he therefore fully satisfies the President's desire that the new member of the Cabinet should be qualified to handle the serious legal questions which, he thinks, the results of the war have devolved upon the War Department. He has not had wide experience, we believe, as an executive in affairs of great magnitude and importance, but he is generally credited with a capacity for efficient work in any field to which he chooses to devote himself. In recent years especially Mr. Root has given considerable attention in a professional way to the course and processes of legislation, and it is possible that the experience thus gained will be convenient to him in presenting the claims of the military establishment to the consideration of Senators and Representatives in Congress. Altogether the public will hope that he may show himself to be a man of skill and resource in the conspicuous place which he has been asked to fill."

The Philadelphia *Ledger* (Ind. Rep.) remarks upon Mr. Root's demonstrated intelligence, integrity, and independence as hopeful indications of better things in the War Department. The New York *Evening Post* (Ind.) considers him nearly an ideal man for the place. The New York *Times* (Ind. Dem.) says: "No man who knows Mr. Elihu Root's abilities and characteristics will have any misgivings as to his success in the post where his predecessor exhibited such a total want of it. . . . It was the service of a trained and sagacious mind, a cool and sure judgment, and a wise counselor, not at law but in politics and policies, we imagine, that Mr. McKinley sought in Mr. Root. He will not be disappointed."

The New York *World* (Ind. Dem.), however, thinks Mr. Root no better than General Alger:

"If the War Department is in need of a very able corporation lawyer, a defender and organizer of trusts, then the appointment of Mr. Root is admirable, 'ideal.' If a man fit to direct war affairs is needed, then the selection is a bad one.

"Mr. Root is just as unfit for the place as Alger was, tho his

unfitness is different in kind. The man wanted at this critical juncture at the head of the War Department is a great administrator or a man familiar with military affairs and requirements, or, better still, a man who combines both these qualifications.

"The appointment of Elihu Root is a conspicuously unwise one, made for personal and political, not for military or administrative reasons."

DEATH OF ROBERT G. INGERSOLL.

THE press comments on the career of Col. Robert G. Ingersoll, who died suddenly last week Friday at Dobb's Ferry, N. Y., pay tribute to his patriotism, generosity, and affection, but criticize his efforts to break down the faith of others. The *Philadelphia Times* says of him:

"Colonel Ingersoll had in high degree the qualities of head and of heart which endear a man to his fellows. Handsome of person, brilliant of wit, persuasive of tongue, a clear, logical rea-

COL. ROBERT G. INGERSOLL.

soner and a deep student of literature, law, and politics, he had every requisite for a successful career. Brave, generous, truthful, charitable, and patriotic, he had the power to sway the reason of men and win their hearts. He was in all his dealings a living exemplification of the Golden Rule. He was a devoted husband, a kind father, a generous neighbor. Love was his religion, home was his heaven. He had no sympathy with those of his pretended followers and blatant imitators that declaim against the sanctity of marriage and the liberty of law. At the Cincinnati Convention in 1876 he delivered the most eloquent, thrilling, and effective political speech that has been made in America since Patrick Henry. At the funeral of his brother a few years later he paid the most beautiful tribute to fraternal affection of which we have any knowledge, while at the same time admitting the possibility of and expressing a tender yearning for a meeting in the great beyond. . . .

"His fatal fault was not that he was an unbeliever, but that he paraded his unbelief and sought to destroy the faith of others. He tried to tear down the dearest possession God has given His children, and offered nothing in its place. Therefore is this man's name, which should have been placed so high, written in sand.

"But we can safely leave his final judgment to Him who in His

death agony cried: 'Father, forgive them, for they know not what they do,' while we lay flowers on the coffin of a tender father, a faithful husband, a generous friend, an open-handed benefactor, a brave soldier, and an unflinching patriot."

The *New York Press* says:

"Probably the worst that can be said of the colonel is that he was a religious gamin. He was not of the sort who undermine the foundations of belief—no such hard work for him, thank you. He was rather the bad boy, with sunburned legs and tow hair, who 'rocks' the congregation at church on Sunday mornings and tempts the good boys off to the swimming-hole or the fishing-weir. If we press for conviction in a higher degree, Ingersoll may also have to plead to a charge of religious demagogism. Starting in revolt against only the forbidding unloveliness of Congregational Puritanism, he seems to have been led, demagog fashion, into the general unsettlement of the minds of superficial folk merely by the discovery that he could unsettle them. If not, we are driven to the disagreeable conclusion that he preached spiritual annihilation for the money in it. He had no substitute gospel, save a vague naturalism. But the more rational conclusion is that his irresponsibility proceeded from the delight in swaying large bodies of people, which actuates the political demagog. It is pretty certain that Ingersoll took little thought of the number of imperfectly educated young men for whom his clever mockery of things which they had revered made excuses for evil courses. It was this influence of his undoubtedly which caused the religious societies to combat him so vigorously and to labor so hard for his conversion. These good people were undoubtedly much worried by his life. They may calm themselves at his death. He leaves no legacy of disbelief like Voltaire, or Renan, or Strauss, or even Tom Paine. With the last echo of his mellow voice silenced, and the last twinkle of his bright wit quenched, his influence is exhausted.

"But as a man he was far less interesting and important than as one of modern democracy's methods of testing the things hitherto accepted. From all outward signs, the thing with which he strove is the soundest of all. The Disestablished Church of the United States to-day in all its creeds and sects presents the most impressive voluntary tribute of the mortal to the immortal, of man to God, whereof the world holds record. There has been at no other place and no other time in Christendom so large an example of the free and uncompelled worship of a Creator as in the land of Colonel Ingersoll's birth on the day of Colonel Ingersoll's death."

LETTERS AND ART.

"KIPLING'S BARBARIC YAWP."

ANOTHER voice is raised in protest against "the Kipling hysteria." This time it is Mr. Elbert Hubbard, who in *The Philistine* (July) makes an onset upon Kipling in the amusingly unconventional Roycroft style, which, like the Roycroft books, is something unique. Mr. Hubbard admits the literal truth of Professor Norton's statement that "the strongest individual voice in contemporary literature is that of Rudyard Kipling"; but, he says, the voice to him is "often heady, and occasionally guttural." The voice has timbre, it carries, but it is not smooth, musical, nor vibratory. "The vocal spectrum reveals small trace of the refined, gentle, or sympathetic in Rudyard's nature." The writer then proceeds to tell why we have accepted Kipling with such apparent unanimity:

"Kipling voices violence—Kipling voices nothing better than that which the world has held and followed since history began. That is to say, Kipling represents power for prowess—violence that good may come: Christianity on the point of a spear—civilization dealt out with a catapult. And the reason we have accepted Kipling and gulped him without question is because as a people we are essentially barbaric.

"To a degree his vogue is due to a recoil from a sham culture and an over-refinement which certain poets who had latch-keys to the popular magazines were trying to push upon us. From inanity and pretence we turn to rugged nature. Yet civilization demands that nature be tamed, lest perforce the ethics of the barnyard prevail. To a degree we must spiritualize nature and tame the tiger in our hearts.

"Yet here comes Kipling, loud, blatant, hairy—voicing the old, old doctrine of force and violence in which we Christians have always believed; and lo! we hail Rudyard as a prophet. We hail any man as a prophet who voices the things we believe. Kipling represents the beast-like in our nature—the mob spirit—he goes in droves and hordes, making a mighty howl, and the echo of his hobnailed mirth smothers the still small voice that a few fair world hear."

Mr. Hubbard, who says that he has had "Kiplingitis" in every form from varioloid to acute, but is now immune, goes on to explain the grounds of his present opinion of Kipling:

"I admire Kipling, but well on this side of idolatry, and think I know his limitations. And among the reasons why all these screechy attempts to work his apotheosis will fail, I will name two:

"1. Kipling has no comprehension of the nature and attributes of a good woman.

"2. He has no understanding of the value of Silence and Peace.

"As to the first of these counts, let me say that all literature is a confession. We write of the things that we do know—we write of the things that fill our waking hours and haunt our dreams. Outside of this, we may make occasional skirmishes into—well, say a roundhouse, and with the help of a wiper make a list of the parts of a locomotive; and then, to bamboozle the world into the belief that we are versatile, write a story, incorporating all the locomotive parts we have listed, and let an engineer correct the final proof. We could do that, or we could write a horse story and call a trotting-horse a thoroughbred, making the horses talk, but it would all cost conscious effort, and this effort would show in the work, and stamp the whole as Class B—just fairish machine-made stuff. . . .

"To sum woman up as 'a rag and a bone and hank of hair' is the last word on the woman question that Kipling has to say. To him woman is a vampire that sucks the life-blood of men. He shows several women who possess a dogged loyalty and cling in maudlin fondness to the hand that strikes them; and many others of similar nature who are slaves, pets, and playthings of men; but the woman of intellect and aspiration—honest and helpful—his comrade for a strong and earnest man, he does not know. If she existed in his brain, he would have pictured her on paper. If

he ever met such a woman, he failed to appreciate her nature and in his dreams he never conjured her forth. . . .

"As a writer, Kipling has wrung his soul dry for copy, and then to satisfy the demands of publishers he has gone outside and written 'Stalky Stories.' But the strong and good woman for him does not live, because his ideals are the ideals of an age that held woman as a chattel, or purchased her favors on the Rialto, thus saving the bother of supplying her board and clothes. . . .

"Representing an age of materialistic power and pomp, he believes in war, and is the advocate and apologist of strife and violence. And this brings us up to the second fact, which is that Mr. Kipling has no conception of the value of Silence and Peace. To cultivate the Silence means to have such an absence of fear that you find a pleasure in solitude. Only good men can bear to be alone. 'Give me solitude, sweet solitude; but in my solitude give me still one friend to whom I may murmur, solitude is sweet. The war spirit means combinations, alliances, fortresses, bars, and loaded cannon. It means crowds, mobs, fear, hate, unrest, gloating glee, flaunting pride, boastful vanity—hell either way and in any event. Kipling's poem 'The Truce of the Bear' gave two nations a twist to starboard, by ingeniously picturing the Czar as a bear that liked a man's face and took it—first getting the man, through a shallow ruse, to lay down his gun. Thus did Kipling show that it matters not who makes the laws, if he can write our songs. Kipling did the Czar a most rank injustice in assuming that Russia was only working to get the rest of us within reach and then claw the countenance off us. . . .

"A clever singer of songs came to us from over the sea, married one of our fair daughters, paid a beautiful tribute to her brother—dead and gone—altho she has another left—and we have yearned toward this singer, and made his songs our litany—forgetful of their barbaric brutality—forgetful that such songs have cursed the world a-down the centuries—songs of violence, blood, and sudden death!

"Fie upon the writer! and shame upon us who have accepted his jolt-head jests and barbaric yawp for holy inspiration."

Yankee Doodle as a Medieval Papal Chant.

"Yankee Doodle" can not be claimed as the exclusive property of the Yankee race. According to a writer in the *Cincinnati Commercial Tribune*, it has had a long and varied history. He says

"'Yankee Doodle' is one of the oldest songs in the world and at different periods of an unparalleled career has belonged to England, to the once vast empire of Holland, and to the Roman Catholic Church, where it probably originated, somewhere about the year 1200 A.D. If you happen to be a musician and do not believe that such an undignified ditty could ever have been intended for religious purposes, play it over on a pipe organ very simply and slowly, and as the majesty of a grand old papal chant fills your soul, all your doubts will vanish away.

"Several hundred years ago the good people of Holland thought so much of 'Yankee Doodle' that they adopted the tune for the harvest song and made up new words for it. Mary Mapes Dodge gives one of the verses in 'Hans Brinker':

Yankee didee dudle down,
Didee dudle launter,
Yankee viver voover vown,
Botermelt und taunter.

"Soon after being first sung, this quaint verse became so popular among all classes in Holland that it became a truly national song. It was sung in livelier time than the old chant which it supplanted.

"One of the latest and aptest historical—if least literary—versions of 'Yankee Doodle' is a stanza said to have been sung by some of the Rough Riders in Cuba after the surrender of Santiago. It ran something like this:

Yankee Doodle came to town
Wearing striped pants on,
But Spain she saw so many stars
That now they need expansion.

"'Yankee Doodle' has already belonged to the three great families of the Caucasian race [*sic*—the Latin, the Teutonic, and the Anglo-Saxon. In seven centuries it has been carried into the heart of four of the greatest political powers of history."

FAMOUS LITERARY MEN IN CARICATURE.

ONE of the most deft and subtle of caricaturists was Carlo Pellegrini, who under the pseudonym of "Ape" for many years contributed to *Vanity Fair*. Some of his best caricatures have lately been republished, and form the basis of an interesting article on the art of caricature in *The Academy* (June 24), which reproduces several of the most striking of his literary portraits, together with one or two by other hands. Of caricature as a fine art the writer says:

"With most persons, who have no time for elaborate distinction, the word 'caricature' covers any humorous portrait; but it has, of course, a finer and more exact meaning than that. The dictionary defines it as 'a figure or description in which beauties are concealed and blemishes exaggerated, but still bearing a resemblance to the object.' Yet this hardly expresses everything. We have seen many drawings in which beauties were concealed and blemishes exaggerated that still did not deserve to be called caricatures. The true caricature is more. In the hands of a master, it is a portrait of a man as he is. The ordinary portrait, whether a painting or photograph, shows the sitter at his best, self-conscious, in special clothes, with features formed to suit the occasion. The caricature is merciless, but not necessarily cruel. It allows no affectations—unless they are in the nature of a man, and then it allows little else. It is not the result of any sitting, but the summary of long acquaintance. It permits just enough emphasis to make its critical, autobiographical point, but otherwise it is realistic."

Pellegrini was an Italian, and therefore peculiarly adapted by heredity to express the delicacy of shading and subtilty of suggestion which are necessary for the highest success in this art. Says the writer:

"To his skill with the pencil he added that instinct which plays a larger part in the composition of a genius than any amount of taking pains can. With every one he was not equally successful; but his best caricatures are superb, instinct carrying him straight to the heart of the matter. Look, for instance, at the Disraeli, one of the seven *Vanity Fair* cartoons which we reproduce in black and white. Even in that medium—for which it was not intended—and many times rednced, it is still convincing. Cynicism, race, diplomatic craft, power, the vein of dandyism—all are there. Pellegrini had a great subject, and he rose to it. His Mr. Swinburne is less profound, and in the Carlyle and the Ruskin criticism is sacrificed to comic effect. Pellegrini, it must be remembered, was a *flâneur*, a haunter of cafés, and the father of

cigarette-smoking in this country, and it is natural that it should please him to make the Sage of Chelsea grotesque and the Sage of Brantwood ridiculous. Similarly, he did not quite rise to Mr. John Morley. And yet how good they are, still!—the Carlyle has something of the melancholy of his best portraits. The fantasia on Jowett, played by Mr. Leslie Ward, whose pseudonym is 'Spy,' is among that clever artist's best work. But here again we miss profundity. The caricaturist, however, is at liberty to confine his energies to one aspect of a man, and, if we miss the

wiser and more serious side of Jowett from this picture, tho benign and dapper 'Jowler' is there to the life. The Matthew Arnold is unsigned, and we are unaware of its artist; but it is very rich. Confidence and the knowledge of intellectual superiority are both indicated. And there is also mischief, a necessary quality in the caricaturist."

Hall Caine and Literary "Plagiarism."

Mr. Hall Caine maintains a contemptuous silence in reference to the request that he explain the strikingly close resemblance between a paragraph in "The Christian" and one in a book by Dean Swift (see THE LITERARY DIGEST, July 22). Mr. William L. Alden, the London correspondent of the *New York Times*, says of this bit of gossip, which is just now a mid-summer day's

wonder in London literary circles:

"Those people—and there are many thousands of them—who fancy that an author who is so prolific and so successful as Mr. Hall Caine would be capable of the folly of plagiarism would never accept what is unquestionably the true explanation of the resemblance between the two paragraphs referred to. That Mr. Caine could not have written his paragraph without having previously read that of Dean Swift seems certain. But that he remem-

bered the Swift paragraph and deliberately copied it is incredible. The explanation undoubtedly is that he had read the Swift paragraph and had so utterly forgotten its origin that he wrote his own paragraph in perfect good faith, imagining that it was wholly his own. I have known precisely such cases. I knew a man who wrote a poem that he could have sworn was entirely original, and when the editor to whom it was submitted pointed out that it bore a close resemblance to one of Owen Meredith's poems, the man was indignant. He was absolutely certain that the poem was wholly his own, and, moreover, he had no recollection of ever having read the volume of Owen Meredith in which the poem referred to by the editor had appeared. However, the man procured the volume and found that the editor was right. The resemblance in subject and treatment between his own verses and those of Meredith was so close that no one could read the

former without charging the writer with plagiarism. The explanation was that the man read Meredith's poem and that it had sunk into his memory. In course of time he had completely forgotten it, as he supposed, and when one day something happened which suggested the same subject to him, he wrote a poem, which virtually reproduced that of Meredith.

"Since this case and one or two others came to my knowledge, I have been slow to accuse any man of plagiarism, unless he had copied the exact words of another writer. Mr. Hall Caine is not one of my favorite authors. Indeed, I have so far been entirely unable to read 'The Christian.' But that Mr. Caine is capable of the inconceivable folly of plagiarism is simply unthinkable. To imagine that he knowingly copied the essence of what Swift had previously written is as absurd as the suggestion made some time ago that Mr. Kipling owed the idea of his 'Brushwood Boy' to Du Maurier's 'Peter Ibbetson.'"

A POEM WHICH WAS MISTAKEN FOR BROWNING'S.

IT is no small honor to write a poem that could be extensively and admirably quoted for many years as the work of Robert Browning. Such an honor befel a young woman some years ago—Miss Ophelia G. Browning, the daughter of a Methodist minister of Fordham, N. Y. Miss Browning, who was not much more than a girl at the time, assisted her father in his religious work, and upon one occasion, in 1879, she had endeavored to bring comfort to a mother who, like another Monica, was greatly distressed over the spiritual indifference and worldliness of her children. Their conversation together left a deep impression on Miss Browning's mind, and upon her return to her home she wrote the following verses, which since then have been so widely printed and quoted under the title "Sometime, Somewhere":

"Unanswered yet, the prayer your lips have pleaded
In agony of heart these many years?
Does faith begin to fail, is hope declining,
And think you all in vain those falling tears?
Say not the Father has not heard your prayer,
You shall have your desire, sometime, somewhere!

"Unanswered yet—tho when you first presented
This one petition at the Father's throne
It seemed you could not wait the time of asking,
So anxious was your heart to have it done?
If years have passed since then, do not despair,
For God will answer you, sometime, somewhere.

"Unanswered yet? But you are not unheeded;
The promises of God *forever stand*;
To Him our days and years alike are equal.
'Have faith in God!' It is your Lord's command.
Hold on to Jacob's angel, and your prayer
Shall bring a blessing down, sometime, somewhere.

"Unanswered yet? Nay do not say unanswered;
Perhaps your part is not yet wholly done.
The work began when first your prayer was uttered,
And God will finish what He has begun.
Keep incense burning at the shrine of prayer,
And glory shall descend, sometime, somewhere.

"Unanswered yet? Faith can not be unanswered;
Her feet are firmly planted on the Rock,
Amid the wildest storms she stands undaunted,
Nor quails before the loudest thunder shock.
She knows Omnipotence has heard her prayer,
And cries, 'It shall be done, sometime, somewhere.'"

It is of course unlikely that the student of Robert Browning would find in these limpid lines the characteristics of the author of "Sordello," altho on occasion Browning could write as limpidly. The poem, however, has a curious history. It was printed, we are told by a writer in *The Presbyterian Journal*, at the desire of the lady already mentioned, that it might "be sent out to cheer and comfort other mourning hearts." It first appeared in *The Christian Standard* in May, 1880, over the signature "F. G. Browning." Shortly afterward it was copied in *The Christian Advance*, and was there attributed to Robert Browning. Later, another paper, *The Methodist Review*, in an elaborate article on Robert Browning, mentioned this poem as an evidence of his ripened spiritual culture. Some years subsequently, Miss Brown-

ing, who in the mean time had married and had become Mrs. Burroughs, of Poughkeepsie, had, in company with the very friend for whom the verses were originally written, the unique pleasure of hearing her poem repeated before an immense throng at a religious gathering in Ocean Grove, the audience by request joining in the recital of the last stanza. The two unknown authors of the poem doubtless enjoyed a reward of authorship not often matched in literary experience.

THE CHANCES OF NEW WRITERS.

THE old question as to whether new writers have a fair chance of obtaining recognition in the magazines or whether those mysterious sanctums are controlled by "a ring" is being threshed over anew, and from the figures given by a recent writer on this subject, Mr. Crittendon Marriott, the outlook certainly is not one to discourage any one who possesses undoubted merit. Says Mr. Marriott (in *The Critic*, July):

"Various arguments pro and con have been advanced, but no one, so far as known, has as yet offered any statistical proof on the subject. Mere assertions from either side amount to little, because they are supposed to be prejudiced or interested, and even those of a recent writer who examined the pages of the magazines for last December, and found that most of the names were unfamiliar, can not be taken as conclusive. Yet absolute proof exists and has existed for some time past—proof, too, that is open to all and is easily obtained. Subject indices of the contents of practically all the magazines of this country and of England for the last fifty years are in existence, and author indices of the same articles have been prepared annually ever since 1891. The volume for 1898 is not yet out, but even without it there are six volumes in print, quite enough on which to base an extremely accurate estimate of the value to an author of former writings. The indices in question give the names of practically all the authors of all the articles in all the magazines of the United States and England. In 1892 111 magazines were indexed; since then the number has steadily increased until in 1897 they numbered 141, an annual increase of five per cent. in the number indexed. Some of the more ephemeral and recent magazines of light fiction may have been omitted, but they are very few. Every article printed during the last six years that amounts to anything is to be found there.

"If we examine the 1897 volume, we find 65 pages of fine print in the authors' index, containing 5,900 names, of which about 1,100 are those of authors whose principal work was fiction, while 4,800 are those of authors who have treated of religion, science, travels, histories, essays, and the like. The qualifying adjective 'principal' is used because quite a number of fiction writers have occasionally written more or less fact while a goodly portion of the fact writers have written more or less fiction. Now if we go over the five preceding volumes, from 1892 to 1896 inclusive, we shall find just what part previous publication played in securing a hearing for these 4,800 writers of fact and these 1,100 writers of fiction. Of course it would be a tremendous task to go through all these pages of fine print in all these volumes, but it is comparatively easy to examine a sufficient proportion of them to obtain figures which, by simple rule of three, will give us the facts for the whole. Accordingly, let us take the authors whose names figure on the first five full pages in the 1897 volume, and look up their previous records. We find that these five pages contain the names of 367 writers of fact and 87 writers of fiction. Of these, 154 of the former and 30 of the latter are absolutely new writers, who have not appeared in a magazine for five years and have probably never before appeared in one. We also find that 82 of the former and 14 of the latter have had just one former article printed, and are therefore practically new writers. That is to say, about two thirds of the fact writers and one half of the fiction writers of 1897 were either absolutely new or had had only one previous article accepted. This seems to show that the chance of the new writer is very good.

"Let us go farther. We find that 101 of these fact writers and 30 of these fiction writers for 1897 have had from two to six articles each published within the five preceding years. Of the re-

mainder, 36 fact and 12 fiction writers have had from 7 to 25 articles each, and 3 fact writers have had from 25 to 40 each. One other, Grant Allen, has had more than 60 articles, about equally divided between fact and fiction. No one in the five pages can touch his record, altho probably there are others equally large farther on in the index.

"Putting these findings in the form of percentages, we ascertain that the following facts existed in 1897:

"Fiction writers, about one fifth of the whole: absolutely new writers, 35 per cent.; nearly new, 15 per cent.; fairly old, 35 per cent.; and thoroughly established, 15 per cent.

"Fact writers, about four fifths of the whole: absolutely new, 42 per cent.; nearly new, 22 per cent.; fairly established, 28 per cent.; and thoroughly established, 8 per cent."

It may be replied that if these statistics are so encouraging to new writers, they appear to be equally discouraging to those who desire to obtain a permanent standing in current literature. If 62 per cent. of all who contributed to the magazines in 1897 are nearly or quite new, then only 38 per cent. are fairly old. Mr. Marriott, however, while admitting this fact, thinks the prospect, for the older writers of fiction at least, is not by any means bad. He says:

"There were 4,700 names indexed in 1892 against 5,900 in 1897, an increase of nearly 5 per cent. each year. But investigation shows that nearly all this increase was in the fiction writers, who increased from 500 to 1,100, while the fact writers only increased from 4,200 to 4,800. That is, the fiction writers increased at the rate of 17 per cent. each year while the fact writers increased only about 2 per cent. per year. It is evident that these facts must alter the reverse percentages more or less, probably to a considerable extent so far as fiction writers are concerned. If the whole number of these last in 1892 were doubled in 1897, they could not form more than 50 per cent. of the whole in the latter year even if every one of them had survived through to that year. As a matter of fact, actual investigation from 1892 forward shows that three fifths of the fiction writers and nearly one third of the fact writers of 1892 are still flourishing at the present time—a far more favorable showing than might have been expected.

"If these percentages and increases are applied to the future—remembering that 1898 has not been considered and that the increases will be for two years—we may safely assume that in the present year, 1899, there will be 6,500 magazine writers who will secure publication. Of these, 5,000 will be fact writers and 1,500 fiction writers. Some 2,100 of the former and 525 of the latter will be wholly new; 1,100 of the former and 225 of the latter will be nearly new; 1,400 of the former and 525 of the latter will be fairly old; and 400 of the former and 225 of the latter will be old and thoroughly established friends. Thus there is abundant encouragement for new writers, both of fiction and fact, to try their hands, and abundant encouragement for writers of fiction to hope to become well established in their work. For writers of fact the chance of establishing themselves is not so good."

Successful Books that were at First Rejected by Publishers.

—The tremendous success of "David Harum," which was rejected in manuscript by four leading publishing houses before it was accepted by the Appletons, calls attention anew to the fact that the beginner in literature need not feel discouraged by some initial setbacks. Several misjudgments of publishers are given by a writer in the New York (*Times* July 8), based on the reminiscences of Mr. James C. Derby, a lifelong associate of the foremost publishers and writers of America. Says the writer:

"Miss Muhlbach's novels were offered to almost every publisher in New York and declined, finally being published by the Appletons. The friend of our youth, 'The Wide, Wide World,' was rejected again and again in manuscript, and the publisher who finally put it upon the market did so against his 'better judgment' and to please his very aged mother, who was greatly taken with the story. Mr. Robert Carter, whose firm was for many years the Misses Warners' publishers, once declared somewhat grimly that he was the first publisher to reject Miss Warner's

book, and that he had read the manuscript himself at the solicitation of the author's father, one of his personal friends, at that time a practising attorney in this city. The authors of 'Rutledge' and 'Stepping Heavenward' had a similar experience, both stories being put upon the market with great timidity and achieving immediate and emphatic success. Marion Harland met with similar difficulties, and as for Mrs. Stowe and 'Uncle Tom's Cabin' the fate of that American classic was a doubtful one for some time after it—with difficulty—found a publisher.

"Julian Hawthorne is himself the authority for the statement that 'Archibald Malmaison,' one of the best-selling products of his pen, was refused by nearly all of the foremost publishers of Boston and New York. McMaster's 'History of the People of the United States' was rejected by the publishers' readers to whom it was submitted, and 'a distinguished *littérateur*' passed an unfavorable verdict on the work. Finally Mr. Appleton himself read the manuscript, came to an opinion diametrically opposite to the judgments previously rendered, published the work, and the results we all know.

"The subject might be pursued much further and innumerable other instances given, but it has gone far enough to show that the publishing fraternity is not exempt from the errors of judgment which pertain to the rest of fallen humanity. And that is quite enough."

STEVENSON AS A BOHEMIAN AND LOVER.

ROBERT LOUIS STEVENSON is already familiar to us as a steerage passenger on a transatlantic liner, as a sojourner in the byways of San Francisco, as a plantation owner in Samoa, as a delightful correspondent, and as at all times a devoted literary worker; but to most of us the picture of Stevenson as a continental bohemian, leading a semi-literary free-and-easy life among the painters and *bon-viveurs* of a little French village, and dallying with a rather risqué intrigue with a charming bohemienne, will present elements of piquant and pleasing novelty. A writer in *The New Century Review* for May, Miss Lillith Ellis, gives us some glimpses of this period of his life in the early eighties. She had left London to go to Grätz for a few weeks, and had the good fortune to meet Stevenson on the first night of her stay, at the headquarters of the colony of French, American, and English students from Paris who were spending the summer there sketching and writing. She thus narrates the first meeting:

"E— took me up a flight of wide, wooden stairs. As he turned the handle of a door, he said, 'Oh, by the by, you must come and see Stevenson.'

"We entered a room that might have been a dormitory, but it suggested a literary den, for the settee near the window was full of books, papers, bottles, cigarettes, paints, brushes, and canvases all piled in a heap in the utmost disorder. Two or three chairs and a washstand were equally occupied, but a box turned upside down was quite a distinguished seat. A singularly pleasant voice from a narrow camp-bed took pity on my nervousness and bade me be seated. I saw a pale, slim youth with a great length of face from the eyes, features strong and impressive, and long, matted hair coming down over his forehead. He was dressed in a very *negligé* style. The whole of his bed was covered with magazines, sketches, papers, and writing materials. An ordinary person would have been driven crazy with such disorderly surroundings, but nobody here seemed to think anything of it. While Stevenson talked, he smoked incessantly. By his side sat his friend, the beautiful Mrs. O—, who rolled the tobacco into the size and shape that he liked, and smoked, herself, continually. The lady had the loveliest eyes that I have ever seen; they were large, black, and fringed with long, deep lashes. She was very dark, and her frizzy hair fell in thick curls over her eyebrows. She had a large, expressive mouth, a straight nose, and beautiful teeth. She wore a loose cotton gown, a man's tie at her throat, and over her thick curls a Turkish fez of bright scarlet which looked piquantly bewitching. Her broad, American accent betrayed her nationality.

"E— talked 'shop.' Stevenson contradicted him with extravagant theories of art which he advanced with the utmost seriousness. I wore an esthetic gown of pale green silk, with a

coachman's cloak of many capes, and a bonnet to match. It was the first costume of the kind that Stevenson had seen, and he admired it greatly. I became the rage among the painters on account of my dress, and I rapidly developed into a good-natured model.

"Stevenson and I became great friends, despite his erratic and fanciful moods. I likened him to Shelley; first, because of his delicate, highly strung temperament; secondly, on account of his capriciousness and his passion for 'fantasy.' I don't think he had made much of a name in literature at that time, but he was renowned among his own set as a most brilliant talker on trifles. He would take a simple word—one in daily use—and fence, and play, and dwell upon it until the commonplace substantive grew unnatural and heathenish, and never quite went back again to its original innocence. He delighted to draw me out on politics, women's rights, and kindred subjects, and in forcing me into ridiculous positions which I defended, metaphorically, with tooth and nail. The more abusive and illogical my argument became, the more interested he grew."

Stevenson was dubbed "St. Louis" by the other men at Grätz, some of whom had known him in Paris. Most of these men have since attained eminence and fortune in art or letters, but were then boon comrades of the author of "Treasure Island." Miss Ellis continues:

"There were all sorts of extravagant stories circulated and freely discussed about him. It was said that he had already spent two fortunes; that, in Paris, champagne baths had been included among his other luxuries. It was also said that he was no stranger to all the vices of the gay city, for truly here, in the shade of the great forest sanctuary, St. Louis was a fascinating anchorite, and might have passed for a saint who had never broken his baptismal vows.

"His perfect ease amid his bohemian surroundings made it difficult to imagine him in another fraternity. For my own part, I am convinced that the take-no-thought-for-the-morrow creed was the only precept enforced upon him by nature and inclination. They did not matter to him. I never saw an individual so free from the trammels of education and convention. I am not surprised that he was a source of constant anxiety to the respectable, middle-class friends beyond the Tweed who now and again stopped the supplies with vague hopes of possible reformation. The supplies must have been stopped, I think, at Grätz, for the incorrigibly lazy Louis was writing in the dog-days. True, he lay in bed to do it, but as he smoked and thought and jotted down impressions while he entertained his visitors, the heat rendered exertion of any kind a purgatorial sacrifice.

"One reason why I was so attracted to him was the rumor of his romantic interest in the dark-haired lady who rolled his cigarettes. It was a new experience to me to be thrown into the immediate neighborhood of an intrigue that was indifferent to gossip and impervious to scandal. . . . I never thought Stevenson was so desperately in love as he was believed to be. It was difficult to imagine that he could be serious, really serious, about anything. He appeared to drift through life with a mild acceptance of anything he fancied that chanced to pass his way. He never seemed to have enough energy to keep up a love affair at a high rate of pressure, but in affairs of this kind men, and women too, are deceiving. She was American-Indian, and cosmopolitan. He, Scotch-Parisian, with a strong flavor of the Arabian Nights. Perhaps she had never learned the Commandments in her youth, and he had learned so much that he had forgotten them. . . .

"The beginning of my interest in Robert Louis Stevenson was on account of his love-affair with the lady of the cigarettes. A love-affair of this sort, spiced with a thousand romantic stories, and with an elopement in view at no very distant date, stimulated my curiosity to the highest pitch, and E—, who was a veritable walking encyclopedia of fascinating gossip, always had some fresh 'development' to unfold. I had an impression at the time that the author of the 'New Arabian Nights' was not quite as desperately in love as circumstances demanded. If he was ever serious, really serious, it must have been when he was asleep, for I never saw any trace of it in his ordinary social life. This characteristic shone through all he said or did, and a Romeo who 'jests' through 'front' scenes, as well as 'full sets,' may righteously expect to have his passion doubted by entranced listeners who are nothing if not sentimental."

One of Miss Ellis's last evenings among this coterie of unconventional spirits happily was spent almost wholly in Stevenson's company, and was the occasion of bringing out some literary small-talk from him. The conversation wandered, with characteristic facility, from the English romantic poets to dressmaking.

"It was the custom of the inhabitants of this free-and-easy city of Prague to arrange themselves into sympathetic couples, and, on moonlight nights especially, to wander away 'motif' hunting among the exquisite woods and lanes that lingered on the outskirts of the great forest. It thus happened that, on one occasion, I was left alone in the wilderness of a garden where the apple-trees ran down almost to the river's edge, and the old sundial of two hundred years stood upright in a bed of roses and lupins, to daily record our hourly, nay momentarily, frivolity. E— and P— had taken a boat and gone down the river to sketch the sunset in the Mill Garden, and I had promised to await their return. As I sat down on the little wooden seat in a rustic arbor, whence I could see the sudden bend in the river, I suddenly became aware that I was not alone. I got up at once to find another resting-place—there were dozens about—but Robert Louis—for it was he—begged me to stay. He, too, was waiting for the boat's return, P— having promised to bring some tobacco from Barbizon. This explained the delay. E— had lent him my Rossetti in the morning, and he had been 'looking through it.' He had not much to say in favor of my prince of poets, frankly confessing that he preferred Byron. I asked him if he had read 'The Stream's Secret,' and he said 'No.' Quite impulsively I turned to it—for the book lay upside down on the bench—and read snatches from it. He was still insensible to its beauties, merely remarking:

"I should like to hear you read Milton. What a pity such enthusiasm should be wasted on a woman."

"He asked if I smoked, and upon my replying that I was learning, said, 'Don't, for you won't be so quaint then.'

"He admired my dresses very much. They were the first esthetic costumes he had seen, and I had a reputation in England for being a 'high priestess of the cult.' He said he could imagine Lamia or Vivien wearing them, but he was no longer surprised that I drank milk—an unholy beverage in his sight—since Rossetti was my god, and Botticelli my dressmaker."

NOTES.

A RECORD of Zola's exile in London of eleven months is to be written shortly by Ernest Vizetelly, who translated Zola's "Paris." Zola, who it seems lived in complete obscurity in a hotel just off Fleet Street, intended to write a book on England. It is also reported that he has in hand a novel on the "Affaire Dreyfus."

THE publication of the new book entitled "Joe Choate's Jest Book" has, it is not surprising to learn, been suppressed by the London publisher at the request of the American ambassador. The wonder is that a publisher could be found, and an English one at that, who would perpetrate such an undignified piece of vulgarity as the title.

THE English are soon going to outdo the Century Dictionary in bulk and presumably in quality. The London *Outlook* says that it will be a mere trifle when compared with the Oxford English Dictionary announced by Mr. Henry Froude under authority of the delegates of the Oxford University Press. Says *The Outlook*: "When completed this monster enterprise will consist of 12,000 to 13,000 pages against the other's 7,000, and as regards words and illustrative quotations almost the same proportions will be maintained. Some idea of the labor involved in so vast an undertaking may be gathered from the fact that even before the printing of the Oxford Dictionary began, its projectors were in possession of about three and a half millions of quotations, selected by some 1,300 readers from the works of more than 5,000 authors of all periods. The Oxford Dictionary will be issued in monthly parts."

JEAN DE RESZKE is reported to receive £300 a night in the London opera season, which is in full swing at Covent Garden. This sum, says the London *Outlook*, seems preposterous. Yet the sums received by the opera singers in New York were much larger. According to figures which *The Outlook* says are authentic, Jean headed the list in New York with \$65,000 for the season, Edouard received about \$28,000, Van Dyck \$23,000, Van Rooy and Plançon each \$12,000, Saleza \$10,000, and Bisman \$7,000. With regard to the ladies, Mme. Sembrich made about \$28,000, Lehmann \$26,000, Nordica \$24,000, Eames \$15,000, and Brema \$10,000. The New York season is twice the length of the London season, the latter containing only three months. "Lohengrin" drew the largest house in New York last winter when Jean de Reszke took the leading part, the box receipts being \$14,000. On another occasion, when the "incomparable Jean" did not appear the same opera drew the smallest house—\$2,500.

SCIENCE AND INVENTION.

SEA INVENTIONS THAT WE NEED.

WOULD-BE inventors who are confident of their ability to devise something that will make them famous, and yet do not know exactly where to start, are advised to study an article contributed to *Modern Machinery* by Dr. Robert Grimshaw, in which the author tells us some of the things that the shipbuilder needs but as yet sighs for in vain. The first thing that naval architects need at present, he tells us, is a process for fireproofing wood. Says he:

"What we need is a composition which will render wood fireproof, without making it attack iron which is in contact therewith—as much of the recently vaunted 'fireproof' wood did. A fireproof coating is no good against the penetration of half-burned and still burning powder grains.

"The exclusive use of iron, as advocated by constructors and combatants, is impracticable, for several reasons. In the first place, it greatly increases the 'sweating.' Covering ironwork with a dope of paint skins and cork chips is good enough for the cabins of merchant ships in hot climates, but is for war-ships of no use; the entire ceiling, sides, and floor can not be so treated. In the second place, quarters so treated in great surfaces would be uncomfortable or even untenable, and the comfort of officers and men is essential to their health and efficiency. In the third place, such a coating would not only be highly inflammable, but would generate noxious gases in burning."

Dr. Grimshaw next tells us that marine constructors would also like water-tight bulkhead doors that can be opened and shut from the deck, improved boat-lowering devices for ocean steamers, gun-carriages that will not rack a war-ship to pieces when the gun is fired, cellulose that will really stop up shot-holes by swelling (we have none that is cheap, light, compressible, absorbent, and fireproof), a practical reversing propeller, improved ash-hoists, better steam-blowers, and properly constructed marine condensers. He also visits steel rigging with the weight of his displeasure. Says the doctor:

"Any one who has ever had the deck of a yacht pulled up by steel rigging will agree with me when I suggest that if some benefactor will produce a steel wire rope that has a little 'give' to it, such as one always gets in hemp, many ship-owners and others who 'follow the sea,' or have it 'followed' for them, will rise up and call him blessed. The old-fashioned 'chains' and 'channels' are rapidly disappearing, and eye-bolts are taking their places; but it is too much to expect six feet in length of hemp at the lower end of a hundred feet of steel wire will give as much elasticity as tho the entire length had 'give.'"

The author next calls for a "good marine governor," to stop the "racing" of the propeller when it lifts clear of the water. He says:

"Any one who has made a trip on an ocean steamer—particularly on one of the 'greyhounds' that cut their way through the water and always have wet decks—knows that the 'gurring' of the screw is about the most disagreeable feature of the voyage. It aggravates seasickness, and never gives a let-up, day or night, if the sea be in the least bit rough—that is, if it be anything but 'mill-pondy,' which it very seldom is. The chattering makes every partition vibrate. This makes traveling less pleasant and lessens the number of transoceanic passengers; but it has a still worse effect—it racks the engines themselves, particularly the shaft and the cranks, and it gradually destroys the whole structure (which, after all, is only riveted together) by working the contracting surfaces against each other and making the rivets fit less and less tightly. Thus the evil increases from year to year, and the danger with it. . . . The life of a 'racer,' or, at least, her life as a racer, is much shorter than it would otherwise be if it were supplied with a good marine governor."

Getting back to war-ships, Dr. Grimshaw tells us that smokeless powder is not all that it should be. To quote again:

"As the use of the present qualities of 'smokeless' (?) powder has a choking effect on those in the vicinity, when the yellow vapors are encountered, and as the half-burned grains are unpleasant things to have driven into one's face, there seems to be a good opportunity for a chemist to produce a 'Jonesite' or a 'Smithite,' or some other kind of an 'ite,' that will be a better neighbor. This 'powder' (if sticks as big as a lead pencil or grains the size of a walnut may be so called) must have a high explosive effect, not be readily set off by concussion, must resist dampness tolerably well, and not alter its characteristics by age; must not corrode the gun nor foul it greatly; must not generate poisonous or highly noxious vapors when exploded; must be comparatively gradual in its burning, so as not to put too great a strain on the breech of the gun before the shot has got started, and yet must have got completely converted to gas before the shot has reached the muzzle—else there will be not merely a waste of powder, but unpleasantness for the gun's crew. It must be made from materials all of which are obtainable not merely in the country of manufacture, but in the neighborhood of the mill or factory; and these raw materials must be quickly convertible into the finished product. If the material can have a high specific gravity, so as to diminish the bulk to be carried, for a given weight and for a given explosive effect, so much the better."

From all this it may be seen that the ambitious inventor has plenty of work cut out for him, even if he confines himself to the sea.

POISONED WEAPONS.

A BRIEF but comprehensive review of the different kinds of poisons used by savage or barbarous tribes to tip their arrows or spears is contributed to *La Nature*, June 24, by M. Henry Chastrey. M. Chastrey tells us that the most effective and durable poisons are those of vegetable origin. He says:

"From the age of stone up to the time when the art of killing one's neighbor led to the discovery of powder and firearms, primitive peoples, owing to the insufficiency of their weapons to cause prompt death, have invented means of giving them poisonous qualities.

"Poisoned weapons, whether they are arrows, knives, lances, or what not, may get their fatal properties from either vegetable or animal poisons. The South American Indians use curare; the natives of India, Indo-China, Borneo, and the Moluccas employ (or rather did employ) the upas, to poison their weapons; the negroes of the Sudan and the Kongo still make use of a poison extracted from different varieties of strophanthus, called *m'boumou* or *infé*, according to the regions where it is employed; the peoples of South Africa, the Hottentots, the Bushmen, the Kafirs, and the Akkas, poison their arrows with the venom of divers serpents, the cobra-de-capello among others; certain tribes of equatorial Africa, the N'Dris and the Banjiris, use their arrows, after long burial in decomposing corpses, to communicate blood-poisoning, which results in speedy death; in Oceania the natives of New Caledonia, the Hebrides, and the Solomon group give their enemies lockjaw by soaking their arrows in marshes containing large quantities of the bacillus of tetanus.

"The first three kinds of poison are practically of vegetable origin, tho the local medicine-men mix with their preparations red ants, snake's venom, toads' eyes, etc.; they are the characteristic alkaloids of plants, which serve as the basis of a deadly poisonous mixture. Curare, upas, and *m'boumou* have as their principal elements plants whose species varies with the tribe, and which all belong to the strychnin family.

"The three last-named poisons, except that of the South African negroes, are of microbial origin.

"What are the value, duration, and activity of these poisons? Curare keeps indefinitely; in 1757, in the course of experiments in physiology made in France with curarized arrows brought in 1752 from equatorial America by La Condamine, a fowl scratched with one of these arrows died in seven minutes; among the Quiteto Indians, lumps of curare, handed down from father to son, have preserved all their poisonous activity altho covered with mold. The same may be said for the upas, which, kept in little sections of bamboo for seven or eight years, retains the same

active qualities as when freshly prepared. Malay weapons, even those of steel, always keep their poisonous properties. The black races that use *inté* claim that it will keep only a short time because it spoils.

"Now *inté*, which is an aqueous maceration of strophanthus seeds, to which is added the juice of a fig or of a euphorbia, and generally also viper's venom, becomes covered with mold at the end of a few weeks, but notwithstanding it has preserved all its toxic properties; guinea-pigs have been killed in a few minutes by being scratched with arrows whose points had molded. In fact, the vegetable poisons used by primitive peoples for their arrows keep indefinitely and always make effective weapons.

"This is not the case with poisons of animal or microbial origin. As we have seen above, the Bushmen, the Kafirs, and the Akkas poison the points of their arrows with serpent venom, especially that of the cobra; at the end of two or three weeks their arms have lost all harmful quality. This is due to a single cause: the venom of snakes, which is preserved indefinitely in alcohol, becomes covered in air with a peculiar mold, which has not been studied hitherto, and which removes all poisonous effect from the venom. The poison used on the arrows of the N'Dris of the Upper Ubanghi is nothing else than the septic vibrio [microbe of blood-poisoning] which dies in the air if it is not in the presence of decomposition; thus these arrows are harmful only during a very short time. As for the arrows of the New Caledonians, which infect their victim with tetanus, authorities do not agree about the duration of their harmful action, altho it is proved that the bacillus of Nicolaier can not live except in a very moist medium and together with other bacilli, harmless or otherwise, such as the septic bacillus, which, as we have seen, dies in a short time.

"Thus, in all cases, the poisoned arrows of the races that make use of vegetable alkaloids are much more to be feared than those of the tribes that employ poisons of animal or microbial origin."
—Translation made for THE LITERARY DIGEST.

A MILE-A-MINUTE BICYCLE RIDE, AND WHAT IT TEACHES.

THE recent feat of C. W. Murphy, in riding a mile in 57½ seconds behind a specially arranged railroad train, near Patchogue, L. I., has evoked much comment. Of course it was not ordinary cycling, but the lessons that may be drawn from it are curious and interesting. The conditions under which the feat was performed are thus stated by *The Scientific American*, July 15:

"The measured mile was laid off on a straight and approximately level stretch of road about 2¼ miles in length. Three quarters of a mile was allowed on which to get up speed and half a mile on which to slow up. The bicycle track was supported on 2 by 4-inch ties, which were cut to exact length and laid on the inner flanges of the rails. Upon these were laid five 1 by 10-inch planks, which were dressed on both edges and the upper side, and laid close together, the abutting ends being arranged to break joint on the ties.

"The pacing outfit consisted of an engine and one passenger car, at the rear of which had been constructed a wind shield of the kind shown in the accompanying illustration.

"The shield was built of 1 by 3-inch tongued and grooved sheathing, laid over a light framework of 2 by 4 scantling. It was built flush with the sides and roof of the car and extended for a distance of 5 feet beyond the rear of the platform. Below the level of the floor of the car platform its sides sloped inwardly until its bottom edges were between the rails and the board track. Projecting forward below the car platform and extending down to within an inch of the track was a plow-shaped projection which served to deflect the wind, dust, etc., to each side of the shield. The latter was thus perfectly closed at the front, top, and sides, the only entrance for air being by way of the one inch of clearance between the shield and the track. To enable the rider to keep the middle of the track a vertical strip of wood 3 inches in width and painted white was nailed to the rear of the car platform. To prevent his wheel from touching the rear of the shield a fender of 1-inch round iron projected rearwardly 2½ feet at a

height which would allow the front wheel of the bicycle to pass beneath it, but would cause the head of the machine to bring up against the bar, which was covered with rubber to lessen the shock."

Under these circumstances it will be seen that the cyclist was practically riding in a following wind blowing at the rate of sixty miles an hour. Of the three forces tending to stop him, namely,

DETAILS OF WIND SHIELD.

internal friction, rolling friction, and air resistance, the last was abolished, and the first two can be made very small on a good wheel. Murphy thinks that in this way a cyclist can keep up to any locomotive that exists, and *The Scientific American* is inclined to agree with him. It says:

"It is more a question of rapidity of pedaling, and a cool head, than of strength and endurance. Altho he was using a 120 gear, equivalent . . . to a 10-foot driving-wheel covering over 31 feet at each revolution of the pedals, the rider was spinning his feet at the rate of 2.91 revolutions a second or 175 revolutions a minute.

"Without disparaging in any degree the persistence and pluck of the bicyclist, the most interesting feature of the ride is the impressive object-lesson it affords as to the serious nature of atmospheric resistance on moving bodies."

The suggestion in the last sentence is followed out further in an editorial in the same issue of the paper. Says the writer:

"People who are, or ought to be, greatly interested in the subject (foremost among whom are the railroad men of the country) are aware that air resistance is one of the impediments that keep down the speed of moving bodies; but we question if one in a hundred of them realizes that this is not merely one, but probably at high speeds the chief resistance. Engineers and architects are all familiar with the tables of wind pressure, . . . but while it is believed that a 60-mile wind will exert an 18-pound (Smeaton) or a 36-pound (Trautwine) pressure per square foot, it does not seem to occur to practical men that a 60-mile train (action and reaction being equal) will be subject to the same unit of pressure—or, if it does occur to them, the fact is steadily ignored."

A brief calculation shows that to make a mile a minute through still air a bicyclist must do work at the rate of 7 horse-power. Now tests show that few crack racers can exert even 1 horse-power. In Murphy's ride, therefore, the engine was doing at least six sevenths of the work that enabled him to keep up his speed. Now comes the lesson, and it is thus stated in the editorial:

"Applying these facts to a train composed of an engine, tender, and say half a dozen cars, moving at the rate of a mile a minute, we see at once that the accumulated atmospheric pressure on the

front of the engine, the front of each car, the front of each set of trucks, and the various projections of ventilators, window recesses, etc., must mount up in the aggregate to an enormous figure, and it is certainly a proof of the extraordinary conservatism of even such practical people as build and operate our railroads that nothing whatever has been done to smooth down and close in our trains, so that the engine should do for the train that follows it what it did for the cyclist Murphy.

"For the train to get all the benefit of the 'pace' (to use a cycling term) afforded by the engine, the front car should be connected to the engine and each car to the one behind it by a continuous sheathing, similar in cross-section to the shield built for the recent bicycle trials. Sheathing should also extend from the sides of the cars to the rails, as in the wind shield, and this sheathing should be continuous from the pilot of the engine to the rear steps of the last car. The train would thus be vested from the roof to the rails and from the pilot to the rear platform, and the result would be that the total front vertical area opposed to the atmosphere would be reduced about three or four hundred per cent. As trains are now built, the air that is pushed aside by the engine closes in upon the first car, and upon the front of every car that follows it. Each truck also, and all of the brake-gear, etc., add to the total resistance, until we think there is little reason to doubt that at high speeds the resistance of the air exceeds by many times the internal and the rolling friction of the train. . . .

"If at 60 miles an hour 7 horse-power is consumed on the 3 square feet surface of a bicyclist, how much is consumed on the 400 to 600 feet front surface of an express train of the same speed? We commend the subject to the consideration of our master mechanics and railroad superintendents throughout the country."

A NEW DEPARTURE IN ANESTHESIA.

EXPERIMENTS in anesthesia by Dr. Bier of Kiel, related by him in the *Deutsche Zeitschrift für Chirurgie* of April last, mark, according to *The Medical News*, July 1, a distinct step forward in painless surgery. Dr. Bier's idea is to produce general insensibility to pain, not by the use of an anesthetic like chloroform or nitrous oxide, but by applying a local anesthetic like cocain to the spinal cord. Says *The Medical News*:

"By the bold expedient of throwing small quantities of very dilute cocain solution directly into the spinal canal he attacks the nerve-roots and ganglia themselves as well as the non-medullated nerve-trunks before their emergence from the spinal column, and produces satisfactory anesthesia of the whole body beneath the nipple line. Insensibility is complete seven or eight minutes after the injection, . . . and continues for about three quarters of an hour. Strange to say, heat and cold perception and also the touch and pressure senses are preserved, but all impressions of pain are entirely obliterated. Because of this, and inasmuch as it seems incredible that the entire thickness of the large nerve-trunks should be permeable by the solution in so short a time, the inference is drawn that the pain-conducting fibers are placed at the periphery of the nerve-bundle.

"Bier performed in this way severe operations . . . to the perfect satisfaction of the patients. By experiment on himself and a colleague he also proved that the anesthesia was absolute and its production unaccompanied by unpleasant sensations.

"Unfortunately for the vogue of the new method, however, the after-effects are quite as undesirable and much more prolonged than those following chloroform or ether, and consist in dizziness, severe headache, nausea, and vomiting. As these symptoms do not put in an appearance till a number of hours after the operation, it is assumed that they are due merely to the disturbance of the cerebrospinal system and not to any direct toxic effect of the drug, and it seems probable that modification of the solution employed may eliminate these difficulties.

"While in its present form suitable only for individual cases where the use of the usual anesthetics is inadmissible, the idea is a very promising one and opens up a most suggestive field for investigation."

What Lamps are Best?—This question is answered incidentally by Dr. Stevenson Macadam, a lecturer in chemistry at the Edinburgh College of Surgeons, in a recent pamphlet. Says

The Hospital, referring to his conclusions: "Contrary, as it might seem, to expectation, Dr. Macadam prefers one with a glass fount, in which you can see how the oil is diminishing. He objects to founts which have any special opening for the purpose of filling. He protests, too, against the use of the popular standard lamps. 'Many of the founts in these lamps become very highly heated from imperfectly aired burners and from the large shades which are placed above them, and which are often heavily ornamented with colored muslin or tissue paper of the flimsiest and most inflammable nature. With any oil, but more especially with the low-flash oils, these standard lamps are most dangerous, not only from the possibility of explosion within the lamp fount, but from the facility with which such a tall lamp can be upset by a push or by an article falling against it. . . . These standard lamps are most unsafe in houses, and should only be tolerated when the base of each is sufficiently weighted or is securely bolted to the floor or wall, and when the top-heavy combustible shade is discarded.' The standard lamp is so precious to the soul of the would-be esthetic house-mistress, and the shade to the bazar worker, that we fear it may be difficult to get rid of them. But it is well to recognize the dangers attendant on their use, so that, even if they are not totally abolished, they may be guarded with the utmost care. After all, they are not much of a success as illuminating agents. Would it not be quite as satisfactory to keep them purely for ornament, with no oil in the founts, and never try to light them?"

CRIMINAL CHEMISTRY.

UNDER this somewhat misleading title, which might be taken to refer to chemistry used for the commission of crime, rather than for its detection, M. C. de Boisgérard writes for *La Science Française*, June 30, a brief description of some of the methods used by chemical experts in ferreting out criminals. He says:

"Active tho our detectives may be, criminals seem daily more audacious and more skilful. Poison is now very much in the fashion, and recent trials have shown how hard it often is to find traces of it. In other cases—assassins are so prudent!—the presence of a suspicious spot on the floor or on the blade of a knife is the only thing that can serve as a guide to justice and as a starting-point for investigation.

"The matter then becomes the business of the chemical experts, whose part in this kind of investigation is becoming of capital importance. In their hands is often found the key to many mysteries.

"As regards the irritant poisons, which leave apparent traces in the bodies of their victims, nothing is easier than to determine their amount and nature. On the other hand, the operation becomes singularly delicate when we have to do with certain very subtle poisons like atropin, aconitin, morphin, etc.

"To speak only of the principal ones, let us note that an infinitesimal dose of aconitin suffices to kill a robust man. With a few grains we could poison a whole regiment of infantry. Likewise, strychnin is mortal in very small doses. Finally, prussic acid is so dangerous a poison that a small quantity placed on the tongue, without swallowing it, will be fatal in a few seconds.

"Without entering here on a course of instruction in toxicology, we may explain briefly how the nature of a poison that has caused violent death, voluntary or involuntary, is ascertained.

"For example, if there is reason to believe that the poisoning is the result of strychnin, several drops of concentrated liquid from the tissues are added to some bichromate of potash. No matter how small the dose of strychnin, the mixture becomes in turn blue, violet, purple, and finally pale blue, remaining of the last-named tint.

"The feeblest trace of arsenic is comparatively easy to discover. We have only to place a thin leaf of copper foil near the interior wall of the stomach or intestines. The arsenic is deposited on the foil in the form of a thin, almost black, layer.

"If there is suspicion of morphin, nitric acid is the test usually employed. A single drop colors bright red the liquids from organs poisoned with this dangerous alkaloid.

"But all this is really child's play to the expert chemist. There

are much harder problems to solve, notably, as was remarked at the outset of this article, when he is asked to determine the exact nature of a suspicious spot or stain.

"Here, for instance, is a kitchen knife covered with black spots. Are they human blood, chicken's blood, or only lemon juice? Apparently all spots of this kind are the same, and only a laboratory experiment can furnish the key to the mystery.

"The best method is to pour on the blade a drop or two of tincture of guaiacum, and then a little peroxid of hydrogen. If the mixture remains colorless, the spots are caused by some vegetable coloring matter; if, on the contrary, it turns bright blue, we may assert that the spots are blood, either human or animal.

"Finally, to discover the kind of blood, we must use the microscope. Every one knows that blood contains corpuscles of various forms and sizes. If these globules are egg-shaped, the blood is that of a fish or a bird; if they are round and of an average diameter of .007 millimeter, the blood is human; there can be no more doubt that a crime has been committed.

"Before reaching this degree of rigorous scientific certainty, the investigation presents real difficulty. The discovery of the inception of a criminal act often requires long experiment, which has made the reputation of more than one savant. Thanks to modern progress in chemistry, experts are now in their heyday."—*Translation made for THE LITERARY DIGEST.*

REVERSING THE PHONOGRAPH.

REFERRING to the curious effects obtained by running a phonograph backward, Professor Pichot, in an article in *Cosmos*, June 17, notes that we may obtain an even better realization, in this way, of what a reversed world would be than by reversing the kinetoscope, as has sometimes been done. After noting some of the curious speculations regarding such a world-bewitched, he goes on to say:

"We now have two instruments that . . . can transport us to this new world—this world moving backward. They are the cinematograph and the phonograph.

"The first aids us very easily in getting a view of a backward-moving scene. Unfortunately, the scenes that can be reproduced on the instrument are too limited to give us a general idea of what the whole world would be like under these conditions. In the instrument the aspect of a person approaching evidently resembles, when the machine is reversed, that of one who is retiring by walking backward. This is nothing new. It gives no idea of a world where effects precede causes.

"The phonograph, on the contrary, . . . positively introduces us into a new world, gives us a new language and a new music. I wish to call the attention of musicians to this fact. It is said that Wagner, to get new musical ideas, used to put his piano out of tune, and then play upon it the most beautiful pieces of Mozart or Beethoven. Thus, by chance, unexpected effects would be revealed to his ears. Chance is sometimes artistic. Children throw big ink-blots on a bit of paper, fold it up, press it down, and then admire the odd forms produced. Who has not wondered, during a thunder-storm, at the fantastic and grand forms of the clouds, and in winter at the elegant decorations made by the frost on our window-panes?

"I advise musicians to hear the best pieces of their repertoires played backward on the phonograph. I do not say that all that they hear will be equally beautiful. But I am sure that they will be surprised more than once to hear the result. It may be that from this will arise some new form of music. Let them hear also a piece declaimed in the same fashion, if they wish to get an idea of a new language where the accents are all reversed. I hasten to add, that running the machine backward does not injure the cylinders—at least if they are those of celluloid. This reversibility makes of the instrument a doubly interesting toy.

"This is a good opportunity to put anew the following question, which was once discussed in *Les Mondes* by the Abbé Moigno: 'Is the universe reversible, absolutely speaking? That is to say, if we admit the principle of the convertibility of the various forms of energy, could it happen that the universe should return to its primitive state by passing through all the intermediate states in reverse order?'"—*Translations made for THE LITERARY DIGEST.*

Liquid Air as an Explosive.—"Searching experimental trials have been made at a large explosive factory in Germany as to the use of liquid air as an explosive," says *The Engineering and Mining Journal*. "The chief difficulty that had to be surmounted was that no means existed for keeping the air in a liquid state for any considerable length of time, because, when this liquid has a temperature of less than 200° C., every increment of heat causes a rapid evaporation, so that about half a liter of liquid air contained in an ordinary receptacle becomes completely evaporated in from 20 to 30 minutes. Now, however, means have been found to considerably prolong the continuance of air in a liquid state; and for this purpose special receptacles are used, in which the air can be kept liquid, not merely for days, but even for weeks. According to the Austrian *Chemische Technische Zeitung*, these receptacles consist of double conical glass flasks, in which a vacuum as perfect as possible is formed in the space between the inner and outer sides, while the inside of the outer glass wall is silvered with amalgam. Owing to the vacuum and also the silvering, any increment of heat is prevented from entering the inside of the flask; and the heat rays that impinge upon the outside of the flask are reflected, while the vacuum in the annular space between the inner and outer sides of the flasks prevents any conduction of heat to the inside."

Cause of Injuries due to X Rays.—Much has been said about serious injuries received in some cases by persons subjected to the X ray for surgical purposes. These have occasionally suffered from a skin affection resembling acute sunburn, with inflammation, hardening, and falling-off of the skin, and loss of hair. In a few cases suit has been brought by the victim against the surgeon at whose hands he has received the injury. According to recent researches by Messrs. Bordier and Salvador, the trouble is not due to the X rays themselves but to a high-tension induction-current formed in the near vicinity of a Crookes tube. Their experiments clearly reveal the existence of such a current. Says the *Revue Scientifique*, July 1: "The researches were undertaken with the aim of furnishing a scientific explanation of the injuries to the skin produced in certain conditions by the Roentgen rays. The two electricians tried to see whether they could not trace these to electrolytic action due to an induced discharge near the electrodes of the Crookes tube, which discharge passes through the surface exposed to the rays when it is too near. The conclusion to which they have come is as follows: Electrolytic phenomena arise in any electrolyte whose electrodes are situated in the neighborhood of an active Crookes tube. The polarization of the electrodes is not due to the action of the X rays, but to an obscure induction discharge; this is equivalent to a constant current of high pressure but feeble intensity formed in the neighboring electrolyte."—*Translation made for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

A TANK of chlorate of potash recently exploded in a factory in Lancashire, England, with disastrous results. As the substance is not combustible in itself, altho a powerful aid to combustion under some circumstances, the disaster, says *The British Medical Journal*, is not easy to account for.

"MODERN inventions," says a correspondent of *Popular Science*, "are working out some unexpected and apparently not closely allied results; thus the electric car and bicycle are reducing the number of flies by taking the place of horses. Fewer horses, fewer breeding-places, fewer flies. Equilibriums and correlations are often surprising. Push down or pull up in one spot and you get a result in an unexpected quarter."

ASEPTIC DUELLING.—"The newspapers announced recently," says *The Medical News*, "that the well-known French author, Catulle Mendes, had been wounded in a duel . . . some of the details of [which] are of considerable interest to medical men. For instance, whenever the sword of either one of the duellists touched the ground the duel was instantly interrupted until the blades had been thoroughly sterilized by being passed through the flame of an alcohol lamp. What was especially feared, and the reason for these minute precautions, was contamination with tetanus bacilli. Not long ago a French surgeon issued a book giving the indispensable regulations for the proper conduct of a surgeon when summoned to a duel, which included the most rigidly surgical sterilization of the dueling swords, and their careful preservation in a state of the most absolute asepsis until the moment they were handed to the combatants, special care being prescribed that no hands came in contact with the blades before they were put to use. The interruption in order to resterilize whenever possible contamination is suspected is the very latest wrinkle and all up to date. Specialists in dueling surgery will, it is hoped, take note of this latest humanitarian addition to the surgical technic of the duel."

THE RELIGIOUS WORLD.

THE "AGNOSTICISM" OF BISHOP POTTER.

IN a prefatory note to the recently published edition of his sermon delivered at the ordination of Dr. Briggs, Bishop Potter says:

"There is in his [the preacher's] words no disparagement of those various expressions of the conception of authority, as these find form in symbols, articles, or other formulated utterances all down the track of history. But the time has come when the church and its teachings must vindicate themselves by something more than speech hardened into dogmatic terms. In our age, and in a world that reads and compares and inquires because it thinks, authority must vindicate itself by its appeal to those judges of all truth which are the image of the Divine in man—the spiritual intuitions, the conscience, and the reason."

BISHOP HENRY CODMAN POTTER.

Commenting on this the *New York Sun*, which has throughout this controversy been, as ever, solicitous for purity of doctrine in all the churches, brands Dr. Potter as an agnostic. It says:

"The meaning of this can only be that in the opinion of Bishop Potter the time for dogmatic religion has gone by. If that is the case,

the time for Christian theology has gone by, for theology rests necessarily on dogma—the dogma of revelation, of supernatural direction and occurrences—or on no evidence which can be adduced or supported naturally, but wholly on dogmatic assertion. The divinity of Christ and His birth and resurrection are dogmas purely. They can not be demonstrated, but must be taken on faith in their dogmatic assertion. They do not appear to 'the spiritual intuitions, the conscience, and the reason,' but must be accepted as facts on the authority of dogma purely. In a natural and a wholly rationalistic view, they are impossible, for they violate the law of nature. They must be rejected or be accepted simply on the dogmatic authority of the Bible or the church, because of 'speech hardened into dogmatic terms.'

"Bishop Potter goes on to speak thus of the Bible:

"The Book is a literature, priceless, incomparable, and most precious, but still a literature, and it must accept, and those who love and reverence it must accept for it, the conditions of its existence."

"If the Bible is literature it is human simply and has no supernatural authority. Looked at in that light and as without special authority as the Word of God, it is incredible, for it describes events and relates occurrences which are naturally impossible. No human intelligence could have penetrated into the mysteries the Bible assumes to explain; only God can know of them. If 'the Book is a literature' it is merely a work of the human imagination, not a record of veritable supernatural occurrences; it is a collection of myths, of the vain and impossible attempts of men to fathom the mind of God. Where, then, does Bishop Potter get the authority for the creed so dogmatically required by the Episcopal church?

"His argument is nothing but an agnostic argument, and as such it will commend him to the favor and applause of the men

'in a world that reads and compares and inquires because it thinks,' who give up the mystery of life and death, of creation, and of the government of the universe as impenetrable by man, and reject religious dogma as unable to 'vindicate itself.'"

A correspondent criticizes *The Sun* for its assertion that theology rests "wholly on dogmatic assertion." He says:

"You are particularly unhappy in instancing in support of this assertion the resurrection of Christ. Turning to the fifteenth chapter of First Corinthians we read: 'For I delivered unto you first of all that which I also received, how that Christ died for our sins according to the Scriptures; and that He was buried; and that He hath been raised on the third day according to the Scriptures.' Had St. Paul stopped here, your assertion, as far as St. Paul goes, might stand. But he proceeds: 'And that He appeared to Cephas; then to the twelve; then He appeared to above five hundred brethren at once, of whom the greater part remain until now, but some are fallen asleep; then He appeared to James; then to all the Apostles; and last of all, as unto one born out of due time, He appeared to me also.' You perceive that St. Paul, far from resting our Lord's resurrection upon dogma, adduces the direct evidence of human witnesses to prove it. Indeed, the whole of this fifteenth chapter is an elaborate argument appealing not to faith, but to reason, to support the doctrines which the Apostle advances. Even in the final glowing phrases, in which he asserts the fact of our resurrection, and which, of course, does not admit of the same class of proof, he deduces it from his previous line of reasoning.

"The Bible is not a book of dogma, but a book of logical deduction from historical facts, boldly challenging criticism. It could never have had the hold it has upon the minds as well as hearts of men were it otherwise. And if there is to-day a Christian church which is built upon dogma, it is not the Protestant Episcopal church in the United States of America."

The Sun in reply says that the "logic apparatus of this correspondent is out of gear," and proceeds to set him right as follows, for the benefit of other "loose reasoners" who have not hitherto had the benefit of the light of *The Sun*:

"The fact of the Resurrection rests here only on the assertion of St. Paul, and the witnesses to it to whom he referred died two thousand years ago. His assertion flew in the face of natural law, and never since has there appeared any mundane evidence to sustain it. The credibility of St. Paul has no other support than in dogmatic authority. Of the original records of the testimony of his alleged eye-witnesses to the Resurrection nothing remains. The Gospels are founded on undiscoverable documents or on traditions handed down to their writers a half-century or a century after the events described; and the authority of the Gospels is in dogma only. The whole supernatural basis of Christian theology is necessarily dogma purely. Dogma is always the premise from which its whole conclusion is drawn. The Bible itself is wholly dogmatic in its authority. Its canon was fixed by the church, so far as it is fixed. No other evidence as to its divinity appears.

"If, then, Bishop Potter is justified in saying that 'the time has come when the church and its teachings must vindicate themselves by something more than speech hardened into dogmatic terms,' the time has come when the church must abdicate its supernatural authority, for that is necessarily dogmatic purely."

The *Atlanta Constitution* also, like *The Sun*, champions the dogmatic view of religion. It says, in reference to the words of Bishop Potter already quoted:

"This means, of course—it can have no other meaning whatever—that the time has come for such exploiters as Dr. Briggs and Bishop Potter to announce once for all that faith is played out, and that Christianity, as it has been understood since the New Dispensation was instituted, depends not on its inherent truth, but on the views and opinions of people who (because they read and compare and inquire) have intuitions and know how to reason.

"Now, Christianity rests on dogma pure and simple, and dogma does not appeal to reason, which demands proof, but to the faith that gives birth to belief. The Incarnation is the central, the vital fact of Christianity. When we say that Christ, the

Son of God, came into the world to save sinners, we do but communicate a dogma that is common to all Christian churches. Here is the great claim of Christianity 'hardened into dogmatic terms.' What part can 'intuitions' or the 'conscience' or the 'reason' play in 'judging' the truth of this dogma? The human reason can not compass it, and in many notable cases shrinks from contemplating it.

"Even miracles are no proof of the main dogma of Christianity, for the fact behind that dogma is the miracle of miracles, and the human understanding simply reels before it; and so, in truth, with all the Christian dogmas. They have nothing to do with pure reason, or logic as such, or with scientific demonstration. The whole basis of Christianity is authority, and that authority is to be taken on faith—not faith in men as men, but faith in God and belief in the dogmas which set forth the facts of Christianity.

"In the prefatory note to the sermon—from which note we have already quoted—Bishop Potter thus disposes of the Bible: 'The book is a literature, priceless, incomparable, and most precious, but still a literature, and it must accept, and those who love and reverence it must accept for it, the conditions of its existence.'

"What are these conditions? Why, they are precisely such as are filled by the works of Shakespeare, Homer, Virgil, Dante, Milton, and other makers of the world's literature. They are the conditions which apply to man's works. If the Bible is literature, it is from the hand of man. It has its literary aspect, of course, for it is transcribed by the hand and translated by the learning of man; but to say that it is literature, as Potter says, is to deny its supernatural aspect, and to deny, and destroy, and obliterate by one word all the promises and prophecies which were fulfilled by the coming of the Son of Man.

"More than that, if it is to be deprived of its supernatural authority, and stripped of the divine significance which Christians have always and everywhere attributed to it—if it is simply from the hand and brain of man—it ceases at once to have any coherence, and becomes incredible. The greater part of it, indeed, ceases to be literature, but is without form and void; it falls to pieces and becomes meaningless."

The New York *Commercial Advertiser* takes a more hopeful view of Dr. Potter and the modern religious world. It says:

"That which makes Bishop Potter's position invincible and his influence potent, on the side of the world as well as on the side of the church, is his mingling, in thought and action, of devout religious sincerity with full openness of mind to the intellectual results of science and scholarship. Time has come for this union of the critical mind and devout spirit to be the saving force, in a society that has outlived the faith of dogma, of those supreme ideals which are the soul of dogma and the life of society. The type of mind that over strenuous spirituality and intolerant materialism agreed in rejecting in their times of prevalence is going to be most potent for social elevation and human enlightenment in a time of reaction from both. Erasmus would have saved a century of bloody and bitter religious war, at the cost of some splendid spiritual training for the race, had his world been as open to wise and tolerant teaching as the modern world is growing open to the teaching of them that can feel the spiritual fervors of St. Francis or Newman, and yet see intellectual truth as clearly as Galileo or Renan.

"This is the compromise of religion and science that is going to vitalize the one and immortalize the other. Nothing is more futile to seek than that literal compromise which was to reconcile the poetic and figurative forms, into which Hebrew poetry and exalted Christian tradition threw its high spiritual truths, with the arid facts and laws of human science and the colorless logic of literary and historical criticism. This is the letter which killeth. That which the supreme evolution of both is destined to merge into a common law for the world is the spiritual truth of religion and the spiritual truth of science. We begin to get glimpses of it already in the meeting of the fundamental laws of political economy and the higher laws of spiritual morality on the common ground of human utility and happiness; and in the heightened potency of spiritual truth when freed from the husks of literal dogma, stripped from it by destructive literary and historical criticism.

"The incident that closed with the publication of the Briggs ordination sermon is chiefly important for the opportunity it gave to set the seal of high church authority on the lawful union of

literary and spiritual interpretation in the work of applying the Bible as a rule of human life. That the Bible is a literary monument as well as a code of moral law, and that it can only gain force and authority by cleansing from literary and historical error, is the enduring residuum of the teaching that was the cause of the Briggs controversy. To set on this the stamp of high ecclesiastical approval is no less gain for the spiritual truth of religion than for the intellectual truth of literary criticism."

LIBERAL AND LITURGICAL DRIFT OF PRESBYTERIANISM IN SCOTLAND.

IT has often been said of recent years that Presbyterianism in this country is drifting away from its ancient moorings. If so, the American church appears to be only following the lead of its venerable mother church in Scotland. A notable article on this subject appears in a late number of the *New York Tribune* (July 2). The writer says:

"American Presbyterian liberals have yet to fight for recognition and toleration; but in the Scottish church that stage was passed some years ago. Professor Briggs would not have been molested in the church founded by John Knox. On the contrary, he would have found in it scholars and thinkers like-minded with himself. Open-mindedness is the characteristic of the Scottish church. Implicitly, if not explicitly, truth is the first article of its creed, and all the other dogmatic articles of its creed are interpreted in the light of the truth. It is true the biblical scholars and theologians of Scotland are more conservative than those of Germany. But, for all that, some of them would have as hard a time in the American Presbyterian church as Professor Briggs had. Nor is that all. A ritualistic tendency has grown up in the Scottish church that has for its object the restoration of some liturgical and ceremonial features that were discarded at the Reformation. This movement meets with a sympathetic response from the people in the larger towns, and bids fair to revolutionize the church. Only in the remote country districts will one find the typical Presbyterians of the old days, and as they die there are none to take their places. Thus, in spite of its strong government and its uncompromising creed, Scottish Presbyterianism finds itself moving along in the stream of tendency.

"But most remarkable of all is the drift away from the severe conception of life and religion that characterized the Scottish reformers. During the last few years there has been a noteworthy change of sentiment in regard to the observance of the Sabbath. Not long ago Principal Story, the Moderator of the General Assembly of the Scottish church, preached a sermon on Sabbath observance in Edinburgh. In this sermon he made a strong plea for a less rigid observance of the day, and especially for the opening of clubs, public gardens, museums, art galleries, and libraries. And he referred in scornful terms to the 'prosperous Pharisees' who oppose the opening of such places, where poor people might obtain needed rest and recreation, while they had no thought for the overworked men and women in their mills and factories, whose lives were being shortened by unrelieved toil. He told how he had visited Continental cities, and had seen workmen spending pleasant and profitable hours on Sunday, with their families and friends, in galleries full of beautiful works of art, or listening to music fitted to elevate and refine their thoughts. That so prominent and representative a man should thus hold up the Continental Sunday for approval in a church in Scotland's capital city is a striking illustration of the change of sentiment that has come over the Scottish church to-day. It shows how difficult, if not impossible, it is for a church to resist the tendencies of the time. It may refuse to change one iota of its creed; yet along with the old creed the members of the church, both ministers and people, will, perhaps unconsciously, modify that creed so as to square it with their environment. And against such a modification of creeds there is no protection, and can be no appeal."

"Holy Firecrackers."—We are all acquainted with the subtlety of the Heathen Chinee through the immortal lines of Bret Harte, if not, happily, through sad experience. We know that for ways that are dark and tricks that are vain, Ah Sin is

peculiar, and that when his smile is most childlike and bland it is time to infer that he has something up his sleeve. It appears that the London Mission Board has of late been highly encouraged by the great demand for Bibles on the part of the Chinese. What this apparent outburst of desire to search the Scriptures really means is told by Mr. M. W. Mount in *Frank Leslie's Popular Monthly* (July). Mr. Mount got his information from a missionary just returned from the Celestial empire. He says:

"Independence Day reminds me," said the missionary from China, "of the most encouraging and the most disillusionizing experience in my life. I had labored hard in the work of converting the Chinese to Christianity, and there was unfeigned rejoicing among all the missions in China and the churches in America when the demand for Bibles on the part of our converts culminated in orders for 84,000 Bibles in one shipment.

"The remarkable number of new Christians thus indicated, while it occasioned much thankfulness in America, caused the heads of the missionary associations to set on foot an inquiry as to the methods employed in saving the souls of such an unusual number of Celestials, and the uses to which they put the Bibles sent them.

"You may not know that in China the majority of the firecrackers with which we celebrate our day of national independence are made by the Chinese in their homes. Contractors for fireworks give each man a certain amount of powder and that must be made into a given number of crackers. The paper used in the manufacture he buys himself—and paper is not a cheap commodity in China. The powder furnished seldom fills the required number of crackers, but that does not disturb the Celestial in the least; he turns in his quota all the same, and the American boy, in consequence, invariably finds in each package of firecrackers a few that "won't go off."

"I discovered that Yankee thrift had been absorbed by the heathen Chinese with much more readiness than Yankee morals. In contributing his labor toward our festival occasions he hit upon an expedient whereby a considerable profit accrued to himself. In other words, our great shipment of 84,000 Bibles had literally "gone up in smoke." They were to be had for the asking, and the Celestial conscience seems never to have suffered a pang as to their disposal for firecracker-wrappers."

"THE MOTHERHOOD OF GOD."

THERE are not a few signs which indicate a revival among Western nations of a belief in the very ancient doctrine of the feminine element in the Deity. It will be remembered that Edwin Markham recently published a poem entitled "The Divine Mother" (see THE LITERARY DIGEST, June 17) in connection with which he mentions the primitive belief of the Hebrews in the dual nature of the Godhead, in the image of whom the first man-woman was created. This feminine element, which of course has been recognized in almost all the great religions of the world, ancient and modern, is believed by some to have been existent in the earliest conception of the Christian trinity, in which the Holy Spirit represented the Divine Woman of the deific family. Those who accept this view find in the high reverence paid to the Virgin throughout the greater part of Christendom in all ages an indication that the religious instinct can not permanently dispense with a feminine conception of the divine nature as an object of worship. In this century several non-Catholic sects, among them the Mormons, the Shakers, and, most recent of all, the Christian Scientists, have formulated the doctrine of the Motherhood of God. Still another powerful impetus to this belief has been given of late years by the remarkable spread of Oriental philosophies and religious cults throughout Europe and America. The Hindus have from time immemorial paid reverence and worship to the Divine Feminine, and in the ancient Vedantic philosophy, which at the present moment is being promulgated throughout both the East and the West by the Swamis Vivekananda, Abhedananda, and scores of other Oriental missionaries, this holds

an important place. A recent number of the *London Light* contains the following *résumé* of a lecture on this subject by the Swami Abhedananda.

"In the word 'nature' we find the clew which leads to the idea of 'the Motherhood' of God. Nature is the produced or, better still perhaps, the producer, the born or that which bears. We know nothing of the mode of being of God, and it is quite arguable—we believe it has long been held in India—that nature has been the Mother of God, in any sense in which God is conscious. The universe, says Swami Abhedananda, is a cosmos, one harmonious whole; and behind every step of evolution there is some orderly hidden purpose and energy. It is that purpose, that energy, which gives birth to all forms of life and intelligence. 'Thou art the *Parā Prahriti*,' says an ancient Indian writing, 'the divine energy of the Supreme Being. Of Thee is born everything of the universe; therefore Thou art the Mother of the universe.' 'Wherever there is the expression of any force or power in the universe, there is the manifestation of the eternal *Prahriti* or the Divine Mother—Mother, because that energy contains the germ of the phenomenal universe, projects it into space, and preserves it when it is born.' Brahma himself is her child, and the Hindus have worshiped her time out of mind. In the *Rig Veda*, the most ancient of the Hindu scriptures, the Divine Mother is made to say:

"I am the Queen of the universe, the giver of all wealth and fruits of works. I am intelligent and omniscient. Altho I am one, by My powers I appear as manifold. I cause war for protecting men, I kill the enemy and bring peace on earth. I stretch out heaven and earth. I have produced the Father. As the wind blows by itself, so I produce all phenomena by My own will. I am independent and responsible to none. I am beyond the sky, beyond this earth, My glory is the phenomenal universe; such am I by My power."

"Thus," says Swami Abhedananda, "we see the Divine Mother is all in all. We live and move and have our existence in that Divine Mother."

"The influence of this fundamental idea is felt, says the Swami, all over India:

"As woman represents motherhood on earth, therefore all women, whether married or unmarried, are representatives of that Almighty Divine Mother of the universe. It is for this reason women are so highly revered and honored by the Hindus. . . . In India the wives do not adopt their husbands' name, they do not merge their individuality into their husbands' as they do in the West, but they keep their own name separate. If a wife's name be Rádhá, and her husband's name be Krishna, and if we say them together, we should say Rádhá-Krishna and never Krishna-Rádhá. The wife's name must be said first."

The writer thinks that just as the new idea of the kinship of human nature with the divine in the doctrine of the Sonhood of Christ introduced a more humane, a tenderer, and closer conception of Deity than that of the Hebrew Jehovah, so the revivification of the doctrine of the Divine Maternity will still further add to the idea of the immanence of God now taking so deep a hold upon men through the teachings of Spinoza, Wordsworth, Whitman, and other great thinkers:

"Says the Swami:

"As a ruler punishes his disobedient subjects, so Jehovah punished those who disobeyed Him or His laws. The duty of a subject was almost the same as that of a slave to his master. As a slave serves his master through fear of punishment, so the Hebrews served Jehovah. The transition from such a relation to that of a father to a son was indeed a grand step. It was no longer an eternal relation to power and strength, but it became a kind of kinship, a kind of internal or blood-relation, which exists between the earthly father and his son."

"But 'the same Jehovah when considered as the Father of the universe by Jesus and His followers, did not lose this extra-cosmic nature.' Even to-day the majority of the Christians can not go beyond this idea of an extra-cosmic God." And [continues *Light*] that is where we are to-day, for the most part. What if the profound Eastern idea of the Motherhood of God, allied to our already fruitful idea of the Immanent (instead of the transcendent) God, should turn out to be the practical emancipation of the Western mind, delivering it from the anthropomorphic images that cluster about this 'extra cosmic' God, and introducing it to a thought of God which will bring Him absolutely near?"

GROWTH AND INFLUENCE OF THE CHRISTIAN ENDEAVOR SOCIETY.

THE wonderful increase of the Christian Endeavor movement was most prominently brought into notice at the recent international meeting at Detroit. Beginning as a local church guild at Portland, Me., in 1881, it has now reached a membership of 3,500,000, organized into 55,813 societies. During the past year, in spite of prophecies that the movement had already reached the crest of its wave of success, nearly two thousand new societies, with over one hundred thousand new members, have been added. Russia, the only large country which had hitherto been without an organization, welcomed the Christian Endeavor Society during the past year. The chief foreign countries are represented as follows according to the report of Secretary J. W. Baer:

"Great Britain has over six thousand societies, and a royal welcome awaits us next July in London. Australia has over two thousand societies, and is represented in this convention by two delegates that have traveled over six thousand miles to bring greetings from our brothers and sisters under the Southern Cross. India has 454, China 148, Africa 136, Mexico 108, West Indies 103, Germany 101, Madagascar 93, Japan 73, and on through a long list, which I must omit at this time, but can not pass by Spain, the country with whom we were at war last year. Spain, rent with war and turmoil, has more than held its own, for she has 36 societies."

In the United States there are 42,075 societies; in Canada, 3,487; in all other countries combined, 10,128. The department called "The Tenth Legion" numbers 14,700 members, while 15,000 are enrolled as comrades of "The Quiet Hour." According to the secretary's report, in England the Baptists lead in Christian Endeavor, in Australia the Wesleyan Methodists, and in the United States the Presbyterians. Mr. Baer's report concludes as follows:

"Christian Endeavor has in more ways than those already referred to, borne fruit, and is to-day one of many other agencies for increasing the membership of the churches of Christ. During the last ten years over one million and one half of our members have joined the church. Over one million and one half church members from the ranks of Christian Endeavor in the ten years. Behold what God hath wrought."

The Detroit *Free Press* finds in the present strength of the movement a most impressive illustration of "the growth of an idea":

"Eighteen years ago the pastor of an unpretentious church in Maine conceived the plan of organizing the young people of his parish into a society for systematic religious training and effort. He saw the necessity of utilizing the talent and enthusiasm of his youthful parishioners to save them from relapsing into a state of indifference and inaction in relation to spiritual things. . . .

"Here is a movement whose rapid growth has surpassed the progress of any cause recorded in the history of the world. Here is an organization, interdenominational and international, that annually assembles the largest concourse of accredited representatives of any sect, society, or association on either continent. In three days it is to be Detroit's privilege to look upon the impressive evidences of the magnitude and the evangelizing power of this mighty host of zealous young Christians.

"In looking for an explanation of this forward movement—the most remarkable growth of all the centuries—it must be borne in mind that religion has been the most potential force that has reached the hearts and minds of men since time began. With this inherent responsiveness to spiritual truth in the human soul to start with, it was Dr. Francis E. Clark's inspiration that the supreme necessity of organized religious effort was to direct it in hopeful, reasonable, and practical channels. . . .

"The broadness of the movement, being intersectional and inclusive, is likewise in accord with the spirit of largeness, love, and tolerance that is coming more and more to mark the relations of religionists in these closing years of the century. Finally, the

EXECUTIVE OFFICERS OF THE CHRISTIAN ENDEAVOR SOCIETY.

1. REV. CHARLES M. SHELDON.

2. BISHOP B. W. ARNETT.

whole tone and trend of the Endeavor idea is to make religion practical and reasonable and its application to the relations and responsibilities of the life here so direct and clear that the young disciple will not reserve his saintliness for the regions of the blest, but live it, use it here and now."

The *Detroit News-Tribune* is impressed by the rare spectacle of a vast concourse of modern men and women fascinated by a spirit of "other-worldliness," not by money-getting or other form of self-seeking:

"Every effect has its cause. The forces that have conspired to bring together 50,000 people from the four corners of the world must be real. All the other conventions that convene in this city of conventions are explicable. The purposes, objects, and motives of them are known, and there is not the suggestion of mystery about them. Material well-being of some sort, usually of a pecuniary nature, is behind them all, and even the city that invites them to its hospitality is not without its selfish interest in receiving them. But here is the most stupendous concern of them all, from which these common motives are wholly absent. No pecuniary profit awaits these devoted members of the Christian Endeavor. No increase of knowledge in the modes and ways of getting on better in the pursuits that add to worldly and luxurious pleasures is to come to them out of the social conditions of the meeting; such gain would be loss, according to the ancient formularies of their faith. They come here wholly under the inspiration of an other-worldliness. They hold that the business of this life is not what the world calls gain, but to lay foundations for the life that has no end. The essential business of the meeting is to get increase of knowledge and fitness to bring this worldly world into the possession of the rich faith and hope they themselves enjoy. In other words, they come to give something and not to get something. It cost them time, money, and effort to do it, but they do it.

"Such a human spectacle is well worth any man's while looking at. It is even worth any man's while to try to understand it."

The *Baltimore American* says of the results of the movement:

"There is not a land beneath the sun into which it has not gone and been firmly established. Its growth has been truly wonderful, and proves the mighty power of the church directed in a practical way toward practical ends.

"This society has put to good use, in the church and for the church, the earnestness and religious enthusiasm of its young people. It has made this a mighty force, directing it, developing it, and pointing out to it the way to great results. It has formed the young people into a vast army, under one banner and under one Commander. Its work has been as wonderful as its growth. The society stands to-day the marvel of the religious world."

The Christian Intelligencer says:

"Before this movement, there were not only young people in the communion of the church, they not only composed no inconsiderable proportion of her membership, but in many live, active, working churches there were young people's societies, not, however, organically affiliated with the societies of other churches, even of the same denomination, under a constitution affording a common basis of union and action. This result has been effected by the United Society of Christian Endeavor, and in this consists its great blessing to the church and to the world.

"We believe, with Dr. Clark, its founder, that it is more than a society, yielding only 'the frothy product of beardless exuberance'; it is a 'Providential movement'; one which God has sent 'to the kingdom for such a time as this' to answer theoretical atheism and infidelity in the world, and to counteract practical atheism and infidelity in the church; to substitute for the 'I don't know' of the agnostic, and the 'I doubt' of the skeptic, the 'I know whom I have believed, and am persuaded' of the Christian, and so effectually as to put the blush of shame on the cheek of the doubting and unbelieving. . . . That magnificent assemblage in Detroit last week of twenty thousand Christian Endeavor delegates, representing a constituency of three and one-third million—their prayers of faith, and songs of praise, and thrilling speech, and joy of heart, and their zeal on fire for the glory of the Master—should hush into a long silence the blare of the infidel and the whine of the pessimist."

Stevenson and the Roman Catholic Church.—

The Rt. Rev. Dr. Broyer, Bishop of Samoa, who knew Robert Louis Stevenson well during the latter's life in the South Pacific, has recently given some interesting information about Stevenson's religious attitude, in an interview reported in *The Catholic Press* of Sydney, Australia. Says the writer:

"We had come to talk about Samoa, and we told the bishop so. But when we should have been framing questions about Mataafa, a vision came to us of a lonely height overlooking the sea, and a still more lonely tomb that covered the last resting-place of Robert Louis Stevenson.

"It was not necessary, but we asked:

"Did you know Stevenson?"

"Bishop Broyer smiled.

"I knew him very well," he said, "for I often visited him at Vailima. Not so often as he wished me, tho. He often reproached me for not coming more frequently, but what could I do? Had I gone too much it might have aroused jealousy on the part of the English consul. Stevenson was very partial to Catholics, you know."

"Yes, we did know, and we thought—at least it had often occurred to us—at times when we crossed passages in some of Stevenson's letters, that it was just possible that he might have . . . Well, we insinuated our thoughts to Dr. Broyer.

"He grew very grave and was silent for a time; then with deep conviction turned to us earnestly. 'I have every reason to believe,' he said, 'that had not death struck him down so suddenly, without a moment's warning, he would have become a convert to the Catholic faith. He thought deeply on religious matters, and that his heart was turned toward Catholicism there can be no doubt. He was singularly free from any taint of sectarianism, and on religious matters thought that none should be coerced. He asked his step-daughter's (Mrs. Strong) boy what religion he would like to be brought up in—Protestant or Catholic? 'I would like to be a Catholic,' said the lad. Whereupon Stevenson brought him to me and he was baptized in the Catholic faith. The lad, I believe, is now being educated in America.'"

RELIGIOUS NOTES.

DR. JOHN BROWN, of Bedford, England, author of "The Life of Bunyan," will be next year's Lyman Beecher lecturer at Yale.

BISHOP HURST of the Methodist church, in an article in *The Western Christian Advocate* on the trend of criticism in Europe, especially in Germany and France, says that the tendency at present is to abandon the higher criticism and return to the long prevalent belief of the church. After indicating works of such a tendency he reaches the general conclusion that "there has been a marked increase in the number of able and scholarly critics in favor of the conservative position" in regard to the authorship and interpretation of the Scriptures.

The Outlook says that the new People's Church in Baltimore, which meets in the Lyceum Theater, is making an auspicious beginning, and the audiences are reported to be large. The church is organized to reach the floating classes of people who would be more likely to be reached by a theater meeting than by the usual church service. There is no formal creed, but instead a "Bond of Union," which is as follows: "We believe in the Fatherhood of God, the Sonship of Jesus Christ, and the brotherhood of Man. We believe Jesus Christ to be supreme, and we also believe that no one else has the slightest authority over our personal freedom or religious rights."

The Commonwealth, a Baptist paper of Philadelphia, gives an expression of its views on the Biblical criticism of the day in these words: "The term 'higher criticism' is, unfortunately, extremely vague. When it is referred to in pulpits or papers some think of it as a movement to destroy faith in the Bible, while others think of it as only a legitimate inquiry into the dates and composition of the books of the Bible. It is better to define our meaning if we use the term, but it is better not to use it at all. It is entirely too definite for pulpit use. But for the sake of those who are too ready to catch at every 'new view' and at every doctrine 'off color' we ought never to give the impression that higher criticism means infidelity or the highway leading to it."

POPE LEO XIII., with astonishing vitality after his recent illness, is already arranging the grand religious ceremonies to usher in the year 1900. The celebrations in Rome, says *The Criterion*, are to begin on next Christmas Day, when His Holiness will go in state to the door of St. Peter's and knock thrice with a hammer. The door will then fly open and the Pope will enter the church carrying a cross in his right hand and a candle in his left. The doors will not be closed until New Year's Day, and some of the magnificent services of the Catholic church will be celebrated during the week. This remarkable Pope is looking forward to taking a large personal share in the devotions.

FOREIGN TOPICS.

LABOR LEGISLATION IN EUROPE.

THE protection of the workman, provisions for his old age, and the strengthening of his position as against the capitalist have been the subject of many debates in the European parliaments of late, but the result is very barren. Most of the proposals will be repeated in the winter. In Germany the establishment of regular labor chambers, which might be extended into international bureaus for the protection of workmen, is contemplated. Herr Rösike, a prominent manufacturer of Hamburg, leads the movement, which is favorably received even in Socialist circles. Another bill deals with the subject of strikes and lockouts. It threatens state prison in the case of strikers who forcibly prevent men from returning to work, and of employers who endanger the public peace by enforcing a lockout. Employers and workmen both object to this restriction of their right to combine. The Socialist *Vorwärts* indulges in the most bitter attacks against the Minister of the Interior. It says:

"Graf Posadowsky preaches rank anarchism. The right of the individual to interfere with the civilizing influence of organized labor must not be interfered with. This right of the stupid, the coward, the blackleg, to betray his comrades must be carefully preserved. Not the good of the whole, not the welfare of the community, is to be considered, but the sweet will of the individual. This preposterous proposal is a direct invitation of the soldiers to shoot their officers, for the will of the soldier can not logically be subjected to the command of a superior entrusted with watching over the welfare of all."

The *Deutsche Tages Zeitung*, a very Conservative paper, thinks the bill cuts both ways and threatens the capitalist as severely as the workman. The *Volks-Zeitung*, Berlin, an advanced Radical, says:

"It has been proven conclusively of late that the employers have organized themselves for the purpose of boycotting workmen for whom they bear a grudge. This means that workmen who are willing to work are prevented from doing so, hence the first candidates for state prison would be found in the ranks of the employers. We do not see how in that case the bill can become a law. Employers do not intend to run their neck into a noose."

However, the bill is a pet scheme of the Kaiser's, and will be again presented in the autumn. Another piece of labor legislation in Germany is the extension of the accident and invalid law, which has passed without serious opposition. In England, too, an attempt has been made to provide something better for the veterans of labor than the workhouse, but the efforts in this direction were not crowned with success. The prevalent argument seems to be that an Englishman can not be expected to accept a very small pension, so it is best not to offer him anything. *The Speaker*, London, says:

"Where is the money to come from? The taxable resources of the richest country in the world are singularly inelastic. . . . When some one specifies a tax which can be imposed without making life harder for the poor—by falling on their food, for example—a very long step will have been taken toward a solution. We ourselves can see no such tax, unless it be on the unearned increment of town lands. But that is shut out of the Unionist program. Lord Salisbury has declared that the line between the parties will henceforth be determined by questions of property—he meant, of course, the property of the very rich; the Liberals will attack, the Conservatives will defend. If that is the case, old-age pensions had better be left out of the Unionist program at once."

One of the main excuses of the present British administration for refusing to propose a pension law after the German pattern is that the British workman will not submit to compulsory thrift. His love of freedom is too great for that, even if, as in Germany,

the employer and the Government pay a share. Very well, says Mr. Charles Booth, let the Government pay all, and he suggests pensions similar to those provided in Germany, 2s. 6d. for males, 1s. 9d. for females beginning at sixty, rising to 7s. for males and 5s. for females beginning at seventy. But this, many people think, would be a greater burden than the country can bear. *The Spectator* says:

"It would be totally impossible to raise the money required by merely demanding a few more pence in the pound from the long-suffering payers of income tax. Indirect taxation, enhancing the cost of living for the working classes, would also certainly have to be resorted to. And then, if some sudden national emergency arose, or the public conscience became keenly alive to some other weak spot in the body politic, on what resources could we fall back? We are a rich and strong nation, but we have no right to trench dangerously on our reserves of wealth and force for the achievement of a single social reform, however beneficial."

Justice, a Socialist organ, suggests that a pension should be paid to every workman who becomes incapacitated, never mind what his age might be. Ten shillings is the least that can be offered without insulting the workmen. How the money is to be raised the paper does not tell, but it is confident that the funds are to be had. It says:

"We know that there are plenty of all the necessities of life, and plenty of the means for producing more, to make it easy to provide decent comfort for all. There is never any outcry about the difficulty of finding the means when it is a question of providing additional subsidies for our cormorant royal family, or voting tens of thousands to some huccaneering hatcher of subject races. Oh, no, it is quite easy to provide pensions for the idlers and plunderers. It is only when it is a question of permitting the workers to share in what they have produced that alarm is expressed as to the possibility of providing the means. We do not share this alarm. The workers produce everything, and they certainly produce sufficient to maintain their own aged and infirm free from want and misery. Let us have done with cant, then, and insist on adequate and comfortable free maintenance for the aged and infirm."

The principal act of the French Government in the way of labor legislation is an extension of the accident insurance law. The state in future enters into competition with the existing insurance companies, but the aim is chiefly to provide insurance where the companies were unwilling to take risk.—*Translations made for THE LITERARY DIGEST.*

GERMANY AND THE SAMOAN AFFAIR.

THERE is no attempt in Germany to deny that the proposed solution of the Samoan difficulty falls short of German expectation. The Germans desired a partitioning of the group, which would allow them to avoid contact with American and English officials. Against England the German feeling is certainly very strong. The British papers generally avoid mentioning the subject, but there is a conviction that the Samoan affair will influence Germany's South African policy. In lieu of other comment, most English papers give lengthy extracts from an article in the *Deutsche Revue*, Berlin. Its writer describes the effect the Samoan affair had upon Mr. Rhodes. We summarize as follows:

"Events in Samoa will arouse German public opinion against England and your railroad plans," said I to Mr. Rhodes. He looked astonished. "I have a written agreement with the Emperor and his Government," he replied. Like many people in England, he regarded public opinion in Germany as a *quantité négligeable*, and it was only when I showed him that the Emperor would never ask Parliament to guarantee the railroad if the voters were against it that he became worried. Later on he discovered that the treatment accorded to Germany influenced Anglo-German relations, and that the spirit of the German voters in

South Africa was also affected by it. Then he exercised pressure upon the papers swayed by him. Of course he did not do this for love of Germany. His interest is in Africa alone, and he does not wish to have Germany opposed to Great Britain there. He did not approve of Admiral Kautz's behavior, and severely censured President McKinley for his behavior to Captain Coghlan after the latter had uttered insults against the Kaiser, "altho McKinley probably meant no harm, and only wished to make his bow to popular opinion in America." I remarked, however, that altho the Americans had acted brutally, England is the real stumbling-block to a satisfactory settlement.

A few Englishmen, like John G. Leigh, the American correspondent of the *London Times*, admit that "Great Britain and the United States are in the wrong," and that "the British Government endeavors to withdraw from the position taken in the matter." The majority of English papers follow their custom of dropping an unpleasant subject.

So does the colonial press. The Samoan affair has vanished from their columns except when, as in the case of the *Sydney Daily Telegraph*, the "brutality of the Americans" is made responsible.

All the more lasting is the impression in Germany. The rumors which were circulated to show that German war-vessels may safely be toyed with are bitterly resented, and the *Tageblatt*, Berlin, explains how some of these popular little tales are supplied. It says:

"*Harper's Weekly* of February 25 published a series of pictures from Samoa. One of these shows the *Porpoise* and *Falke* steaming out of Apia harbor. Both vessels are evidently going fast, and thick clouds of smoke ascend from their funnels. The photographer, a Mr. Andrews, had taken this picture January 16, when a storm forced the ships to leave the harbor. On the copies he had for sale is photographed the legend: 'Apia Harbor, January 16, '99. A Northwester. Andrew.'"

"This signature has been carefully cut off in the reproduction in *Harper's Weekly*, and instead we read the following explanation: 'H. B. M. S. *Porpoise*, with two forward guns trained on German war-ship *Falke*.'"

"What conclusions must the reader draw when he reads in addition that 'these first photographs of the rebellion are kindly supplied by Chief Justice William L. Chambers'?"

That German planters were arrested because the British-American detachment walked into a trap is bitterly resented. "It means that a civilian is to be made responsible for the incapability of the British officer," says the *Tages Zeitung*, Berlin. Yet the German papers acknowledge that a war with Great Britain and the United States, even for the indemnity due to the Germans whose property has been destroyed, is out of the question. The Samoan affair must, however, be carefully remembered "for future reference."

The *Kölnische Zeitung*, in the course of a long article, expresses itself to the following effect:

The English must know best what suits them. But what was the object of their behavior? Was it to teach the German nation, whose enterprise they hate, a lesson? Very well, we will remember it; remember it longer, perhaps, than our good cousins may like. At present, things go swimmingly with the English. But the political aspect may change. We will bear in mind that only

a single English paper refrained from attacking us, and that paper is owned by an American. Good comes sometimes of evil, and the one good lesson taught us is the need of an adequate fleet. We may not think of creating a navy of the very first rank, but we must have marine armaments sufficient to preserve us from such treatment as France received at the hands of Great Britain some time ago. And for this the necessary grants will be made. Most of our people did not know the value of a fleet. They do now.

The destruction of property caused by the bombardment is said to be considerable, but the German Government is not likely to present claims where payment can not be enforced. Such influential publications as the Berlin *Echo* nevertheless keep the memory of losses of this kind alive, as in the case of the Denhardt claims in Witu.—*Translations made for THE LITERARY DIGEST.*

MORE FOREIGN CRITICISMS OF THE PHILIPPINE WAR.

A CERTAIN amount of impatience is noticeable in the foreign comments on our Philippine war, especially in the far East, where the destruction of the trade with the Philippine Islands is most seriously felt. The *Telegraph*, Hongkong, says:

"The Americans have all along made the mistake of looking upon the Filipinos as savages, and treating them as such, and now it is too late to mend matters. At the commencement of the Spanish-American war the Americans had the trust and respect of the Filipinos, and a very small modicum of consideration and diplomacy would have enabled them to have retained those friendly feelings and to have been to-day in peaceful occupation of the country. Had any of the natives of the interior or of other islands offered opposition to the Americans, there would have been the Filipino troops at hand to act under American officers and so save the expense of maintaining and operating the large force which is at present necessary. It must not be thought that we are antagonistic to the American cause; such is not the case, but we must say and say plainly that we are sorry to see that instead of the Filipinos being introduced to the benefits of peace and a just and civilized form of government they are now likely to be cursed by a war of extermination, and all on account of the bungling and mismanagement of certain officials of the United States."

"The Filipinos begin to discover that there is mighty little difference between Spanish tyranny and American freedom," says *Jugend*, Munich; but it suggests that the wholesale massacre of the Filipinos mentioned by the Hongkong *Telegraph* is for the present prevented by the Filipinos themselves, and it pictures Aguinaldo glancing at the headlines of an American newspaper. "Great American victories," he murmurs; "I wonder who else they're fighting with?" A recent letter from Manila published in the *Deutsche Tages Zeitung*, Berlin, certainly indicates that the "round robin" of the American newspaper correspondents in Manila is very mildly worded. We quote as follows:

"MANILA, June 13.

"The Filipinos have given battle to-day in a manner very humbling to our pride, and which puts even the most pessimistic expectations in the shade. And this battle did not take place around their own strongholds, but right before the gates of Manila. What makes the matter worse is that the battle was not fought by Aguinaldo's main army, nor by the troops under General Pilar, nor by the troops of Luna—said to have been assassinated recently; but merely by the detachment which so worried the garrison of Manila in the south that General Otis never dared to send his best regulars northward. Events have proven that his caution was justified."

The writer then describes the battle much in the same way as in the official report received here, and adds:

"In the evening General Lawton had to be content to hold, with the assistance of the war-ships, the right bank of the Zapote River and to keep open the communication between Cavite and

THE GERMAN TO THE SAMOAN KING: "Didn't I warn you against that old lady's humanity cordial?"
—*Der Floh, Vienna.*

Manila. Inland, from Paranaque to Binacayan, the Filipinos remained masters of the position, and they continue to threaten Cavite on their left and Manila on their right."

Much censure is aroused by the manner in which our "yellow" journals continue to speak of Aguinaldo and his people, "hut," says *The Friend of India*, Calcutta, "these attacks cause unimpeachable witnesses to take up the cudgels for the Filipinos." It adds:

"One of the great difficulties that confront the journalist is the difficulty of getting at the facts. . . . A flagrant example of this trouble in getting at the facts is afforded by the rebellion in the Philippines. The view that we must take of the struggle proceeding there depends largely upon the relations and dealings between Aguinaldo and the American leaders; and the credence we attach to the conflicting accounts of those relations and dealings must, in turn, depend largely upon the personality of the chief actors and narrators. The 'yellow' journals and the representatives of the neck-or-nothing jingoism of the United States, have naturally found their profit in painting the Malay president in the darkest colors. To allow that he is a patriot in any worthy sense of the term is to condemn the American campaign."

Howard Bray, writing in the *Singapore Free Press*, says:

"I am certainly the only foreigner who has enjoyed the confidence of the Filipino leaders both before and during the rebellion against Spain, and, above all, I was the medium through which Aguinaldo was brought into relation with the American Government in Singapore last April. . . . I have known the Filipinos probably better and more thoroughly than most people, and I must confess I was surprised at this unstinted and unselfish devotion, which, I submit, is, indeed, a charming trait in the character of these much-maligned people, against whom the 'free people' of the United States are committing one of the greatest crimes in history, in the name of what McKinley, with Methodistical cant and revolting hypocrisy, terms 'benevolent assimilation.'"

Every foreign paper that comes to hand shows that a wearisome and difficult war of conquest is now expected, and there are not wanting hints that President McKinley and the Republican Party will have "to pay the piper." "President McKinley's popularity is for the present impaired," says the *London Spectator*. The *Journal des Debats*, Paris, says:

"The man at the White House is not bedded upon roses just now. The great majority of Americans still hold that their flag, once hoisted in the Philippines, should not be hauled down; but the former enthusiasm has disappeared. . . . Resolute action is needed in the Philippines unless an agreement can be reached with the native chiefs. The President saw that, at the time peace was concluded with Spain, public opinion demanded the annexation of the Philippines, and he allowed himself to be drawn into annexation. . . . The wisest thing for him to do now is, since the soup has been cooked, to eat it."

Meanwhile our revival of the old French maxim that one nation is justified in conferring forcibly upon another the benefits of its own civilization and humanity, has led to a much stricter examination of our methods than was practised for years. It is generally denied that we have benefits to confer. Goldwin Smith, whose popularity with the British public has risen much since he has abandoned his former advocacy of Canada's union with the United States, writes as follows in the *Toronto Sun*:

"What proof can these poor people give of their worthiness to be the fathers of a nation more signal than this lavish outpouring of their blood in the struggle for independence against the overwhelming forces of iniquity? Can we believe that they would be exalted in character or made more capable of self-government by the rule of American carpet-baggers such as it was in the Southern States? This it is which, under the fine name of a reign of law and freedom, is really in store for them when they are vanquished, as vanquished they can not fail in the end to be."

Professor Smith denies that he is hostile to the United States. It is his love of truth only, he says, which compels him to express himself as in the above. *The Saturday Review* assumes

that even now the United States Government confesses itself incapable of furnishing an incorrupt administration, and says:

"One of his promises was 'an honest and effective civil service' for the Philippines, but what hope is there for those distressful islands when we find that the Alaskan civil service has been handed over bodily to the political sportsman, and that the excuse given is 'the distance from Washington'? Mr. Gage's naive defense of his chief bodes no good for the new territories cut off from Washington by salt water."

There is little doubt that many Japanese sympathize with the Filipinos, but the position of Japan is not such that the Government could interfere unless forced to do so by an overwhelming outburst of public opinion. But the authorities do not encourage an agitation in this direction, and open filibustering expeditions, advertised in the papers, will hardly leave Japan for the Philippines. *The Japan Mail*, Yokohama, whose opinions are accepted as semi-official, says:

"The United States Government is reported to have addressed to Japan a friendly inquiry about a rumor that supplies of arms and ammunition are being secretly sent from this country to the Filipino insurgents, and the foreign office in Tokyo is said to have been able to reply that the story had not the smallest basis of truth. We transcribe the statement because it has currency, but we attach no credence to it. The United States, having already received assurances of Japan's official resolve to strictly guard against any and every breach of neutrality, is most unlikely to formulate any fresh query on the subject. If concrete evidence of the smuggling of munitions of war were forthcoming, the United States authorities would doubtless call Japan's attention to the fact, but a mere breath of rumor would not warrant recourse to international communications, in whatever language they might be couched."—*Translations made for THE LITERARY DIGEST.*

A BRITISH VIEW OF AMERICAN INDUSTRY.

"AMERICAN brag" has come to be almost proverbial, for foreigners not always appreciating the fact that what is called our brag is half the time due to American love of humor rather than to American conceit. Nowadays, however, we do not have to do all our own bragging; there are others who do some of it for us. We take the following from an article in the *Liverpool Journal of Commerce*, a paper not likely to be prejudiced in favor of the United States even by Anglo-Saxon sympathies:

"That citizens of the United States are given to 'blow their own trumpet' few will deny. Before condemning them wholesale, however, for indulging in so harmless a discharge of gas—which to the British public shows, perhaps, just a little want of taste—it is as well to look around and see if there is not some justification for the American's assumptive right to talk in a tone somewhat above a whisper, and brag of the achievements of his country. Without giving any opinion likely to hurt the susceptibilities of our fellow countrymen, we would advise many of them, especially the manufacturer, to take a journey over to the States and there examine the way things are done, note the machinery that is used in producing goods there, and compare it with that which obtains in similar factories in this country. Above all, moreover, pay particular attention to the workers. To an unbiassed person the difference all round can not but be noticeable and favorable to the American. There men work as if they had to, as if their very lives depended upon putting in as much labor as could be crowded into the working hours of a day, as if, indeed, they had a direct interest in the result of their toil. No one would need to go a long way in this country to find men in the pay of any industrial concern loafing about as if they were paid to learn and practise draughts or cards, or amuse their chums with entertaining gossip, when they should be head and ears in their business. . . . It may be said that the American is better paid than his British contemporary, hence this display of energy; but, if the American gets more, there can be little doubt that he earns it all. And, without condemning the working capabilities or proclivities of our own countrymen, it can not be denied that, generally speaking, the measure of their day's work is gaged by the capacity for work of the poorest workman, or at least of a very indifferent one. This restraining influence upon men of energy and ambition is demoralizing, and has played no little part, we opine, in the retrograde movement of Great Britain as the world's factory. . . . Germany, with her technical education and skill, has been looked upon too distractingly, while America might have had the attention, for it is from Western, not Eastern, trade rivals that former British controlled markets are now and will be assailed."

FOREIGN POSSIBILITIES OF
AMERICAN COMMERCE.

Consul-General Holloway sends from St. Petersburg, May 13, 1899, program of the exhibition of dairy products and machines and appliances for use in dairy work, to be opened in St. Petersburg September 1, 1899, to continue one month. The exhibition consists of the following divisions and classes:

Division I.—Dairy products. Class 1: milk, cream, curds, sour cream, and other products; Class 2: all kinds of butter; Class 3: all kinds of cheese; Class 4: accessory products: koumiss (fermented milk of mares), kefir, gaseous milk and other kinds of it, milk brandy, condensed and dry milk, whey, etc.

Division II.—Dairy apparatus and machines. Class 5: apparatus and machines to work the milk, separators, churns, butter dryers, cheese kettles, pasteurisators, elevators, etc.; Class 6: apparatus for scientific and practical analysis of milk, butter, and other products.

Division III.—Class 7: exhibition of the products under work.

Division IV.—Class 8: tasting division.

Division V.—Class 9: scientific division: investigations, descriptions of farms, herbaria, etc., collections, models, apparatus, adaptations for learning, reports of the dairy—schools and learning books.

Division VI.—Class 10: auxiliary substances, salt, color, ferment, abomasums, thermometers, psychrometers, etc.

Division VII.—Class 11: dairy buildings, plans, models, special adaptations for cooling, ventilation, and heating.

Division VIII.—Class 12: conservation and transportation of dairy products: ice-wagons, cooling-rooms, magazines, and samples of different kinds of packing butter, cheese, etc.

The dairy products are to be of Russian origin; the exhibition is international in regard to machinery, apparatus, kinds of packing, and means for transportation. The entrance fee is 45. (97 cents) per square meter. Articles must be delivered to the exhibition not later than five days before opening, with the exception of machinery, which must be sent twenty days before. There will be daily demonstrations of the fabrication of dairy products and the working of machines.

The following shows the volume of shoe imports into Ecuador during the year 1898:

Country.	Value.
Belgium.....	\$710.50
England.....	31,587.41
France.....	11,882.35
Germany.....	4,234.58
Spain.....	4,300.51
United States.....	8,930.99

These figures are from the custom-house records and refer exclusively to foot-wear of leather. Duties are charged by gross weight—\$1.67 silver per kilogram. There is no prejudice against American goods in this country; our shoes are considered higher in grade, and perhaps in price, than those from other countries. The same is true of other lines. A number of prominent firms here carry a small line of American shoes. Competent salesmen should visit the country, in order to obtain knowledge of requirements and scope of the trade, and results would justify expense. Unless salesmen are sent, it is certain that England, France, and Germany, whose representatives exploit this field with zeal and frequency, will continue to enjoy the bulk of the business. A New York salesman recently obtained a large order, and expressed surprise at his unexpected success. Imported shoes are retailed at from \$3.50 to \$8 gold, according to quality. All varieties of finish are on the market, and only an expert can judge of technical requirements. Trade manuals are useful only in Spanish, as a supplement to the exertions of a salesman; otherwise, they receive no attention and are money wasted.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

INVEST and SAVE

NOT

SAVE and INVEST

There's quite a difference between these two. Probable it is not apparent to you. One is our plan, the other is the usual plan.

Ours is best—safest—easiest. We would like to show you just how much difference there is. Write and ask us for full particulars.

CAMPBELL INVESTMENT COMPANY

(CAPITAL \$300,000)

106 La Salle Street - - - Chicago, Ill.

It seems to be generally admitted that German beet sugar, when once it comes into competition with the Cuban product, must go to the wall. In casting about for some way of saving the industry from utter destruction, many plans have been proposed, but the most available seems to be to "increase home consumption." To this end, it is proposed to issue sugar as a ration to the soldiers and to encourage farmers to feed it to stock, especially to hogs. Of course, this will necessitate the cheapening of the article, and the only way this can be effectually accomplished is to abolish the taxes now paid on sugar consumed in Germany, and reduce or entirely discontinue sugar bounties.

The following statistics of the consumption of sugar in Europe and America, taken from the last monthly report of Herr Licht, statistician of the beet sugar industry of the German empire, show conclusively that there is ample room for a large increase of its use in Germany:

Country.	Population.	Sugar used per capita per annum. Pounds.
England.....	39,072,000	91.31
Switzerland.....	2,990,000	52.11
Denmark.....	2,340,000	48.83
Sweden and Norway.....	7,031,000	40.74
Holland.....	4,938,000	34.41
France.....	38,539,000	31.02
Germany.....	54,168,000	30.22
Belgium.....	6,495,000	23.08
Austria.....	45,391,000	17.84
Portugal.....	5,105,000	14.24
Russia.....	106,250,000	12.61
Spain.....	17,913,000	8.09
Rumania.....	5,505,000	7.21

Consul-General Lincoln writes from Antwerp, May 5, 1899:

"At the second quarterly sale held on the 2d and 3d instant, the ivory offered and sold was as follows: About 133,411 pounds Kongo hard, 9,472 pounds Kongo soft, 18,026 pounds Angola, 9,918

Household Enamelling

For a score of household things—case-ments, mantels, crockery, chairs, doors, bath-tubs, refrigerators, food boxes, etc.—the secret of long usefulness and beauty is an occasional coat of enamel.
A can of our Liquid Enamel is crammed full of economy and decoration.
Our enamel is incomparably the best in durability, in richness of gloss, in ease of application, and for preservation and ornamentation.

JOHN MAIR & SONS,

136 S. Delaware Ave. PHILADELPHIA.

ponnds Gaboon, 1,221 ponnds Zanzibar soft, and 994 ponnds Senegal and Gold Coast. The total was about 173,042 pounds, as compared with 128,568 pounds in 1898, 162,214 pounds in 1897, and 146,682 pounds in 1896. The bidding was very active, the prices established showing an advance of from 9.6 to 19.3 cents per 2.204 pounds for the heavy and medium weight tusks and 19.3 cents for the scrivilles. For tusks for bangles, however, there was a fall in price of about 19.3 cents. There was a considerable increase in the value of soft ivory, varying from 57.9 to 90.5 cents per 2.204 pounds. Stock on hand this day is about 206,075 pounds, against 127,832 pounds in 1898, 185,136 pounds in 1897, and 236,930 pounds in 1896. The next quarterly sale will be held on August 1."

Consul Metcalf, of Newcastle-on-Tyne, reports the recent establishment of a weekly line of steamers from that port to Finland, carrying passengers, mails, and freight. One steamer has already arrived at Newcastle with above 200 emigrants on board, en route for the United States.

PERSONALS.

A YOUNG officer who served under General Wood in the second battle of Santiago—that against disease—says a writer in *The New Voice*, has returned with some stories and descriptions that throw new light, or at any rate more light, on the doctor-soldier who has won the whole country's enthusiastic admiration and confidence. "I saw General Wood," declares this officer, "at his desk for three days when, I really believe, he was the sickest man in Santiago. Once, going into the palace in the morning, I saw him lean against the wall for support, but in a moment he braced up again, and went on and worked just as hard that day as on any other. With chills shaking his entire body he would press his hand hard against the desk so as to stop the trembling while he wrote." Here, too, is a significant detail: "He is a man who talks with his eye, and you know what he means. Clear blue eyes they are, attractive in their mildness, but they can be 'cold enough to give you a chill,' as one of his men said." And the general not only works himself, which is no rare merit, but he inspires others with his own energy and forgetfulness of self. "Somehow or other," we read, "he makes you feel that the complaining man is a sickly sort of creature, undeserving of pity. I know of two instances of men who were born kickers and had the worst sort of reputation for fault-finding down in Alabama, where they came from, and if you were to see them now you would think that they would suffer the worst possible torture without an ejaculation. The change in their character has simply come about by their being brought into close contact with the general."

THE death of Augustin Daly, says the *New York Tribune*, removes the most distinguished figure among the dramatic managers of America since the time of Lester Wallack, and the most powerful and most important intellectual force that has been operant in the American theatre since the best days of Edwin Booth. Mr. Daly was animated by the highest ambition, and in all his relations with the stage he was conscious of a solemn responsibility and acted from motives that were conscientious and noble.

The early part of his career as a manager was, naturally, marked by some wildness of experiment, but he soon obtained a firm control of the business and of his resources, and shaped the clear policy of aiming at the best, and from that purpose he never deviated. He gathered the ablest men and women in the dramatic profession; he presented the best plays that were available; he made the theater important, and he kept it worthy of sympathy and support of the most refined taste and of the best intellect of his time.

His fertility of resource seemed inexhaustible. He was quick to decide, and the energy with which he moved in the execution of his plans was all the more splendid because it was never de-

ranged by tumult nor marred by ostentation. As long as he had a finely intelligent public with which to deal, and until the actors of the old school began to die away, giving place to the cohorts of the drawing room, he touched nothing that did not succeed.

He has earned a great renown and has left an imperishable example. His character was marked by some eccentricities—for he liked to hide his virtues and to seem indifferent and hard, but it was a thin disguise. He had encountered much ingratitude, and his experience had made him stern in judgment and somewhat cold and austere in manner; but those who know him well knew that his probity was like a rock; and they will remember him now as a man of perfect honesty, of inflexible principle, of a most affectionate heart, and of a temperament marked by singular simplicity, generosity, and tenderness. The passion of his life was to deserve true success and beneficent power in his vocation by the genuine and unquestionable merit of his deeds.

His life was completely free from pretense and flattery. He had a distinct design, and he worked for its accomplishment with an industry that never slept. He was a deeply religious man, and his absolute faith, combined with his great firmness and force of character, made him resolute to meet every trial and calm in the face of every danger.

AN interesting account of the early career of Empress Eugenie is given by Mme. Clara Tschudi, in a recently published biography.

Eugenie is by blood and inheritance an adventurer. Kirkpatrick, her maternal grandfather, was a canny Scotchman, who married a Spanish woman and kept a wine-store at Malaga, where he started as a small retailer and grew rich. One of his two daughters who waited upon the customers, Manuela, had an overpowering ambition and an insatiable vanity. Whether true or not, she got it into her head that she was of royal lineage. With a sneer in her heart she doled out wine to the Malaga peasantry and entertained her great dreams. "Manuela was far from being a true Spaniard. A Spanish woman is as a rule indolent and ignorant. . . . But it was otherwise with Kirkpatrick's daughter. . . . She was a Spaniard, but at the same time possessed the energy of the Scotch-woman, a quality without which her dreams and wishes could never have been realized."

As the wine-shop grew in importance there came to it a Spanish colonel of artillery, Don Cipriano. He was a true soldier and a real hidalgo. He later became the Count of Montijo. Manuela set about to entrap the don with her smiles and bewitching glances across the wine-cup. When Scotch genius is in earnest it never fails, and she bagged him and became the Countess of Montijo. To them two daughters were born, Francisca Teresia in 1825 and Maria Eugenia Ignacia Augustina, May 5, 1826. The couple were poverty-stricken, but the count's eldest brother was immensely rich and childless, and his wealth at his death would go to the count and countess if his opposition to

Curtis, is done as it should be by The Easy Chair's friend and fellow laborer in letters, Dr. Titus M. Coan. Send for circular L, or forward your book or MS. to the N. Y. Bureau of Revision, 70 Fifth Avenue, writing to advertisers.

their marriage could be removed. The clever Manuela soon made a friend of the brother and later got his money. She then took her husband and two children to Madrid, where she plunged into the highest social swirl. She was a wild, daring woman, not valuing any too high a virtuous name, although she guarded her daughters' innocence with a jealous care. Tiring of her plain husband, she left Madrid in 1834 for extensive travel in Europe. In 1837 she put her two girls in school at the Sacred Heart in Paris. Although a countess, she could not shake off the reputation of an adventuress, and she hurried back to Madrid to gain a more fixed position by seeking admittance to the court. Soon after her two daughters returned.

It was there that Eugénie's career really begins. She fell desperately in love with a man who loved her but was forced to choose her sister. She took poison, but was discovered. After this she was no longer a "retired shy girl, but became an eccentric, exacting coquette, who sought forgetfulness of the past in a vortex of dissipation." Her ambition and vanity became like her mother's. She frequented the theaters, bullfights, and places still more *risqué*. She got a place as one of Isabella's maids of honor, but her reputation for riding in male attire and bathing in a curious costume and carrying in hand a riding-whip and dagger frightened hidalgos as snobs. The silly and immoral Isabella dismissed the young woman from her circle. Her mother, who was the queen's camerara, was also dismissed for scandal. The mother then tried to persuade her daughter to take the veil, but without success. The two left Madrid and set out to lead a life of roving.

It is supposed that Louis Napoleon came across Eugénie in London in 1847 or 1848. Napoleon was a notoriously unsuccessful suitor. No woman could ever feel any attachment for him, and up to this time his prospects were not an inducement. Eugénie first appeared in the court circles of Napoleon in 1852. It is certain that he then had no idea of marrying her. One of his followers, Frailin de Persigny, called on the countess and explained to her that considerations of state would not allow his master to share his throne with Eugénie. The countess curtly dismissed Napoleon's emissary. Napoleon, who had been aubbed by about every woman in Europe "fit to be his wife," could not endure this last snub, so pressed his suit. His family strenuously opposed the match, but on January 29, 1853, the civil marriage took place, followed by the grand pageant at Notre Dame. Mme. Tschudi gives a pleasing description of Eugénie as she appeared on this occasion. But only three persons were pleased—Napoleon, Eugénie, and her mother.

It is doubtful whether there is any author now before the public who receives as large an amount of remuneration for his literary labors as Rudyard Kipling, whose illness has aroused deep sympathy throughout the world. *The British Weekly* publishes this paragraph on the subject:

"Rudyard Kipling has contracted to write eight stories for one of the magazines next year, for each of which he will receive about £240. This is simply for the English serial rights of the stories. In addition, Mr. Kipling receives payment from America, India, and the colonies. This will probably bring up the price of the stories to about £500 each, making £4,000 for the year. In addition to this, Mr. Kipling receives the royalties for book publication in England and America. This will not amount to less than about £4,000, so that for each story the author ultimately receives not less than £1,000. Whether these high prices will be kept up is very doubtful. If the cheap magazine succeeds in injuring the older periodicals, they can not be maintained. It remains to be seen whether the public cares much for names, and it must be remembered that the papers with the largest circulation in this country do not depend upon names at all. I remember some years ago Mr. Kipling contributed one of his best pieces of work, better work by a great deal than he has been doing lately, to a monthly review. The editor informed me that not one extra copy of the periodical was sold."

MORE OR LESS PUNGENT.

Classed.—Alfred Austin is the poet laureate. Rudyard Kipling is the poet litigant.—*Boston Globe*.

The Common Fate.—Like everybody else, the sea waves arrive at the shore in great style, but they go away broke.—*Philadelphia Record*.

Chicago Debutantes.—"I don't believe that he has sand enough to propose." "You might help him a little. If he hasn't sand, he has plenty of rocks."—*Brooklyn Life*.

A Youthful Bluffer.—DOLLY: "Dick, I've seen the Obelisk in Central Park." DICK: "Huh! That's nothin'. I've seen 'em feed it!"—*The New Voice*.

Vained Classmate.—FATHER: "Who is the best writer in your class, Bobby?" BOBBY: "Jack Bulger. He writes the excuses for every feller in the class."—*Judge*.

Division of Labor.—"Look at poor Mrs. Jones dragging that heavy hose around, sprinkling their yard." "That's all right. Listen to Mr. Jones. He's putting the baby to sleep."—*Chicago Record*.

In Chicago's "Elite" Directory.—"Long before I met you I heard of your family," said the Count. "Yes," replied the beautiful girl coolly. "I believe papa is quoted in Bradstreet's."—*Chicago Post*.

With the Hunting Set.—MISS CHASE: "That sporting widow who got the brush to-day has been in at the death a good many times." MISS HUNT: "Yes, and each of them left her a fortune."—*Brooklyn Life*.

Not a Good Year for It.—"Maria, do you feel any symptoms of your regular annual attack of bay fever yet?" "Not yet." "Well, you'd better not have it this year at all. I've lost too much money on wheat."—*Chicago Tribune*.

A Devoted Father.—FOND MOTHER (listening to baby's cries): "What a sweet-toned voice she has, dear. She'll be a splendid singer. We must send her to Italy and have her voice cultivated." BRUTAL FATHER: "Send her now."—*Tid-Bits*.

His Version.—"Haven't you and your friend gotten through that argument yet?" "It isn't any argument," answered the opinionated man, resentfully. "I am merely telling him the facts in the case, and he is so obtuse that he can't understand."—*Washington Star*.

A Wise Girl.—"I know the secret of your birth!" hissed Reginald J. Porter after Miss Clytie T. Maginnis had rejected him. "Indeed you do not," she replied emphatically. "I cut the birth page out of the family Bible years ago."—*Detroit Free Press*.

To Avoid Misapprehension.—GUEST: "Ah!

RELIEF FROM RHEUMATICS..

Mr. W. H. Jenkins writes from Topeka, Kan., under date of August 5th, 1898:

GENTS: Several years ago I was crippled with rheumatism, and for 162 weeks I was unable to do business of any kind, and in that time I have expended nearly \$3,000. I had given up all hope. My mother in looking over the CHRISTIAN ADVOCATE saw your advertisement, and we ordered one bottle of your Tartarilithine, which gave me immediate relief.

I have recommended your medicine to a number of parties in this city, who have had chronic rheumatism for years. One of them, a lady 68 years of age, is now doing her own work. So far your medicine has not failed to make a cure.

In conclusion your medicine is just as represented, and has entirely eliminated the disease from my body. My mother is enthusiastic over the benefits that I have derived from the use of your medicine.

THE PEN-CARRON MANIFOLD CO.

227 Canal Street, New York

Then you are a musician? What instrument do you play?"

MUSICIAN: "The first fiddle."

HIS WIFE (emphatically): "But only in the orchestra!"—*Tit-Bits*.

Their Limitations.—"Some of those post-office people are very clever. They can read illegible writing and deliver letters when the address is worse than a Chinese puzzle." "Yes; but they can't help out the man who forgets to mail his wife's letters."—*Brooklyn Life*.

Settled.—"Have you made up your mind what college you will send your boy to?" "Oh, yes. That's all settled." "What one is it?" "What one! Didn't three boat races and the baseball championship all go to one institution this year? What one! Say, you amuse me with your fool questions."—*Chicago Post*.

Accepts the Situation.—"Why, darling," exclaimed the pretty bride of three weeks as she rushed to embrace her husband, "how good it was of you to skip baseball once and come home early! You're just too sweet." And he accepted it all without saying a word about there being no game.—*Detroit Free Press*.

A Bright Little Pupil.—"Give me some familiar proverb about birds," said the teacher. Tommy Tucker raised his hand. "The early bird—" He paused a moment, and tried it again. "The early bird—" "Yes," said the teacher, encouragingly. "That's right." "The early bird gathers no moss."—*Chicago Tribune*.

Wherein He Stands Alone.—MISS CAUSTIQUE: "So you are engaged to that Mr. Atkinson, are you? Now, tell me honestly, what can you see in him that distinguishes him from all other men in the world whom you have met?"

MISS PASSTIE (with unlooked-for frankness): "He asked me to be his wife."—*Tit-Bits*.

Weaving a Spell.—HE: "I am rather in favor of the English than the American mode of spelling."

SHE: "Yes?"

HE: "Yes, indeed. Take 'parlour,' for instance; having 'u' in it makes all the difference in the world."—*Boston Christian Register*.

Wouldn't Offend.—An old negro once, in relating his religious experience, avowed that he had seen the devil in bodily form. Upon being asked whether his satanic majesty presented himself as a white man or a black one, the honest darkey replied: "Neither white nor very black, but of a grizzly gray."—*Augusta (Ga.) Chronicle*.

Getting Even.—"Oh, yes," said the stocky man with the square jaw, "my married life is quite a happy one." "Glad to hear it," said the thin man with the thin hair. "Got any particular system?" "Well, yes. Whenever my wife gets into a tantrum I go out and find the fellow who introduced us and give him another licking."—*Indianapolis Journal*.

Ineligible.—PILSON: "Are you going to take part in that guessing contest?"

DIDSON: "Oh, no; they'd rule me out as a professional."

PILSON: "Professional?"

DILSON: "Yes; you know I am connected with the Weather Bureau."—*Columbus Ohio State Journal*.

Ate Too Fast.—HICKS: "They have music during luncheon. Let's go there."

WICKS: "No. I used to go there, but it gave me indigestion."

HICKS: "Cooking had?"

WICKS: "No, it was the music. They play nothing but rag-time marches and quicksteps."—*Catholic Standard and Times*.

Author's Incredulity.—In his anguish the author cried aloud. "You don't read the manuscripts you reject!" he protested. Here the editor smiled the sweet, warm smile peculiar to his kind. "You are mistaken," he replied, with gentle insistence. "We not only read the manuscripts

we reject, but the manuscripts we print, as well." Ah, who could believe that.—*Detroit Journal*.

Quite Absurd.—HARRY: "I had a letter to-day from Mrs. Mustardseed, the Christian Scientist who treated Aunt Hannah."

DICK: "What did she have to say?"

HARRY: "Oh, nothing much. She said she was pained because we had not settled with her."

DICK: "And, of course, you replied to her that there is no such thing as pain; that it is only a creature of the imagination?"—*Foston Transcript*.

Habituated to Solitude.—MR. NEWLYWED (of Lonelyville): "I've been to the employment agency and got a jewel of a cook—coming tomorrow, dear. Said she'd just as leave live here as not, and was three years steady in her last place, just as lonesome as this."

MRS. NEWLYWED: "And where was that?"

MR. NEWLYWED: "I forgot whether she said it was on a whaler or a lumber schooner, but I know she'll like Lonelyville."—*Judge*.

Current Events.

Monday, July 17.

—The American newspaper correspondents at Manila unite in a formal complaint, cabled by way of Hongkong, against the press censorship, and declare that the situation is worse than has been supposed in this country.

—The trolley strike in Brooklyn continues, but with decreasing prospects of success.

—The street-railway employees at Cleveland, Ohio, strike again, claiming that the company has broken its promises.

—The supreme court of Colorado decides that the eight-hour law is unconstitutional.

—It is reported that the Transvaal Government will adopt a franchise law that will terminate the strained relations with Great Britain.

Tuesday, July 18.

—The State Department makes public reports received from Manila, contradicting the gloomy statements of the correspondents as to conditions there.

—Advices from Samoa say that fighting has broken out between the forces of the rival kings, and several chiefs have been killed. A despatch also shows that Chief Justice Chambers intends to resign.

—The American representatives sign at the State Department a reciprocity treaty relating to British Guiana.

—Negotiations of the Franco-American treaty are resumed at the State Department.

—Rioting occurs in Brooklyn in connection with the trolley strike. An elevated railroad pillar is blown up by dynamiters; twenty-one arrests are made.

—Secretary Alger returns to Washington from his visit to Vice-President Hohart at Long Branch.

—The Transvaal Volksraad adopts the seven-year franchise proposition, which will probably avert the trouble with Great Britain.

Wednesday, July 19.

—Secretary of War Alger presents his resignation, to take effect at the pleasure of the President.

—A Manila despatch says that the total rainfall there thus far in July has been 35 inches; and in the last 31 hours 12 inches of rain have fallen.

—The Brooklyn trolley strike extends to New York City. Mobs have frequent clashes with the police and many arrests are made, but the disorder continues.

A Wholesome Tonic

Horsford's Acid Phosphate.

Dr. S. L. WILLIAMS, Clarence, Iowa, says: "I have used it to grand effect in cases where a general tonic was needed. For a nerve tonic I think it the best I have ever used."

SUMMER EXCURSIONS

TROY LINE

To Saratoga, Lakes George and Champlain, the Adirondacks, and all points North and East.

Fare lower than by any other route.

Searchlights. Dining-rooms unsurpassed.

Stra. Saratoga and City of Troy have been entirely rebuilt. Service daily except Saturday from West 10th St. at 6 p. m. Sunday steamers touch at Albany. Send for Excursion booklet. R. L. MONNBY, Gen'l Ticket Agent, Pier 46, N. Y.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

LONG ISLAND

IDEAL FOR A DAY'S OUTING
A WEEK'S VACATION
OR A SUMMER'S REST

ATLANTIC OCEAN

Reached ONLY by the Long Island R. R., recently made dustless, smokeless, speedy; starting twelve hundred trains daily—the finest service in the world. New cars and engines.

Good air, good water, good roads; quaint villages, charming country, surrounded by hundreds of miles of sound, bay and sea-coast, offering every summer allurements. Woods, hills and harbors on the north shore. Ocean, bays and beaches on the south. Dotted with hotels and cottages which afford every desirable accommodation.

These four handsome books sent on receipt of stamps for postage as follows: "Long Island" (descriptive), 6c; "Unique Long Island" (photo-illustrations only), 5c; "Summer Homes, Hotels and Boarding-Houses," 4c; "Cyclist's Paradise" (road maps, distances, hotels, etc.), 2c.

THE LONG ISLAND RAILROAD CO.

the fatal wounding of a doctor who shot a goat belonging to one of the Italians.

—Admiral Dewey is banqueted at Trieste.

—The British admiralty announces that England will continue to maintain a naval power equal to that of France and Russia.

Saturday, July 22.

—A Manila despatch via Hongkong says that many sick and wounded are in the hospitals, and that General Otis has disapproved a request for more surgeons.

—Ellhu Root, of New York, accepts the War portfolio, succeeding General Alger.

—The Italian Charge d'Affaires in Washington made representations to the State Department in regard to the lynching of five Italians in Louisiana.

—The President issued a proclamation putting in force the reciprocity arrangement with Portugal recently negotiated.

—The signing of a reciprocity treaty with France is regarded as assured by the officials who are conducting the negotiations.

—The militia were called out in Cleveland to suppress disorder and protect lives and property while the street car strike continues.

—Reports from Honolulu indicate that one side of the great volcano Mauna Loa has fallen in.

—The new torpedo-boat *Dahlgren* made a record mile in a trial on the Kennebec River, Me.

—The Third Committee at The Hague adopted the arbitration scheme as a whole.

—At the grounds of the Queen's Club, the Oxford and Cambridge athletes defeated representatives of Yale and Harvard in five out of nine contests.

Sunday, July 23.

—A movement for the Independence of the church in the Philippines resulted in the excommunication of its leader.

—A report from Trieste says that Admiral Dewey will remain there for ten days.

—Authorities at Havana have taken measures to check gambling.

—There was considerable rioting in connection with the street-car strike in Cleveland; a street car was wrecked by an explosion, and a woman fatally hurt.

—The negroes who committed the assault on Mrs. Ogletree, in the presence of her husband, were lynched in Georgia.

—Fire in a grain elevator in Toledo caused a loss estimated at \$1,000,000.

—The Epworth League Convention closed in Indianapolis, and will meet in San Francisco in 1901.

When in Montreal make your home at the **QUEEN'S HOTEL**. The only fire-proof hotel in the city. C. & Y. Vallee, Proprietors.

THE "FOUR-TRACK SERIES."

The New York Central's books of travel.

These small books are filled with information regarding the resorts of America, best routes, time required for journey and cost thereof.

Our Illustrated Catalogue, a booklet of 32 pages, 4 x 8, gives synopsis of contents of each of twenty-five books; this Catalogue sent free to any address on receipt of a postage stamp by George H. Daniels, General Passenger Agent, Grand Central Station, New York.

THE MOST CHARMING ISLAND WATER TRIP ON THE AMERICAN CONTINENT. Steamers "New York" and "Albany" General Office, 10 Broadway Street, New York

The Literary Digest

VOL. XIX., No. 6

NEW YORK, AUGUST 5, 1899.

WHOLE NUMBER, 485

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

TRADE PAPERS ON PROSPERITY.

THE business outlook in nearly every field of industry, the country over, seems to be one of almost unexampled prosperity. The iron trade is undoubtedly in the lead, with an advance of 100 per cent. in prices, and apparently still more to follow. One company alone, the Pressed Steel Car Company, has contracted with the Carnegie interests for an average of 1,000 tons of steel every day for the next ten years—enough, it is said, to absorb a quarter of the entire pig-iron product of the country during that long period. The railroads have all the business they can handle, shipping on the Great Lakes is overwhelmed with traffic, and rates have been advanced to the highest point reached in ten years. The grain crop of the West and Northwest is enormous, and it is reported that the demand from Europe will be as great as last year, assuring the farmers a good price. The clothing trade is experiencing great activity, and the canned-beef companies, in spite of all that has been said on both sides of the water, are steadily increasing their export trade. Perhaps the best index of prosperity, however, is the low tide of failures. In an article which has commanded wide attention, *Bradstreet's* says:

"It may well be considered a special index of the widespread activity in trade during the period under review to find that business embarrassments for the first half of 1899 make just as favorable a comparison with preceding periods as did the record of the first quarter of the year. Earlier reports by *Bradstreet's* apparently indicated that the first quarter of the present year witnessed the minimum of friction or disturbance in general trade, inasmuch as it was shown that in that period the number of failures reported was the smallest there was any record of for seventeen years past, and the liabilities involved were the smallest reported for twelve years. The showing for the second quarter of 1899, however, is almost equally encouraging in that while the number of failures in the second quarter this year has been slightly larger

than in some other years, the volume of liabilities involved is the smallest there is any record of since 1883. Records of failures by months show that the failures in June were the lightest and least damaging for any month this year, and a comparison of May and June failures with the same months of recently preceding years shows that this year's troubles have been unprecedentedly small, pointing to the continuance of the favorable conditions referred to to the very close of the six-months' period. For that latter period of time as a whole, therefore, the showing is an exceptionally favorable one, pointing, in fact, to the smallest number of embarrassments reported since 1882, while the liabilities of the failing traders are the lightest reported since 1881. Further testimony to the decline of business troubles to a minimum is found in the small percentage of assets to liabilities, the proportion this year, in fact, sinking to the extremely low level of 45.5 per cent., a point not heretofore reached since *Bradstreet's* statistics of failures first began to be compiled, twenty-one years ago."

The New York *Journal of Commerce* says:

"It would be difficult to exaggerate the degree of prosperity which the country is now enjoying, and while there are occasional warnings, and it is prudent to remember that the rate of increase in the volume of business in the past few months can not be indefinitely continued, it is also true that there are at present few clouds upon the commercial sky, and there is the utmost confidence in trade circles that existing conditions will last for some time.

"There is speculation, but it is not the leading factor in the present situation. There have been rapid advances in prices on the Stock Exchange, but they have been checked from time to time, so that they have not soared far above the material facts upon which they must ultimately rest. The conspicuous facts are not speculative but commercial, and they are closely connected with the actual consumption of the merchandise. Consider one fact lately mentioned in the dry-goods review in this paper, that clothiers are complaining that they can not get goods fast enough. They are supplying the men who are wearing the clothes, and instead of exhausting the patience of manufacturers by returning goods, which has been a common enough practice of late years, they can not get their re-orders filled fast enough. Or consider the trade in which there has been the greatest expansion in the past half year, the iron and steel trade. With the production rapidly increasing it has been unable to keep up with the demand, and the stocks have been nearly exhausted, while the buyers of pig are not speculators, but manufacturers who have difficulty in keeping up with the orders for materials needed at once for consumption. The enormous shipment of lake ores is giving the lake vessel interests an unexampled prosperity, and yet the furnaces can not get enough domestic ore and are importing it from remote countries.

"The *Chronicle's* computation of railroad earnings shows an increase for the first half of this year over the first half of last year of \$35,000,000 to \$40,000,000, and the earnings in the first half of 1898 were \$57,000,000 above those of 1897. The railroad receiverships in the first half of 1899 were fewer than in any previous half-year since the records began, the one company was large enough to carry the mileage and capital figures above those of the same period in 1898. Commercial and manufacturing bankruptcies were exceptionally low. The amount of liabilities in failures in the second quarter of the year was smaller than in any previous second quarter in *Dun's* tables, which cover twenty-five years.

"Wages in almost every line of industry have been advanced, and in many instances a second and even a third advance has been made since the beginning of the year, the deposits and loans of the banks as well as their clearings, the activity of all manufacturing plants, and the distribution of goods from all centers,

afford evidence of a degree of prosperity that has never been exceeded, and in which there is so moderate an element of speculation that it is reasonable to expect its continuance for a considerable period."

The Southern papers report that the commercial uplift has reached that part of the country, and that railroads, furnaces, and other industries are in a thriving condition. The editor of *The Tradesman* (Chattanooga, Tenn.) declares that he could fill three pages of his journal with proofs of Southern prosperity. *Bradstreet's* says of the Southern railroads:

"While the fiscal year which terminated on June 30 last was marked by large increases in the earnings of railroad companies in all parts of the country, the principal systems of the Southern States have been particularly favored. The transportation of another large cotton crop was, of course, a factor in the matter, but owing to the diversification of Southern industries, and especially to the development of the coal and other mineral resources of that section, the prosperity of the carriers whose properties are south of the Potomac and Ohio has been really remarkable."

The American Grocer (New York) finds that the controversy over canned meats has not decreased the export trade:

"The charge has been publicly made by a prominent Government official that the foreign demand for canned meats had fallen off as the result of the beef scandal and the charge that chemicals were used as preservatives. Naturally, we look to the official report of exports for a verification of the statement, but can not find that the figures support the assertion. The latest official bulletin furnishes the following statement of exports of canned beef, as follows:

	Pounds.
May, 1899.....	2,646,939
May, 1898.....	1,827,815
Increase	819,124
Eleven months ending May, 1899.....	36,252,902
Eleven months ending May, 1898.....	35,836,544
Increase	416,358

"Some of the most prominent packers state that their export sales are larger this year than ever, and are of the opinion that the charges against American meats have had little or nothing to do in checking demand."

The same paper says of the retail trade:

"There has not been a period in years when the retail grocery trade was so free from the influence of the cutter as at present. Few complain, and such as have grievances find that in nine out of ten instances the fault lies with themselves, and not with the general conditions."

The American Wool and Cotton Reporter (Boston) says of the dry-goods and clothing trade:

"Not in years has there been such an influx of buyers in the cities of New York and Chicago as have come during this month. Among them are many men who have not gone to market to buy goods for a long time. The travelers are all at home and are kept busy selling goods 'in the house' daily. . . . The industrial and agricultural conditions throughout every section of the country seem to warrant fully the belief, so widely prevalent in the clothing circles, that business will be exceptionally good in every section of the country this fall and winter. . . . The boys' clothing houses are doing the biggest business in their history."

The Textile World (Boston) says:

"At no time, except immediately after the passage of the present tariff law, has the wool market been in such an excellent condition as it is now, for sustaining prices. The supply of desirable wool is quite within the limits of the demand, if it does not greatly fall short of it, not only in this country, but abroad. This condition has been growing for the last number of years, especially in relation to the supply of fine wools. . . . The cotton situation, as regards the raw material and manufactured goods, is in a fairly satisfactory condition, especially for the latter."

As to the cause of our present flood-tide of prosperity, *The Textile Record* (Philadelphia) avers that it is due in great part to the presence on this side of the water of large quantities of gold:

"The prosperity of this nation at the present time is not only gratifying in itself, but it may be made profitable for instruction if the people will regard it in the light of certain theories which in the past they have been invited to accept. It has long been a favorite doctrine of the free traders, for example, that a nation must be better off with the balance of trade against it than with the balance in its favor. The argument advanced in support of this proposition has never commended itself to really sound judgment, but it has been urged with vehemence, and, by some persons, accepted with confidence. After a long period of depression the business of this country began to improve when its export trade began enlargement; and at this moment prosperity has come to us again, in some measure, chiefly because last year we sold six hundred millions more than we bought. The effect followed the cause, not solely for the reason that we pocketed the profits upon the excess transactions, but because the balance in our favor was paid in gold, which came here in unusually large quantities, and by its mere presence strengthened the market, inspired confidence, and put up prices. . . . Prices have advanced with the arrival of gold and have tended more strongly upward as the imports of the metal were enlarged. We need

"LET GO THAT LINE. WE'LL ATTEND TO THIS BUSINESS."

CANADA: "Just watch that new-fangled machine get a jar!"

—*The Republic, St. Louis.*

CANADIAN BOUNDARY IN CARTOON.

have no doubt that, if the current shall set strongly in the opposite direction, if we shall lose gold largely, prices will speedily be depressed again."

The editor of *The Bulletin of the American Iron and Steel Association* (Philadelphia) takes the same view:

"In every European country business is now better than it has been because of the large increase in the world's supply of good money, that is, *gold*. The director of the mint sums up the gold production of the world for 1899 at the enormous total of \$340,000,000. The corresponding figures for 1897 amounted to \$237,505,000, and for 1898 to nearly \$288,000,000. These are startling figures. The discovery of gold in California and Australia about fifty years ago stimulated business all the world over. We have always believed, however, that our Government could have kept in circulation, if it had so desired, a much larger quantity of silver coins than it has done, and could thus have stimulated business without impairing in the least the security of the gold standard."

CITY OWNERSHIP'S DEFEAT IN DETROIT.

ADVOCATES of municipal ownership of street railways, who have been expecting a trial of their theories in Detroit to result from the energetic efforts of Governor Pingree, feel disappointment at his failure, but find a grain or more of comfort in the fact that city ownership was not defeated on its merits. The solid opposition of the Detroit papers and of a large number of the Detroit people to Governor Pingree's plan was due partly to the price (\$17,500,000) which the company wanted for its property, and partly to the fear that the roads could not pay the principal and interest on this large sum out of the proposed three-cent fares. The failure to do so would mean that the roads would go back to the present company for forty-eight years, which would make the last state of Detroit worse than the first. The Detroit papers rejoice over the downfall of the governor's plan, and are waiting for him to evolve another which will eliminate the

features they think objectionable. The details of the Detroit contest, which has been a long, involved, and bitter one, are told as follows in the Indianapolis *Sentinel*:

"It will be remembered that after a prolonged contest an act was passed by the last Michigan legislature authorizing the creation of a municipal commission in Detroit to devise means for putting municipal ownership into practical operation. A commission of three was appointed under this act, with Governor Pingree at the head. This commission entered into negotiations with the street-railway companies for the purchase of their lines for \$17,500,000, payable in four-per-cent. bonds to run fifty years. Legal proceedings were instituted to test the constitutionality of the act providing for the commission, and the supreme court of the State rendered a decision that the municipal ownership of street railways or other common carriers in Michigan was in violation of the constitution.

"Governor Pingree, with characteristic persistency, refused to acknowledge defeat, and, altho his commission was stripped of all powers, it continued in existence as a voluntary organization, and proposed to take over the street-railway lines and operate them under a three-cent fare with universal transfers, issuing bonds to the amount of \$17,500,000 to the present companies in payment for the properties and agreeing to devote the entire net earnings of the roads to a sinking fund for the redemption of such bonds. The companies—that is to say the ubiquitous and many-sided Tom L. Johnson, in behalf chiefly of himself and Banker Wilson of New York—agreed to accept these bonds, provided the city would guarantee them by the issue of a so-called 'security franchise.' This franchise was to become operative only upon a failure to pay the interest or principal of the bonds as agreed, and to confer upon the grantees the use of the streets of Detroit for forty-eight years, fares to be five cents, six tickets to be sold for a quarter. This franchise was embodied in an ordinance, which, after a most tumultuous session, passed the council by a vote of 19 to 14. The press of the city was almost unanimous in opposing the measure, which was freely denounced as a bare-faced job, and charges of wholesale bribery were profusely made in the council and in the newspapers. . . .

"The despatches yesterday announced that Mayor Maybury has

REAR LINE.—Mr. Sharp, Mr. d'Oyly, Mr. Martin, Mr. Perny, Mr. Tibbott

MIDDLE LINE.—Mr. Tilley, Mr. Mac Farlan, Mr. Harris, Mr. F. Webster, Mr. Reddon, Mr. Baker, Mr. Rowbatt, Marquis de Rojas, Mr. Buchanan, Mr. Asquith, Mr. Gray, Mr. Soley, Mr. Mallet-Prévost, Mr. H. Collins.

FRONT LINE.—Mr. im Thurm, Sir Robert Reid, Sir Richard Webster, Hon. Justice D. J. Brewer, Lord Russell of Killowen, S. E. M. de Martins, Hon. Justice Melville Fuller, Lord Henry Collins, Ex-President Benjamin Harrison, Gen. B. F. Tracy.

VENEZUELAN BOUNDARY COMMISSION.

Meeting in Paris to Delimit the Boundary between British Guiana and Venezuela.

vetoed the ordinance and that the number of votes necessary to pass it over his veto could not be secured. The street-railway companies have been giving the people of Detroit 'an object-lesson' in three-cent fares for the last few days, with a view of creating public sentiment in favor of the ordinance. Now that the ordinance is dead we suppose the 'object-lesson' will be discontinued and the old fares will be restored. But Governor Pingree will hardly 'throw up the sponge.' The question may be carried into the next municipal campaign, and if the people of Detroit favor his project they can elect a council committed to it. In the mean time an amendment to the constitution of the State authorizing the municipalities to own and operate common carriers may be brought forward, but of course it will take some time to secure its adoption."

The *Hartford Courant* says:

"The present street-railway situation in Detroit seems to be this: Municipal ownership postponed indefinitely; the scheme to extend existing franchises for forty-eight years blocked by the mayor, the papers, and public opinion; the street-railway owners in a surly and threatening mood; the people waiting to see what turn affairs will now take, but not at all hopeful that the three-cent fares of last week will last. The company's franchises have only nine or ten years to run. Judge Speed, Pingree's man of law, says that the governor will now let things take their course, having done his best for the public and failed. The judge's prophecy is that Tom Johnson will now 'get all he can out of the franchises during their remaining life.' The *Detroit paper* quoted above [*The Journal*] tells Governor Pingree that he has been 'hornswoggled.'"

MILITARY PRESS ON THE CENSORSHIP.

WHILE the majority of the daily papers are following up the "round robin" of the Manila correspondents with demands that the censorship be relaxed, *The Army and Navy Register* (Washington) and *The Army and Navy Journal* (New York) declare that the correspondents are wrong and General Otis right. *The Register* points out that the news sent to the Government at Washington is complete and uncensored, and if the authorities want it given out to the newspapers it can be done at Washington. General Otis, therefore, is no more guilty than the officials nearer home. *The Register* says:

"The indifference of General Otis to the appeals of newspaper representatives for 'stories' is altogether creditable. It shows that he is not inclined to depend upon the favor of newspaper representatives for the heroism which sometimes comes from edi-

torial adulation. He evidently prefers to do his work as it is assigned him or as he sees it before him prompted by the conditions he knows to exist or suggested by his advisers. If fame can come to an officer with such a modest policy, he will be repaid for his reticence in the presence of the interviewer in greater measure than if he substituted loquacious candor for legitimate military work. His duty is to suppress an insurrection, not to furnish articles for newspaper writers. The latter have their rights and privileges, but at this time those rights and privileges are dependent entirely upon the views of the responsible commanding general. It is natural that there be difference of opinion between the authorities charged with the success of the campaign in the Philippines and the contemporaneous historians. It seems to us that whatever criticism may be visited upon General Otis by the strategists at home for his military plans and achievements, they must receive in silent commendation his attitude toward the newspaper men during the period when there is, to all intents and purposes, a state of war existing"

"There is no doubt that General Otis has kept the Washington authorities fully advised, and the responsibility of giving out such portions of his advices as are deemed necessary for public information without menace to American interests rests with the authorities here and not with General Otis at Manila. The action of the correspondents in advertising their animus is most unfortunate. We are not sure that it is not treasonable."

The Army and Navy Journal says that the correspondents "raise the direct issue as to who controls the Philippines, the newspapers or the United States Government, and whether our army is there for the purpose of serving the Government or to make space for the 'bright young men' of the daily press." *The Journal* then tells how they do it in the British army:

"How other governments deal with such matters as this is best shown by the example of the British Government, which is in much the same position as our own, so far as concerns a necessary deference to public opinion and the rights of a free press. A circular recently issued for the guidance of the military authorities in India requires each correspondent to take out a license and to limit his contributions to the paper mentioned in the license. Only one correspondent is allowed to each paper, and his character must be passed upon by the military authorities. He is forbidden to use a cipher, to go to the outposts without written permission for each visit, and is under the army act during his stay with the army. All newspaper communications must be examined by a staff officer, who may alter them if necessary in the interests of the army, and to him the correspondents must go at a given hour to obtain the information considered proper for publication. The other regulations are as follows:

LET THE SCAPEGOAT TAKE ALL THE HOODOOS.
—*The Journal, New York.*

WHO'LL BE THE NEXT VICTIM?
—*The Journal, Detroit.*

TWO VIEWS OF GENERAL ALGER'S EXIT.

"12. The military authorities will facilitate, so far as they can, the despatch of messages of correspondents.

"13. Should the means of communication at the disposal of the general commanding-in-chief in the field not be sufficient to convey the messages of correspondents, the latter may, under his sanction, arrange for special means of transmitting their messages. It is, however, to be clearly understood that such arrangements are to be entirely under the control of the staff officer previously mentioned.

"14. The general commanding-in-chief in the field has power to revoke, at any time, any license granted under the authority of the commander-in-chief, should he consider it advisable in the interests of the army to do so. Correspondents are to be warned that any messages despatched, either from the field telegraph office or elsewhere, without the countersignature of the staff officer, mentioned in paragraph 9, will involve immediate withdrawal of the license."

"Such are the regulations which the British authorities consider essential for the proper control of correspondents with the army, and we can imagine what would happen to the correspondents who should unite in the publication of protest against the commanding officer enforcing them. Article 14 would no doubt be promptly put into operation against them, and the places that knew them would soon know them no more.

"The War Department should assume the authority for the regulation of correspondents by the issue of some such order as this. There is no reason to suppose that the restrictions to which correspondents at Manila have been subjected are any more severe than those we have quoted."

The National Tribune (Washington), the organ of the Grand Army of the Republic, takes the opposite view:

"The censorship of the news from Manila is simply intolerable. The people are entitled to have every bit of information that can be given them. They can be trusted to do the right thing at all times if fully informed as to the situation. It seems strange, after our experience in the war of the Rebellion, that it should be necessary to impress this on any one's mind. Then there was the freest possible communication between the army and the people, and not an ugly detail was allowed to be hidden. People who could not be shaken in their determination by the awful slaughter of their sons at Gettysburg and the Wilderness can be safely trusted with full details of the skirmishing around Manila."

LESSONS OF THE STREET-RAILWAY STRIKES.

MANY papers point out in connection with the street-railway strikes in Cleveland, Brooklyn, and Manhattan, as they have pointed out often before in connection with other labor troubles, that when the strikers resort to violence they lose public sympathy. The press admit that the strikers have real grievances and great provocation, but hold that no provocation can justify the attempts upon human life that have marked these disturbances. The acuteness of the strikes and the refusals of the employing companies to arbitrate have led to several suggestions for remedying the conditions from which the evils arise. The public, it is argued, have as much interest in the street-railway systems as the companies or their employees, and have a right to compel arbitration, to buy and operate the railways themselves, or to take any other measures that will remove the cause of the present difficulties.

The People Own the Streets.—"It is true that strikers who break the laws put themselves in the wrong and forfeit any claim upon public sympathy, but the people are not prevented by a present necessity for restoring order from inquiring whether the employing corporations were not originally in the wrong and could not have avoided war in the streets by a redress of grievances or a resort to peaceful arbitration. They own the streets, and the corporations have obtained for little or nothing, in most cases, the privilege of making a profitable use of these highways. The people may reasonably require the holders of the franchises to deal justly with their employees and to avoid by peaceful and reasonable agreements any conflict which will subject citizens to great inconvenience, expose them and their families to danger, and seriously injure their business interests.

"If the corporation asserts that there has been no just ground for complaint, and the men say they have been badly used, why should not the controversy be adjusted peaceably by arbitration? If the men are ready to go before arbitrators, and the corporation

declines to do so, preferring war in the streets, may not the people reasonably infer that the corporation is in the wrong? If such controversies ought to be settled by arbitration, what can the people do to induce or compel both parties to reach agreements in that way?

"In the State of New York there is a law providing for arbitration, but it is only a permissive statute, which has no force in cases where one of the two parties declines to use it. The time has come for the enactment of laws in New York and other States compelling the submission to arbitration of such controversies between the employees and the officers of corporations using public franchises as have recently caused deplorable disorder and conflict in the streets of several American cities. Compulsory arbitration has been tested in New Zealand with very satisfactory results. There the process begins with a hearing before a local board of conciliation, whose decision has no binding force, but by such boards many disputes have been settled. An appeal may be taken, however, from the local board to the Court of Arbitration, which consists of one person elected by the trade unions, one elected by the associations of employers, and a justice of the supreme court, who presides. The decisions of this tribunal have the force of law.

"The public may not suffer when work is stopped in a cotton mill or a shoe factory by a strike or a lockout. In such cases very few persons except the employers and the employed are affected. But when the street cars in a city of a million inhabitants stop running or can move only under the protection of an armed guard, and both life and property are menaced by riots and explosions, and trade is checked, the effect is more injurious upon the public than upon either the workmen or the employing corporation. The people should and will undertake to protect themselves. They can do this most surely by legislation requiring the other two parties to seek the decision of arbitrators and abide by it."—*The Independent, New York.*

Arbitration Should be Compulsory.—"What we need is a kind of arbitration that neither party will be at liberty to treat with contempt. If two men have a quarrel and begin fighting in the street, the police do not leave them to fight it out until one gets the other down and sits on him. One of the disputants may be absolutely right. The policeman pays no attention to that. He takes both men to the station-house, and the next morning a magistrate passes upon the case and both have to abide by his decision.

"Even if the man who happened to be in the right should say,

GEN. ULISES HEUREAUX.

President of Santo Domingo since 1882. Assassinated July 26th.

'There is nothing to arbitrate—just stand aside and watch me polish this fellow off,' the policeman would soon convince him that there was something to arbitrate after all.

"When a community gives up its streets to a corporation it does not reserve many rights, but one of the few that it does reserve is the right to have peace. A street-railroad company operating under a public franchise is a quasi-public agency. It is not entitled to carry on its business with the same freedom from interference that might be claimed by a purely private individual, like a barber or a tailor. And even barbers and tailors have been compelled by law to treat their employees decently.

"Let us have a system of compulsory arbitration, under which corporations holding rights granted by the public will be deprived of the power to sit in judgment in their own cases. Let the tribunal established take cognizance of any dispute between such a corporation and any substantial number of its employees and render a decision which shall be binding upon both parties.

"The present system, or rather lack of system, is simply economic anarchy—the naked, unrestrained right of the strongest, in whose application the most accomplished financier is merely a humble imitator of the primitive gorilla with a club."—*The Journal, New York*.

Three Remedies.—"These strikes would have been averted had we as a people had three things: the initiative and referendum, the income tax, and municipal ownership. This paper doesn't pretend to the wisdom of Solomon. It can, however, say to the strikers this: Did you ever consider a fireman at his ease? or behold a policeman in his widespreading magnificence? They toil not; neither do they spin. But the important part in this conjunction is: They never strike. Why? Because they work for the people—work for the city. If every man now 'striking,' and every one now thinking of a strike, were to devote himself to his party, whether it be Republican or Democratic, and strike to lead control in favor of municipal ownership, he would press toward the solution of the question which to-day galls him to rebellion."—*The Verdict, New York*.

Free Land for the Unemployed.—"One feature of the Brooklyn strike contains a lesson for those reformers who would somehow get the Government to grant the use of sufficient land and tools of production to put the unemployed to work. On the first day of the strike most of the cars in Brooklyn were running with new men, drawn from capitalism's reserve army of the unemployed."—*The Social-Democratic Herald, Chicago*.

GERMAN-AMERICAN PRESS ON THE HAZELTON KILLING AND ARBITRATION.

THE refusal of our Government to arbitrate Austria-Hungary's claims to indemnity for the killing of the miners at Hazelton, Pa., in 1897, is not accepted by the German-American press with much favor. They see in it an indication that the foreigner can get little protection in America. One and all declare that the verdict which exonerated the sheriff was in open violation of justice, and that, whatever legal defenses the United States Government may have, it is morally bound to indemnify the people whom it failed to protect. The *Wächter und Anzeiger*, Cleveland, says:

"Some twenty miners were killed by the bloodthirsty crew of Sheriff Martin, some sixty were badly wounded and crippled. Dozens of poor families were made to suffer pain, poverty, starvation. People who thought that justice would be done in America reckoned without the Pennsylvania courts, which are nothing but the flunkies of the coal barons. These miners committed no crime, they violated no law, they marched along the road under the American flag which, as they thought, would protect them. They little knew. They were shot down like partridges. . . . Formally our Government may be in the right. But nobody in the world, not the Washington authorities themselves even, believe that these Hungarians were rioters. They were solely the victims of blood-sucking exploiters and paid murderers. The shameful fact remains that in the United States men who ask for justice may be shot down with impunity. Austria-Hungary will probably be forced to let the matter drop. But this stigma of injustice and anarchy can never be removed from America!"

The *Anzeiger des Westens*, St. Louis, points out that, altho those miners were marching along the highroad quiet and unarmed, and were not even given time to understand what the sheriff wanted ere the massacre began, the official excuse is that they were "rioters." The paper adds:

"Formally the position of the Austrian Government may not be tenable. The responsibility of the Government is no greater in the case of foreigners than in the case of citizens. What happened September 10, 1897, to those Hungarian immigrants may happen to-morrow to Americans who strike, and their claim to indemnification would be just as invalid. But morally the United States Government certainly is responsible. Like the massacres of Chinese in Wyoming and of Italians in New Orleans, this shooting of the 'Huns' was largely due to the jealousy of 'foreigners.' By its refusal to express even regrets the State Department shows that, under the present Administration, immigrants who do not blindly obey their masters have no rights at all."

The *Staats-Zeitung*, Chicago, remarks that no power more effectively made a joke of the Peace Conference than did the United States by its refusal to arbitrate, and continues: "'There is nothing to arbitrate!' That is the standpoint taken by the American Government. In the future as in the past the nation which fights in a just cause may be thrice blessed, but four times armed is he who can hit a knock-out blow!" The *Volksblatt*, Cincinnati, says:

"How can an arbitration court ever come into play if every nation judges its own cause? . . . If of two parties each believes itself in the right, an impartial tribunal must judge between them. If the United States is in the right, the verdict of an arbitration tribunal need not be feared. If America is in the wrong, it is her duty to make reparation. It is nothing but a miserable farce to pretend to be a progressive, philanthropic nation at The Hague by advocating arbitration, and yet to refuse arbitration when the opportunity offers."

The New York *Morgen Journal*, which still remains a little "yellow" imperialistic and inclines to defend the doctrine of America's high humanitarian destiny, nevertheless believes that there would be no harm in paying an indemnity. It says:

"The case itself has long since been decided against Sheriff Martin and his men by public opinion. Men who peacefully walked along the highway, and who understood little or no English, were ordered back and immediately shot without provocation. The general impression is that the jury was strongly influenced and that the verdict can not claim to be impartial. The Austro-Hungarian Government was represented at the trial, and

ELIHU ROOT,
New Secretary of War.

based its demand for indemnification of the victims upon these very proceedings. Again, as in the case of the Italians lynched at New Orleans, the United States Government refuses to accept responsibility by pointing to the sovereignty of the individual States. Austria-Hungary will hardly discuss the question. She will merely enter a protest, and diplomatic relations will be officially somewhat clouded. An indemnity was afterward granted to the widows and orphans of the Italians; it would not hurt the dignity of the United States at all if the same course were adopted with regard to the Pennsylvania incident."—*Translations made for THE LITERARY DIGEST.*

LEO XIII. AS THE ORIGINATOR OF THE PEACE CONFERENCE.

IT has long been known that the Pope was not invited by the Czar to send a representative to The Hague owing to the objections of the Italian Government to any recognition of the Pontiff's sovereignty. It will, however, be a surprise to many to learn that Leo was himself the originator of the plan for a Peace Conference. Such is the claim made by a writer in *The Catholic World* (August), who adds that this statement is "an undeniable, incontrovertible fact, here advanced on the highest authority." He says:

"When Emperor Alexander III. died, in November, 1894, the Pope was one of the first to whom formal announcement of the event and of the accession of his son Nicholas was made. The Pope was invited to send his representative to the coronation of

"Is he dead?"—"No, only a new poem!"—*Simplicissimus.*

the new Czar. To the special pontifical embassy which went to Moscow for this purpose quite extraordinary honor and attention were paid by the Russian authorities. The special representative of the Pope was Monsignor Agliardi, then apostolic nuncio to Vienna and now cardinal prince of the church, and in his suite was Monsignor Tarnassi, a young ecclesiastic belonging to the papal diplomatic corps. When the special mission left Moscow to return to Rome, Monsignor Tarnassi detached himself from it and turned his steps toward St. Petersburg. No secret was made of the fact that he had gone there on a private diplomatic mission to the Russian Government. The nature of this mission was for the time being unknown, but the fact that Monsignor Tarnassi had been fully successful in the undertaking entrusted to him was soon announced, and the practical proof of it was had when the Vatican shortly afterward rewarded the young ecclesiastic by appointing him to the important position of internuncio at The Hague. Later on the fact came out that Monsignor Tarnassi's

special mission was to convey a special proposal to the Russian Government, that the Czar should on the inauguration of his reign publicly and solemnly call upon the nations of Europe to join hands in an effort for peace and social well-being, and as a first step thereto to begin a reduction in their costly armaments and military organizations, which were threatening to lead not only to financial ruin, but also to serious social disaster.

"The Pope's proposal was received by the Russian minister with much diffidence, but on the arguments by which it was backed being exposed by Monsignor Tarnassi, the statesmen were won round, and the young Czar himself clinched matters by taking up the idea enthusiastically and entrusting the papal representative to inform the Holy Father that his desire in the matter would be accomplished to the fullest. Even at that time His Holiness had foreseen all the details of the practical carrying out of the project, and even then Holland had been looked to as the most suitable place for holding the projected meeting of the delegates of the powers. It was on this account that Monsignor Tarnassi was appointed apostolic internuncio to partly prepare the way, as far as the court of Holland was concerned, for the coming congress."

The writer says that when it was suddenly learned that through the animosity of the Italian Government the pontifical representatives would be excluded from the conference, the tidings unquestionably came as a blow to the venerable pontiff, who could thereafter only look on impassively as a spectator. The writer says that had the great influence which the Pope holds over many of the continental governments been allowed full play in the conference, the beneficent results of the conference would have been vastly greater. In conclusion, he says:

"Many minor points of interest have undoubtedly been settled in the Peace Conference at The Hague. Such, for instance, are the questions of privateering, the rights of private property at sea during a war, the use of explosive projectiles, the prerogative of the Red Cross Society, and similar items. But, be it noted, these and other matters, on which the members of the congress reached definite conclusions, have relation to what is to take place during war. In other words, the conference is a preparation for the exigencies of war. A peace conference it has proved only in name.

"As a peace conference its results have been Dead-Sea fruit. No one alive deplors this fact more than Leo XIII. But those who organized the conference may well reflect what measure of the ill success of the undertaking is attributable to their want of judgment and foresight in excluding from the conference the potentate who was the real father of the project, and who alone could have aided most mightily to its successful outcome."

LETTERS AND ART.

MARY MAGDALENE—A BIBLICAL DRAMA.

THE fascination which biblical narrative and story possess for the poet and fiction writer is phenomenal. This fact is demonstrated anew by the publication of a five-act drama, entitled "Maria von Magdala," by Paul Heyse, generally regarded as the leading dramatic writer of Germany and himself anything but a friend of the Christian cause or church. Yet he has handled the subject in so chaste a manner, with such a veneration for the person of the Nazarene, whom he does not make a leading actor but rather the powerful agency for good behind all that appears on the stage, that the play is practically unobjectionable from a Christian point of view. There is an objective presentation of the Gospel story, including the resurrection of Christ. The relation of Jesus toward His mother and other New-Testament women is treated in the same spirit, at once reverent and artistic. The action of the drama is in substance as follows:

Scarcely fifteen years of age, Mary of Magdala is given by her parents in marriage to a man forty years her senior, who is at the same time the richest but also one of the most wicked men in the city. On bended knees she begs her father not to sell her to such a husband, but her tears availed nothing. Three years Mary endures her terrible fate, and then flees to Jerusalem, and as she had learned to despair of those two things which she had considered most sacred on earth, love of parents and love of husband, she gives herself up to a life of shame and of sin. But gradually she becomes more and more revolted at this method of existence, and she comes under the influence of a man who is rough and ready, a terrible hater of the oppressors of her people, the Romans, but who at the same time does not hide from her the truth as to her condition and its consequences. This man is Judas Iscariot. In his friendship she learns to trust implicitly.

This friend, however, seemingly deserts her for four weeks, and when he returns informs her that he has found in a prophet from Nazareth in Galilee a man who was the true leader of the people, the anointed of the Lord, who would break the yoke of the people. The desire to see the Lord becomes all powerful in Mary, and this explains her entrance into the house of Simon. And when the cries of resentment at the presence of the adulteress at the feet of the prophet of Nazareth are heard, she hears His voice for the first time, saying that those that are without sin shall cast the first stone upon her. This quells the riot; she hears the Jews throw aside their stones, and disperse through the garden. Mary, however, keeps her eyes riveted upon the Lord, and anoints His feet and dries them with her hair. She knows that from this hour "she is His, but He is not hers," as He had come to comfort all those who are in distress. She becomes a warm devotee of the principles He preaches and teaches, and dedicates her life to the purity of the Gospel religion. And this adherence she maintains even in that terrible hour when Judas, who had led her to the Lord, betrays the Master, because he found that Jesus was not willing to head an insurrection against the Romans. Her phenomenal faith and purity are further attested when Flavius, the nephew of Pontius Pilate, offers to release Christ from captivity and save Him from the ignominious death on the cross if she will yield to his passions and become his mistress. This scene, in which Mary, for Christ's sake and on account of the truths which she has learned from Him, is not permitted to save Christ from His shameless death, is the summit of the dramatic development of this drama, and by a German critic is pronounced to be one of the grandest things ever produced by poetic thought. Mary, who is in despair at the Master's death, which she regards as having been partially caused by herself, is comforted by Peter, who tells her that this death is only a passing phase in Jesus's career, and that after three days He will arise again from the tomb. With this promise the drama closes.

The German papers, including such religious journals as have announced this new drama, have accorded it a warm welcome.

Heyse has used the Gospel narratives as historical records of facts, which he himself may not accept, but which he has utilized to telling advantage. The picture of Christ here drawn has nothing offensive to Christian convictions, altho the Gospel story has been somewhat enlarged. A correspondent in the *Christliche Welt*, No. 25, regards Heyse's Mary Magdalene as one of the most successful dramatizations of biblical material that has ever been produced.—*Translation made for THE LITERARY DIGEST.*

KIPLING AS A GLOBE-TROTTER.

RUDYARD KIPLING made one voyage around the world avowedly as a globe-trotter. It was in 1889, soon after he had written "Soldiers Three" and "Plain Tales from the Hills," and wanted to find publishers for them in England and America. Mr. Kipling was at that time a reporter for *The Pioneer*, published at Allahabad, and also did work for *The Military Gazette*. In the early spring of that year he set out by way of China and Japan to visit America and England. At regular intervals he wrote letters describing what he saw. The letters have at various times since then been dug out of the files of these papers, especially the letters concerning America, and published with misquotations and interpellations to suit the publisher's purpose, without the authority of the author. This has been carried to such an extent that Mr. Kipling decided to have all this correspondence collected and republished in book form in his own name. This book, which has just appeared, is entitled "From Sea to Sea," and contains "Letters of Marque," "The City of Dreadful Night," "The Smith Administration," and other short sketches. His letters on America have been so generally quoted that we pass them by for those describing what he saw in China and Japan, which some of his friends hold to be of the very best work he ever did.

The first important place this young globe-trotter in cork belt and duck shoes touched at after leaving Calcutta was the city of Rangoon, Burma. The golden dome on the old Skway Dagon, the Buddhistic temple in this city, was the first thing Mr. Kipling saw, and it said to him: "This is Burma, and it will be quite unlike any land you know about." The writer says of it:

"Then we came to a new land, and the first thing one of the regular residents said was: 'This place isn't India at all. They ought to have made it a crown colony.' Judging the empire as it ought to be judged by its most prominent points—*videlicet*, its smells—he was right; for tho there is one stink in Calcutta, another in Bombay, and a third and most pungent one in the Punjab, yet they have a kinship of stinks, whereas Burma smells quite otherwise. It is not exactly what China ought to smell like but it is not India."

He tells us this country smells of *nopi*, or pickled fish which ought to have been buried long ago. Burma is a very lazy land, full of rich colors, pretty girls, and bad cheroots. Mr. Kipling fell in love with this land, especially its girls, and wanted to die a Burman without going farther. But wait. He had not yet seen Japan.

The first Chinese he saw on this voyage was at Penang, a town in the Straits Settlements under the English flag. Neither here nor at Hongkong nor at Canton could Mr. Kipling tolerate the Chinese. He berates them as a people without nerves and digestion. They had the stomachs to eat anything and the ears to enjoy the most horrible din for music. He thought there must be something wrong with the Chinese mind, altho he confesses he never saw a Chinaman idle or asleep. They have some interesting characteristics too. He says:

"But it is not true that they are born with full-sized pigtails. The thing grows, and in its very earliest stages is the prettiest head-dressing imaginable, being soft brown, very fluffy, about three inches long, and dressed to the end with red silk. At

infant pigtail is just like the first tender sprout of a tulip bulb, and would be lovable were not the Chinese baby so horrible of hue and shape. He isn't as pretty as the pig that Alice nursed in Wonderland, and he lies quite still and never cries. This is because he is afraid of being boiled and eaten. I saw cold boiled babies on a plate being carried through the heart of the town. They said it was only sucking-pigs, but I knew better. Dead sucking-pigs don't grin with their eyes open."

Mr. Kipling drew one picture of a spoiled American boy in his "Captain Courageous." Here is another. This boy was an American-German Jew, and its appears had been brought up on globe-trotting. Surely he is not an average:

"But the real monstrosity of the ship is an American who is not quite grown up. I can not call it a boy, tho officially it is only eight, wears a striped jacket, and eats with the children. It has the wearied appearance of an infant monkey—there are lines round its mouth and under its eyebrows. When it has nothing else to do it answers to the name of Albert. It has been two years on the continuous travel; has spent a month in India; has seen Constantinople, Tripoli, Spain; has lived in tents and on horseback for thirty days and thirty nights, as it was careful to inform me; and has exhausted the rounds of this world's delights. There is no flesh on its bones, and it lives in the smoking-saloon financing the arrangements of the daily lottery. I was afraid of it, but it followed me, and in a level, expressionless voice began to tell me how lotteries were constructed. When I protested that I knew, it continued without regarding the interruption, and finally, as a reward for my patience, volunteered to give me the names and idiosyncrasies of all on board. . . . On certain subjects it was partly better informed than I, on others it displayed the infinite credulity of a two-year-old. . . . Albert is, I presume, but an ordinary American child. He was to me a revelation. Now I want to see a little American girl—but not now—not just now."

Here is a picture of another type of traveler, a bit of whose conversation Kipling overheard at his hotel in Hongkong:

"A rattling of trunks in the halls—a click of heels—and the apparition of an enormous gaunt woman wrestling with a small Madrassi servant. . . . 'Yes, I haf traveled everywhere and shall travel everywhere else. I go now to Shanghai and Peking. I have been in Moldavia, Russia, Baireut, all Persia, Colombo, Delhi, Dacca, Benares, Allahabad, Singapore, Penang, here in this place, and Canton. I am Austrian Croot, and I shall see the States of America and perhaps Ireland. I travel forever. I am—how you call?—*veuve*—widow. My husband, he was dead; and so am I sad—I am always sad und so trafe. I am alive of course, but do not live. You onderstandt? Always sad. Will you tell them the name of the ship to which they shall warf my trunks now. You trafe for pleasure? I trafe because I am alone und sad—always sad.'"

Mr. Kipling is left wondering how that conversation began and why it ended so suddenly. He wishes it had kept on until an explanation was reached. He was, however, no longer left in doubt where the fragmentary school of novelists got their material from.

Almost everything Mr. Kipling saw in China repelled him. But he marveled at the people's capacity for work and their accuracy in art:

"Neither at Penang, Singapore, nor this place (Hongkong) have I seen a single Chinaman asleep while daylight lasted. Nor have I seen twenty men who were obviously loafing. All were going to some definite end—if it were only like the coolie on the wharf, to steal wood from the scaffolding of a half-built house. In his own land I believe the Chinaman is treated with a certain amount of carelessness, not to say ferocity. Where he hides his love of arts the heaven that made him out of the yellow earth that holds so much iron only knows. His love is for little things, or else why should he get quaint pendants for his pipe, and at the backmost back of his shop build up for himself a bower bird's collection of odds and ends, every one of which has beauty if you hold it sufficiently close to the eye. It grieves me that I can not account for the ideas of a few hundred millions of men in a few

hours. This much, however, seems certain. If we had control over as many Chinamen as we have natives of India, and had given them one tithe of the cossetting, the painful pushing forward, and studious, even nervous, regard of their interests and aspirations that we have given to India, we should have long ago been expelled from, or have reaped the reward of, the richest land on the face of the earth."

An executioner in Canton, who happened to be wandering about in search of employment perhaps, offered Mr. Kipling a sword with the guaranty that it had cut off many heads. The Anglo-Indian tourist replied: "Keep it, keep it, and let the good work go on. My friend, you can not execute too freely in this land."

Of Canton he says:

"A big blue sink of a city full of tunnels, all dark and inhabited by yellow devils, a city that Doré ought to have seen."

But in a few more days the globe-trotter was in Japan—the Japan of cabinets and joinery, gracious folks, and fair manners. And at last Kipling is perfectly happy, altho a newspaper man met him on board the ship before reaching Nagasaki and presented him with a copy of the new constitution of this country. An examination of this modern English instrument threatened to destroy all of his pleasure. What countries but England and America had any business with a constitution? He says:

"Nagasaki is inhabited entirely by children. The grown ups exist on sufferance. A four-foot child walks with a three-foot child, who is holding the hand of a two-foot child, who carries on her back a one-foot child, who—but you will not believe me if I say that the scale runs down to six-inch little Jap dolls such as they used to sell in the Burlington Arcade. These dolls wriggle and laugh. They are tied up in a blue bed-gown which is tied by a sash, which again ties up the bed-gown of the carrier. Thus if you untie that sash, baby and but little bigger brother are at once perfectly naked. I saw a mother do this, and it was for all the world like the peeling of hard-boiled eggs."

Kipling of course took tea or tiffin in a Japanese tea-house. When he entered, Y-Tokoi, the proprietor, said to him, "You must take off your boots." Kipling obeyed and describes his awkwardness:

"I assure you there is no dignity in sitting down on the steps of a tea-house and struggling with muddy boots. And it is impossible to be polite in your stockinged feet when the floor under you is as smooth as glass and a pretty girl wants to know when you would like tiffin. Take at least one pair of beautiful socks when you come this way. Get them made of embroidered *sombur* skin or silk if you like, but do not stand as I did in cheap striped brown things with a darn at the heel, and try to talk to a tea girl."

Mr. Kipling remarks further that a white man is always degraded when he goes barefooted. After describing in his own peculiar style this Japanese, tea-house, he closes in this happy vein:

"My very respectable friends at all the clubs and messes, have you ever, after a good tiffin, lolled on cushions and smoked, with one pretty girl to fill your pipe and four to admire you in an unknown tongue? You do not know what life is. I looked around me at that faultless room, at the dwarf pines and creamy cherry blossoms without, at O'Toyo bubbling with laughter because I blew smoke through my nose, and at the ring of *Mikado* maidens over against the golden-brown bearskin rug. Here was color, form, food, comfort, and beauty enough for half a year's contemplation. I would not be a Burman any more."

But how horribly out of shape a Jap looked dressed in European clothes! They never fit him. Another one of their customs also embarrassed Mr. Kipling:

"*Après* of water, be pleased to listen to a shocking story. It is written in all the books that the Japanese, tho cleanly, are somewhat casual in their customs. They bathe often with nothing on and together. This notion my experience of the country.

gathered in the seclusion of the Oriental at Kobé, made me scoff at. I demanded a tub at Jouter's. The infinitesimal man led me down verandahs and upstairs to a beautiful bath-house full of hot and cold water and filled with cabinet work, somewhere in a lonely art gallery. There was naturally no bolt to the door any more than there would be a bolt to a dining-room. Had I been sheltered by the walls of a big European bath I should not have cared, but I was preparing to wash when a pretty maiden opened the door, and indicated that she also would tub in the deep sunken Japanese bath at my side. When one is dressed only in one's virtue and a pair of spectacles it is difficult to shut the door in the face of a girl. She gathered that I was not happy, and withdrew giggling, while I thanked Heaven, blushing profusely the while, that I had been brought up in a society which unfits a man to bathe *à deux*."

Japan pleased Kipling because it is a land of children. A man there never ceases to be a child, and Kipling's well-known love of children stood him in great service among such a people. One morning after a refreshing rain Kipling arose to find the sun come out for the first time in a month:

"Then the land of peach blossoms spreads its ragged wings abroad and rejoiced, all the pretty maidens put on their loveliest crêpe sashes—fawn color, pink, blue, orange, and lilac—all the little children picked up a baby each, and we went out to be happy. In a temple garden full of blossoms I performed the miracle of Deucalion with two cents' worth of sweets. The babies swarmed on the instant, till, for fear of raising all the mothers too, I forebore to give them any more. They smiled and nodded prettily, and trotted after me, forty strong, the big ones helping the little ones, and the little ones skipping in the puddles. A Jap child never cries, never scuffles, never fights, never makes mud pies, except when it lives on the banks of a canal. Yet, lest it should spread its sash bow and become a bald-headed angel ere its time, Providence has decreed that it should never, never blow its little nose. Notwithstanding the defect, I love it."

But Mr. Kipling stops every now and again to berate the Japanese for having a constitution:

"Fancy a people like the Japanese solemnly going in for a constitution. Observe! The only two nations with constitutions worth having are the English and the Americans. The English can only be artistic in spots and by way of the art of other nations—Sicilian tapestries, Persian saddle-bags, Kroten carpets, and the sweepings of pawnbrokers' shops. The Americans are artistic so long as a few of 'em can buy their art to keep abreast of the times. Spain is artistic, but she is disturbed at intervals; France is artistic, but she must have her revolution every twenty years for the sake of fresh material; Russia is artistic, but she occasionally wishes to kill her Czar, and has no sort of government; Germany is not artistic because she experienced religion; and Italy is artistic because she did very badly; India—"

"I am of the opinion that a constitution is the worst thing in the world for a people who are blessed with souls above the average. Now the first demand of the artistic temperament is mundane uncertainty. The second is—"

"Sleep," said the professor, and left the room.

Sir Walter Besant on Hopes for New Writers.—A contributor to a New York paper—Miss Ruth Hall—recently attempted to show that new writers have very little chance of getting into the magazines. Her plea, as summarized in *The Society of American Authors* (July), is as follows:

"1. *Harper's Magazine* for February contains twenty-three articles. Of these, one short story, one essay, and three poems are by unknown writers.

"2. *The Century* for February contains twenty-seven contributions, of which seven are by unknown writers."

Sir Walter Besant, however, is not disposed to think that these figures make a bad showing for the new writer, but that they appear "to prove exactly the reverse of her proposition." In *The Author*, London, he says:

"When we consider that a magazine is not run with the object

of advancing writers, but of advancing the proprietor; that the editor's first duty is to find out what will instruct and attract; that popular authors are certain to attract; and that untried and unknown authors can only attract by the reason of the very rare condition of having something to tell which is new and curious; and that popular authors can almost always be had if the editor will pay them—we can understand how difficult it must be for a new writer to get a hearing. We can also understand how the English magazine of the older kind seems sinking into a kind of atrophy because the editor and proprietor will not understand the simple rule of supply and demand. To sit down in a chair and wait for things is the editing of the past. To arrange beforehand with an eye to what will please and attract readers, yet with a door open to a newcomer, is the editing of the present and the future. The newcomer, when he finds in *Harper's Magazine* there are five out of twenty-three papers, and in *The Century* seven out of twenty-seven, contributed by unknown writers, may take courage. There is still the open door."

BALZAC'S LETTERS TO MME. HANSKA.

IF the philosophy of Balzac's writings is that of "wickedness triumphant," as has been said, his letters to Mme. Hanska published in the *Revue de Paris*, do much to explain if not to atone for it. In these letters he shows a nature so simple and pure, and a faith in human nature so childlike, that one can easily understand why it was that when disappointments came upon him and when those he trusted failed him, he should have become a little bitter and to some extent distrustful of his kind.

The ingenuousness with which he acknowledges his financial embarrassments to his friend, and the concern which he evidently feels for his debts, must be something of a revelation to a more modern mind. In one of his letters to Mme. Hanska he writes:

"You have not written because my letters have been infrequent. If so, it has been because I have not always had money with which to stamp them. Yes, my distress has been just there, and even beyond it. There have been days when I have proudly eaten a small piece of bread upon the boulevards. I have experienced the greatest sufferings! Self-respect, pride, hope, my future, all have been attacked. But I hope to surmount all that. The affair of Peytel has cost me 10,000 francs, and they say I have received 50,000 francs. You know the case of this poor boy, accused of the murder of his wife and of his domestic. Oh! there are fatalities in this life. The evidence against him was very slight. If he had been of the *noblesse* no man would have believed it of him. I shall read you some day what I wrote of him before he went to the scaffold. It is two days since he was executed. 'A Christian,' said the priest, but I said, 'A man who is not guilty.' He was a martyr to his honor. What they applauded in Shakespeare, Calderon, and Lope de Vega, they have guillotined at Bourg.

"No, I was not happy in writing 'Beatrice,' as you should know. Yes, *Sarah* is Mme. de Visconti; yes, *Mlle. des Touches* is George Sand; yes, *Beatrice* is Mme. d'Agout to the life. George Sand is at the height of her joy; she takes a little vengeance there upon her lover. Tastes sometimes differ, but *history is true*.

"*Turlette* has appeared in 'Le Siècle.' Friends and enemies have proclaimed this little book a *chef-d'œuvre*, and I shall be happy if they do not deceive themselves. They have put it by the side of *La Recherche de l'Absolu*.

"'Vautrin' is to be mounted. I have a rehearsal every day. It is almost certain that 'Vautrin' will be represented on the very evening that you will receive this letter. It will be a fortune of gold and a literary fortune played in the same evening. Frederick Lemaitre answers for its success. Harel, the manager, believes in it! me! It is ten days that I have despaired of it. I find my piece stupid and I am right. I have begun it again entirely and I find it passable, but I have conceded to the wish of others to throw upon the scene a romantic person, and I have been wrong."

Again, February 10, he says:

"I have surmounted many miseries, and I have won success.

Judge what will be my anguish during the evening when 'Vantrín' will be represented. In five hours it will be decided whether I pay or whether I do not pay my debts. But I have been crushed under this burden during fifteen years. It has prevented the expansion of my life; it has taken happiness from my heart; it has stifled my thoughts; it has spoiled my existence; it embarrasses my movements; it arrests my inspirations; it weighs upon my conscience; it hinders me everywhere and in all things. My God! have I not paid dearly enough for my place under the sun? All this calm future, the tranquillity of which I have so much need—all this, played in a few hours and given to the caprice of Parisians. And if in this moment should come censure! I need repose so much.

"Think of it, forty years of suffering, because the happiness which was mine in living beside an angel from 1823 to 1833 must needs have the counterpoise of an equal misery. I sigh for the promised land of a happy marriage. I am tired of treading a desert without water, full of sun, and of Bedouins.

"Ah, well! see Dumas, who has married Ida! I dare not question the motives of this marriage. There was no affection in it; it has proved itself a horror twenty times. She has not the sublime excuse of talent; she is an execrable actress, and she despises Dumas. It is only love, the purest love that excuses all things. Thus is it to love Fannie Ellsler, who was sixty, as did Gentz. Hugo at seventeen loved and married Juliette, a woman of forty, and made her his idol. Pierre le Grand married a vivandière. Yes, love justifies all. But the marriage of Dumas makes my heart ache, and fills me with chagrin for literature, of which he is a part. He has a name, not merited, but he has a name."

On May 10 he writes to her:

"You doubtless know that 'Vantrín' has had the misfortune to be suppressed by Louis Philippe. He has seen a caricature of himself in the fourth act, in which Frederick Lemaitre presents the character of an envoy from Mexico. . . . I am followed by the most active persecution, but, notwithstanding these hostile efforts, we have obtained a grand financial success. It was all I wished for the theater and for myself when the prohibition came. Behold me then on Sunday with 60,000 francs; on Monday with nothing.

"Victor Hugo accompanied me to the minister, and we were assured that the minister had had nothing to do with the interdiction; Louis Philippe, all. In all these circumstances, whether during the representation or during our visit to the minister, the conduct of Hugo has been that of a true, courageous, and devoted friend. When I was sick he came to see me. I have been well treated also by George Sand and by Mme. de Girardin. Frederick has been sublime, but the matter of the resemblance to Louis Philippe is still a mystery to me. The journals have been infamous. They say that the play is revoltingly immoral. You shall read it! It may not be very good, but it is *eminently moral*. Believe me, it is all due to the terrible attacks which I have made upon this tottering throne."—*Translation made for THE LITERARY DIGEST.*

NEWLY DISCOVERED STORIES BY BALZAC AND CHARLES LEVER.

BESIDES the new Dumas manuscript (see THE LITERARY DIGEST, June 14, July 15) two other posthumous discoveries of works by well-known authors have lately been made. One is an unpublished novelette by Balzac. Only four hundred copies are to be printed, according to *The Critic*, and these will be illustrated in water-color by a French painter of some prominence.

The other newly discovered work is a novel entitled "Gerald Fitzgerald," by Charles Lever. It first appeared serially in the *Dublin University Magazine* many decades ago, but singularly enough has never since been reprinted, either in separate form or in Lever's collected works. The magazine in which the story was appearing changed hands on the death of Lever's old friend and publisher, James McGlashan, and the author, owing to a misunderstanding with the new proprietors, decided to discontinue further publication of the novel in that form. Further de-

tails as to the subsequent history of the story and as to its plot are given in the *New York Times* (July 7):

"When he was arranging a new edition of his novels just before his death he omitted this and certain other stories from the collection. His daughter, Mrs. Nevill, who died recently, and who assisted him in making the collection, was unable to account for the omission of 'Gerald Fitzgerald.' The decision as to its republication was left by her to the present publishers, and they concluded that, while the work would not rival Lever's earlier productions, it was worthy of a place among the author's books. These facts are embodied in the preface to the present edition.

"'Gerald Fitzgerald' is a story of the last of the Stuarts, a son of Charles Edward by a secret marriage with an Irish girl of good family. The author, according to an appendix, obtained the suggestion of the existence of such a personage from the correspondence of Sir Horace Mann. The incidents of the story are such a wondrous mixture of fact and fiction that it is not worth the reader's while to endeavor to separate the true from the fanciful. The Prince Charles appears as one of the characters, and is made to recognize the youth Gerald as his son. Whether anything of the kind ever occurred it is impossible to tell, and in view of the perfect security of the Hanoverian succession at the period in which the story is placed it is a matter of little moment.

"Historical persons teem in the pages of this vigorous yet overwrought and over-elaborate tale. The poet Alfhéri is dragged into the story with little or no purpose, and Mirabeau appears in several chapters, a gloomy and portentous figure. Even the grim figure of Marat stalks briefly across the stage of action, and passes away into the world of specters. Other historical personages come and go, and some of the characters who are undoubtedly fanciful are identified with historical occurrences. The book can hardly be said to have a heroine, yet, if there is one, it is Marietta, a gypsy. She is identified with Gabrielle, the mysterious lover of Mirabeau, and is also pictured as the woman who posed as the goddess of Reason in the Revolution.

"The tale is a rambling one, and is incumbered with endless details and with personages having little or no real relation to the vital incidents. Yet there are passages of immense power, and there is constant evidence of a supreme mastery of the art of realizing imaginary incidents. Those who are fond of novels of intricate plot and abundant action will find this minor work of Lever's well worth reading."

PUSHKIN'S FATAL DUEL AND THE "BLACK KISS."

THE centenary of the birth of Pushkin, the great Russian poet, recently so generally celebrated in European literary circles, has recalled his tragic death in a duel, and various accounts of the circumstances are given currency. Pushkin married, in 1831, Mlle. Natalie Goutcharov, whose sister, on January 27, 1837, married Baron de Heeckeren d'Anthès. Pushkin, madly jealous of his wife, took umbrage at his brother-in-law, and provoked him to a duel, which was fought with pistols on February 15, 1837. Baron de Heeckeren d'Anthès had his arm broken. Pushkin was wounded in the lower abdomen, and died several hours after with horrible suffering. The question is raised as to the real causes of the duel and how far Pushkin's jealousy was justified.

M. Charles Laurent attempted some time since to answer it in the *Matin* of Paris, and gave a striking version, which is reproduced as follows in *The British Weekly*:

"One evening in the poet's parlor were seated Pushkin, his wife, and the Baron d'Anthès. Pushkin, who suspected his wife and his friend, wished to 'know all.' He went to his samovar, took a bit of charcoal, crushed it between his thumb and forefinger, and made an impalpable powder, with which he blackened the palm of his hand. Then he went to the lamp as if to turn it up, and by a feigned awkwardness put it out. As he apologized for his blunder he kissed his wife, and, taking her head in his hands, he blackened her face. Then he went out to get the lamp lighted. When he came back the Baron d'Anthès had on his

face the mark of the 'black kiss.' The next day the duel was fought."

Laurent's account was confirmed by M. Solness, who wrote in the *Matin* (as translated by *The British Weekly*) as follows:

"The revelation of the black kiss and the dreadful stratagem of the accusing charcoal are facts. Baron Antoine d'Ezpeleta has assured me that the story is true. He was in the confidence of Baron de Heeckeren, Pushkin's unfortunately successful adversary, whom he knew at the Imperial Club. M. de Heeckeren was extremely reticent on the subject. He never told the details of the memorable duel. He did not like to have it spoken of. There was one quite accidental circumstance relating to another projected encounter that induced him to give with great soberness some details of this duel. It took place, it seems, without the usual seconds. A friend of Pushkin's named Dauzat alone witnessed the deadly combat, tho at a distance."

When he had heard of these reports, the son of Pushkin's adversary, Baron de Heeckeren d'Anthès, left Alsace, where he

ALEXANDER PUSHKIN.
After the painting by W. Tropinin.

lived, and came to Paris, emphatically denying to the newspaper writers mentioned the assertion that his father had ever told anybody that the story of the black kiss was true, because he had always denied it. M. de Heeckeren declared, moreover, that he wanted to put an end once for all to the tale, so injurious to an estimable lady, and that he intended to find out, yes or no, whether anybody could guarantee the truth of an admission which his father, as he said, had never made or could make.

The result of all this is shown in two letters that the *Matin* published, one from Baron d'Ezpeleta and one from Baron de Heeckeren d'Anthès. M. Solness received the following from Baron de Ezpeleta:

"Baron de Heeckeren, who was a great friend of mine, never told me anything about the duel or its causes.

"The explanation of the confusion under which you are laboring is the fact that when you spoke to me of the circumstances that led up to the duel between Pushkin and Heeckeren, I told you that, as a matter of fact, I had heard the story told as you told it yourself in your paper, and that that was the story current at the time."

On the other hand, Baron de Heeckeren d'Anthès wrote M. Charles Laurent as follows:

"In view of the very proper discussion that the celebration of Pushkin's centenary has caused in France as well as in Russia, I had determined to keep silent, the reason for which you will surely understand.

"One fact has compelled me to break this silence and utter an indignant protest—the statement that Baron Antoine de Ezpeleta had heard from my father a remark tending to confirm the truth of the story about the 'black kiss.' Baron de Ezpeleta's letter entirely satisfies me on this matter, and leaves no room for further discussion.

"Nevertheless, I deem it proper to give certain additional facts, which I state for the first time, based on reminiscences from my father's lips and on written documents that he left me in order to establish the facts in the case clearly and beyond the possibility of contradiction.

"Pushkin's jealousy was excited without ground, by an anonymous letter. Nothing in the actions of Mme. Pushkin toward my father, her future brother-in-law, could properly have aroused the gloomy spirit of the great poet. As a result of this anonymous letter Pushkin, on November 16, 1836, gave my father provocation to a duel. In a letter of December 2 of the same year he withdrew it. Nevertheless, the usual relations of persons connected by marriage were not resumed between Pushkin and my father. The latter had no further occasion to meet Pushkin except in society and at formal gatherings. This fact I lay stress upon, because it shows that any such meeting as that in which the 'black kiss' is alleged to have occurred was out of the question.

"Nevertheless, anonymous letters continued to be sent to Pushkin. They were all in the same handwriting, a disguised one, but showing in each letter certain identical features. This proves that there was a plot, whose consequences were fatal. Pushkin wrote a letter that led to the duel of grievous renown, fought on February 15, 1837.

"His second was his friend Dauzat; my father's was the Viscount of Archiac, secretary of the French Embassy, his cousin. Everything was carried out in the most regular way, and with the strictest correctness, for it is well known that in Russia at that time it was the custom to have only one second in a duel.

"I will add that our relations with my mother's family, except with Pushkin's direct descendants, have been uninterrupted, and perfectly affectionate. There is one point which I must place quite outside of all controversy. On the honor of Mme. Pushkin there has never been cast the slightest suspicion in St. Petersburg society, and we, as well as our Russian relatives, preserve the profoundest respect for her memory. As the keeper of this tradition, I can not permit the least doubt to be thrown upon it. It will remain unbroken in my hands and my son's."

NOTES.

TWO new daily papers are shortly to be established in London, one by Pearsons as a rival to *The Daily Mail*, which has been an enormous success, the other a Nonconformist journal. The latter enterprise is regarded as a doubtful one, since there are already two papers of this class—*The Daily News* and *The Daily Chronicle*.

MR. KIPLING finds England hardly a safer retreat from the inconveniences of publicity than was America. Mr. W. L. Alden writes of him as follows in the *New York Times*: "Mr. Kipling has returned to his home at Rottingdean. He is said to be looking much better than it was feared he would look. Perhaps the sea voyage has done him much good. He was compelled to steal away from London in order to avoid being mobbed at the station by his innumerable admirers—a fact which goes some way to indicate his enormous popularity. Beyond all question he is to-day the most popular man in England."

HAROLD FREDERIC'S posthumous novel "The Market Place" is having a tremendous success in London. "It is an instance of the irony of fate," says Mr. W. L. Alden in the *New York Times*: "For twenty years or so poor Frederic labored to become a successful novelist, and when, after half a dozen failures—that is to say, financial failures—he finally made a brilliant success he suddenly died. And now after his death comes the still greater success of 'The Market Place.'"

Of another American, Mr. Alden writes: "Because Lady Randolph Churchill happens to have a title, her appearance as the conductor of a review is treated as if it were the mere fad of a rich woman with plenty of time on her hands. Those who know her assert that she is a woman of unusual cleverness, and that her review will be far from being the amateur publication which many people assume that it is. She is certainly entitled to fair play, and most of all from Americans, for in spite of her marriage she is and always will be an American."

SCIENCE AND INVENTION.

THE WEATHER SERVICE AT MANILA.

OWING to the censorship of despatches at Manila much of our news from that point, and especially all criticism of our administration there, must come to us in a roundabout way. The following charge, which we translate from *Cosmos* (Paris, July 8), has to do with a matter of science. We are accused of suppressing, for improper motives, the local weather service, which, it is said, had reached a high state of efficiency. *Cosmos* heads its article sarcastically, "The New Agents of Civilization at Manila," and says:

"While the United States deserve all admiration for the talent with which they have organized the service of their Weather Bureau, and while they have established throughout their territory an admirable system of forecasts, their War Department has just given the most absolute orders that this service, carried on admirably at Manila for a long time by the Jesuit Fathers, shall be stopped. With them apparently, questions that have to do with scientific matters are not for exportation.

"We should note that in this particular case things are complicated by the jealousy of Dr. Doberck, director of the Kowloon Observatory at Hongkong, who aspires to the monopoly of weather in those parts.

"Here is the history, as we gather it from an article in *The Journal of Indian Engineering*.

"The Jesuit Fathers of the observatories of Zi-ka-wei and Manila have been long sending telegraphic weather forecasts and storm warnings to the consuls at different ports and especially at Hongkong, Shanghai, and Singapore. These agents transmitted them to the press, which published them, to the great advantage of all. The service, carried on voluntarily by the Jesuit Fathers, is admirably organized, very accurate, and ought to be encouraged and aided; it renders the greatest possible assistance to mariners in all these ports.

"Now the United States War Department has formally forbidden the sending of meteorological despatches from Manila, and it is asserted that this decision has been made at the demand of Dr. Doberck, director of the Hongkong Observatory. He must have used his influence with the United States Weather Bureau to obtain this measure from the American Department of War, which represents for the moment the administrative authority at Manila.

"Dr. Doberck thinks that his own telegraphic forecasts, being the only good ones, should be the only ones given out to the public. *The Journal of Indian Engineering* remarks with some reason that the public is perfectly able to judge for itself of the value of published forecasts, and that it has no need of aid from the American authorities at Manila; and that, besides, it is absence of the most elementary judgment to fix a limit to the diffusion of scientific information.

"It adds that, in the case in question, the service being carried on voluntarily and gratuitously by the Jesuit Fathers, the measure is so much the more incomprehensible."—*Translation made for THE LITERARY DIGEST.*

"Liquefied Steam."—A writer in *The American Machinist*, June 15, thus makes fun of some of the recent claims for liquefied air: "If we take steam and put it under pressure, we shall cause some of it to liquefy. If at the same time we abstract from it some of its heat by means of some less hot body, we shall perform this duty of liquefaction with much greater ease, and we can with the command of a sufficient amount of heat-absorbing material liquefy practically all our steam without exercising upon it any pressure whatever. I have myself manufactured many tons of water by liquefying steam, and by again applying heat I have succeeded in again vaporizing the liquid steam and generating power by the use of the enormous expansive force thus set free. I have applied this force to turn machinery for the grinding of corn, for the spinning of cotton, and for drawing vehicles along rails. Is it not marvelous! Yet no one gives me any credit for doing this. I am told that the principle has been known for years, and that my results are only an improvement on some re-

sults obtained a century ago by some fellow named Watt, and that Watt would have done just as well as I can do, but he did not have the appliances which I can command. Yet here comes Mr. Tripler. In place of a chemical combination of oxygen and hydrogen Mr. Tripler takes a mechanical mixture of oxygen and nitrogen, having practically identical properties with my steam gas. The only substantial difference between his gas and mine is that the properties I have described as connected with my gas are exercised by his gas at temperatures much lower down the scale. . . . I see that he can carry his liquefied air in milk-cans. Well, what if he can? Our milkman gives away a quantity of liquefied steam with every quart of milk he leaves at the door. . . . Liquefied steam has many other advantages. At its usual temperatures it may be drunk without danger, and there are thousands of uses to which it can be put for which liquid air is unsuitable. As to power-production, liquid air is not in it. Why, then, all this fuss about liquid air, as tho Mr. Tripler had discovered a new principle? He has possibly improved the apparatus for liquefying air, but here his useful work ends, and his liquid air can only have a very limited application; and when once vaporized, can not be returned to the liquid state except by great expenditure of energy. Its use, therefore, must demand a great expenditure of fuel, and after all he must employ my liquid and my motor to produce his liquid. Yet the papers are full of Tripler, and say nothing of me. Is this because Tripler promises perpetual motion and I don't? Looks like it."

AN INSECT THAT CAN COUNT.

AN account of a curious insect found in the French colony of New Caledonia is contributed by Lieutenant-Colonel Delauney of the French army, who believes, from the regularity of certain gyrations that he has seen it make that it can count, or estimate number, up to six. We translate Colonel Delauney's letter in *La Nature* (Paris, July 8). He says:

AN INSECT THAT COUNTS.

Line below shows actual length.

"In my capacity as an entomologist I have observed many curious customs and habits of insects: I have often employed my time in watching the sports of the flies in the sunshine; I have looked on with interest at the toilet of these same diptera, as they rub their legs, bodies, and heads; and I have seen many other things. But I never had the fortune to witness so extraordinary a spectacle as that offered me by an insect in New Caledonia on September 29, 1892.

"I was walking, on that day, in my garden at Noumea, when my attention was attracted by the singular movements executed by a small insect on a banana leaf; it was turning about its own head as a pivot, describing rapid circles; every now and then it made a sudden stop and then went on again; it seemed, in short, to be a sort of 'skipper,' which was executing its gyrations on a leaf instead of on the surface of the water.

"All of a sudden the insect came to a full stop, and I waited patiently a good quarter of an hour to see what it would do. I resolved to observe and note the number of circles that it should describe in either direction, and when it began to move again, I put down the following data successively:

"Six turns in the direction of the hands of a watch, then a stop; six turns in the opposite direction, a stop; five in the first direction, a stop; five in the opposite, a stop; four in the first direction, a stop; four in the second, a stop; three in the first, a stop; three in the second, a stop; two in the first, a stop; two in the second, a stop; one in the first, a stop; one in the second, a full stop.

"I waited for the insect to begin to move again, but I waited in vain; an hour was passed uselessly in this occupation; the creature was immovable and seemed to be asleep. I then decided to put it into my poison bottle, and some time afterward I examined its corpse at my leisure.

"It belonged to the order of *Hemiptera*. Its length was about 3 millimeters [$\frac{1}{8}$ inch] and its form was in general that of a

'water boatman' with its large head and powerful legs, altho it was flatter than this coleopter. . . . Its color was a light tan.

"I made a note of what I had observed, and placing the insect in a little paper box I packed it in cotton and sent it with a letter to M. Stanislas Meunier, at the Museum.

"Alas! Three months later this scientist sent word that he had received both my letter and the box, but that there was no insect in the latter. Owing to its smallness and lightness the hemipter had slipped out.

"Six months afterward I was fortunate enough to find one of the same kind of insects again. I hastened to capture it and placed it in a large box with a glass cover. I then promised myself a very interesting series of observations.

"But on the morrow there was no insect in the box; it had disappeared. My servant had evidently involuntarily aided it to escape by displacing the glass cover of the box while setting my table to rights.

"During more than a year's stay in the colony I never met with the creature again.

"However this may be, in reporting the observation of September 20, 1892, I may be permitted to think that I have seen an insect that knows how to count at least up to six, since it made movements numbering successively from six down to one.

"The accompanying illustration is as exact a representation as possible of this curious New Caledonian insect."—*Translation made for THE LITERARY DIGEST.*

THE CAUSE OF THIRST.

WHY are we thirsty? Is the sensation due to dryness of the throat, or to a general need of the system for liquids? Each theory has had its advocates, but the latter, we are told by M. T. Obalski, in *La Science Française* (July 7), is supported by the facts. Thirst is a constant phenomenon in living creatures, says M. Obalski. Altho there are some that appear never to drink, we must not forget that their food always contains water. He proceeds as follows:

"Thirst is more active among herbivorous animals than with the carnivorous. Herbivores use much water; they must have a great abundance of salivary and digestive fluid to digest the herbs which, in great volume, contain a relatively small amount of nutritive matter. These animals need to have water in their stomachs, for otherwise the material swallowed would dry and form what are called 'heteroliths.'

"Carnivorous animals, as has been said, are less often thirsty. We may cite as an instance the cat, which can live eighteen months without drinking, and lions, which in menageries remain easily all winter without liquid."

Is thirst a localized or a disseminated sensation? On this M. Obalski writes as follows:

"It has been thought that we may localize it in the back part of the throat, since thirst may be appeased by moistening the larynx with a little water or a few drops of diluted citric or malic acid. This palliative, however, acts only for an instant, the thirst reappearing almost at once.

"We must abandon this idea of localization, for the following experiment, made by Claude Bernard, disproves it: he cut open a horse's esophagus in the middle of the neck, and after fixing a glass tube there caused the horse to drink; the water was carried off through the tube after passing through the pharynx. In the experiment the animal drank an enormous quantity of water without appeasing its thirst.

"Louget cut the sensory nerves that lead from the rear of the throat—the glossopharyngeal, the lingual, the pneumogastric; the animal so treated continued to have thirst. So there is no localization.

"Thirst can be appeased by the injection of water into the veins. In some cases of dilatation of the stomach it may be satisfied by intestinal injections. Bathing also relieves it.

"We must believe, then, that thirst is a general sensation; that it results from a general need of the anatomical elements, produced by a loss of the liquids of the organism.

"Thirst presents varieties, sometimes by exaggeration, some-

times in the contrary direction. There is 'polydipsia' [extreme thirst] in diabetic patients, in cases of fever, in certain stages of cholera, and in great pain. There is 'adipsia' [absence of thirst] in cases of marked prostration, altho this phenomenon is rare."—*Translation made for THE LITERARY DIGEST.*

THE "KISSING BUG."

THIS latest hero of the yellow journals is viewed in the sober light of science by Dr. Eugene Murray-Aaron in *The Scientific American*. It appears that there is really an insect, *Melanolestes picipes*, to which this name properly belongs, but it is neither new nor specially harmful, while a majority of the bites reported in the papers prove on investigation to have been due to other bugs, to mosquitoes, or even to horseflies. In none of these bites is there poison, and the occasional serious results are to be attributed to the inoculation of disease germs by the insect. Says Dr. Murray-Aaron:

"The 'kissing bug' is no commoner this year than usual; of the genus *Melanolestes*, the two not uncommon species, *M. picipes*, with black, piceous legs, and *M. abdominalis*, with the sides and sometimes the whole upper surface of the abdomen red, are to be observed by the entomologist around electric lights in our parks, or in decayed matter, or under stones in our woods, with about the same frequency as always before. 'They are active, blood-thirsty insects, and inflict a severe wound upon the hand of the incautious collector,' has been said of them [*The "Riverside Natural History,"* vol. 2, p. 281]. altho to describe them as 'bloodthirsty' gives a false idea of a creature which, probably, never uses its proboscis on man for any purpose other than self-defense. There is no proof whatever that they are bloodthirsty, in the sense that that term may be applied to the mosquito. I have handled scores of both species, and have been bitten but once; and then only because I carelessly pinched the picipes too tightly between thumb and finger, in lifting it from the ground to my killing-jar. The wound made in my thumb was excessively painful, because my powerful little antagonist had no difficulty in piercing to the bone; but there was no more poison about it than about the puncture of a clean knife-blade. For *Melanolestes* is not possessed of any virus or poison-secreting apparatus whatever; the occasional poisonous effects observed as following a wound from its proboscis are entirely due to the food or the environment it is lately from."

Dr. Murray-Aaron has followed up the newspaper reports, and finds that out of about forty cases reported since the beginning of June, there are but three cases in which *Melanolestes* has been an undoubted offender. In two of these three cases there was "a slight amount of poisoning," in the other case simply the pain of the puncture. In many of the reported cases the bite was to all appearances due to the stable-fly or horse-fly (*Stomoxys calcitrans*).

The X Ray in Medicine.—The use of the Roentgen ray in surgery is now so common as to require no comment. We are told by a contributor to *The Lancet*, July 1, that it is extending to medicine, properly speaking, where it has been found, in certain cases, to be invaluable as a means of diagnosis. Says the writer:

"Dr. F. H. Williams, of Boston, United States army, finds that fluids, whether blood or serous effusions, have great power of resisting the passage of the rays; and that by employing an open fluoroscopic screen and by tracing thereon the outlines of the shadow, the form and position of organs can be exhibited. . . . The different degrees of transparency in the lung are, he finds, due to the greater and less amount of blood, not of air, in the stages of expansion and contraction. . . . He was able by this means to see and to trace the extent of a pleuritic effusion imperceptible by ordinary methods, and in a case of pneumothorax to see the waves following the heart's movements and the splashing produced by succussion. Of most interest perhaps was

his demonstration of aneurisms which were not only unsuspected but the symptoms of which were erroneously explained. . . .

"In pleurisy the presence of effusion may be seen before it can be determined by physical methods and after these have ceased to afford evidence of its persistence, and the same was the case with pneumonia even after the patient had been discharged as cured. Pleuritic adhesions in themselves are not visible by the fluoroscope, but may be inferred by the consequent restriction of the movements of the diaphragm. . . . Pericardial effusions, dilatation, hypertrophy, and the atrophy of the heart accompanying some forms of anemia are easily seen, as may be the enormous enlargement of the left ventricle in aortic insufficiency. Lastly, the passive congestion of the lung in diseases of the kidney as well as of the heart, as shown by the fluoroscope, may give timely warning of danger to life previously unsuspected."

MOSQUITOES AND MALARIA AGAIN.

THE specialists who believe that the mosquito takes an active, if not a principal, part in the propagation of malaria are now urging that efforts be made to extirpate the disease in notoriously malarial districts by preventing the breeding of the objectionable insects therein. To the argument that malaria does not exist in some particularly mosquito-cursed districts, they reply that only certain species of the insect harbor the germs. In a recent lecture at University College, Liverpool, printed in *The British Medical Journal* (July 1), Major Donald Ross, a surgeon in the British army and a great authority on the subject, asserts his belief that the well-known fact that malaria is lessened by proper drainage simply means that such drainage removes breeding-places for mosquitoes. He says:

"We can detect the dangerous species of mosquitoes in a given locality by a perfectly certain method, namely, by ascertaining . . . whether the parasites of malaria will live in them or not. We can detect their breeding-grounds by searching for their larvæ. If the dangerous mosquitoes prove to be confined to the genus *Anopheles*, the problem will be much simplified, and it will be advisable to declare war against the whole genus. The larvæ of this genus can be distinguished by any intelligent European by the fact that they float flat on the surface of the water, and the adults can be generally distinguished by their having spotted wings. In order to obliterate pools which breed dangerous mosquitoes, they must be filled up or drained away. As I have said, mosquitoes scarcely ever breed in large bodies of water, because these contain fish. To kill larvæ in wells, some appropriate drug must be sought for, but I think it unlikely that malaria-bearing insects often inhabit wells.

"To conclude, then: It will be observed that the practicability of eradicating malaria in a locality by the extermination of the dangerous mosquitoes in it depends on a single question—Do these mosquitoes breed in spots sufficiently isolated and rare to be dealt with by public measures of repression? I am afraid that it is impossible to give a final answer to this question as yet; we do not yet know all the dangerous species of mosquito, much less are we acquainted with all their habits. But . . . I am inclined toward giving an answer in the affirmative to the question. At any rate, in view of the mischief wrought by the disease in warm countries, I certainly think that we should make every effort to ascertain whether or not we can give an affirmative answer to it.

"For a concrete example, suppose we were to discover by accurate investigation that all the malaria in a large town—say on the coast of Africa—arises from a few small puddles which can be obliterated at the expense of a pound or two, would not this discovery repay our exertions? and, further, if we could next extend our operations to other towns—to numerous towns—in the tropics, should we not be more than repaid for our exertions? At all events, the question can be decided only by experiment; and the experiment is well worth making."

calamity," giving rise, as it does, to dyspepsia, headache, sleeplessness, irritability, and deformities of the jaws. He also refers to the state of the teeth as a possible factor in the mental state of the child, and strives to impress upon teachers the necessity of having the teeth of children under their care inspected by skilled dentists. He condemns unwarrantable teeth extraction, asserting that "teeth-drawing is not dentistry, and that the supply of artificial dentures should no more be regarded as the chief aim of dentistry than the supplying of wooden legs is looked upon as the ideal of surgery." "We are of opinion," says *The British Medical Journal*, in commenting on this article, "that it is not alone after the eruption of the teeth that care should be exercised. The future of the teeth as well as the future of the body depends for the most part on the care of the child during the early years of its existence, and it is more important to consider the subject of children's teeth during their development in the gums and before they have erupted than even to check decay when they appear or to scoop out microorganisms from their sockets. This aspect of the hygiene of the teeth has yet to be dealt with."

THE ELECTRIC-LIGHT BATH.

THIS form of treatment, in which the patient's body is exposed to the radiation of numerous incandescent lamps, has already been noted in these columns. Why should this form of heating be more effective than the ordinary hot-water bath, or than the Turkish bath of hot dry air? *Modern Medicine* endeavors to answer these questions by referring us to the recent physiological experiments of Dr. Hertz of Vienna. He says:

"Among other interesting experiments made was a series of studies which had for their purpose a comparison of the amount of heat absorbed by the skin when exposed (1) to hot water; (2) to dry hot air; and (3) to an incandescent body, as a lamp flame. . . .

"The results were most interesting and remarkable. It was found that during exposure of the hand near the flame of a lamp for thirty seconds, as much heat was absorbed as by holding the hand in very hot water for thirty minutes; in other words, the heating effect of a flame was sixty times as great as that of hot water, while the sensory effect was the same. When the hand was held above the lamp chimney, the time required for the absorption of a given amount of heat was many times greater than when the hand was exposed to the flame of the lamp. . . .

"These interesting observations show in a most graphic manner the superiority of the electric-light bath over the older forms of the heating apparatus, as the vapor, hot-air, and hot-water baths, as well as the Roman or Russian and Turkish baths.

"The explanation of this phenomenon is easily found. The heat from an incandescent body, whether a lamp flame or the filament of an electric light, is in a state of activity, so to speak; it is in the form of radiant energy, and is thrown out into space in lines which travel an indefinite distance without loss unless they meet resistance. These rays pass through transparent bodies, like glass, without heating them; but in an opaque body the light is converted into heat just as electricity is converted into heat when it meets with resistance in a poor conductor. Thus when light falls upon the skin it penetrates to a greater or less depth according to its transparency, finally being all transformed into heat in the deeper parts.

"When heat is applied to the skin by means of such a heated substance as hot water or hot air, the heat is slowly communicated to the deeper parts by means of conduction. The skin is a very poor conductor, while at the same time it is, if not quite transparent, very translucent, so that radiant heat passes readily through it, while the heat of conduction penetrates slowly.

"This simply physical explanation makes very clear the reason why the direct rays of the sun are so powerfully active in producing heat effects, while one may readily tolerate a temperature of 200° F. or even 300° F. in a Turkish bath. . . .

"Dr. Winternitz, the eminent professor of hydrotherapy and of nervous diseases in the Royal and Imperial University of Vienna, recently informed the writer that he had in the use of the electric-light bath succeeded in some instances in producing perspiration at a temperature of less than 70° F.; that is, the air of the bath was less than 70° F. Of course the temperature of the skin of the

The Care of Children's Teeth.—In an article in *The Nineteenth Century* on the care of children's teeth, Dr. E. Collins, editor of *The Dentist*, asserts that the condition of school-children's teeth in England may be looked upon as a "national

patient was much higher. . . . The writer has observed perspiration at a temperature of 85° F. Nearly double this temperature is usually required in the hot-air and Turkish baths, and considerable time, whereas vigorous perspiration occurs in the electric-light bath usually within from three to five minutes.

"The electric-light bath is already in use in many hospitals and other medical establishments in Austria and Germany, thanks to the cordial commendation of this new thermic method, of which America claims to be the origin. The bath is also gaining ground in America, and is being introduced quite extensively in England and other countries. It undoubtedly has come to stay, and by its convenience and superior efficiency will largely supplant the older methods of producing heat effects for therapeutic purposes."

THE "AMERICAN VOICE."

THE belief entertained by all orthodox Britons that every American has a shrill nasal voice will be strengthened by a paper read at the recent congress of the American Laryngological Association at Chicago by Dr. John W. Farlow. The doctor surrenders at the outset by admitting that the "national voice" has a "nasal twang," and he sets himself to discover its cause. *The British Medical Journal* (July 1), which compliments Dr. Farlow as "a bold man," goes on to give the following abstract of his paper and of the subsequent discussion. It says:

"The question he set himself to discuss is whether this [twang] is due to catarrhal or other pathological conditions of the upper air-passages. There is a general impression that such conditions are relatively very frequent among the citizens of the United States. Indeed, if we may judge from the text-books of the specialists of that country, the average American nose must be a museum illustrating most of the diseases and deformities with which that part of the human fabric can be afflicted. But as Dr. Farlow correctly points out, the nose is not the determining factor in the formation of the nasal voice. The twang appears, like smoking, to be largely a matter of imitation. But the defect must have been fairly prevalent before it became so fashionable as to be an object of imitation. Owing to the great influx of foreigners into America the English tongue is mangled and outraged there more than anywhere else, and Dr. Farlow admits that his countrymen are quite indifferent to purity of accent or correctness of speech. He therefore urges that children should be carefully trained in the use of their organs of speech, and pains should be taken to prevent them from forming themselves vocally on an *exemplar vitii imitabile*. Dr. G. Hudson Makuen (Philadelphia), in discussing the question, gave it as his opinion that the American voice is due to the excessive tension of modern American life. How this tension affects the vocal organs is not very clear, but as Dr. Makuen goes on to affirm that 'the active anatomic factor in nasal voice is probably a low hanging palate during speech,' it must be inferred that the tension of life in some way causes relaxation of the velum. The remedy which he suggests is to train the levator palati muscles by making the patient practise several times daily with open mouth before a mirror. The 'patient' will be obliged to segregate himself as carefully as if he were learning to play the fiddle. Dr. Amory De Blois (Boston) thinks the voice is all a matter of race. The German has a guttural voice, the Yankee has a high-pitched voice, while the English voice, 'no matter what the social rank, is always of an agreeable low pitch.' Dr. De Blois has evidently never heard the newspaper boys shriek 'Winners!' or 'Horful Murder!' in the Strand. It must also, we fear, be confessed that the voices of our fashionable ladies are too often remarkable for their un-Cordelia-like quality. On the whole the debate threw little light on the mechanism of the American voice, which we are inclined to regard as due to some peculiar condition of the nasal sinuses and other parts of the resonating apparatus. This may be caused by climatic influences; but, however it is produced, its effect on the voice is aggravated by a bad habit of speech which will never be corrected, because patriotic Americans look upon it as one of their national institutions."

Brooms as Germ Breeders.—"Bacteriologists devote themselves to the detection, isolation, and destruction of bacteria," says *The Scientific American*, "and strange to say, they do not

appear to have given much attention to the danger that lurks in the ordinary articles of household use. For example, the common house broom is both the habitation and breeding-place for whole colonies of bacteria, and cases of disease have been traced to this apparently inoffensive article. At Königsberg a course on bacteriology is given by a physician, in which he maintains that the strictest sanitary and hygienic conditions in things pertaining to the house should be inculcated, and in this country in the Boston Cooking School, and doubtless elsewhere, there are many lectures given on bacteriology. The refrigerator is one of the danger spots, for bacteriologists tell us that the minutest organisms may thrive even in melted ice, and putrefactive bacteria once gaining access to the household refrigerator will breed and contaminate butter, milk, meat, and other food kept therein. Cupboards and closets also afford an excellent breeding-place for the ever-present microbe, and housekeepers will do well to look to such articles as refrigerators, brooms, dusters, etc."

Iodin in Nature.—Iodin is found in many quarters where it would least be suspected. According to some interesting experiments of Armand Gautier, we are told in *La Science Illustrée* (Paris, July 15), the thyroid gland contains about one-thousandth part, by weight, of this substance. Where does it come from? Some authorities say that it is derived from the atmosphere or from water, but others fail to discover traces of the substance therein. M. Gautier believes, however, that their failure was due to insufficient methods. He finds minute quantities of iodine in the air of Paris, and still more in that of the sea-shore and salt marshes. It is well known that seaweed is especially rich in iodine. It has also been discovered in ordinary foods, especially in certain fish. By bathing a rabbit in water containing iodine M. Gallard discovered a curious fact, namely, that the brain has a peculiar attraction for this substance, absorbing over seven times as much, proportionately to weight, as the glands of the neck and four times as much as the heart and lungs. Iodin may have a special action on the brain, but this is for future experiment to determine.—*Translation made for THE LITERARY DIGEST.*

The Russian Calendar to be Conformed to General Use.—"It is officially stated through the Department of State of this country," says *The Railway Review*, "that the Russian Government has decided to abandon the Julian calendar and adopt the Gregorian, now in use all over the world except in Russia and Greece. A commission of sixteen members, including nine astronomers, has been appointed to arrange the details of the change, and it is the intention to have the new calendar go into operation in the year 1901. As readers will understand, the Russian calendar is now twelve days behind that in universal use. A potent cause for the change is stated to be the confusion of dates, in correspondence and business transactions, between Russians and citizens of foreign countries."

SCIENCE BREVITIES.

"It is reported," says *Science*, "that Dr. Nansen has resolved to enter the lists as an Antarctic explorer. Letters received in London from him state that he hopes to have an expedition organized and ready to start in 1902. He is at present engaged in preparing his plans, and will endeavor to shape them so that he may supplement the work which the British and German expeditions propose to accomplish."

"The Eiffel Tower," says *The Scientific American Supplement*, "is undergoing a complete renovation in preparation for the forthcoming exposition. The entire structure will be painted with an enamel in five shades. The dome and summit are to be of a fine lemon chrome, and the shades will graduate to the pedestal, which will be a rich, dark orange. *The Mechanical Engineer* states that for the two coats which are to be applied upon the tower, nearly fifty tons of enamel will be employed."

A WRITER in *Nature* speaks of the medical tyranny which banishes the strawberry from the diet of the gouty, and notes that Linnæus considered that he had been cured of this very disease by free use of the fruit. He goes on to say: "Altho strawberries are forbidden to the gouty by some authorities, by others they are permitted, the fruit being regarded as a useful food for gouty persons on account of its richness in the salts of potash, soda, and lime, and its cooling, diuretic, and laxative qualities. The analysis of the strawberry shows it to be particularly rich in soda salts, and in spite of the high percentage of water this fruit excels all other common fruit in the amount of mineral salts. The chemistry of the strawberry, therefore, would teach that this fruit is likely to be beneficial in gouty states."

THE RELIGIOUS WORLD.

ROBERT G. INGERSOLL.

THE secular press throughout the United States teems with lengthy comments on the life, character, and religious opinions of Colonel Ingersoll. There is upon the whole a surprisingly small amount of bitter criticism, even from those who differ greatly from him in his views. Such persons for the most part attribute what they regard as his extreme opinions to the reaction of a buoyant, sympathetic, and freedom-loving spirit against the unfortunate influences of an early religious environment. The *Springfield Republican* gives the following outline of his life:

"Robert Green Ingersoll was born in Dresden, N. Y., August 13, 1833, and thus he had nearly compassed his sixty-sixth year. He was of New England ancestry, and his father, Rev. John Ingersoll, was a Congregational minister of many and brief pastorates. Altho Colonel Ingersoll used to say that his 'infidelity' was largely caused by his being compelled to go to church twice or three times of a Sunday, with Sunday-school between services, and his youth was a time of pretty strict theology, nevertheless Rev. John Ingersoll's chief difficulty in retaining his charges was his broad view of religion. Robert's boyhood was spent in Wisconsin and Illinois, the family removing to the latter State in 1843. His education was of the common schools, and then picked up along the wayside, as is often the case. In 1857, when he was twenty-four years old, he with his brother, Eben C. Ingersoll, went to Peoria, and thence Eben went to Congress, where he made a reputation for ability and especially for a happy turn of wit. Robert was Democratic candidate for Congress in 1860, but was unsuccessful. He made a good campaign, and one of remarkable interest. It is related that when his Republican antagonist, Judge William Kellogg, a friend of Lincoln, asked him what he would do if a black man escaping from slavery should ask him for food and shelter—would he, as the fugitive slave law required, have him arrested and remanded to slavery—Ingersoll interrupted Kellogg to say that he would do just what he had done within a week—give him the last dollar he had and bid him Godspeed to Canada. This was Ingersoll's first and last candidacy for an elective office.

"The war for the Union came on, and he went out in 1862 as colonel of the 11th Illinois cavalry. He was a good soldier, a competent officer, holding the affection of the men. He was captured by Gen. N. B. Forrest's command, and winning the heart of the Confederate by his genial wit, he was paroled. In 1866 he was appointed attorney-general of Illinois, and soon became known as a leader of the Republican Party. He would have been candidate for governor in 1868 had it not been for his heterodoxy in religious matters. Three fourths of the delegates of the nominating convention were in his favor, when some foolish person brought up the matter of his attitude in respect to Christianity. A committee was appointed to wait upon him, and they asked him to pledge himself not to discuss religious issues in the campaign. It should have been plain that Mr. Ingersoll would not have interposed such a matter in his political work, but when he was required to pledge himself not to do so, he took the only manly attitude, and declined to make even this passing surrender of his liberty of speech. And thus it came about that General Palmer was the Republican candidate and was elected, and Ingersoll was one of the most effective of the campaign speakers.

"Important tho he was in Illinois, Colonel Ingersoll had no general reputation until after the brilliant speech he made in nominating James G. Blaine as a candidate for the Presidency in the Republican national convention of 1876, held at Cincinnati. That splendid moment takes place with the swift triumphs of orators in many a juncture, and it was in this pyrotechnic speech that he bestowed on Mr. Blaine the sobriquet of 'The Plumed Knight,' destined to become a by-word in politics in several campaigns that were yet to come. The phrase in which he framed this sobriquet, referring to an episode in a debate in the House of Representatives, was this 'Like an armed warrior, like a plumed knight, James G. Blaine marched down the halls of the American Congress and threw his shining lance full and fair

against the brazen foreheads of the defamers of his country and the maligners of her honor.' Mr. Ingersoll was one of the best orators of the campaign for Hayes, notwithstanding the defeat of Blaine's candidacy, and he had ever since been active wherever the party exigency demanded. He received no rewards of office for his services. He was talked of for Minister to Berlin, in Hayes's Administration; some say it was offered to him. But offered or not, he did not get it; and so it had been ever since. . . .

"Colonel Ingersoll married in 1862 Eva Parker, daughter of a farmer in Tazewell County, Ill. A devoted husband and father, he had led a happy life. He had become a man of literary culture, being an enthusiast on authors so diverse as Shakespeare, Shelley, and Walt Whitman. His oration on the occasion of a reception to Whitman in Philadelphia was quite remarkable. And he had been of generous and constant service to many young men beginning life."

The *New York Times* thus speaks of him:

"Whatever else he was or was not, he was an American, a product of our soil and race of it, particularly a product of the Middle West, which is developing its own sub-variety of American. He was that American whom Kipling had in mind—

Uncouth, illogical, elate
He greets th' embarrassed Gods, nor fears
To shake the iron hand of Fate,
Or match with Destiny for beers.

"A writer as different as possible from Mr. Kipling, Mr. Henry James, to wit, has expressed the same thing in a novel in which he makes an admiring Frenchman say to an admired American that he went about the world as if he were traveling on a railroad in which he held a large amount of stock. Certainly no order of men is more at home in the world than the American of the Middle West. Certainly no one of these was ever more at home in it than he who has just left it.

"Not that the character is wholly admirable. It has the defects of its qualities. Its qualities are energy, bravery, friendliness, and frankness; as a Bostonian returning from the West once put it, 'candor till you can't rest.' We can not say honesty in a conventional or even in a real sense, because one of its chief defects is a lack of scruple, the other being a lack of respect, a lack of that 'reverence' without which Goethe, who was by no means a conventional moralist, said that 'all other things are of no use.' The defect as well as the qualities were illustrated in this man of the Middle West, were even exaggerated in him. Nobody could possibly ascribe scrupulousness to the man whose mining and ranching operations in the Southwest attracted so much attention a dozen years ago. And as for his want of reverence, he gloried in it, gloried in having a hollow where the bump of veneration 'ought' to be. It has been justly said that he was 'no respecter of parsons,' but that was only part of his radiating and centrifugal disrespect. Geniality, courage, frankness, without scruple and without deference; these are the qualities which were as completely summed up in Ingersoll as in any man we can recall."

The *New York Herald* says:

"He was a strong enemy and as gentle, kindly a father as ever breathed, loyal in his attachments, reckless of consequences when defending his opinions, and eloquent to the verge of genius.

"We can find in his early environments one reason at least for his hostility to creeds and churches; his father was a clergyman so broad in his views that he suffered from a harassing unpopularity. In his outspoken youth the son was ostracized and possibly embittered by what amounted to persecution for his opinions. He was driven into solitude at a time when he should have been welcomed for his honesty and his courage, and in those far-off days may be found the root of that unbelief which marked his riper years and made him proud to be called an agnostic.

"He will be greatly missed, for a more intrepid champion of what he believed to be right and true can not easily be found. Most men will declare that he was mistaken in his religious opinions, but all will concede that he fought for them like a true knight."

The *Baltimore News* thinks that the dogmatic ideas which Ingersoll attacked are no longer the beliefs of to-day:

"Great changes have taken place since 'Bob' Ingersoll first

leaped into prominence by his daring crusade against the Bible. Belief in the literal correctness of the Bible narratives has been gradually dying away in most religious denominations. Audiences of to-day would be quite unmoved by ridicule based on a showing of the amount of heat which must have been generated by Joshua's stopping of the earth in its rotation, or on the difficulties presented by the dimensions of Noah's ark. The representatives of the church have quietly bowed to the inevitable in all these matters, and have taken the wind out of the sails of any Ingersoll of to-day by admitting in advance all that he may choose to say in this line.

"This change was plainly on the way, and quite inevitable, apart from any efforts which might be made or not made by iconoclastic orators. What Ingersoll did, that gentler and more scrupulous critics did not do, was to attempt roughly to tear away what had become dear to millions of his fellow human beings. In this, there is no reason to suppose that he had very widespread or lasting success. More has been accomplished for the liberalization of religious views—and has been accomplished with less harm—by those who have written or spoken in quite a different spirit; by Emerson, for instance, who, as has been said, took down our idols with such gentleness and reverence that it seemed like an act of worship."

The *New York Mail and Express* takes a condemnatory view of Ingersoll's attitude toward the fundamental principles of religion, and fairly represents the position adopted by most of Colonel Ingersoll's critics:

"In the large sense of the word, Colonel Ingersoll's life was a failure. He was a phrasemaker and magician, who fascinated his hearers but never instructed them. He appealed to the imagination but not to the soul. He painted beautiful pictures, but they faded like mists in the sunbline. His life was one long protest against truths which he was too small to grasp, and which, for that reason, he held to be non-existent. He was a destroyer as far as he could be, and had nothing to offer in place of that which he destroyed. He taught only the gospel of doubt and dark despair; his spiritual vocabulary contained no such word as faith, and in all the beautiful things he ever said he never brought cheer to an aching heart nor hope to a troubled soul. The ideals and aspirations which he decried still thrill the heart of humanity; the institutions at which he scoffed still shed their benign radiance upon the races of the earth, and he leaves the world without having added even a fragment to its knowledge or a single ray of light to its joys and hopes.

"Colonel Ingersoll failed not only for the world, but for himself. If he was an honest seeker for the truth he was a most unfortunate one. For with the badly poised mind which disputes the existence of all things which it can not comprehend, he barred the gates against his own progress and became a hopeless wanderer in the gloomy mazes of doubt. And so he passes, like a shadow, while the faith which he assailed still brightens the world."

The *New Voice*, New York, in a discriminating review of his life, touches on some phases of his personality and work which have not often been understood:

"Ingersoll's assaults upon religious faith were not the product of any deep research, laborious scholarship, or intellectual strain. His weapons were sarcasm, flippant smartness, catchy rhetoric, and at times an eloquent and obviously sincere appeal to the feelings of justice and humanity, so often outraged, as we all know, in the history of the church. He added practically nothing to the world's stock of knowledge and thought, and produced no literature that is likely to live as that produced by Voltaire, Hume, and Paine has lived. We have spoken of him as an antagonist of the Christian religion; yet in fact he was more an antagonist of the Jewish religion as expounded in the Old Testament than of the Christian religion as expounded in the New Testament and embodied in the life of Christ. The phases of the Christian religion from which he seemed unable to get away were those phases that developed in the days of Puritanism and, farther back still, in the days of medievalism. The Christian world has not been standing still since the days of Ingersoll's youth, when the fiery tortures of the damned were so apt to bide the love of God from the eyes of His children. Even twenty years ago Ingersoll's death would have elicited comment of a much different kind from that which it will now elicit. We do not undertake to judge him.

Perhaps in the all-encompassing wisdom of God such antagonism as his is of positive benefit in driving us back from the conventionalities of religious formalism to a reexamination of the first principles and a reconstruction of dogmas."

THE CATHOLIC CHURCH AND THE LABOR QUESTION.

DR. NICHOLAS BJERRING believes that while Christ's words, "The poor ye have always with you," will probably, in their literal sense as applied to material poverty, remain the order of things on earth until the full coming of the spirit of Christ among men, yet the harshest conditions of poverty may even now be greatly ameliorated. There is still another text, "Neither was there any among them that lacked," that shows what already has been and can again be accomplished by applying Christ's spirit to the social organism and the daily life of men. After briefly referring to the harsh and cruel conditions introduced by industrialism and commercialism, through which multitudes of men must be content merely to work, eat, and sleep from day to day, he declares (in *The Catholic World*, July) that the remedy is to be found, not in new laws of trade, but in the application of old principles:

"I shall endeavor to sketch briefly the outlines of this social question, as viewed from the principles of religious communism, by speaking of the community of production, consumption, and property. Just as the body has many members, and each has its particular work to do, contributing to serve the whole body, so in a well-ordered household the work is distributed among the various inmates according to their ability, and if every one work industriously, then the house is well cared for.

"Thus it is ordered in the household which God has established in the world. All must serve each other, both high and low; to none are time and power given for naught; the main question is not the high or low position, but that time and power are well employed. With the common work of his hand man may serve his fellow man, still more serve God; for he does the daily work that God has entrusted to him, and by serving his brother he serves himself. By achieving his maintenance he gains health of body and soul. That we shall eat our bread in the sweat of our brow is a punishment of sin; but, willingly borne, the punishment turns into a blessing. That is the Christian doctrine of labor, and social cooperation through labor."

Ultra-individualism is, he says, the canker-worm that has destroyed the sense of race solidarity, and this sense can only be recovered through the Christian sense of brotherhood:

"Competition reigns on most fields of social activity. This is by no means a friendly rivalry, but a cruel war for life and death. Whoever can not hold out in this competition must look to himself or fall by the wayside; his fellow will take no heed of him. The maxim, 'Private egoism leads to the general welfare,' is not only the soul of modern production, but is actually established as a principle, and in it lies the canker-worm of the social evil. Is it to be wondered at that 'professional envy' has become proverbial? Employers and laborers stand in no lasting relation toward each other; each has need of the other for individual purposes, that is all. Hence it has come that the master has banished the young workman from his table and house. Master and servant, factory lord and factory hand, storekeeper and clerk, stand in like loose relations.

"It is a Christian principle that we must not only respect and love ourselves, but also those who are our companions in salvation, and who possess the same rights of citizenship in the kingdom of heaven. When master and servant, employer and laborer, factory lord and factory hand meet on Sunday for the worship of God, then at least they must demonstrate by their actions that they all alike call God their Father. It would appear in the modern industrial world that if such a consciousness ever was present in them, it has become extinguished. Faith, hope, and charity have been forced to make room for the greed to possess, to enjoy, to assert one's self, to govern. How, then, can a religious communism exist, and by its social workings demonstrate itself in actual living relations?"

The writer sees no hope of a restoration of this sense of race

solidarity except through a return to religious community and in the passage of laws which recognize the principles of brotherhood and cooperation rather than the power of might and the right to trample underfoot one's fellow men.

A PROPOSED RELIGIOUS DAILY PAPER.

AT the recent International Christian Endeavor Convention at Detroit the Rev. Charles M. Sheldon, of Topeka, author of "In His Steps," the most popular book of the year in England and the United States, proposed that the members of the society raise one million dollars to establish a Christian daily paper which should represent the spirit of Christ as applied to journalism. In his book Mr. Sheldon had told of an hypothetical newspaper of this kind, and he believes that there is need for such papers in the world of real life. The proposal awakened much interest and enthusiasm, and it is possible that an attempt may be made before long to carry out his plan. Mr. Sheldon says that he has in readiness a competent newspaper man to take charge of such an enterprise—"a man ready to lose his money and everything except his reputation" if need be. He has other men of the right kind ready to take places as reporters and pressmen, making altogether "a corps sufficient to start the paper in Topeka or Chicago to-morrow if some man will raise the money." Mr. Sheldon's own idea as to the necessary financial basis of such an undertaking is thus expressed in an interview quoted in *The Northwestern Christian Advocate*:

"I don't think that a paper of the kind I have in mind can succeed without financial support. I think the Lord intends us to use means to carry out His work, and I do not yet myself see how a man can found a daily paper without means. I don't know of any such paper. The nearest thing that comes to it is the *Montreal Daily Witness*. I want to say here, and I am going to say it again to-night, that this paper ideal of my hook will be real in a few years, I hope. I have had letters from newspaper men in every part of the country saying they are willing to throw up the positions which they now hold to go upon the staff of just such a paper as that. I have a newspaper man in my own church, a young man who has had experience in newspaper work, a graduate of your state university and who worked upon the newspaper at the college, who has since been trying to run a political paper on the basis of this pledge. He says: 'I can't do it. I am going to give up the paper, but I want to start a paper of the kind you mention, if somebody will come to the front with the money.'"

The same paper, in commenting editorially upon this proposal, says:

"We doubt that even a city as large as Chicago would support a Christian daily paper, after the novelty of the first year had worn off. Yet, even if it would, no one should flatter himself that cities and towns at a considerable remove from the publication center would wait for their daily paper until ten or eleven o'clock in the morning. We doubt that they would wait until ten, and some will doubt that they would wait until nine or eight or even seven o'clock. It is not to be supposed that any one wishes to found a Christian daily paper simply as a monument, or a representative protest against the defects in management or of conscience which attach to daily papers as they now exist. If any city needs such a daily, many cities have the same need. If any group of right-minded people deserves such a paper, all right-minded people have the same desert. It would seem, therefore, that not only one, but many Christian daily papers should be contemplated.

"No paper of the kind can subsist upon the receipts from its subscription list alone. Sums received from that source should be considered a surplus, or bonus. A few years ago the morning paper was sold at five cents, which cost was reduced in this city to one cent, and later was increased to two cents. Our Endeavor friends must plan to sell their paper for not more than two cents, and even then it would meet dangerous competition in the penny papers that omit much evil reading matter—but with this difference—that the existing penny paper omits it because it costs money, while the Christian daily paper will omit it because it

should not appear. That matter being omitted from both papers, the old query remains—Can the Christian daily charge two cents for itself while the penny paper charges only one half so much?

"The main reliance of a daily paper is upon its advertisements. Right at this point must come the tests respecting daily income. A Christian daily probably will not advertise theaters, horse-races, immoral medical doctors, liquor stores, quack doctors, patent medicines of exceeding patent dishonesty, department stores whose subsidization of the ordinary daily paper amounts to hundreds of thousands of dollars every year; Sunday excursions, railway trips on Sunday, Sunday picnics, secret or public society outings on Sunday, or any of scores of other movements or events or plans that desecrate the Sabbath or tend to aid sharpers to rob confiding people of their money. Much less will the Christian daily issue an edition on Sunday, on which day reading matter is multiplied by six or ten, and advertisements are multiplied and get cash by like ratios. London recently gave up its Sunday papers solely because all the papers there agreed to do the same, it being understood that if one paper had its Sunday edition, all must have them. American papers entered the field on Sunday from like motives, because it is well understood that the paper that thrives on Sunday has that much the more of profits wherewith to excel its rivals on the six secular days of the week. He who risks his money in a paper like the one suggested in Detroit must therefore take into intelligent consideration both the matter of cost per copy and the advertisement question."

The Advocate sees another difficulty. How is such a paper to get its telegraphic news? The writer says:

"The new paper could not get into the 'Associated Press,' for memberships therein are not for sale at any price. We deprecate that monopoly, but deprecation is as useless as are deprecations of some other unkillable monopolies. The new daily must have the news and all the news; therefore, it is quite pertinent to ask where the proposed new daily will get its telegrams. When our American cities have founded about fifty daily papers it will be time to found a new news-gathering association, if the associated telegraphic companies even then can be persuaded to transmit your news.

"We repeat our old prescription: Christian people can have the right kind of a paper when they persuade some already established daily paper to edit and print the right kind of a paper. Select the right man or company of men, convert him or them, and then set them to work, the next morning, to make the paper Christians are supposed to want. Are Christians ready to tell their daily paper that it can not have their advertisements on Monday if it prints any advertisements whatever on Sunday? Is any one ready to condition his subscriptions to a paper for all days upon the issuance of a decent paper on six secular days of the week? A paper that can get Christian patronage on the six days on its own terms can better afford to snap its fingers at the church on Sunday."

DR. PAUL CARUS ON AGNOSTICISM, THEISM, AND HERBERT SPENCER.

DR. CARUS, editor of *The Monist*, in a lecture delivered not long ago at the Philosophical Club of the University of Chicago, defined his views upon the problem of theism. The lecture was afterward printed in *The Monist*, and has led to an interesting discussion between Dr. Carus and Mr. Amos Waters, writing in the London *Literary Guide*. Mr. Waters, who may be described as a Spencerian agnostic, takes issue with Dr. Carus in his statement of the agnostic and theistic conceptions of the world. We quote as follows from Mr. Waters's *résumé* of the lecture, and his criticisms upon it:

"Even from the standpoint of the atheist, Dr. Carus opines, the 'God-idea' remains the most important thought in the history of the world.' 'It is neither irrelevant nor an aberration, but contains the most important, the deepest and most comprehensive, philosophically the most explanatory, and practically the most applicable truth of all truths.' And then Dr. Carus vehemently assails the agnostic position as he conceives it:

"Agnosticism . . . as a bankruptcy of thought, is not only the weakest, but also the most injurious, philosophy. It is the philosophy of indolence.

which, on account of its own insolvency, declares that the most vital questions of man's life, the questions of the soul, the soul's relation to the body, the immortality of the soul, the existence of God, the creation, and the ultimate purpose of being, are beyond the reach of reason."

"Dr. Carus affirms that there are but two kinds of agnosticism — 'the pious agnosticism of him who would not allow the light of science to shine upon the problems of religion; and the infidel agnosticism of the scoffer, who argues that, knowledge on matters of religion being unattainable, we ought to leave religion alone.' The latter proposition is offensively worded and loosely phrased. What is 'infidel agnosticism'? Infidel implies 'faithless'; does Dr. Carus mean that the 'scoffer' is 'infidel' to agnosticism? But should such 'scoffer' argue that 'knowledge of matters of religion [is] unobtainable,' that is a faith. To what, then, is even the 'scoffer' faithless? The orthodox Christian theist might describe Dr. Carus's position as 'infidel theism,' and we should anticipate an exposure of such misuse of words. 'Christian agnosticism' is an oblique compliment to agnosticism; 'infidel agnosticism' an illogical offense."

Dr. Carus, whose views have an added interest from the fact that he has advanced to his present philosophical position from one of scientific agnosticism, thus partly defined his concept of Deity in his Chicago lecture:

"God is, further, not an indifferent being to us. He has a personal and private relation to all His creatures, being nearer to every one of them than the beating of their hearts and the neural vibration of their brains. He is in them, and yet different to them, and infinitely high above them. He is their life, their home, whence they stay, and the goal whither they travel. God is not like us, but we like Him. He is the light of our life. He is the mariner's compass which guides us, and the anchor of hope on which we rely. Unless we feel His presence, we shall find no peace in the restlessness of this world. Unless we sanctify our lives by the purport which His existence imparts to all life, we can find no comfort in our afflictions. Unless we recognize that our soul is an actualization of His eternal thoughts, we shall not learn to fight the right way in the struggle for existence. Unless we listen to the still, small voice that teaches us our duties, we shall not obtain that blissful assurance which the childhood of God alone can afford."

Upon this Mr. Waters remarks:

"This certainty of utterance seems to be inspired by a new conviction. Such new conviction may command our remote admiration if explicitly avowed. Of absolute sincerity in any conviction there is no question. . . . Dr. Carus alleged that his conception of God 'was not only compatible with the Christian conception; it is the Christian conception itself, in its matured and purified form.' We ask for more explanation. 'Is it possible to explain too much?'"

"We yield to none in admiration of the splendid and catholic spirit, the lofty ethical inspiration, the oftentimes exactitude of philosophical thought and definition, that we associate with the attractive personality of Dr. Carus. His persistent misconceptions of agnosticism we have willingly—alho regretfully—attributed to unconscious bias, in degree of rebellion against dogmatic delimitation of the knowable. Time was when he appeared as the apostle of science in denial of knowledge other than physical science can yield. And we who have—on this side of the Atlantic—through many years acclaimed his work, despite his petulant upbraiding of agnosticism, have now the right to ask for 'light, more light.' Have the 'philosophy of science,' the 'science of religion, and the religion of science,' evolved a coherent theistic belief? If not, is it inconceivable that theists may reasonably assume that the editor of *The Monist* has a god-knowledge he is able to announce. 'Is it possible to explain too much?'"

In *The Monist* (July), Dr. Carus makes reply to these protests and questions of Mr. Waters. As to agnosticism, and Mr. Spencer, its great protagonist, he says:

"I am loath to reopen the debate on agnosticism, and repeat here only that there are many kinds of agnosticism. On some other occasion I expressed my approval of the agnosticism of modesty, which is a suspension of judgment so long as there are not adequate grounds to be had for forming an opinion. But the agnosticism of modesty is a personal attitude, not a doctrine. As

soon as it is changed into a doctrine it becomes the agnosticism of arrogance. By agnosticism of arrogance I understand the theory that the main problems of life (viz., concerning the existence or non-existence of God and of the soul, as to the immortality of the soul, and the relation of the soul to the body, as to the origin of life, the nature and authority of morals, etc.), are not within the ken of human comprehension. There is no need of entering now into details, as I have discussed the subject time and again. Mr. Herbert Spencer is the representative agnostic thinker, and when I criticize agnosticism, I mean Mr. Spencer's agnosticism. His agnosticism is not a mere suspense of judgment, but a most emphatic declaration that the mystery of life is utterly incomprehensible, that the substance of the soul (whatever that may mean) can not be known, that energy is inscrutable, etc. He has of late reiterated his principle in censuring Professor Japp for asserting that organized life can not have risen from inorganic nature, and Mr. Spencer declares expressly that he rejects the opposite view too. He rejects both horns of the dilemma, the affirmation as well as the denial, winding up his argument with these words:

"My own belief is that neither interpretation is adequate. A recently issued revised and enlarged edition of the first volume of the *Principles of Biology* contains a chapter on 'The Dynamical Element in Life,' in which I have contended that the theory of a vital principle fails and the physico-chemical theory also fails: the corollary being that in its ultimate nature life is incomprehensible."

"This high-handed way of condemning the very attempt at solving a problem on the plea that it is insolvable is the agnosticism which I reject. I know that Mr. Spencer is commonly regarded as the most liberal, progressive, and most scientific philosopher, but I can not help thinking that he is not. Mr. Amos Waters must not blame me for not joining the liberals in their enthusiastic laudation of agnosticism; for agnosticism is to my mind illiberal, anti-scientific, and reactionary in the highest degree. How does Mr. Spencer know that the main problem of biology, the question as to the origin of organized life, lies beyond the ken of human knowledge? Judging from the tone of his expositions, he is not informed on the present state of things and has not very closely followed the investigations of biologists. And how does Mr. Spencer prove his proposition? He does so in the old-fashioned dogmatic way, by quoting Scripture. There is only this difference between him and the theologian, that the latter quotes from the Bible and Mr. Spencer refers to his own writings."

"Mr. Amos Waters, I know, understands by agnosticism the agnosticism of modesty, a suspense of judgment as to problems as yet unsolved, and I repeat that I gladly join him on that score; but agnosticism is commonly understood as Mr. Spencer defines it, and whatever admiration we may have for Mr. Spencer personally, for his noble intentions, his studious habits, his industrious collection of interesting materials, his versatility in writing on various subjects, we must not be blind to the truth that his philosophy is wrong in its roots and exercises as baneful an influence as does the religious dogmatism which it attempts to replace. Its main usefulness consists in stimulating thought and in quieting the complacent assurance of the old fogies, who imagine themselves in possession of the whole truth."

Referring to Mr. Waters's characterization of his view as "the Christian conception," he says that there is nothing to be alarmed at in this. The Christian God conception has itself undergone changes:

"The God of the church authorities who instituted the inquisition is different from the God of the Reformers, and the God of Calvin is no longer the God of the Presbyterians to-day. My own God conception has developed from the traditional Protestant God idea and has been modified under the influence of science, passing through a period of outspoken atheism, until it was transformed into what some sarcastic but friendly critics of mine have called the God conception of atheism—the doctrine of the superpersonal God. . . ."

"I am fully satisfied that my article on God is sufficiently clear not to be misunderstood as a pandering to that kind of a God belief which I have unhesitatingly and without any agnostic suspense of judgment branded as a superstition. Mr. Amos Waters must bear in mind that I have not requested any one to believe in God, but have simply investigated the question of what God must be, if we understand by God that something which molds the world and shapes the fate of man. I have, however, come to the conclusion, and am becoming more and more convinced, that the superpersonal God, the God of science, the eternal norm of truth and righteousness, is God indeed; He alone is God. He is what the pagans (including the pagan Christians) have been groping after for ages."

FOREIGN TOPICS.

THE BELGIAN TROUBLES.

SINCE 1884, the Catholic Party has ruled in Belgium. Its opponents were unable to muster sufficient force, for, being divided into Liberals, Radicals, and Socialists, and giving full scope to the individual opinion of the voter, they were ill matched against a party whose followers are trained to strict obedience on religious principles. Of late, however, the opposition parties have shown a tendency to unite, and have been hoping for victory at the next election. To prevent this, the premier has proposed certain "reforms," suggested by M. Schollaert, abolishing the "blanket ballot" in the large cities, but retaining it in the country districts. This, it is charged, would insure the election of Clerical candidates where the Catholics are in the majority, and while enabling the Clericals to avail themselves of the services of a strong Catholic minority in the cities, the Opposition minority in the country districts would be prevented from making itself felt.

Serious riots were the result. Stormy scenes in Parliament ensued. A general strike was threatened by the Socialists, who have sufficient power to make good their word, and the Government has been forced to pigeonhole the obnoxious redistribution bill. The *Indépendance Belge*, Brussels, says:

"There is only one way out of the difficulty. The country must be divided anew, yes; but in such a way that the majority rules. A redistribution which is intended solely to benefit the Clerical Party is not to be tolerated. The system which allows the Clericals to obtain a seat at a second ballot must also be abolished. What we need is a system which enables each party to muster its full strength on the first ballot, and quiet will not return for good until these much-needed reforms have been accomplished."

It appears that the opposition parties are very much in earnest, and that the militia could not well be depended upon to support either the king, the ministry, or the present parliamentary majority. The *Étoile Belge* expresses itself in the main as follows:

"The militia is with the people. At Doornik, when General Tournay called for cheers for the king, only three officers responded, the men all remained silent. At Liège a militia officer addressed the crowd as follows: 'We have inscribed on our swords the device "For King and Country." But if the king interferes with the rights of the people, we will say: "For the Country only." Every one who is not an out-and-out supporter of the Clerical Party indorses these sentiments."

The Clerical *Gazette de Liège* suggests a referendum, but it seems that the majority is so certain to be with the Opposition that the Government would only suffer moral defeat by risking a referendum. "There is no doubt that even good Catholics are revolting against the Clerical Party," says the *Paris Journal des Débats*. Naturally developments are watched with much interest in the neighboring countries, for a revolution in Belgium would lead to serious international complications. We condense the following from an article in the *London Spectator*:

There was revolution in the air, and a revolution in Belgium would gravely affect the military position of France and Germany. A republican Belgium would of a necessity be an appendage of France, the German staff and the British admiralty would be wild with suspicion, and, as in 1830, all Europe would be compelled to intervene to prevent a general conflagration. The Belgians, tho' prosperous and pacific, are divided by differences of race, creed, and social condition more violent than exist in Ireland, where, at all events, all alike, with few exceptions, speak the same tongue. The French-speaking Belgians despise the Flemish-speaking, the Flemish-speaking despise the French-speaking, the Clericals and Secularists hate each other as only religious parties can hate. The possessors of property expect that the "ugly rush" which used to be talked of in England will occur to-morrow, while the workers declare they are worked to death

for the benefit of others. The wisest course would be to let the majority rule; but that is precisely what the Catholic and Flemish-speaking will not do.

In the *Nation*, Berlin, Léon Leclère says:

"If the state of public-school education is to be deplored from a material point of view, considering the competition with better educated nations, political questions must also be considered. For five years Belgium has been a democracy ruled by the ballot. The people has become the ruler. But this ruler is little fitted to exercise power, for one sixth of the adult males, that is to say of the voters, are unable to read a newspaper or even an election manifesto. They are analphabets."—*Translations made for THE LITERARY DIGEST.*

WHAT DREYFUS SUFFERED.

ALFRED DREYFUS has been permitted to see his relatives, and to learn of the extent of the conspiracy which for so long a time prevented a revision of his sentence. He has heretofore believed, so it is said, that his superiors were merely the victims of erroneous impressions. Now, however, the significance of the treatment to which he has been subjected is made known. In the *Aurore*, Paris, Clemenceau describes the sufferings of the famous prisoner. We condense it as follows:

Even if he had been guilty of the crime of which he was accused, the punishment ought not to be more than five years' deportation. But Dreyfus would not even hear of a legal protest; he denied the justice of the charges against him in every detail, and refused to ask for clemency for fear that this might be interpreted as an admission of guilt.

Life in the climate to which he was sent is in itself damnable. The French officials never stay more than two years at a time. It was hoped that Dreyfus would die in two or three years at the most. When the atmosphere in his hut became intolerable, he would go into the narrow space between the hut and the stockade. The heat was here still worse, and often he fainted. Then his jailers hoped that he had died. They threw him upon his pallet, ready for the inquest. But he always revived, tho' his continual fever, the excessive use of quinin, and his many fainting fits caused excessive weakness in an otherwise robust body. To reduce his chances of life, the preserves he ordered from Cayenne were taken from him and his rations of milk were denied to him. Food which he could not eat was given him instead. But he would not die.

To all this must be added the tortures of the mind. The letters

TRUTH: "I must come out."

FRENCH GENERALS: "Not if we know it."

—Punch, London.

his relations wrote were never given to him in the original. He was not even permitted to see the handwriting. Copies, mutilated and altered, alone were given to him. At last the entire correspondence was withheld, and he was told that his family had abandoned him. A few books were left to him; but if he wrote down over so trivial a thought, the paper was torn to shreds before his eyes. At last he copied chapter after chapter as the minimum of brain work necessary to keep him from becoming insane.

The death of Dreyfus was so necessary to the conspirators, we are further told, that Paty du Clam informed the Minister of Colonial Affairs that an attempt would be made to liberate Dreyfus. Then followed, at a time when his friends were already active in their endeavor to procure a revision of his sentence, an increase in his punishment. He was placed in irons. He was put upon rations of bread and water. It was then that the famous stockade was built, which Louis Hanet, a member of the French Institute, describes graphically as follows in the *Figaro*:

"Between the box which served as his hut and the stockade, the distance was only 40 centimeters [$13\frac{1}{3}$ feet]. I beg every reader to note this carefully. Fancy yourself walking in a narrow groove, touching the wall on each side, in a climate like that of Guiana. This lasted a year. At last when the prisoner was too frequently in danger of asphyxiation, the doctor demanded a change. Then only the box was raised a little, to enable the hot tropical sun to reach the prisoner. No wonder that Mme. Dreyfus was not allowed to visit her husband. She would have described these things. Somebody would have been found to ask questions in Parliament."

No wonder that the authorities provided a coffin and the materials needed for embalming the unfortunate prisoner. It should be remembered that all this is true to the letter. M. Lebon, the then Colonial Minister, does not deny it. His only excuse is the rumor that an attempt would be made from America to liberate the prisoner.

That Dreyfus will be declared innocent by the new court is now tolerably certain. Even Déroulède admits now his innocence, and Rochefort believes that the *intellectuels* have definitely triumphed over the *patriots*. The last efforts of the anti-Dreyfusards to obtain some evidence against him are not lacking in

humorous aspect. A wag obtained 750 francs from Quesnay de Beaurepaire—the judge who resigned from the Court of Cassation because he would not admit that Dreyfus could be innocent—un-

"ARE THEY TAKING ANY ONE TO REPLACE DREYFUS ON 'DEVIL'S ISLAND'?"
"NO. IT ISN'T BIG ENOUGH TO HOLD THEM ALL."

—Fischietto, Turin.

der pretense of furnishing evidence hidden in Switzerland or Germany. The money was returned to M. de Beaurepaire after he had been allowed to boast of the "evidence" he would obtain. The *Aurore*, in order to ridicule the weakness of the French for mysteries, publishes the following amusing persiflage of the letters received by the unfortunate Beaurepaire:

"Ascend on a calm day the Eiffel Tower, as far as the second platform. Drop a Lebel bullet which has been wrapped in a copy of the *Libre Parole*. From the point where it touches the ground, draw a direct line to north-northeast. At a distance of fifty yards dig three feet into the ground. You will find an oaken case with a silver lock, containing a pocketbook of shark's skin. In the left-hand pocket you will discover the name of a small town in the West, in which lives the veteran of the African wars who has the parchment with the proofs of Dreyfus's guilt. Knock three times at the back door. When it opens pronounce the words, 'Ad iniqua per occulta!' The old African will take off his blue glasses and false beard, and, dressed in Bedouin garb, will reply: 'For Boisdeffre, for our country, for the forgers?' He will take you by the hand and lead you through the garden to the little stone steps which enable you to get to the river. He will loosen the last step, the one washed by the flood, and produce an old sabretash, of the pattern of the Hussars during the first empire. In this is carefully hidden the document which will relieve the public conscience."

In the *Figaro*, Gaston Deschamps makes fun of the weakness of France for "traitors." "At first it was Bazaine," he says. "He is dead now. Somebody had to take the job. Dreyfus was given it, but the people discover that he isn't a genuine traitor at all. Now they are mad. They are entitled to their traitor, they must have one, can't live without one."—*Translations made for THE LITERARY DIGEST.*

DECLINE OF FAITH IN REPUBLICS.

FOR some time past there has been noticeable in Europe a marked decline of belief in the value of the republican form of government—not, however, of democracy. The conviction that the rule of the masses by means of the referendum will bring the millennium is stronger than ever among the Socialists; but the bourgeois form of republic is decidedly discredited. The *Spectator*, London, sketches the skepticism with which it is regarded as follows:

"All through the 'forties, 'fifties, and 'sixties, the ideal of genuine Liberals, the system toward which they looked with hope and a certain enthusiasm as of the youthful, was republicanism. If only the monarchies would take themselves away, and men organized under a wide system of suffrage would govern themselves through themselves, then everything would go right, war would

PRESIDENT LOUBET: "At last, my dear Mariaune, you realize that mud baths are not good for your constitution, and now the clear water will benefit you."
Humoristische Blätter, Munich.

cease, oppression would be regarded as loathsome, and the economic miseries of the multitude, which were as clearly perceived then as they are now, would gradually be removed. . . . Those impressions produced in 1848 a dozen abortive revolutions, and in 1871, when in France a great defeat had shattered the prestige of a dynasty, a successful one, and they regulated for more than a generation the aspirations of all who, whether from misery or from thoughtfulness, are unable not to aspire. At present, tho they are not dead, and indeed can not die, they have been profoundly modified, and may almost be pronounced in a state of catalepsy. The universal arming of the peoples, which produces a sort of natural demand for a commander-in-chief; the rise in Germany of a strong monarchy, ruled in succession by two most interesting individuals, Bismarck and William II.; the remarkable diffusion in Austria of belief in the Grand Referee; the usefulness of the monarchy in Italy as a preventative of disunion; the steady growth in power and visibility of autocratic Russia; and the immense popularity of the British Queen—have all tended to revive, both in the masses and the reflective, the belief that there is a force in monarchy which neither logic nor ridicule suffices to disprove. . . . France since it became a republic has repeatedly fallen into the hands of inferior jobbers, who have not conquered, have not founded, and have not in any way whatever proved leaders of mankind. They have not even kept clear of the dirtiest pecuniary corruption. They have not made their country as strong as her conqueror, and of late they have shown a disposition to coquet with pretorianism; that is, in the opinion of all Liberals, to go further backward than even reactionaries wish to go. There is certainly nothing noble in the present position of France. America, it is true, has been more attractive, for in her great Civil War she developed magnificent patriotism and endurance, she produced in Lincoln an almost ideal republican chief, and her astounding increase in strength has removed from the general mind the impression that republics are always weak. The effect of her example has, however, been seriously weakened by the corruption rampant in her great cities, by the extreme slowness with which she produces great men, and by her almost entire failure to solve the greater economic problems. . . . Taxation, it was thought, would be lighter, dangerous accumulations of wealth would be infrequent, and the mass of mankind, who, instinct tells us, must always labor if the earth is to yield her increase, would perform that labor under conditions favorable at once to happiness and to intellectual progress. The recent experience of white mankind has not verified those anticipations. The Americans, who seemed for a moment likely to realize them, have turned aside to try a colossal experiment in individualism, which, whatever its ultimate result, has for the present increased the disparities of fortune to an amazing degree, so that there are now individuals with the income of ten thousand prosperous workmen, that the opportunities and careers open to all men have been seriously diminished—through trusts—and that there is danger of a whole community consisting only of capitalists and those to whom they give orders. . . . The human race, however, so inventive in the domain of creeds, has never shown itself inventive as regards methods of government, and at present displays a singular shrinking from any method which has once failed, even tho it succeeded for long periods. It seems unable or unwilling even to think of any plans of government except confiding the executive to a hereditary monarch or confiding all practical power to representatives of the people. . . . The peoples consider only monarchy and republicanism, and, for the reasons we have indicated, the favor of republicanism declines, with a grave result, we fear, in an increase of political hopelessness, and therefore a decrease of political energy."

GREAT BRITAIN'S POSITION TOWARD THE BOERS.

"WHAT is needed in South Africa is quiet on the part of the British," says the *Deutsche Tages Zeitung*, Berlin; "yet England will hardly allow herself to be turned from war. For things have come to such a pass that the British possessions—if at all—can only be retained at the cost of war. England knows this, and that is why Chamberlain is master of the situation."

The situation as thus described is recognized not only by a multitude who write to the English newspapers demanding revenge for Majuba Hill, but also by more thoughtful persons. In *The Nineteenth Century*, Sir Sidney Shippard, lately administrator of British Bechuana Land, declares outright that the British Government must resort to war immediately, else South Africa will become a great Dutch republic. Again, in *The Contemporary Review*, the old doctrine, "Once a British subject always a British subject," is revived. When the Boers left the Cape Colony after it had been ceded to Great Britain, the British Government argued that any one who became subject to them could never free himself, and that the Boers "carried British soil on their feet," i.e., the parts they populated became of themselves British territory. Mr. Frank Safford declares that the Transvaal having once been British territory, whether the Boers liked it or not, it remains so forever unless an act of Parliament specially decrees otherwise, "as the sovereign has no right to release subjects from their allegiance." Yet there are plenty of Englishmen who believe that such a war would be unjust, and that it would hurt England more than if Mr. Chamberlain were to withdraw from the position he has taken. *The Westminster Gazette*, London, says:

"But if we want victory, if we are seeking annexation, if we are filled with undignified panic about the supposed aims of the Dutch, and if we really imagine the power of Great Britain in South Africa to hang on the suffrage dispute in the Transvaal, then, of course, we shall spurn these concessions and mobilize our troops. But let there be no mistake about the nature of this issue. We shall be face to face with a united Dutch South Africa. Mr. Schreiner for the Cape Government and Mr. Fischer for the Free State have indorsed Mr. Krüger's terms. Mr. Schreiner and his government are constitutionally the representatives of our chief South African Colony. We shall, therefore, be entering upon an internecine struggle, in which a majority of our own fellow citizens will be against us. We shall have rejected and vetoed the advice given us by our own self-governing colony."

The Economist, London, expresses itself to the following effect:

The attitude adopted by Mr. Chamberlain can only tend to weaken morally the position of Great Britain. He has rendered a critical situation worse by a systematic appeal to the passions of the English people. He now indulges in violent language and browbeating telegrams. All that is unworthy of the minister of a great country. The situation is rendered worse by the fact that his excitement is noticed in other countries.

The London *Echo* still believes that the war may be averted, but asserts that the object is to obtain larger grants for British armaments. It says:

"Mr. Chamberlain himself let the cat out of the bag. On three previous occasions, he pretended, war with the Boers had only been averted by prodigal military expenditure on our part, and

QUEEN VICTORIA: "Are you not afraid the gun will burst?"
CHAMBERLAIN: "So far I have only loaded it with blank cartridges."
—*Amsterdammer*.

overwhelming display of force. Already, in connection with the present dispute, we have increased our military garrisons at the Cape and at Natal at an extra cost of half a million sterling per annum. Mr. Chamberlain, in short, contrives scare after scare in order to make it easy for his brother brigands at home to wring more money from the taxpayers for more soldiers and more guns. Nobody believes there will be war, but it is so easy to tickle the 'patriotism' of the average British fool by reminders of our licking at Majuba Hill, that you may take a few more shillings out of his pocket to squander on military preparations. Foreigners simply laugh at the farce, and that is really the worst of it; because, if we can not get rid of our windbag Colonial Minister, some great danger *may* confront us when it may be necessary that a *man* should speak for England—not a pair of bellows."

The extreme Radicals and Socialists are decidedly against the war, including *Reynold's*, which some time ago we erroneously classed among the jingo papers. Countless are the warnings which come from South Africa; the most effective among them, perhaps, a little book by Olive Schreiner, who is a South African, but is linked by strong personal ties to Great Britain. She says:

"Do not think that when imported soldiers walk across South African plains to take the lives of South African men and women that it is only African sand and African bushes that are cracking beneath their tread; at each step they are breaking the fibers, invisible as air but strong as steel, which bind the hearts of South Africans to England. Once broken they can never be made whole again; they are living things; broken they will be dead. Each bullet which a soldier sends to the heart of a South African to take his life wakes up another who did not know he was an African. You will not kill us with your Lee-Metfords; you will make us. There are men who do not know they love a Dutchman, but the first three hundred that fall they will know it.

"Do not say to us: 'You Englishmen, when the war is over, you can wrap the mantle of our imperial glory round you and walk about boasting that the victory is yours.'

"We could never wrap that mantle round us again. We have worn it with pride. We could never wear it then. There would be blood upon it, and the blood would be our brothers'."

Very remarkable is the attitude of the press of other countries. Despite their numerical weakness the Boers of the Transvaal are thought to have a good chance of victory—a chance which, in the event of a general rising throughout South Africa, would become a certainty. It is even predicted that defeat in South Africa would mean ruin to the British empire. Altho the English profess to take up the cudgels for all the "Uitlanders," *i.e.*, foreigners, it is well known that only the English rebel; the French and Germans in the Transvaal will side with the Boers. In Holland, indignation meetings are held. At one of these, Mr. Beelaarts van Blokland said:

"Remember the history of the Boers, how they have been ill-treated; driven from their homes, deprived of their rights, until at last they became strong enough to resist; how, even after their independence seemed assured, England broke her word and ridiculed their complaints. Remember that even for the enormous crime of the Jameson raid no reparation was made. At this very moment, while Sir Julian Pauncefote speaks of arbitration at The Hague, Chamberlain continues to utter his untruths against the Transvaal. How can we trust the justice of England?"

In the *Économiste Français*, Paris, Pierre Leroy Beaulieu expresses himself to the following effect:

Threats will never succeed with the Boers, and their attitude shows that their patience as well as their generosity is pretty near at an end. If more is wanted than President Krüger, for the sake of peace, has offered, war must be resorted to. Now what are the chances of the English? Leaving the altogether uncivilized parts, such as Rhodesia, out of the count, there are some 391,000 Boers and 311,000 English* in South Africa. Even in 1880-81 many Free-State Boers assisted the Transvaalers, and when the Jameson

*This number is frequently described as excessive. Peaceable Englishmen writing from South Africa assert for instance that not 21,000 male Englishmen are to be found in the Transvaal, altho that many names are on the petition to the British Government.—Editor *The Literary Digest*.

raid occurred many Natal Boers crossed the frontier to fight with their brethren. Forty thousand men, at the smallest computation, is the number which the Boers would put in the field. England can hardly muster as many, and the quality would not be nearly as good, as the English element lives mostly in the cities. England would need, perhaps, 80,000 men to carry on the war with reasonable chances of success. It would be difficult to furnish supplies, for the Boers would see to it that no English army is supplied in the country itself. When the British army, after much fighting and hardship, reaches Johannesburg, it will be in no better position than the Spaniards formerly and the Americans now in Manila. The surrounding country will, perhaps, never be conquered, considering the determined character of the Boers. Conquest is no easy thing. Napoleon was beaten by the Spaniards on their own soil, yet his troops were superior to those England can furnish to-day. But suppose England wins. Can she hold the Boers in subjection and oppose Russia at the same time?

The *Kölnische Zeitung*, Cologne, declares that Germany will remain neutral, but explains that Germany can afford to do so as the Boers are quite able to take care of themselves. In the *Deutsche Revue*, M. von Brandt points out that Britain's rule in India is anything but firmly established, and that a rebellion is only too certain if her prestige suffers. "It is incredible that England should risk all for the pleasure of subjugating the Boers," says the *Indépendance Belge*. The *Handelsblad*, Amsterdam, thinks the English may hope to exterminate the Boers ere they get strong enough to take the offensive for the mastery of South Africa; but the main reason for the war would be that Rhodesia is bankrupt, and that the men at its head wish to hide this fact. It adds:

"There was a deficit of \$2,555,000 last year in the budget of the Chartered Company, and this year the estimated deficit is already \$2,090,000. Even the Chartered Company can not hold out against this. So the Jameson raid, for the purpose of annexing the Transvaal gold-fields, is to be renewed, but this time with British regulars. Unfortunately, the Boers will fight, and the English throughout South Africa are full of fear. Kimberley and Newcastle have already petitioned for guns and fortifications. Certain it is that the Afrikaners are more enthusiastic and resolute than ever, and a declaration of war is by no means synonymous with the destruction of Boer independence. Many Afrikaners are convinced that such a war means Boer rule throughout South Africa in the end."

Beyond a hope that the United States, on the principle that the rule of the English-speaking people must be established throughout the world, will offer some assistance, no alliance against the Boers is in sight. The British Colonies have offered a few insignificant detachments only. German mercenaries can not be obtained in this case. But the jingo papers demand that the war be fought with troops raised in India, and that the Basutos, Swazies, and what is left of the Zulus be utilized against the Boers.—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

A CURIOUS lawsuit was recently won by the *Vorwärts*, Berlin. That paper asserted that the Saxon supreme court was influenced against the Socialists. The Saxon judges brought suit, and the Berlin supreme court decided against them!

THE Prince of Monaco declares that Anna Gould's husband has no right to his title, and the matter may be fought out in the courts. It is, however, certain that many of the present-day French nobility do not derive their titles from noble deeds of ancestors. The Pope supplies them. The Count de Jametel was merely Mr. Jametel a short time ago. The Prince d'Achery's father was honest Mr. Dachery, who had a store in St. Quentin. The Prince of Nissol, the Duke of Astrando, and the Duke of Esclands are all titles which should be examined by intending American fathers-in-law.

THE practise, which originated in Italy, of using artillery to ward off hail-stones has been used with considerable success in the province of Lombardy on several occasions. The Italian Government, with commendable alacrity, has placed some of its black powder at the disposal of the authorities for this purpose. The cloud of heavy black smoke, so familiar to men accustomed to battles in the days of black powder, is said to prevent the hail-stones from advancing even in cases where the wind is favorable. At Calepi a thunder-cloud was diverted at a distance of 3,000 yards.

FOREIGN POSSIBILITIES OF
AMERICAN COMMERCE.

Consul Canada, of Vera Cruz, transmits newspaper clippings describing a new cotton-mill located in Orizaba, about eighty-two miles west from Vera Cruz on the Mexican Railway, as follows:

"The company interested in the new concern consists mainly of French capitalists. The capital is \$2,200,000. Work on the building was commenced December 1, 1896. In the latter part of August, 1898, the first turbine wheel was installed. The power is derived from a fall in the Rio Blanco—a height of 82 feet—5,000 liters per second. The water is stored up in a tank containing 1,200 cubic meters, moving two turbine wheels of 500 horsepower each. From the turbine pit, 135 feet deep, the water flows through a tunnel 670 meters in length and is used again by the cotton-factory at Nogales, another suburb of Orizaba. The factory occupies an area of 170 square meters. The buildings are lit with 1,200 incandescent lamps and 20 arc lights. The company generates its own electricity. In addition to the power derived from the turbine wheels, there is a magnificent steam-engine of English make; capacity, 450 horsepower. There are eight Northrop American looms. The balance of the machinery, with the exception of the electrical plant, is English. The electrical part is French. This factory is now the second largest in the republic, the largest being that at Nogales. This concern employs some 950 operatives—men, women, and children—but the help so far is almost entirely male, girls and women being scarce in the district. Germans and Frenchmen are in charge of the printing. Six colors are printed simultaneously, with fine engraved English cylinders. The capacity of the mill is 1,500 bolts a day. The mills are turning out various grades of goods, from common manta to prints. At present they are not making a very high class of goods, but when the help gets more intelligent they will do so."

Minister Straus writes from Constantinople, under date of May 18, 1899, that, according to a note verbatim from the ministry of foreign affairs in Turkey, the regulations prohibiting the exportation of horses from that country have been removed and a duty of 5 Turkish liras (\$24) will be charged upon each horse exported. As inquiries are made from time to time regarding the export of Arab horses from Turkey, adds Mr. Straus, this information may be of interest.

Consul Skinner of Marseilles, under date of May 3, 1899, transmits the following information:

"Reports from Algeria indicate that standing crops will be seriously damaged and in some cases destroyed by the clouds of grasshoppers now moving in a northerly direction. Ten thousand francs (\$1,930) have already been placed at the disposal of the general of the division for the first expenses incurred in fighting against the invasion, and steps have been taken to secure \$38,600 additional for the same purpose. Near Biskra 3,200 camels are being employed in the transportation of inflammable material, which is being burned where deposits of eggs are found. In all parts of the colony men are at work plowing up eggs and destroying them. It is hoped that the energetic measures being taken will prevent a now menaced catastrophe. The Algerian wheat crop of 1898 was estimated at 24,118,000 bushels. The exports of cereals from the colony during 1897 were as follows, in tons: Wheat, 54,178; corn, 971; barley, 13,492; oats, 32,781; flour, 2,826."

Consul-General Holloway writes from St. Petersburg: The Russian Government has raised the pilotage for steamers and sailing-ships trading with Cronstadt and St. Petersburg from 60 copecks (30 cents) per foot draft to 6 copecks (30 cents) per register ton from and to sea. The difference is considerable, amounting to 60 roubles (\$30.90) for a steamer of 1,500 tons loading or discharging in Cronstadt, and 120 roubles (\$61.80) if such steamer goes up to St. Petersburg.

An analysis of the banking and railway statistics of Ireland for 1898 shows that the amount of

deposits and cash balances in the various banks in Ireland on December 31, 1898, was \$238,156,777, being an increase, as compared with 1897, of \$3,387,084. The total amount was made up of \$191,925,027 in the joint-stock banks, \$35,160,462 in the post-office savings-banks, and \$11,071,288 in the trustees' savings-bank. These figures, respectively, show the following increases as compared with 1897: \$671,577, \$2,525,714, and \$189,793. It is interesting to note in this connection that not only was the total amount in the banks the largest ever recorded, but that in each class of banks the deposits were the largest on record. The average bank-note circulation at the close of 1898 was \$31,150,466, a decrease of \$3,260,533 as compared with 1897. There were 2,988 miles of railway open in Ireland at the close of 1898, the earnings of which were \$16,979,597, an increase over 1897 of \$228,929, or 1.4 per cent. The local financial papers seem to consider the above figures evidence of a very satisfactory condition of affairs as regards the resources at the command of the people, and of an increased capacity to save a portion of their earnings. While this may be partly true, it is believed that these increased deposits in the banks, drawing little or no interest, are due to some extent to distrust in many of the businesses in which the people formerly invested, and partly to the high price of really sound securities and the consequent small dividends on money invested.

The wool market in the province of Silesia has not only decreased in quantity during the past five years, but the quality has deteriorated. Breslau, the capital of the province of Silesia, is the chief market of Germany for all kinds of wool. The amount of wool offered for sale in Breslau during the year 1898 was as follows: Old fine to extra fine Silesian wool: Fleece washed, 495,000 pounds; in the grease, 275,000 pounds. Wool of sheep more or less crossed with Rambouillet, fleece washed and in the grease, 825,000 pounds; better quality of Posen wools, fleece washed and in the grease, 550,000 pounds.

In the year 1898 the prices per 50 kilograms

H. H. BALLARD, 327, Pittsfield, Mass.

(110.23 pounds), for Silesian wools were as follows: Fleece-washed extra-fine "Electoral," \$57.12 to \$64.26; fine wools, \$50.00 to \$57.12; middle fine, \$41.55 to \$48.80; middle, \$30.94 to \$39.27; in the grease, fine to extra fine, \$13.09 to \$16.66; Posen wools: middle fine to fine (special quality), \$30.94 to \$42.84; in the grease, \$11.42 to \$13.80.

In 1897, the amount of wool offered for sale was 10 per cent. less than in 1898, and in 1894 the quantity of wool was at least 50 per cent. greater than in 1898, and the quality was better. On account of the importation of Australian and Buenos Ayres wools into this market since 1894 the price of wool has been very low; in fact, it was lower in 1894 than ever known before. For that reason the farmers, who had been raising the pure Silesian wool, imported English and Scotch rams, and the cross produced larger sheep for meat purposes, but an inferior quality of wool in comparison to the pure old Silesian product, which is known for its soft, silky, and long fleece as one of the finest qualities of wool, and was sought after by the manufacturers of fine cloths, dress goods, and shawls. For the production of these goods, the manufacturers are now mixing the fine Silesian with wool imported from Sydney and Port Philip, as the pure Silesian wool is too high and scarce.

PERSONALS.

ROSA BONHEUR had many honors showered upon her since the Empress Eugenie gave her the decoration of the Legion of Honor. She was always a staunch patriot. It is related, says the *London Chronicle*, that in 1871 Frederick, crown prince of Prussia, rode into her château grounds at the head of a troop of Uhlans. Dismounting, he asked graciously that the great artist would do him the honor of receiving his visit and show him some of her pictures. A servant carried the message to her mistress, and in a few seconds returned with the answer: "The crown prince of Prussia is welcome to look at the pictures he wishes to see, but Rosa Bonheur can not, and will not, entertain her country's conqueror." The prince, as may be expected, was greatly taken aback with such an answer. For a moment he stood undecided, then said carelessly: "Well, well, so be it; but as I can not see the artist, I do not care to see her pictures; but tell Rosa Bonheur that her courage is above that of men, for in all France there is not a householder who would have dared defy Frederick of Prussia at the head of a regiment of soldiers."

THE following story about the Archduchess Valerie of Austria is told by the Vienna correspondent of the *London Morning Post*. A short time ago a thirteen-year-old schoolboy was summoned home from his boarding-school at Linz to attend his father's funeral in Vienna. The lad was without traveling companions, and while waiting on the platform at Linz began to cry bitterly. His distress was noticed by a lady in a first-class compartment, who summoned the guard and had the boy brought to her. She paid his excess fare for traveling first class, and devoted herself to the task of comforting him and relieving the tedium of the long journey to Vienna, telling him that she too had suffered much from the loss of a parent who had died suddenly and unexpectedly in a foreign land. The schoolboy was not a little astonished at the end of the journey to learn that the kind-hearted lady was the Archduchess Valerie, daughter of the emperor.

In Mr. Justin McCarthy's "Reminiscences," recently published, there is a good story about Thomas Carlyle and his friend Allingham, the poet and essayist, whom Mr. McCarthy describes as one of the gentlest of men. One thing that would never have occurred to any of his friends as possible was the chance of his taking on himself to dispute with Carlyle. But once when Carlyle was denouncing an English statesman, he gently urged that something might be said on the other side. "Eh, William Allingham," Carlyle broke

forth, "you're just about the most disputatious man I ever met. Eh! man, when you're in one of your humors you'd just dispute about anything." It was the fable of the wolf and the lamb over again.

MAJOR MARCHAND, whose rival factions are combining to exalt into the hero of the hour in France, was born at Thoissey, a village on the edge of the district where the Mâcon wine is grown, says the *London Chronicle*. His father, a grizzled, hony little man of sixty-five, still plies his humble trade as a carpenter, and makes a decent living, for the country around is fairly prosperous. The major is the eldest of four sons, all of whom have left home to seek their fortunes abroad. One died as a non-commissioned officer in the Sudan, and another is employed as a civilian in Africa, while the youngest hopes to become an engineer in the navy.

AN amusing story concerning the great Bohemian poet and dramatist, Maurus Jokai, is told in the *Glasgow Herald*. His youthful drama, "Dalma," was performed in its author's presence at Pesth a few days ago, and the students, with true Continental enthusiasm, took the horses out of his carriage to drag the hero home. Arrived at the house, Jokai put his head out of the carriage window, declaring that he had left these premises more than three months, a fact which he had for some moments past been endeavoring to explain to them. Nothing therefore remained but for the students, with many a hearty laugh, to drag the carriage to the poet's new abode.

MR. EDMUND GOSSE has written a paper on "Stevenson's Relations with Children," in *Chambers's Journal*. In it he relates a story of his youthful days as narrated to himself by Stevenson. He was still a little fellow when in the summer holidays, after reading a number of detective novels of a bad kind, he was passing one Sunday afternoon along a road in an Edinburgh suburb. There he saw a deserted house, furnished, but without a caretaker. It struck young Stevenson that it would be a fine thing to break into this house, which he accordingly did, roaming from room to room, looking at books and pictures in great excitement, until he thought he heard a noise in the garden. Terror seized upon him as he imagined himself handcuffed and conveyed to prison just as the church folks were returning home. He burst out crying, then managed to creep out as he had come in.

DAVID B. HENDERSON, who will probably be the speaker of the next House of Representatives, once fired a rather hot shot, according to *The Argonaut*, at Holman of Indiana, whose savage opposition to any and all appropriation measures earned him the title of "watch-dog of the Treasury." Some years ago, when an appropriation for Holman's own district was up for consideration, the latter arose, and, departing from his usual custom, made a warm speech in its favor. The instant he sat down Henderson was on his feet. "Mr. Speaker," he said, "the member's address brings to mind Byron's lines:

"'Tis sweet to hear the honest 'watch-dog's' bark
Bay deep-mouthed welcome as we draw near home."

THE Germans ever had the highest admiration and respect for Gallifet, and when the cavalry hero attended the German maneuvers one autumn in the eighties by special invitation of the old emperor, relates the *London Chronicle*, he was treated with the most exquisite courtesy and consideration. His majesty placed him on his right hand at table, and felt inclined to repeat (he remarked later) what Frederick the Great once said to the Austrian Marshal Dann on meeting him

GET Macbeth's "pearl top" and "pearl glass" lamp-chimneys; they are made of tough glass, tough against heat; they do not break in use; they do from accident.

They are clear, transparent, not misty. Look at your chimney. How much of the light is lost in the fog?

Be willing to pay a little more.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

MACBETH, Pittsburgh, Pa.

Diet for Summer.

Few people realize what an important part the food plays in the temperature of the body. It is just as important that the diet be changed with the weather, as the clothing. Foods that heat the blood should be avoided when the mercury stands at 80 degrees as much as one would shun a heavy overcoat.

Meat heats the blood and should not be eaten in hot weather. Many people are so accustomed to their meat, however, that they feel as if there was something lacking in the meal without it.

An investigator has been experimenting for years on a substitute for meat and has at last discovered a delicious, dainty vegetable meat that can hardly be distinguished in taste from beef. This new and nutritious product is called Protose. It contains 25 per cent. more nutriment and 10 per cent. more fat-making properties than beef and can be served in any manner that beef or chicken can be prepared.

The noted trainer at Princeton College, Mr. Walter M. Christie, says: "For hot weather Protose takes the place of meat admirably and one feels the better for using it."

Protose is made by the Sanitas Nut Food Co., at Battle Creek, Mich. Any of our readers who will mention THE LITERARY DIGEST, and enclose six cents to the maker, to pay postage, will receive by mail free a sample can and handsome booklet on nut foods.

after the seven-years' war. The marshal was for taking his place at table opposite the king, but Frederick exclaimed: "No, that will never do; come and sit beside me; I know only only too well what it is to have you on the other side."

A WRITER in *Cassell's Magazine* tells a pretty story of Sardou. In his twenty-third or twenty-fourth year (the date was April, 1854) he had contrived to produce at the Odéon a comedy called the "Taverne des Étudiants." The author himself had named it simply "The Tavern." The manager of the theater, which is situated in the students' quarter of Paris, renamed it, with an eye to gain, "The Students' Tavern," whereupon the scholars, thinking themselves attacked, promptly damned the piece. Sardou's distress both of mind and body was now extreme, and he was presently laid low in his garret by a terrible attack of typhoid fever. On another floor of the house there was living a certain pretty Mlle. de Brécourt, who had sometimes met the unsuccessful interesting dramatist upon the stairs. Missing him, the young lady learned in what manner he was stricken, and running to the top story, she installed herself at his bedside. So good a nurse did Mlle. de Brécourt prove that Victorien was presently in courageous health again; and there is nothing to add except that the devoted nurse became, in a very short time, the not less devoted wife. Yes; there is something else to add, for his young wife, having saved his life, promptly placed in his hands the means of fortune. She it was who brought him under the notice of Déjazet, just as that great actress was founding a theater of her own. The encouragement and support of Déjazet awoke in Sardou the talent which was being stifled. She brought out in succession his "Candide" (the piece he had carried tremblingly to her), the "Premières Armes de Figaro" (his first distinct success), "M. Garat," and the "Près Saint-Gervais." Suffering was at an end, the empty purse began to fill, and nine years later Victorien Sardou was on the flood-tide of prosperity.

MORE OR LESS PUNGENT.

What Did They Mean?—"And was your speech a success?" "Well, when I sat down they said it was the best thing I had ever done."—*Judy*.

No Case on Record.—"Brooks," asked Rivers, "do you know what will cure a wart?" "I never heard of a wart being sick," said Brooks, without looking up from his writing.—*Chicago Record*.

One of Many.—"You are not very fond of sunbathing, are you?" asked her friend. "Not very," replied the girl in the bathing-suit. "My affection for salt water is merely platonic."—*Puck*.

Frightful.—UNEASY PASSENGER (on an ocean steamship): "Doesn't the vessel tip frightfully?" DIGNIFIED STEWARD: "The vessel, mum, is trying to set a good example to the passengers."—*Tit-Bits*.

Bright Future.—MAY: "I shouldn't think you'd be feeling so gay after quarreling with Jack last night."

MADGE: "But just think of making up again!"—*Brooklyn Life*.

How to Do It.—The only way to enjoy a Georgia watermelon is to scoop out the heart with the hands, fetch a swipe or two across the mouth, and let the juice trickle down your neck and arms.—*Atlanta Constitution*.

Her Diagnosis.—"Yes," said the pale woman, "my husband keeps grumbling day after day about the way things are going." "What makes him?" "He says it's patriotism. But between you and me, I think it's rheumatism."—*Washington Star*.

No More to be Said.—MAMMA: "Susie, what do you mean by all this noise? See how quiet Willie is."

SUSIE: "Of course he's quiet, ma—that's our

YOU cannot afford to take chances in painting when, by exercising a little care and common sense, the use of mixtures of unknown composition and questionable value can be avoided and the best materials (and, as you will find, by far the cheapest) can be obtained.

The best materials are Pure White Lead and Pure Linseed Oil. The brands named in margin are genuine.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

game. He's papa coming home late, and I'm you."—*Tit-Bits*.

After Patrick Henry.—HENPECK: "Emily, these biscuits aren't the kind that—"

MRS. HENPECK (glaring): "Go ahead, Henry; go on!"

HENPECK: "That I used to get down in Cuba in the war."—*Brooklyn Life*.

Free Coinage.—TROTTER THOMAS: "I wish I could turn myself into a rumor for a few moments."

WALKING WILLIAM: "What for?"
T. T.: "Why they say rumor gains currency."—*Yonkers Statesman*.

The Last Laugh.—BURGLAR (taking watch from vest): "Ha, ha! excuse me for taking up your time."

SCRIBBLER: "Oh, that's all right—the watch only cost a dollar, and I will get two dollars for the joke. Ha, ha, ha!"—*Judge*.

Theory and Practise.—KIND LADY: "If you did not drink liquor, you would have more to eat."

TRAMP: "Oh, no, mum; no indeed, mum; it's just the other way. If the barkeeper didn't see us huying a drink once in a while we'd soon starve."—*New York Weekly*.

Appreciated.—WATTS: "Did you see that story about an arrowhead being brought up from a depth of more than 1,500 feet underground?"

POTTS: "Yes. Strikes me the fellow that shot it that deep into the earth must have been a pretty good man in his time."—*Indianapolis Journal*.

Ans Wiedersehen.—After the high-church wedding, the fashionable bride and groom shook hands. "Shall we meet again?" she asked, trying to seem interested. "Yes, there's ladies' day at the club, you know," he answered, smiling, for it would be impolite to act bored.—*Detroit Journal*.

The Old Trouble.—"I would like to know," said the gruff old father to the young man who had been calling with considerable frequency, "whether you are going to marry my daughter?" "So would I," answered the diffident young man. "Would you mind asking her?"—*Chicago Evening Post*.

Side Lights on History.—"Do I want the earth?" echoed Alexander the Great. "I should say I do. I want all the earths there are!" "But, my master," urged one of his confidential advisers, "you couldn't display them to any advantage."

PANTASOTE

Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerous inflammable substances, and is not affected by heat, cold or climate. Made in standard colors, plain or figured.

Enough to cover a dining chair, seat or footstool sent for 25 cents in stamps.

Sample Free! 15x18 inches, enough to make a Sewing Companion sent for 2c, stamp with your upholsterer's name.

Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.

THE PANTASOTE COMPANY,
29 Broadway, Dept. P., New York City.

Steel Ceilings

DECORATIVE, DURABLE, AND BEST
FOR ALL CLASSES OF BUILDINGS

Send for catalogue, and give diagram and description of room for estimate.

H. S. NORTHRUP, 52 Cherry St., New York
BOSTON OFFICE, Equitable Building.

You haven't the space." It was then that Alexander wept.—*Chicago Tribune*.

A Feminine Victim.—MR. LINGERER: "I must tell you about the dream I had last night; it was an awfully pleasant one."

MISS WEARY (indifferently): "Indeed!"

MR. LINGERER: "Yes, I dreamed that I was hundreds of miles away from here."

MISS WEARY (with enthusiasm): "Oh, how delightful."—*Richmond Dispatch*.

The Main Question.—A funny incident happened during a performance of "Macbeth" in Dublin. In the sleep-walking scene, when the nurse and doctor appeared on the stage together and confabulated with one another, a loud voice suddenly called out from the gallery, causing a roar of laughter in the middle of a most serious scene: "Well, doctor! Is it a boy or a girl?"—*Tid-Bits*.

Sold.—Her dilating eyes left no doubt that she was deeply horrified. "What dreadful people!" she cried. "The Orientals, I mean! They actually sell wives in department stores, I read here!" "Well, we can't brag much!" protested the man, her husband, speaking in general terms, it is true, but glaring fixedly at the 80-cent rocking-chair she had that day paid \$2.50 for at a bargain scramble.—*Detroit Journal*.

Practising Medicine.—"Doctor," sighed the fat man, "I guess it's no use. I've tried everything you've prescribed and grown fatter all the time. Your latest recommendation was to ride

horseback. I've done so faithfully for a month, but I've taken on eighteen pounds and the horse has lost 160." "Ah! there's a scientific suggestion," said the elated doctor. "Try letting the horse ride you for a while."—*Detroit Free Press*.

Girls Never Understand.—"I don't see," said Flossie, throwing a torpedo on the ground with a bang, "how they manage to blow up a big ship with one of these things." "Oh, you girls can't expect to understand about such things," said Tommy, in a superior manner. "Of course the torpedoes they use are about a hundred times as big, and they use a derrick to lift them and drop them on the ship."—*Harper's Bazar*.

A Fable.—Once upon a time some Parties offered to sell a Farmer a tin box for \$500. "But it contains only sawdust!" protested the Farmer, who took seven daily papers. "Yes," replied the Parties, smiling patiently, "but with a sucker being born every minute, there's going to be a great demand for sawdust. There's bound to be a bulge in sawdust sooner or later." The Farmer was much struck with this theory, and bought the box, mortgaging his farm to raise the money. This fable teaches that with the common people becoming so exceedingly intelligent, as they now are, methods of doing business with them will have to be revolutionized.—*Detroit Journal*.

Current Events.

Monday, July 24.

—More mob violence, bloodshed, and intense excitement marked the efforts to operate the trolley lines in Cleveland, Ohio. A car was wrecked by an explosion, injuring several persons. A boy was shot and killed by a non-Union car conductor, and the police charged repeatedly upon the street mobs. All the Cleveland militia are under arms.

—The reciprocity treaty between the United States and France was signed at Washington.

—The Rev. Dr. Thomas J. Sawyer, the noted Universalist writer and educator, aged ninety-five years, died in Boston.

—The twenty-one strikers arrested in Brooklyn for wrecking the elevated railroad pillars with dynamite were discharged.

—Between 5,000 and 7,000 coat-makers in New York struck.

—About 200 Postal Telegraph messenger boys in New York went on a strike.

—By an explosion of gas in a Pennsylvania mine, four men lost their lives.

—General Wood reports that he has the yellow-fever situation under control at Santiago.

—The final act embodying the declaration of the Peace Conference at The Hague has been made public, for the approval of the respective governments.

—The rumor that President Krüger, of the South African Republic, has resigned, is denied.

—Reports of a Chinese-Japanese alliance are taking a definite form.

Tuesday, July 25.

—Gen. Joseph Wheeler sails on the transport *Tartar* from San Francisco for Manila.

—The state militia to the number of a thousand or more, with the adjutant-general of Ohio in command, have supplemented the troops at Cleveland, to suppress disorder growing out of the trolley strike.

—At the meeting of the Cabinet, Secretary Alger made his farewell, and his successor, Mr. Root, was formally presented.

—The messenger boys on strike in Cincinnati were joined by the newsboys, and scenes of great disorder prevailed.

If you Feel Irritable

Take Horsford's Acid Phosphate.

It makes a refreshing, cooling beverage, and is an invigorating tonic, soothing to the nerves.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

IS IT A TRIFLE?

That Common Trouble, Acid Dyspepsia, or Sour Stomach.

Now Recognized as a Cause of Serious Disease.

Acid dyspepsia, commonly called heartburn or sour stomach, is a form of indigestion resulting from fermentation of the food. The stomach being too weak to promptly digest it, the food remains until fermentation begins, filling the stomach with gas, and a bitter, sour, burning taste in the mouth is often present. This condition soon becomes chronic, and being an everyday occurrence, is given but little attention. Because dyspepsia is not immediately fatal, many people do nothing for the trouble.

Within a recent period a remedy has been discovered, prepared solely to cure dyspepsia and stomach troubles. It is known as Stuart's Dyspepsia Tablets, and is now becoming rapidly used and prescribed as a radical cure for every form of dyspepsia.

Stuart's Dyspepsia Tablets have been placed before the public and are now sold by druggists everywhere at 50 cents per package. It is prepared by the F. A. Stuart Co., Marshall, Mich., and while it promptly and effectually restores a vigorous digestion, at the same time is perfectly harmless and will not injure the most delicate stomach, but, on the contrary, by giving perfect digestion strengthens the stomach, improves the appetite, and makes life worth living.

Use a Sanitary Still and you have it in any quantity. Six styles, \$10 up. Used by U. S. Government. No. 128 N. Green St., Chicago.

COLLAR Button Insurance goes with our one-piece collar button. Kremenitz & Co., 63 Chesnut St., Newark, N. J.

Morning Headache

is usually caused by retention of uric acid in the system which, if not attended to, results in rheumatic, catarrhal or kidney troubles.

Tartarlithine...

gives immediate relief in these cases.

Dr. J. M. Welch, St. Paul, Minn., says: "I gave Tartarlithine to a lady who had been suffering for ten days with a severe headache, caused by retention of uric acid, having been a sufferer from that complaint for several years. For the past ten days her physician could not relieve her headache, and the Tartarlithine helped her very materially—at once."

CHESS.

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

Problem 402.

By J. PECH, PRAGUE.
A PRIZE-WINNER.

Black—Seven Pieces.

White—Ten Pieces.

White mates in two moves.

Problem 403.

By J. JESPERSEN, SVENDBORG.

Black—Seven Pieces.

White—Eight Pieces.

White mates in three moves.

Solution of Problems.

No. 396.

Key-move, Q-Kt 3.

Solution received from M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; the Rev. F. H. Johnston, Elizabeth City, N. J.; P. S. Ferguson, Birmingham, Ala.; R. M. Campbell, Cameron, Tex.; C. R. Oldham, Moundsville, W. Va.; Dr. L. A. Le Mieux, Seymour, Wis.; the Rev. J. G. Law, Walhalla, S. C.; Mr. and Mrs. J. V. Streed, Cambridge, Ill.; Dr. F. M. Mueller, Lawrenceburg, Ind.; J. H. Mimms, St. Albans, Vt.; W. H. Philbin, Archbald, Pa.; M. Marble, Worcester, Mass.; C. F. McMullan, Madison, Va.; J. Astrom, Milwaukee; O. A. Rice, Chicago; G. W. S-V, Canton, Miss.; D. E. Horn, Branford, Fla.; Dr. C. S. Minnich, Palmer, Neb.; "Meropie," Cincinnati; G. Patterson, Winnipeg, Man.; Dr. F. W. Fannin, Hackett, Ark.; M. Crown, Waco, Tex.; the Rev. S. Weston-Jones, Windsor, N. S.; C. E. Lloyd, Washington C. H., O.; H. A. Horwood, Hoboken, N. J.; T. R. Denison, Asheville, N. C.

Comments: "Very good"—M. W. H.; "Still another Queen-massacre"—I. W. B.; "Might pass muster as first-class"—F. H. J.; "Good and easy"—F. S. F.; "A pretty game little fellow"—R. M. C.; "A dandy. Better than 394"—L. A. L. M.; "Pretty but not difficult"—H. W. F.

No. 397.

1. Kt-B 4	2. Kt-Q 3	3. B-Kt 2, mate
K P x R	Any	
1. Kt P x R	2. Kt-Q 3	3. R-R 4, mate
.....	P x Kt	
	R-R 3	3. Kt-K 2, mate
1. Kt-R 3	2. R x R	3. R x K P, mate
	
	Any other	

Other variations depend on those given. Solution received from M. W. H., I. W. B., F. H. J., P. S. F., R. M. C., C. R. O., L. A. L. M., J. G. L. Mr. and Mrs. J. V. S., F. M. M. Comments: "Difficult but rather defective"—I. W. B.; "Solution depends on second move, which is exceedingly intricate"—F. H. J.; "Quite difficult"—F. S. F.; "Very difficult"—R. M. C.; "Deep and difficult"—C. R. O.; "Very fine and difficult"—L. A. L. M.; "First-prize well won"—J. G. L. The reason that so few got this problem is that so many selected Q-K 5 as the key-move. One of our solvers writes: "After 1, Q-K 5, I can see no way by which Black can avert 2, R x P (K 5) dis. ch., and Kt-B 4, mate." The reply to Q-K 5 is R-R 4. If 2, R x P ch, then R x Q, etc.

R. M. C., and Prof. C. D. Schmitt, University of Tennessee, got 304 and 305; L. A. L. M., 395; C. E. L., and H. A. H., and Dr. C. S. M., 394; E. C. Harrison, San Francisco, 392 and 393.

Roasting Pillsbury.

The Washington Post declares that our champion "deserves, and will receive, no sympathy whatever" for losing first prize in the London Tournament. "It was his own fault," etc. His countrymen expected him to take first," etc. To this the Norfolk Landmark felicitously replies: "That is right. If an American enters any sort of contest with a foreigner, he must win or be disgraced. It is true that Lasker, who won the first prize at London, played a phenomenal game, losing only once outright; but that ought not to have disturbed Pillsbury. Pillsbury ought to have risen to the occasion and won every game he played. The American people have no patience with the man who loses, and they make haste to dispose him from their graces. . . . Know all men by these presents: No such thing as a second prize is worthy of consideration in the United States of America. We feel that we are in a position to take everything now, and have just started out to acquire the earth, beginning with the Philippines. It is a pity that our so-called Champion Chess-player can not get the best of a measly Hungarian or Russian. The thing is a shame and is not to be tolerated. Pillsbury should be branded with a red-hot iron, hung by the thumbs for a week, and then shot. . . . Conspex Pillsbury! Out with him!! *A bas le traître!!!*"

Lasker and Janowski.

The latest item of interest in the Chess-world is Janowski's desire to play Lasker a match for £400 a side and the Championship of the World. The French expert is anxious to have this settled early in 1900, and will play anywhere except in London. His objections to the British metropolis are not given. It is the general opinion of Chess-students that Lasker is much stronger than Janowski; but the latter has been playing very fine Chess and improving right along, so that a match between these masters would be productive of some very fine games.

"The American Chess Magazine."

The only magazine in America devoted to Chess begins its third volume with the July number which has just been received. We congratulate American Chess enthusiasts over the fact that Dr. L. D. Broughton, Jr., assumes the editorship, for under his able management we have every reason to believe that we will have a first-class publication. This number is interesting and instructive, and gives promise that the good work will continue. We have advised our readers to subscribe for this magazine, because it was American, and especially because we hoped and believed that it would be helpful to those interested in Chess. It seemed to us at one time that the A. C. M. was fated to go the way of experimental periodicals, but we are hopeful now that it will continue as good as this number, and that it will receive ample support, so that it can increase its worth and influence.

Games from the London Tourney.

LASKER RETURNS THE COMPLIMENT.

The only game Lasker lost was his first with Blackburne. The second time he played the English champion, he wasn't caught napping, as the following game shows:

BLACKBURNE.	LASKER.	BLACKBURNE.	LASKER.
<i>White.</i>	<i>Black.</i>	<i>White.</i>	<i>Black.</i>
1 P-Q 4	P-Q 4	23 B-R 2	Q-Q 2
2 Kt-K B 3	Kt-K B 3	24 Q-Kt 3	P-B 5
3 P-K 3	P-K 3	25 Q-Q 3	P-K 4
4 B-Q 2	Q-Kt-Q 2	26 P-B 4	P x B 5
5 Q-Kt-Q 2	B-Q 3	27 Kt-B 4	P-K 5 (c)
6 P-K 3	P x P	28 Q-B sq (d)	Kt x Kt
7 Kt x P	P-Q Kt 3	29 R x Kt	R-Kt sq
8 Castles	B-Kt 2	30 R-B 2	K-R sq
9 Kt x B ch	P x Kt	31 K-R-B sq	Q-Kt 5
10 R-K sq	Castles	32 P-B 3 (e)	Q x R 5
11 B-K Kt 5	(f)-B 2	33 P x P	R x K P
12 P-B 3	K-R-B sq	34 R-B 8 ch	R x R

19 Kt-Q 3	Q-Kt-Kt 3	41 R-B 8 ch	K-Kt 2
20 P-Q R 3 (b)	P-Q R 4	42 R-B 7 ch	K-B 3
21 R-Q B sq	P-R 5		Resigns.
22 P-R 4	P-B 4		

Notes from The Evening Post.

(a) The exchange of Bishops, challenged herewith, is not at all to our liking. The K B could have been used to better advantage.

(b) Tantamount to wrecking the Queen's wing. This move may have been necessary, but the centre seems worse than the evil.

(c) A beautiful and well-calculated rejoinder!

(d) If 28, R x P, then Kt x Kt; 29, R x R ch, Q x R, and White can not retake the Kt because of Q-K 8 ch. Or, 29, R x Kt, R (K sq) x R; 30, Q x R (if R x R ch, Q retakes, threatening mate), R x R; 31, Q x Kt ch, Q-B 2, remaining exchange ahead. If, however, 28, Kt x Kt, then P x Q; 29, Kt x Q, P-Q 7, and wins.

(e) After 32, P-K Kt 3, P-B 6, White's Bishop would be shelved for good.

(f) If R-K 8, then P-Q 4, which White prevents with his last move, threatening also R-B 4.

(g) Nothing would be gained by continued checking at B 8 and 7, as the King crossing over would ultimately attack the Rook, which then must return to the first rank to guard against R-K 8 ch.

AN EASY ONE FOR PILLSBURY.

Falkbeer Counter Gambit.

BIRD.	PILLSBURY.	BIRD.	PILLSBURY.
<i>White.</i>	<i>Black.</i>	<i>White.</i>	<i>Black.</i>
1 P-K 4	P-K 4	15 P x Kt	Q-R 2
2 P-K B 4	P-Q 4	16 Q-K 2	R-Q sq
3 K P x P	P-K 5	17 B-Q 2	B-K Kt 5
4 B-Kt 5 ch	P-B 3	18 (f)-B 2	R-K B
5 P x P	P x P	19 Q x R	B x K P
6 B-B 4	Kt-B 3	20 Q-Kt 2	Q-Q 5
7 Q-K 2	B-Q B 4	21 B-K 2	Bt-Q 7 ch
8 Kt-Q B 3	Castles	22 K-B 2	Kt-Q 4
9 Q-B sq	Q-K 2	23 B x B	Kt-K 6 ch
10 Kt-Q sq	P-Q R 4	24 K-B 2	Kt x P dis ch
11 Kt-K 3	Kt-R 3	25 K-B sq	Kt-K 6 ch
12 P-Q R 3	Kt-B 2	26 K-B 2	Kt x B ch
13 P-K Kt 3	Q-Kt-Q 4	27 K-K 2	Q-Q 6 ch
14 P-K R 4	Kt x Kt		Resigns.

The Westminster Gazette in commenting on this game says: "Bird played a favorite variation of his own, with which he might have been successful against inferior opponents, but Pillsbury demolished it mercilessly in a few moves. It shows the lucid grasp of the situation and thorough judgment of position of the American master."

Errata.

THE LONDON GAMES

We are very sorry that there are so many typographical errors in the "Games from the London Tournament" that we have published. Special efforts will be made to have the rest of the games correct. The Lasker-Blackburne, Lasker-Lee, Lasker-Steinitz, Janowski-Pillsbury, Showalter-Maroczy, and Maroczy-Tschigorin games are free from blunders. In the Janowski-Schlechter game, Black's 14th should be P-B 4; in the Tschigorin-Pillsbury game, White's 21st should be P-Kt 3; in the Steinitz-Blackburne game, White's 6th should be B x P, Black's 21st Kt x R P, and White's 25th R-Q 4; in the Pillsbury-Lasker game, Black's 27th should be Q-R 4, and White's 32d R (Kt sq)-Kt 2.

Lasker May Come to America.

We are informed that the Manhattan Chess-Club, of New York City, is trying to make arrangements to induce the Champion to visit this country. His terms are rather high; but we hope that this will not stand in the way, as his coming to the United States would be of great advantage to Chess. If arrangements are made, it is understood that he will give exhibition games, meeting all comers, and will lecture on Chess.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

CLOSE OF THE DISARMAMENT CONFERENCE.

NOW that the delegates at The Hague have concluded their deliberations (the conference ended July 26), the fruit of their labors becomes an important matter of discussion. The proposed arbitration court, which is considered by far the most valuable result, must depend entirely on the support of public opinion to give it force; and the comments and arguments of the public press and of prominent men for the next few months or years can make or mar this effort to keep the world's peace. The reception of the conference's results by the press, therefore, is of considerable consequence.

The proposed arbitration court will have its headquarters at The Hague, and will be composed of four representatives from each power, to hold office six years. The parties in dispute may select from this court any number of judges upon whom they can agree. The special field for this tribunal will be cases involving questions of judicial bearing, especially as regards the meaning and application of treaties. Perhaps the feature that will do more than all else to aid the cause of peace is the proviso that neutral nations may call the attention of disputing powers to the existence of the court; so that if the disputing parties then refuse to arbitrate, they will have to tell why, or suffer a loss in public esteem. The nation which recommends arbitration, moreover, will feel constrained by its sense of consistency to submit to arbitration at its own next quarrel. Sixteen governments, by their delegates, signed the arbitration agreement. The United States reserved the rights declared in the Monroe doctrine. Germany, Austria, China, Japan, Luxemburg, Serbia, Switzerland, and Turkey did not sign the agreement, but some of them probably will do so before the close of the year, when the time for doing so expires.

Fifteen governments signed the convention on the rules of war, fifteen the adaptation of the Geneva convention to naval warfare,

seventeen the declaration prohibiting the use of explosives from balloons, sixteen the declaration prohibiting the use of projectiles containing asphyxiating gases, and fifteen the prohibition of the use of dum-dum bullets. England and the United States did not sign the agreement prohibiting the use of dum-dum bullets. The final act, which reviews the work of the congress and recommends future conferences, was signed by all the nations represented: Germany, Austria, Hungary, Belgium, China, Denmark, Spain, the United States, Mexico, France, Great Britain, Greece, Italy, Japan, Luxemburg, Montenegro, the Netherlands, Persia, Portugal, Rumania, Russia, Serbia, Siam, Sweden and Norway, Switzerland, Turkey, and Bulgaria.

One result of the conference has been, it is said, to give added prestige to the United States in the eyes of the other nations. The Hague correspondent of the New York *Sun* says:

"The feature of the congress which most impresses many members is the removal of many prejudices and misconceptions which more than two months of close and amicable association between representative men of all countries has accomplished.

"This will unquestionably prove of greater future value to the United States than to any other country. It is true, as mentioned earlier in these despatches, that there was a feeling at the outset in many delegates' minds that the Americans were almost interlopers in what had heretofore been regarded as exclusively European questions. This feeling had entirely disappeared before the American delegates themselves raised the point a week ago that the United States must decline to accept the proposed duty to volunteer friendly offices in quarrels between European countries. Moreover, America is not only fully recognized as a great new factor in the international situation, but her delegates have commanded greater influence during the past six weeks of the session than those of any other country.

"It is a curious but significant fact that nothing added so much to the American influence in that parliament of the world as the advent of the American flag in the far East. It has been manifested again and again in indirect ways to the United States delegates that the appearance of American authority on the other side of the Pacific has won recognition and respect from the other great powers such as no amount of internal progress and prosperity would have accomplished."

A Ridiculous Court.—"It is safe to say that the expectations of neither Mr. Stead nor the congress will be anywhere near realized in the matter of arbitrating international disputes. Mr. Stead himself admits that the wording of the agreement leaves the right to any nation to blackball any other nation applying to be included, except the nations signing The Hague compact. England would surely blackball the Transvaal, Italy would never consent to the Pope becoming a member, the United States would never permit the so-called republics of Cuba and the Philippines to appeal to the arbitration court, nor would any of the signatory powers allow the court to listen to an appeal from China for protection against the spoliation of the empire by greedy Europe.

"It looks like a close corporation of the stronger nations to protect themselves while scrambling for opportunity to make conquest of the territory of the weaker countries. The most important questions now before the world are to have no standing at court. The Transvaal must right wrongs put upon it, the Pope must fight alone, the Cubans and the Filipinos must wear the collar of subjects if they can not win their freedom, and China must not grumble if she is too weak to protect herself against land robbers. Such a court of arbitration would be a travesty on justice, if not on decency, too."—*The Times, Kansas City.*

An International Farce.—"The Peace Conference finished its labors and passed into history as one of the many international

farces which have from time to time engrossed public attention. It was an impracticable scheme originated by an autocrat whose system of government and the fact that he maintains the largest standing army in the world made it plain to everybody that he had some other motive in view than the one announced. . . .

"The conference was a failure in every sense of the word, because it accomplished nothing of the least practical value. It is true that not one of the powers represented had any hope or even desire that anything should be accomplished. They all sent delegates out of a desire to appear complaisant to Russia, but there was but a thinly veiled purpose from the start on the part of the delegates that Russia's plans, if indeed she had any, should come to naught.

"The only agreement of interest arrived at by the conference was the formulation of a scheme of voluntary arbitration, by which nations may refer disputes to a permanent court of arbitration. The scheme is utterly impracticable, because the arbitration is purely voluntary, and no nation would resort to it except where it realized that it could not maintain its point and desired a graceful way out of a tight place. . . . The adoption of the arbitration plan was the means the conference employed to conceal the utter insincerity of the whole proceedings. . . . Those kind-hearted and well-meaning souls who imagine that the conference has placed us nearer the millennium are likely to be very quickly undeceived."—*The Picayune, New Orleans.*

Epoch-Making and Significant.—"In order to appreciate the labors of the conference at their true value it is necessary to recognize the fact that the decline of warfare and the growth of the peace sentiment have been and will probably continue to be slow—discouragingly slow, perhaps, to men of extremely sanguine temperament. Those who confine their attention to their own times and their immediate surroundings may be inclined to the pessimistic conclusion that human nature will be in the future very much the same as it has been in the past, and that war is an incurable evil. If, however, the conditions of life during past ages be examined, and comparisons be made of the same, a steady development of human sympathy and the gradual sapping of the military spirit will be noted. At a comparatively recent time in the history of mankind a battle was regarded by men of our race as a religious rite, wherein the priests of warring clans sacrificed the women to slaughter in honor of their tribal gods. The student may read in the pages of the chronicles how our Teutonic ancestors hacked off the arms of their captives and cast the severed members into the blazing fires of their altars. Wherever they marched their route was marked by wanton massacres, in which neither age nor sex was spared. Occasionally the monotony of putting a whole nation to the sword was relieved by a variation

in devilry, as when the Franks, during the invasion of Gaul, rolled their wagons over two hundred maidens and cast the mangled bodies to the dogs. . . .

"It would be possible to trace the amelioration of social life through successive stages up to the present time, each stage showing a distinct advance in humanity and a decline in brutality. The most successful nations from a material point of view are no longer those which are the most incessant fighters, but those which have developed to the highest degree the arts of peace and the pursuits of commerce. The essentially martial Turks occupy a low place in the family of nations, while the shopkeeping Englishmen are far in the van. In the light of past history the achievements of the Peace Conference must be regarded as epoch-making. The professional peace-makers may be obliged to defer to a still distant future the final consummation of their hopes; but it can not be denied that the establishment by universal consent of an international court to which all nations may appeal for a judgment of their differences must mark a point of departure quite as significant as was the proclamation in a more brutal age of the 'Truce of God.'"—*The Record, Philadelphia.*

An Immense Gain.—"The fact that sixteen nations, including the most powerful and the most advanced in Europe, have become signatories of the arbitration convention really changes the situation as to war and peace radically. It makes war more difficult and improbable, and it makes peace more easy and certain. It creates obstacles in the way of the former and safeguards for the latter. It raises in the mind of the world a presumption that did not exist in favor of peace. It is a formal and general declaration that the nation that enters on the path of war without having exhausted the means provided for avoiding it must expect the condemnation of the opinion of civilized mankind.

"It will be said that no nation is obliged to regard this opinion. That is true. It is equally true that this opinion is all that has secured every change for the better in the relations of nations. It is open to any government to-day to violate any of the essential principles of what is called international law, if it choose to do so. There is no court before which it could be arraigned, there is no machinery of punishment that could be set in motion against it. Other governments might, indeed, join in defending its victim, but there is no legal obligation on any one of them to do so. Yet it is simply incredible that any government would in war bombard a defenseless and unfortified city, or kill prisoners, or turn troops loose for rapine and outrage, as was done with impunity only little more than a century ago. Nor is this the only evidence of the power of opinion. Every one of the changes for the better that have been adopted was originally suggested by mere writers, with no authority but the respect their motives and

their reasoning inspired, and often without official station or even actual experience in diplomacy."—*The Times, New York.*

American Success.—"Against the one failure to secure the exemption of private property not contraband from seizure at sea the American delegates to the Peace Conference at The Hague are to be credited with several distinct diplomatic triumphs. It was to their initiative and persistent advocacy that we owe the adoption of the principles of mediation and arbitration, which, if they do not afford the promise of uninterrupted peace among nations, yet provide a standing invitation and method to avoid war. The signatory powers bind themselves to at least count thirty before they let loose their ponderous armaments.

"In uniting with the British delegates in opposition to limiting the advantages of financial strength and mechanical resources in warfare the American delegates were only strengthening the forces of civilization against ignorance and sheer brute force. The dum-dum bullet is as much an instrument of civilization as the bell-mouthed blunderbuss was in its day.

"But the triumph of genuine American diplomacy was shown in securing the adoption of a resolution saving to the United States the time-honored principles of the Monroe doctrine. According to the synopsis of the work of the conference cabled to *The Times-Herald* last Monday the twenty-seventh article of the international agreement provides:

"The signatory powers consider it their duty, whenever an acute conflict threatening to peace occurs between any of them, to recall to the latter that the arbitration court is open to them."

"Seth Low was quick to warn his associates that in the word 'duty' there might lurk a menace to the Monroe doctrine. They therefore formulated and secured the adoption of a resolution declaring that nothing in the arbitration convention shall impose an obligation upon the United States to interfere in European affairs or *vice versa*.

"This preserves to the United States what may be called its hemisphere of influence."—*The Times-Herald, Chicago.*

THE CLEVELAND BOYCOTT.

THE singular turn which the street-railway strike in Cleveland took at the end of July has provoked considerable comment, mostly of wonder that a city of over a quarter of a million people should enter into the boycott movement with such an approach to unanimity. Some of the papers express surprise that the people of Cleveland should be so completely "terrorized" by the strike leaders; but others, remembering the aid that the Cleveland people have given the striking employees from the start, conclude that the strikers have cause for their action and that the people are influenced rather by sympathy than fright. Milwaukee, it will be remembered, had a similar boycott experience in 1896, the movement finally weakening and the street-car lines winning a victory. As the *Cleveland Leader* and *Plain Dealer* have stood with the street railway in the struggle, the strike leaders ordered the merchants to place no advertising in their columns. *The Leader* says:

"To get the true measure of the boycott's meanness and lack of every element of fair play it must be imagined reversed. Suppose that capitalists interested in the big consolidated company should begin the systematic discharge of all workmen employed by other companies which they controlled or had influence with, if those wage-earners did not ride on the big consolidated lines; would not such tactics be justly denounced as infamous cruelty by the same men who are now doing all they can to enforce a boycott of their own? Imagine the outcry which would go up if any corporation were to notify its employees that they must ride on the cars of the Cleveland Electric Railroad or be discharged, and should give as its reason a warning from the Street Railroad Company that unless it took such action it would lose the patronage of the street railroad! That would exactly turn about the conditions existing where a merchant tells his clerks that they must not ride on big consolidated cars under pain of losing their positions, his excuse being that he fears a boycott. All such fighting is hitting below the belt, and hitting innocent persons at that. It is unfair, mean, un-American, and vile."

The *Washington Times* says:

"We are compelled to congratulate the Cleveland strikers on their success in boycotting the city of Cleveland. It is a wonderful illustration of the domination of an organization of men over a demoralized outfit of asses and cowards. The supine worms of the Cleveland city government should not only be prevented from riding in street-cars; they should be compelled to work the treadmill for the rest of their lives. If there ever was a ridiculous exhibition of American official cowardice and contemptibility Mayor Farley and his Columbus superiors have displayed it."

FAITH HEALERS AND THE LAW.

PUBLIC opinion as represented in the daily press is still aroused upon the subject of mental healing. The discussion, which began with the death of Harold Frederic in London last October, has recently been further stimulated by a number of cases in various parts of the United States in which patients have refused or have been refused medical attendance, and have subsequently died. Believers in mental therapeutics, whether calling themselves mental scientists or Christian scientists, hold that a man has an inalienable right to die in his own way. Many of their opponents, on the contrary, claim that regular medical assistance should be made use of in every serious case of illness, and particularly that in the case of children, who are not competent to speak for themselves, professional faith healers who dispense with the traditional therapeutic agencies should not be permitted to be called in attendance. We have been unable to find thus far in the secular press any defense of the new system of therapeutics. The *Philadelphia Times* says:

"The public press reports almost daily the sacrifice of life in the charlatanism popularly known as the faith cure. It is organized in all the great centers of population, and tempts those who would profit by the infirmities of others to engage in it as a matter of speculation. The faith-cure doctor is now to be met with in all the cities and larger towns of the country, and often in rural communities, and alleged professional services are rendered for pay the same as regular physicians. . . .

"But while a few of the faith-cure practitioners are sincere in their faith, the theory has been degraded to the basest charlatanism, and it is rapidly growing upon us every day."

Under the heading "The Punishment Cure," the *New York Times* of recent date says:

"We do not think the courts will long continue to cheat the criminal law by accepting the Christian Scientists' defense of their murders as the exercise of a religious right. The earlier opinions of the judges here and in England display a shocking confusion of mind. The persecution of Puritans, Quakers, and Scotch Covenanters has inspired the jurists of both countries with an exaggerated timidity toward all malefactors and cheats who look sanctimonious and use their pietistic cant terms fluently. The judges at first were unable to see the difference between the devotee, daft and harmless, who preaches an eccentric gospel, and the harpies of Chris-

Son of Dr. Oliver Wendell Holmes.

tian Science who substitute their incantations for the resources of rational medicine at the bedside of helpless children, and take fees for their deadly work.

"Of late the judicial mind has become clarified, and the number of trials and convictions are proof of a disposition to deal with these murderous charlatans as the law intends and the safety of the weak and deluded demands. The practise of Christian Science 'healing' will at no distant day involve such vicissitudes of fine and imprisonment as will tend notably to diminish the zeal of the gullible for the gospel of Mrs. Eddy."

In another editorial article, however, *The Times* expresses a belief in what it terms a legitimate system of mental therapeutics as an auxiliary to the sciences of physic and surgery. It says:

"It is possible that profit may come to humanity in the form of a more systematic study by regularly trained and competent physicians of what with entire propriety may be called the department of mental therapeutics. Even now, of course, as always, every doctor pays more or less attention to that branch of his art and utilizes its dimly understood resources to a much greater extent than do the quack healers, for whom those resources, still more vaguely understood, are the only stock in trade. The occasional successes of the charlatans, which, tho rare, are extremely well advertised, have emphasized the existence of a great and fertile field of research that hitherto has received but desultory cultivation from men practical as well as intelligent and honest. At the recent annual meeting of the Massachusetts Medical Society an earnest appeal for more and better work in this direction was made in a paper read by Dr. J. J. Putnam. It is hardly necessary to say that his demand is for the extension of medical science, not for an abandonment of drugs and hygiene and exclusive reliance on mental influences. In the course of some highly eulogistic comments on Dr. Putnam's paper, the *Boston Medical and Surgical Journal* quotes, as expressing a real grievance, the question asked by a student in the Harvard Medical School: 'Are we in our course to get no systematic work in the mental treatment of disease?' What this inquirer wants, *The Journal* says, is instruction from trusted teachers on the best methods of handling sick minds as well as sick bodies, and it adds: 'We do not for a moment presume to say that the subject is unmentioned at our best medical schools. On the contrary, it is much talked about under such vague headings as the "personality of the physician," or "tact," or the "effect of cheerfulness in the sick-room," but as yet we hardly go further. Such matters are never brought sharply to the student's attention, as is the action of opium or strychnin. It is not that individual teachers are not fully alive to the importance of such teaching, but as yet we see no evidence of concerted action toward a radical improvement, and until such concerted action comes we are confident the student will continue to go out from his medical course with a biased mind, and one incapable of seeing the full scope of his therapeutic possibilities.' Here, evidently, is a valuable hint as to the best way of meeting and destroying 'Christian Science' on its own ground."

At the June dinner of the Medico-Legal Society in New York, the relations of law to Christian Science was the principal subject of discussion, and the religious, scientific, and legal aspects of the question were brought out rather fully. We quote from a report in the *New York Times*:

"Ex-Coroner Moritz Ellinger led the discussion with a paper in which he said the death of Harold Frederic last October called attention to a new school of medical practise called Christian Science. This school, he declared, was more closely allied to the undertaking business than to the practise of medicine. Its name, he said, was misapplied, as science, impartially considered, is undenominational. The title 'Christian Science,' he declared, is only justifiable as it applies to the domain of theology. As used, however, it depends upon an arbitrary construction of the Bible. Its healers, he declared, invariably collect their fees in advance, thus setting an excellent example to practitioners in other schools of medicine. According to Mrs. Eddy, the founder of the sect, payment in advance is necessary as an earnest of the faith of the patient. He held that the practise was iniquitous, and argued that the law should be invoked to suppress it, as it does other species of charlatantry. No alleged cure which depended on the

superstition of the people whom it sought to aid should be tolerated, and the severest penalties should be enforced against those who practised it. If it were to be permitted, every safeguard possible should be thrown around those who accept its ministrations. Howard Ellis followed Mr. Ellinger in an argument favoring the placing of Christian Science under the laws which apply to other schools of practise. The side of the Christian Scientists was maintained by Carol Norton, who recently lectured on the subject in the Metropolitan Opera House, and whose paper, read by Stanley Burger, was, in a general way, a repetition of his lecture. He contended that Christian Science mind-healing is a part of genuine Christianity, and therefore can not be dealt with except as a religious act or system. It is essentially different, he said, from mind cure, hypnotism, and suggestive therapeutics. H. Gerald Chapin discussed the subject from the point of view of a lawyer. He felt that the matter was extremely difficult to deal with, because the religious and medical ideas were so closely allied. He did not doubt that the treatment was efficacious in its application to imaginary diseases and hysterical affections, but he declared firmly that in cases of infectious or contagious diseases the healers should be put under the same restrictions as physicians. In closing, Mr. Chapin remarked: 'On the whole, the case seems to be one where each individual may be permitted to act as he thinks best about calling a Christian-Science healer, and any legislation which would tend to restrict it would be so paternalistic as to deserve failure.'"

SECRETARY GAGE AND THE CIVIL SERVICE.

THE disagreement between Secretary Gage and the Civil Service Reform League, as to whether the President's civil-service order of May 29 was good or evil (see *THE LITERARY DIGEST*, June 10), instead of being healed by the lapse of time has grown more acute; until we now find Secretary McAneny, of the League, accusing Secretary Gage of having broken the civil-service laws repeatedly before the recent order, and Secretary Gage, in reply, reflecting on Mr. McAneny's intelligence and truthfulness. Mr. McAneny's charges are of added importance from the fact that Secretary Gage had always been considered one of the staunchest friends of civil-service reform, and it is pointed out that, if the allegations are true, Mr. Gage's admirers may have to revise their opinions of him. In replying, therefore, Mr. Gage is defending not only the President, but himself. Secretary Gage's reply is in the form of an open letter to the League, published in the columns of *The Independent* (July 20). He says:

"I shall consider only a few of the allegations, and if these are shown to be not founded in truth, I shall leave the public to judge of the reliability of his statements as to the rest. He says:

"Following the incoming of the new Administration, however, there were sweeping changes in the force of agents and clerks known commonly as 'deputy collectors,' in many districts. The new appointments were made generally in open disregard of the civil-service law, and in most cases for political reasons."

"This statement is misleading, and therefore untrue. Not a clerk, not an agent, in the service of the Internal Revenue Bureau has been removed for political reasons. Very few removals of any kind have in fact been made, and when made, they have been in strict conformity with the President's order of July 27, 1897.

"THE LIGHT THAT FAILED."
—*The Herald, New York.*

which requires, antecedent to removal, the filing of charges and the opportunity for defense. It may be doubted, however, if your secretary intended to refer to clerks and agents in the language he used. He speaks of 'agents and clerks known commonly as deputy collectors.' There are no such clerks and agents. There are clerks, agents, and deputy collectors, but they are as distinctly separated as are the Treasurer of the United States, his bookkeepers, and his money-counters. Does he know this, or does he mix these classes together to confuse the mind? However that may be, his remarks are without application, unless it be to deputy collectors of internal revenue, and I do him the credit to believe that it is these he had in mind.

"How about this? He says:

"The new appointments were made generally in open disregard of the civil-service law."

"He knew when writing this that there is and has long been a contention as to the legal right of collectors to appoint their deputies. He was aware of Section 3,148, Revised Statutes, that reads:

"Each collector shall be authorized to appoint, by an instrument in writing under his hand, as many deputies as he may think proper, to be by him compensated for their services, and to revoke any such appointment, giving such notice thereof as the Commissioner of Internal Revenue may prescribe."

The United States circuit court of the district of New Jersey, in fact, Mr. Gage points out, has sustained an internal-revenue collector in appointing deputies of his own choice. Mr. Gage holds that Mr. McAneny must have been aware of this decision. Further, he must have known that the Civil-Service Commission itself, on June 1, 1898, recommended that these deputies be exempted from the operations of the civil-service law. Yet he alleges that for twenty months prior to the President's order the force of deputies "was treated as tho actually outside the classified service." As to the truth of this, Secretary Gage says:

"With all the assertions of right and power made by the collectors to appoint their own deputies, a claim which has been put in practise in certain cases, it still remains true that the restraining influence of the Treasury Department has been such that out of a total of 963 such appointees 752 deputy collectors were appointed and, on May 29 last, held their positions under the provisions of the civil-service law and rules, which he charges the Treasury Department with 'entirely' disregarding. The 211 not thus accounted for include those temporary appointments made with the consent of the Civil-Service Commission in cases where they were unable to furnish eligibles. The remainder may be said to be those appointments which are alleged to have been made in contravention of the civil-service law. But they were made in view

of section 3,148, Revised Statutes, an authority invoked by collectors for their independent action in the premises, and, as he must well know, in some instances sustained by the courts, notably the case before cited."

Of Mr. McAneny's charge that "since the opening of the war with Spain the number of appointments in the Washington offices of the Treasury Department through competition under the civil-service rules has been insignificant," Mr. Gage says that this does not prove that the law has been violated, as positions can legally be filled by reinstatement and transfer. He says:

"It is not worth the time to look up the data, but this I assert, that every appointment to the classified service in the Treasury Department has been made either by taking 'eligibles' from the commission lists, by reinstating 'eligibles,' or by the transfer of 'eligibles'—in one of these three ways and none other.

"He confuses this question—whether purposely or not you must judge—with quite another question—i.e., the appointment of temporary clerks made necessary by the late war."

Even when given power by Congress, on March 31, 1898, to appoint sixty-five clerks, without restraining directions as to how they should be appointed, Mr. Gage subjected them to the civil-service regulations until the July 7 following, when Congress decreed that such positions should be filled without compliance with the civil-service law. Nor did this decree drive him to the spoils system. He filled the remaining places by the transfer of men who had already passed the examinations. "Can he find anything in this action," says Mr. Gage, "inimical to the spirit of the civil-service act?" He says of Mr. McAneny:

"In this connection I can not avoid an expression of regret that he seems to strain far away from fact and truth in order to justify criticism. I believe in the principles which the Civil Service Reform League is intended to foster and protect, and I am heartily in accord with every intelligent effort it makes looking to the public good. I am entitled to some fair presumptions in this regard by a reputation earned by zealous endeavor in the fields of state and municipal reform, covering, perhaps, more than all the years the secretary of the league numbers; therefore it is a matter of keen regret to me that, instead of receiving sympathetic encouragement from a body whose purposes are acknowledged to be for the public good, only captious criticism is accorded."

Mr. Gage demonstrates that some of the rest of Mr. McAneny's charges are irrelevant and some others outside the province of the Treasury Department, and concludes with a gloomy view of the entire National Civil Service Reform League:

STUCK ON IT.
—The Tribune, New York.

THE YOUTH: "Give up that buoy and I'll help you."
—The Post, Washington.

THE FREE-SILVER OUTLOOK IN CARTOON.

"I have made analysis of the substantial part of his letter. I have endeavored to make clear what he has obscured. Those who read it must judge. In the National Civil Service Reform League those who administer the law ought to find an intelligent and conscientious adviser, a considerate and just friend. In the two communications submitted by your secretary on behalf of that body, he furnishes evidence that it can not be classed in either category."

In spite of Mr. Gage's repeated statements in defense of the President's order, few if any papers have come around to the view that the relaxation of the rules was a benefit to the service. Yet at the same time few papers are willing to believe that Secretary Gage has become an open ally of the spoilsmen, preferring to think that he is doing his best amid the hampering usages and rules of generations of less scrupulous predecessors. Secretary McAneny has replied to Mr. Gage's article in an open letter whose main points are summarized in the following paragraph from the *New York Evening Post*:

"Very few" removals of any kind have been made in the revenue service, asserted Mr. Gage. Mr. McAneny cites official figures to prove that 50 per cent. of the entire service has been removed since March 1, 1897. Is 50 per cent. "very few"? In all the removals made, continued Secretary Gage, there had been "strict conformity" with the President's rule requiring "the filing of charges and the opportunity for defense." The records of the Civil-Service Commission show case after case of collectors defying this rule, alleging "verbal instructions" from "the Department," and upheld by their superior officers in their open violation of the law as regards both removals and appointments. Mr. Gage declared that the Civil-Service Commissioners themselves recommended the exemption of deputy collectors from the classified service. Yes; but why? Because, says Mr. McAneny (and, of course, he speaks by the card), "they preferred absolute exemption to a continued state of disregard of the law." If Mr. Gage was to appeal to the Commission at all, he should have stated the whole truth about it. If he had done so, he would have admitted that it recommended only 1,000 exemptions, instead of 10,000, and that so far from being unable, as the Secretary of the Treasury asserted, to furnish eligible lists, it "was prepared to furnish as many eligibles as might be needed, at the shortest notice."

Reform Falling to Pieces.—"One can not remain long in Washington, we are told, without hearing well-authenticated instances of violations of the civil-service law which make Mr. McAneny's statement of yesterday seem conservative. 'How did you get

that job?' one crony will ask another: 'I thought it was under the civil service.' 'So it is,' comes the reply, 'but so-and-so fixed it up for me.' It is hardly an exaggeration to say that the 'fixing-up' process is bringing more employees into the government service to-day than the Civil Service Commission. . . .

"This is no time for an ostrich attitude toward civil-service reform. From all Washington sources of information which are not themselves heavily indebted to the 'temporary lists,' word has long been coming that the reform cause was falling to pieces. Public sentiment must be reawakened. Congressmen must be made aware of results of steadily undermining the merit system, and the reformers themselves must be willing to join in helping to bring about such a revision of the present system, correcting its obvious defects on the reform side as well as upon the other, as will give a sure basis upon which the good citizenship of the country may firmly stand."—*The Transcript (Ind. Rep.)*, *Boston*.

Unintended Effect.—"Whether Mr. Gage was mistaken or not, time must tell, but no real friend of civil service has any moral right to impugn the motives which prompted the issuance of the order.

"And here it is important to direct attention to one of the most remarkable and unintended effects of that order. Instead of having weakened and jeopardized the merit system as a whole, it has really infinitely strengthened it. The storm of protest and indignant outcry it provoked emphasized in the most striking possible manner the devotion of the people to the cause of civil-service reform. . . . The open exultation of the spoilsmen must have been even less palatable to the Administration than the vigorous attacks of the civil-service reformers. . . . There will be no temptation to repeat the experiment. No official, however satisfied in his own mind, will venture to invite another avalanche upon his head. The merit system is a fixture, and it will not again be disturbed for any reason. Surely in this there is consolation and cause for congratulation even for those who refuse to admit that any necessity or reason existed for the recent modification. The politicians who flattered themselves that the spoils doctrine was still a safe and attractive one to preach have been disabused. Civil-service reform is firmer than ever to-day."—*The Evening Post (Ind.)*, *Chicago*.

"The Secretary has ceased the attempt to square the President's exemption order with the party's and Mr. McKinley's own pledges on behalf of reform, and has turned to the defense of his own administration of the Treasury Department. This leaves the President's order indisputably where the shouts of the spoilsmen in Ohio and Kentucky and elsewhere are placing it—first among the executive blows delivered against the reform since the enactment of the civil-service law in 1883, and of vastly demoralizing effect."—*The Republican (Ind.)*, *Springfield*.

GROWING ON HIM.

McKINLEY: "Good heavens! Was it an elephant I bought or a mastodon?"
—*Life*, *New York*.

Michigan Press on Alger.—If an exception is needed to prove the rule that "a prophet is not without honor save in his own country," General Alger seems to supply that exception. His welcome home to Detroit last week partook of the nature of a "triumph," and the feeling expressed by it is equally apparent in the Republican press of Michigan. The *Detroit Journal* (Rep.), *News* (Ind. Rep.), *Tribune* (Ind. Rep.), and *Free Press* (Ind. Dem.) are loyal to General Alger, as has been shown by quotations in these columns heretofore. The *Union City Register* (Rep.) says of his resignation: "In Michigan there appears to be but one opinion, and that is of regret. No matter what may be the result of the senatorial fight, General Alger will have the satisfaction of knowing that Michigan stands loyal to him, and therefore can not help but condemn the action of the President." The *Middleville Sun* (Ind.) says: "General Alger met all obstacles in a manner that reflected credit upon the country and upon himself, and his friends and foes alike must look upon a record that will take its place among the most brilliant in American history." The *Marshall News* says: "There is not a doubt that the most of Alger's shortcomings were the result of his obedience to his employer." The *St. Joseph Herald* (Rep.)

says that Michigan should resent this "shabby treatment of one of her most honorable and distinguished sons." The *Ipsheiming Iron Ore* (Rep.), the *St. Ignace Republican* (Rep.), and many other papers accuse the "yellow" press of gross libel and misrepresentation. The *Kalamazoo Telegraph* (Rep.) says that his reception home "will be a solace for the bitter wounds which he unjustly bears," and the *Battle Creek Moon* (Ind.) says that General Alger's triumphal entry into Detroit "will astound the man in the White House and cause him to tremble as did an ancient ruler when the handwriting on the wall was interpreted to him."

PENSIONS FOR RAILROAD EMPLOYEES.

THE announcement by the Pennsylvania Railroad Company that it has established a pension system for its men has elicited from the press nothing but praise and predictions that the system will prove a reciprocal blessing to the company. The outline of the plan is given as follows in the *Newark Evening News*:

"The Pennsylvania Railroad Company, which is a pioneer in most things for which great corporations can be praised, has decided to create a pension and superannuation fund for the benefit of its employees. This will be entirely distinct from the Employees' Relief Fund, which has proved such a substantial success, and will be maintained solely by the company, while in the relief fund each member contributes a certain sum monthly. Threescore and ten years has been fixed upon by the company as the age limit. Hereafter, when an employee arrives at that age he will be compulsorily retired and will then for life receive from the company an allowance based upon his length of service and average wages. It will not be necessary, however, for an employee to have attained the age of seventy years to become a beneficiary of the fund. If he has been in the company's employ thirty years he may become entitled to the fund's benefits upon a favorable report by the committee having it in charge. What percentage of the former wages will be paid has not been announced, but it is stated that it will require a payment by the company of about \$300,000 to make the fund effective in the fall, when it is expected that it will go into operation."

The *New York Journal*, which seldom gives praise to a great corporation like the Pennsylvania unless it is earned, says:

GEN. MILES: "What's the use of being a general, anyway?"
—*The Record, Chicago.*

"The Pennsylvania Railroad has taken a long step on the road that leads toward industrial peace. It has established a system of retirement and pensions, not built upon sums compulsorily held out from the wages of its employees, but paid for by the company itself. It is estimated that the expense to the corporation will be about \$300,000 a year.

"The cost of this arrangement to the Pennsylvania Railroad will be trifling in comparison with the benefits the corporation will receive from the plan. If the scheme is carried out in good faith every employee will gain interest in his work. His position will become a property, like an insurance policy, which will increase in value from year to year. The company will be insured against frivolous strikes. It will know that nothing except serious grievances can induce its men to risk their places, and if a strike is threatened it will know that some substantial wrong has been committed which ought to be redressed.

"On their side the men will have a sense of security that is seldom felt in this era of unbridled competition, on the principle of every one for himself. They will feel reasonably certain of holding their places so long as they are able to work, and of enjoying a peaceful old age afterward.

"The Pennsylvania managers are wise in their generation. They have adopted the only course that offers any hope of delaying the approach of public ownership of railroads."

TOPICS IN BRIEF.

POSSIBLY Santo Domingo would rather ask for annexation than be benevolently assimilated.—*The News, Detroit.*

ADVICES from various sections of the Union indicate that Bryanism is dead in spots.—*The Ledger, Philadelphia.*

THE census department might attempt to discover and report how many kinds of Democrats there are in this country.—*The Record, Chicago.*

GENERAL ALGER is already enjoying the satisfaction of seeing the bricks take a more direct course to the White House.—*The News, Detroit.*

NEW YORK's recalcitrant councilmen are afraid they'll go to jail, and the citizens are afraid they won't.—*The Ledger, Philadelphia.*

WOULD Mr. Laurier be disposed to arbitrate if we were suddenly to demand the province of Quebec?—*The News, Detroit.*

SO Americans have bought the Lakes of Killarney and own part of Ireland! Well, turn about's fair play.—*The World, New York.*

ON his way home from The Hague peace conference, Captain Crozier is to stop in England to investigate recent inventions in high explosives.—*The News, Detroit.*

THERE is a third way out of the Alaska dispute, which Mr. Laurier didn't mention. The boundary might be left where it belongs.—*The News, Detroit.*

CONSIDERED THE ENEMY SILENCED.—Otis seems to have thought that all was over when he captured that brass band.—*The Commercial-Appeal, Memphis.*

ALL Democrats look alike to Bryan, he says. It would be interesting and possibly historic to find out how Bryan looks to all Democrats.—*The Press, New York.*

THE condition of the man with the hoe is not entirely hopeless. He knows enough to put the largest radishes on the outside of the bunch.—*The Record, Chicago.*

MAKING USE OF HIS KNOWLEDGE.—The new Secretary of War, Lawyer Root, might swear out an injunction against the Filipino insurrection.—*The Commercial-Appeal, Memphis.*

THE Georgia supreme court has handed down a decision which, it is claimed, will encourage lynching. This is the first intimation that the Georgia lynchings needed encouragement.—*The Tribune, Detroit.*

SLIGHTLY INVIDIOUS.—Senator Stewart proposes a plan to prevent vacancies in the Senate. A more popular plan would be one that would insure a great many more vacancies than there are.—*The Courier-Journal, Louisville.*

WHAT HE HAS TO LEARN.—Captain Dreyfus's intimate friend was narrating to him the principal events of the last five years. "It was about this time," he said, "that Mark Hanna became prominent in American politics." Captain Dreyfus interrupted him. "Who is Mark Hanna?" he asked. And the intimate friend fainted.—*The Tribune, Chicago.*

IT is all very well for the directors of the New York Central and Boston and Albany to map out a program for 100 years; but perhaps it might have been well for them to bear in mind that on the 13th of November of this present year our planet is to come in contact with the comet known to astronomers as the comet of 1894, and to be partially if not absolutely destroyed. At least, so says Prof. Rudolph Falb of Vienna, and of course he knows all about it, or he wouldn't make such a statement.—*The Transcript, Boston.*

LETTERS AND ART.

WILLIAMINA STUART, SCOTT'S FIRST LOVE.

THERE has always been some doubt as to the name of the young lady to whom Walter Scott early gave his heart and who ever retained a tender place in his remembrance. Her identity, however, now appears to have been definitely ascertained by Mr. F. M. F. Skene. The *New York Times* makes some interesting comments on his statements, based on his article in *The Century*. It says:

"It is from internal evidence and from correspondence that Mr. Skene shows conclusively that it was Williamina who won Walter Scott's heart, and apparently forever. There had been an intimacy of many years' standing between Sir Walter's mother and Lady Jane Stuart, the mother of Williamina. The young woman was but seventeen when Walter Scott became acquainted with her. The two young people had gone to church, and on leaving down came a heavy fall of rain. The prosaic umbrella offered by Walter Scott brought the two together, and from 'the first hour,' writes Mr. Skene, 'the charm . . . she exercised over Walter Scott was instantaneous and irresistible.' The two young people lived near one another, and so came about the intimacy. Talented and beautiful as was Williamina, she may have had many suitors.

"Walter Scott was, however, undoubtedly by far the most ardent and devoted of all the aspirants to her favor, and no deeper, truer love was ever offered by one human being to another than that with which he worshiped Williamina Stuart for three long years in silence—in silence because Scott was extremely diffident."

"Scott had the world before him. He was unknown. He had not even then written 'Lenore,' that adaptation from Bürger. He was simply a young advocate making his way to the bar. His prospects were by no means brilliant.

"He dared not by an open avowal risk the terribly critical question on which his fate depended. According to his own words,

"Silent he loved. In every gaze
Was passion—friendship in his phrase."

"Walter Scott's father was keen-sighted, and saw his son's troubles. Who can tell whether Walter Scott did not ask his father to help him? Anyhow, it seems as if Mr. Scott did call on Williamina's father and laid the matter before him, 'saying frankly that he did not wish the matter to go any further without the express sanction of the lady's father.' Sir John, it is quite possible, threw cold water on love's flame. Walter Scott's passion was intense, his despair terrible."

It has been said that Miss Stuart played fast and loose with Scott, and dropped him when a rich suitor appeared. Mr. Skene denies this, on apparently good evidence. Says the writer in *The Times*:

"There is a letter extant of the lady's. She tells Scott that he has her friendship, but there is no word of love mentioned by her. She even expresses the wish that amicable relationship should not be severed. Then Scott, tho his heart may have been broken so far as the showing of his love for Miss Stuart went, held himself strictly on his guard. It was about this time that his 'Lenore' was produced, and 'a beautifully bound and ornamented copy' was presented to Miss Stuart through a friend of both. Even after that he made a visit to Sir John and Lady Jane at their country seat, but it was the last one he ever paid to them. Perhaps Walter Scott made the mistake of merging Miss Stuart's respect for him into affection.

"Williamina married Sir William Forbes, a very good and proper gentleman and a personal friend of Sir Walter. Lady Stuart Forbes lived in perfect happiness with her husband for thirteen years, when she died, in December, 1810, and from that day, so far as society and the outer world were concerned, Sir William Forbes may be said to have died with her. His friendship for Walter Scott never ceased, for does not Scott tell us how when in financial straits Sir William called on him 'with all offers of assistance'? and he adds: 'In what scenes have Sir William and

I not borne share together? It is fated our planets should cross, tho, and that at periods most interesting to me. Down, down, a hundred thoughts.'

"Sir Walter married, but it was rather a marriage 'de convenance.' There was affection, respect between man and wife, but, as he wrote it, 'it was something short of love.' It must have been a relative of the author of this most interesting article, 'Mrs. Skene,' who was asked by Sir Walter to accompany him on a visit to the mother of Lady Williamina Forbes, and Mrs. Skene told Lockhart how deeply affected were Sir Walter and Lady Jane. Some short time before the death of Lady Jane he paid her a second visit, and he kept a touching record of it, for he wrote:

"I went to make another visit and fairly softened myself with recalling old stories till I was fit for nothing but shedding tears and repeating verses all night. This is sad work. The very grave gives up its dead and time rolls back thirty years."

"There is a letter of Lady Louisa addressed to Lady Montague and written two years after Sir Walter's death (1835), in which she refers to the subject of Scott's early passion. The beginning of the letter reads:

"I have learned the name of the lady, poor Sir Walter's first and perhaps only love; . . . you will be surprised to hear it was Sir John Forbes's mother. . . . Sir Walter was heard to say that after her marriage, he withdrew his waking thoughts from her, but nothing painful ever happened to him that he did not dream of her before it. Remember the passage about dreaming we read the other day in the 'Lady of the Lake.' He read it to us at Buchanan in private, and, I recollect, spoke with a thrill about the renewal of feelings (long hushed) in a dream."

"THE CASE OF MR. KIPLING" AGAIN.

THE publication of Mr. G. F. Monkshood's recent book entitled "Rudyard Kipling"—which received the somewhat deprecatory *imprimatur* of Mr. Kipling himself—is taken by *The Saturday Review*, London, as the occasion for reading the distinguished author a lecture on some of the dangers of authorship and adulation. "Danger for him," remarks the critic, "lies now in the foolish praise of his more illiterate admirers, and no more curious instance of what this class can do in the way of making a fool of a hero can be conceived than a certain volume of crudded flattery by a Mr. Monkshood which is now lying on our table." The lecture proceeds as follows:

"Unhappily, there is some little reason to fear that this particular deity does enjoy the blare of the conchs. Our instinct would have been to offer our sincere condolence to Mr. Rudyard Kipling, exposed against his will and without his knowledge to all this offensive laudation. But the publishers of this little book print as a preface a letter from Mr. Kipling, and we are bound to confess that this largely withdraws our pity from the illustrious victim. Mr. Kipling has 'read your typewritten book with a good deal of interest,' but, faintly protesting, suggests that it 'would be best published after the subject were dead.' That is to say, Mr. Kipling likes the praise (Oh, yes! we are afraid he likes it, gross and rancid as it is), but he feels obliged, with his finger to his lip and his eyelids cast down, to suggest that it should be posthumous. Now, if there is one thing which Mr. Kipling is, it is perspicuously intelligent. He must be blinded with vanity indeed if he is not aware that Mr. Monkshood, with all his enthusiasm and his good intentions, is absolutely without skill as a critic. Mr. Kipling has read 'with a good deal of interest' a book which no unprejudiced judge of literary merit could possibly applaud. Why has he done so? Because it is full of unstinted, unreflecting, undiluted praise of the entire works of Mr. Kipling.

"Mr. Kipling has been, and now habitually is, overpraised. The language adopted regarding him would be excessive, because unbalanced and irrational, if it were applied to Sir Walter Scott, to Tennyson, to Victor Hugo. Ten years have passed, and no more, since the wonderful boy published 'The Story of the Gadsbys,' and already he is raised on a pinnacle of golden adoration higher, perhaps, than any author has ever reached in his lifetime.

The world grovels at his feet, and those few of us who have kept our heads gaze up into the dim air to see whether the little figure high in the shimmering distance will be able to endure this deification. It is a very dangerous thing to be raised to this height. Let Mr. Kipling beware that he does not 'assume the god, affect to nod, and seem to shake the spheres.' The temptation to do so is almost irresistible."

The critic finds that two elements have united to place Mr. Kipling in the exalted position he holds:

"One of these, of course, is his own genius—the pungency of his style, the closeness and abundance of his observation, his rich and multiform imagination. All praise which these qualities secure for him is safe and wholesome; on this side he needs not suspect a straining of the note. But these alone would not account for a quarter of his popularity, and the preponderating element in this is the encouragement his writings have given to a certain national state of mind. All that is utilitarian and materialistic, all that is inimical to thought and favorable to action, all the external rowdiness and latent Puritanism with which this century is closing so surprisingly in England, find their exact echo and confirmation in Mr. Kipling's books. We observe that the admirers now claim for their hero that he set all this great imperial machinery in motion; that England was lying spellbound, when the majestic genius of Kipling brooded over the deep, and called forth the forces which ran, throbbing with life, to the extremities of the Seven Seas. But this is to exaggerate the function of an author. The greatest poet does not start a national movement; the most that he can do is to identify himself with it, and to speed it smoothly on its way. That we can not deny that Mr. Kipling has done."

"But what will be Mr. Kipling's position when this fit of popular materialism has played itself out? We are sure of one thing: the very adorers of to-day will be the first to turn upon their image and pelt it with stones. Public taste will change, but Mr. Kipling is far too deeply scored with the characteristics of his talent to change with it. Within certain flexible limits we know now what he will give us. At present, everything tends to the glorification of his strength and to the minimizing of his weaknesses. Borne along on the crest of the wave of public satisfaction, he seems to have no defects at all. But he is not that faultless monster which the world ne'er saw—the author equally equipped on all sides. If the fickle public should turn round and demand philosophical reflection from its poets, or tender sentiment, or the symbolism of aerial melancholy, there will be no 'Recluse' and no 'In Memoriam' and no 'Kubla Khan' to be expected from Mr. Kipling. In these and other provinces, much lesser men, with the public at their backs, will go far beyond him. These are the reflections which make us tremble for Mr. Kipling in the giddy altitude of his triumphs to-day. He is in danger of 'assuming the god,' of considering himself above all fear of reverse, of being persuaded by the incense burned before him that he is an impeccable artist. We would, if we could, recall him to a sense of his mortality, 'lest he forget—lest he forget' that there are other men than he in the world, and other manners."

Hall Caine's "Incorporation" of a Passage from Dean Swift.—Mr. Hall Caine has at last replied, through a friend, to the charge of plagiarism recently made against him (see *THE LITERARY DIGEST*, July 22 and 29). Of his defense, Mr. W. L. Alden says in the *New York Times*:

"The friend admits Mr. Caine's indebtedness to Swift, but claims that previous to the publication of 'The Christian' Mr. Caine had freely mentioned in the course of an interview designed for publication that he had in several instances incorporated in his book the thoughts of other men. Mr. Caine's admirers will regret this explanation. Whether it is made at the request of Mr. Caine, or whether the friend is acting on his own responsibility, is of little consequence. The explanation is not one which the public will accept as satisfactory. There was no hint given either in the body of the book or in a preface that everything in 'The Christian' was not strictly original. Whatever Mr. Caine may have said to interviewers previous to the publication of 'The Christian' can not excuse the use in the book, without any acknowledgment, of the work of other men."

"Mr. Caine would have been wise if he treated the accusation of plagiarism with silent contempt. No sensible person would have believed the accusation. Why should a man who can write with such ease and fluency novels of 400,000 or 500,000 words in length feel it necessary to make use of a few hundred lines from the writings of other men? The simple truth seems to be that Mr. Caine, when he quoted from Swift, forgot to put quotation marks at the beginning and end of the quotation. He could safely have afforded to disregard utterly the opinion of any man who could fancy him guilty of deliberate plagiarism. But now that his friend has put forward so weak and unacceptable a defense, Mr. Caine's enemies, if he has any, will be delighted, and thousands of people who do not perceive the absurdity of assuming that Mr. Caine is capable of plagiarism will believe to the end of time that he has been proved to be guilty of something worse than a mere oversight."

AN ORIENTALIZED AMERICAN.

A TRAVELER who has just returned to New York from Japan tells some curious facts about one of the most singular as well as one of the ablest men that America has produced—a man fit in originality of taste and life to rank with those singular the diverse geniuses, Thoreau, Walt Whitman, and Richard Realf. Says the writer (in *The Verdict*, July 24):

"Just a month ago to-day I was strolling along the Bund in Tokyo, Japan, watching the strange huddle of humanity passing through that fascinating thoroughfare. This Tokyo street is to Japan what Broadway is to New York and the United States; it is the show window of Japanese fashion and Japanese poverty. There one may see the Oriental millionaire in all his splendor, and by his side the poorest 'rickshaw runner in the empire. Both classes, alas, rich and poor, are doing their utmost to denationalize themselves sartorially; they are casting aside the picturesque costume of their country to don the garb of the European and American. A man who has worn Japanese dress for a lifetime looks about as much at home and about as interesting in an American hand-me-down, \$15-no-more-no-less suit of ready-made clothing as an Indian in a dress-suit, and just about as picturesque."

"Among the throng in the Bund I observed a tiny figure of a man in a curious mixture of Japanese and American dress. He was scarcely more than five feet tall, and his clothing hung over his shrunken figure with the grace of a blanket on a horse rack. Huge spectacles straddled his nose, and under his arm he carried half a dozen books. As the natives passed him they bowed most respectfully. I asked my 'rickshaw man' who the little chap was. He told me he was an American, 'Mis'r Hearn.'"

"That night at the hotel the manager told me that the American was Lafcadio Hearn, the most distinguished man of letters in Japan. He is professor of foreign literature in the university, and the only foreigner left in any educational institution in the whole empire. The university and all the noted schools ten years ago had full staffs of European and American teachers, but since the war with China the Japanese have become so chauvinistic that they have turned out all the foreign teachers from their schools, and all the foreign officers from their army. Hearn was

LAFCADIO HEARN.

the only American or European who survived the ax of reform in the university. He is, however, as much a Japanese as the Marquis Ito himself, and is so steeped in Orientalism that he has almost forgotten his English-speaking friends. It was rather interesting to see this man so revered by the Japanese, and to know that he was an American. Hearn has done more in a literary way to give Occidental readers a glimpse of the real intellectual life of modern Japan than any other living writer, native Japanese, or visiting student. He is the only writer of English who has pierced the veil of mysticism that has for so many decades separated Japan from the eyes of the Occident. Hearn, indeed, is no longer American save in his command of English. In all other respects he is as much of a Jap as if he had been born and reared in a Buddhist temple under the shadows of Fujiyama."

Another writer, Edward Henderson, once the city editor of a large daily newspaper, adds some interesting recollections of Hearn's journalistic career:

"Twenty years ago Hearn was a reporter on the staff of a Cincinnati newspaper which I was directing. He came from—no man knew where. He was a tiny fellow physically, and as myopic as a bat. He knew nothing about news, but he could write a 'story' that was as polished and as full of color as if it had come from the pen of Gautier himself. Despite his physique he was as courageous as a lion, and there was no assignment of peril that he would not bid for avidly. I remember that one day a famous steeple-climber was going to scale the spire of the cathedral to repair the cross that topped the spire two hundred feet above the sidewalk. It was a feat that all other steeple-climbers had balked at, but this fellow was the master of his trade and accepted the contract. The afternoon he first scaled the spire thousands of people watched him breathlessly as he slowly made his way up the outside of the steeple, fixing his ropes and footholds as he went. Of course, he was interviewed, and he said boastfully that the task was so easy that he could just as well carry a man up on his back. That noon Hearn came to me and said timidly that he had read of the steeple-climber's offer, and would be glad to ascend the spire on his back. I was amazed, and tried to point out to Hearn the peril of the thing. He would not listen. Finally my desire to get a 'good story' overcame my scruples, and I told Hearn I'd arrange the matter with the steeple-climber. I thought the latter was making a huge bluff for business and advertising ends, but I was mistaken. He was as zealous as Hearn. Well, I brought the two together. They arranged their end of the feat, and I washed my hands of further responsibility for either the steeple-climber's or Hearn's safety.

"At the appointed time Hearn mounted the steeple-climber's shoulders and the dizzy journey began. Tens of thousands of people watched the foolhardy pair. At last the cross was reached and Hearn left his perch on the climber's shoulders. The steeple Jack swarmed up the cross and stood on his head upon the apex of it. The mob in the streets below cheered the daring fellow, but he was so high up in the air that the cheers were inaudible. The two men returned to the ground safely. Hearn came back to the office and sat down and wrote two columns of a story describing his sensations and the glories of the view he had obtained from the steeple top. It was literature, this story, and it is regrettable that it has been lost in the obscurity of a forgotten newspaper. Such a glowing description of a city seen from a great height I never read before or since. The most interesting thing about it to me was the fact that Hearn couldn't see five feet beyond the tip of his nose, so myopic was he.

"Since that day in Cincinnati, Hearn has become one of the best writers this country has ever produced. His descriptive power is not exceeded even by Gautier, Flaubert, or De Maupassant, and yet the Frenchmen had the advantage of Hearn in that they could see the things they described. Hearn could not. His descriptive powers were due wholly to his glowing imagination. Once an humble reporter, Hearn stands among the foremost living writers of English. He always had a love for the Orient and its philosophies, and I am not surprised to learn of his successful career in Japan. It shows that now and then journalism produces a master-writer of English, despite its drawbacks."

It is announced that Miss Julia Arthur, in emulation of Mme. Bernhardt, will take the part of *Hamlet* at the Broadway Theater next autumn.

SUPERINTENDENT ANDREWS AND SPELLING REFORM.

BOTH praise and blame have been bestowed on Dr. E. Benjamin Andrews for his recent efforts in behalf of a simpler form of spelling in the Chicago public schools. Dr. Andrews does not think that a radical change in our complicated orthography can be brought about in a few months, but believes that the cause of reform can be best served by a gradual introduction of reformed spellings in accordance with the recommendations of the Ameri-

DR. E. BENJAMIN ANDREWS.

can Philological Association and the usage illustrated in the Standard Dictionary. Accordingly, he has advised his teachers to begin with the use of the twelve words recommended by the National Educational Association, as follows:

program, programme.	thruout, throughout.
tho, though.	catalog, catalogue.
altho, although.	prolog, prologue.
thoro, thorough.	decalog, decalogue.
thorofare, thoroughfare.	demagog, demagogue.
thru, through.	pedagog, pedagogue.

A good many newspapers are antagonistic to Dr. Andrews's plan, and are aghast at the prospect of what seems to them the grotesqueness of a phonetic orthography. Others treat the matter humorously. Thus the New York *Tribune* lately printed the following article headed "How Tha Spel in Chikago":

"A despatch from Chikago yesterda sez that the bizniz men ther ar in favor of fonetik speling. Dr. E. Benjamin Andrutz, the superintendent of the publik skools ther, iz in favor ov it to. Wun bizniz man, it iz sed, wants the word which most pepl spel 'through' to be spelt 'tru,' but Dr. Andrutz iz not in favor of this bekoz he sez that it iz not pronounst that wa. But the bizniz man sez it iz pronounst just that wa.

"This queschun of fonetik speling iz an old wun, and this iz just wun of the objecshuns to the plan, that everybody wood spel words the wa he himself pronounst them, even when he pronounst them rong, and so a good many pepl cood not reed what other pepl rot. Thar iz another objecshun to it, if it shud ever be used alto-gether, if books shud be printed this wa, and if pepl shud lern to reed this sort of stuff, tha wood not no how to reed the books that ar printed in the present wa, and so ol the books and ol the libra-riiz that thar ar in the world to-da wood be simply wast paper, for

nobody could read them except skolarz who had lerned the old way of speling.

"In Chikago tha propoz to chang the speling of ten words, as an enterin wej. But why stop at ten? Why not chang them ol at wuns and rit lik this?"

Antagonism to the reform is represented in the following editorial from the *Chicago Chronicle*:

"The agitation for spelling reform recurs with its usual promptitude. It is a mild form of disease among abnormally ambitious educators. The peculiarities of the English language, and its strength as well, can not be separated from its orthography. Educational faddists, in their haste to develop a royal road to learning, insist that much of the time necessary to master the spelling of the English language is wasted. They present testimony from the business man that his typewriter wastes time in clicking off seven letters in 'through' where it might be spelled with four. The utilitarianism of their contention might recommend it to the bustling age in which we live, were it not for the fact that confusion never tends to progress.

"As soon as we adopt Mark Twain's idea that a man should be allowed 'to spell according to the dictates of his own conscience' we have sacrificed much that must be retained in the English language if it is to continue its acknowledged supremacy as a growing and overmastering medium for the communication of thought. There is hardly a nation of importance to-day where the English language is not read, spoken, and written. It may one day be the language of the world. Its strength is largely due to the fact that it is not a dialect language. But with the introduction of the so-called reforms in spelling, from numberless different sources, we should have a written language that would necessarily be local in its interpretation. Educational centers like Chicago, Boston, and San Francisco would vie with each other in the innovations introduced, each setting up its own standard. The result would only be confusion."

The *Richmond Dispatch*, altho it calls its own position a conservative one, is apparently in substantial agreement with the position of Superintendent Andrews in advocating gradual changes:

"We understand, of course, that our language has undergone many changes during the past few hundred years. He who has any doubt upon this point may readily remove it by referring to any copy of Shakespeare which is a literal reproduction of the original folios. It is well that such changes should go on; but we would prefer that they should be gradual. We should not like to see our written or spoken tongue so rapidly revolutionized that parents would not be able to understand the speech or writings of their children.

"While few expect changes to be based upon the phonetic system, we must take note of the fact that that system would not be thoroughly reliable and uniform. In different parts of this country there is marked difference in the pronunciation of the same words, and if the spelling is to follow the sounds used, we shall have a 'tangle' at once. So we would do well to allow time to pass, in which our pronunciation might approximate uniformity nearer than it does now. . . . We do not contend for an immovable, inflexible, and non-progressive language, but for such gradual changes in orthography as usage and good scholarship may warrant. And for the present, at least, we are quite willing for the Chicago schools to make the experiment, while we await results and cultivate a judicial temperament preparatory to giving our decision on the merits of the question."

Most of the school journals naturally favor the reform program of Dr. Andrews, as being in agreement with the recommendations of the National Educational Association. A representative view is that of the *Wisconsin Journal of Education*:

"Spelling reform still makes headway. Superintendent Andrews, by declaring in favor of it, and by recommending its use by Chicago school teachers, has drawn down upon himself the censure of certain journals, but the outcry seems to have been wholly ineffective. In fact the public is getting used to the reform. It is becoming evident that dropping ugh from the end of the will not throw the universe into confusion, or even undermine the Constitution of the United States. We simply smile at the

intensity of the bigotry which prompted a distinguished speaker at the National Educational Association to declare that he would prefer never to have his address printed rather than to see it in the barbarous forms of the new orthography. His preference can safely be indulged. Meantime the association seems to be preparing for another forward move. The committee on this subject of the department of supervision not only approved the step already taken, but also reported for action at the meeting next February resolutions favoring dropping the final *e* in words in which it does not serve to lengthen the preceding vowel, as hav, giv, ar, etc.; substituting *f* for *ph*, as geografy, enuf, etc.; dropping *gh* wherever it is silent, as bou(gh), ni(gh), etc.; and spelling coud, sovrein, (w)hole, iland, gastly, etc. That is really dreadful to contemplate! We shall feel as if we had been robbed of our inheritance if the old anomalies really go out of fashion! We shall not be English any longer, you know. But perhaps we may be able to reconcile ourselves to being simply progressive Americans."

The School Journal, New York, one of the most widely circulated and influential school papers of the United States, says:

"The practical beginning of reform in spelling inaugurated by the National Educational Association last year is steadily gaining ground. Quite a number of city school systems have already adopted the list of words suggested. Chicago is now taking the lead under the energetic leadership of Superintendent Andrews. No orders have been issued, only simple recommendations to principals, but there is no doubt that all the schools will adopt the list. Dr. Andrews believes that the changes proposed by the National Educational Association are not radical enough, and are destined very shortly to be followed by others.

"What will the poor croaking 'conservatives' say now? As usual, when reforms are gaining a foothold, they are, for their own comfort, predicting all sorts of dire results that are to follow any tampering with the absurdities encrusted in English orthography. *The School Journal*, *The Teachers' Institute*, *The Primary School*, and the other periodicals issued from this office, have collected quite a number of amusing threats from rabid 'protectionists' who believe in retaining every tittle of the word-forms handed down from the printing-shops of the past. A few consciences have troubled their owners so seriously that they canceled their subscription, rather than tolerate their eyes weekly or monthly to behold the iniquities perpetrated by the spelling-reform committee of the National Educational Association. The old woman who tried to sweep the ocean back with her broom has still some followers in this day and generation."

Not long ago *The Voice*, New York, devoted a special issue to the subject of simplified spelling, and published the views of leading educators, writers, and statesmen upon this question. The list of those who express themselves strongly in favor of reform is an impressive one, and includes such names as Noah Porter, Prof. W. D. Whitney, editor of the "Century Dictionary," Professor Lounsbury, of Yale, Prof. Max Müller, Prof. W. W. Skeat, Prof. Francis L. March, United States Commissioner of Education William T. Harris, William E. Gladstone, and many others equally eminent. The fact that every leading authority on English etymology favors spelling reform, it is argued, is an effectual answer to the claim that phonetic spelling would obscure etymology. Says Professor Skeat upon this phase of the question (as quoted in *The Voice*):

"It is surely a national disgrace to us to find that the wildest arguments concerning English spelling and etymology are constantly being used even by well-educated persons, whose ignorance of early English pronunciation and of modern English phonetics is so complete that they have no suspicion whatever of the amazing worthlessness of their ludicrous utterances. . . . It is really a gross misnomer to call that spelling 'etymological' which merely imitates the spelling of a dead language. Every student is (or should be) aware that the only true 'etymological' spelling is one which is *phonetic*. It is the sound of the spoken word which has to be accounted for; and all symbols which disguise this sound are faulty and worthless. If our old writers had not used a phonetic system, we should have no true data to go by. . . . As a matter of history, the notion of so-called 'etymologi-

cal' spelling is a purely *modern* one, a thing never dreamt of in the earlier periods, but the fond invention of meddling pedants who frequently made ludicrous mistakes in their needless zeal."

Prof. Max Müller, one of the highest of linguistic authorities, thus replies to the etymological argument:

"An objection often made to spelling reform is that it would utterly destroy the historical or etymological character of the English language. *Suppose it did*; what then? Language is not made for scholars and etymologists; and if the whole race of English etymologists were really swept away by the introduction of spelling reform, I hope they would be the first to rejoice in sacrificing themselves in so good a cause. But is it really the case that the historical continuity of the English language would be broken by the adoption of English spelling, and that the profession of the etymologist would be gone forever? *I say No, most emphatically, to both propositions.*

"Because the Italians write *filosofo*, are they less aware than the English who write *philosopher* that they have before them the Latin *philosophus* and the Greek *filosofos*? If we write *f* in *fancy*, why not in *phantom*? If in *frenzy* and *frantic*, why not in *phrenology*? A language which tolerates *vial* for *phial* need not shiver at *filosofer*. What people call the etymological consciousness of the speaker is strictly a matter of oratorical sentiment only.

"If anybody will tell me at what date etymological spelling is to begin, whether at 1500 A.D., or at 1000 A.D., or at 500 A.D., I am willing to discuss the question. Till then I beg to say that *etymological spelling would play greater havoc* in English than phonetic spelling, even if we are to draw a line not more than five hundred years ago."

DAVID HARUM, AND LITERARY POPULARITY.

THE question as to how far the popularity of a new book or of a new author is founded upon real and permanent merit or upon a passing fad is always an interesting one. At the present time we have two books that have attained a vast sale—"David Harum," which has now reached the hundred-thousand mark, and "In His Steps," of which several million copies are said to have been sold in America and England. Few would claim for the latter work, however useful and worthy a book it may be, any title to consideration simply as a product of literary art. But with regard to "David Harum," a spirited and at times even acrimonious controversy has been raging, particularly in the columns of the *New York Times*. The admirers of "David Harum" appear to constitute a very considerable majority of the reading public. They claim that the book is a permanent contribution to American letters, and think its author should have a place beside Irving, Bret Harte, and other great humorists of America. There are, however not a few who see nothing but inanity and commonplace in the work, and believe it will take its place in the group of obsolete or obsolescent stories such as "Helen's Babies," "Trilby," and "The Bonnie Brier Bush." Says one writer in *The Times*:

"No one ever pretended to give a reason for fashions in dress. 'They come and go as comes and goes the sea.' Neither season nor convenience seems to cut any figure in their adoption. It seems to be about so in literature. Few of the books which at the start have enormous circulations live to be admired for five years. What has become of 'Trilby,' about which all the half-educated world raved a short time since? It is dead as a door nail. What has become of the later novels of George Eliot? No one, it seems, reads them any more; but they were as much of a fashion in their day as the old hooped skirt. 'Adam Bede' and 'The Mill on the Floss' beyond doubt are worthy of fame; but surely no spark of their fire is visible in the padded later novels of the same author. These became popular because it had become the fad to consider the writer a genius.

"I am afraid the same will prove true as to Kipling's works. In a few years I do not believe that any of his stories will be regarded more highly than those of the author of 'King Solomon's Mines,' which really have some merit of their own. The latest fad, it seems, is 'David Harum,' that is likely to out-Trilby

'Trilby.' Of course it is useless to reason against either fads or fashions. People who follow them do not argue, and it only makes them mad, as it will, no doubt, some of your readers, to hint that they are carried away by the fashion of the hour. . . .

"As a matter of fact, it is art that alone is immortal among the children of men. Science changes because knowledge changes; but art is as imperishable to-day as it was in the days of ancient Egypt or of classical Greece or Rome. The future of every book depends upon the art that it exhibits. Homer and Shakespeare and Byron and Tennyson, yea, even our English Bible, are immortal, if for no other reason because their incomparable style reaches the dignity of art. Macaulay's essays and history remain, even to-day, the standard of luminous style, so much so that every one that would excel in diction must give his days and nights to their pages. The worshipers of fads and fashions do not trouble themselves about either art or science. They simply follow the mob. Perhaps it is just as well, after all, for is there not a feeling of safety in numbers even among insects?"

Another writer says that those who do not like "dear, delightful 'David Harum'" must be "congenitally sour," and quotes the sales of the book as proof that "it is plain that there must be something extraordinarily good about it." Still another writer points out that this test would prove also that there is something "extraordinarily good" about the works of Archibald Clavering Gunter and Miss Laura Jean Libbey—a supposition that makes the muse of fiction gasp. This curious diversity of literary judgment is amusingly illustrated by the story of a writer who lately read "David Harum" with more delight than he had found in any novel in many years, and he had read most of the novelists from Fielding and Richardson to Hardy, Tolstoy, and Juan Valera. He was just on the point of sending a copy of "David Harum" to a friend whose tastes were in general similar to his own, when by the same mail he received a letter with these words:

"I have just read the famous 'David Harum,' expecting a rare treat, and was wofully disappointed. To me it was exceedingly stupid and commonplace, and I wonder at its popularity. According to the usual location of climaxes, one should begin with the last chapter and read up to the first; for, to me, the interest began to wane after the opening chapter, and reached the vanishing point about the middle of the book."

NOTES.

IN a recent speech at the Authors' Club in London, Mark Twain perpetrated a pun which, he said, it had taken him eight days to compile. In the peroration of his speech, after alluding to the friendliness of England and America as shown in their common anxiety around Mr. Kipling's sick-bed, he said: "Since England and America have been joined together in Kipling, may they not be severed in Twain." And Mark sat down amid a burst of rapturous applause.

A RECENT telegram from London to the *New York Herald* states that Mr. Grau has already secured the artists for his coming American season. They are, says the despatch, as follows: Sopranos—Mmes. Calvé, Sembrich, Nordica, Adams, and Susan Strong; Contraltos—Mmes. Schumann-Heink, Mantelli, Olitzka, Bauermeister, Van Cauteren, and Broadfoot; Tenors—Van Dyck, Saloza, Alvarez, Dippel, Salignac, Bars and Vanni; Baritones—Van Rooy, Bertram, Campanari, Albers, Scotti, Muhlmann, Dufliche, Meux and Pini-Corsi; Basses—Edouard de Reszke, Plancon, Devries, and Pringle; Conductors—Mancinelli, Hinrichs, and Paur. Mme. Ternine will practically be a newcomer; M. Alvarez has not yet been heard in New York; Mme. Calvé returns after an absence of nearly three years. Signor Scotti is an Italian baritone who has never sung in America. Herr Bertram is a celebrated German baritone who has for years been engaged at the Royal Theatre at Munich, and is particularly well known as a Wagner singer. The grand-opera season in New York this year is to begin December 18 and to last fifteen weeks, consisting of forty-five evening and fifteen afternoon subscription performances. Says *The Herald*: "Mr. Grau has not yet decided upon the repertory of the coming American season, but it is sure to include the best works of all schools of music. The policy of the management is an eclectic one, and operas will be given as heretofore in French, Italian, and German. A novelty that promises to be interesting will be a complete cycle of Wagner's works in chronological order, beginning with 'Rienzi' and ending with 'Goetterdaemmerung'. This will be followed by a short cycle of Mozart's works, particular attention being paid to the *mise en scène* of 'The Marriage of Figaro,' 'Don Giovanni,' and 'The Magic Flute.' One or two novelties, as well as some interesting revivals, will also be introduced in the program mapped out by Mr. Grau. Negotiations are still going on with a celebrated American prima donna, who in former seasons was a member of Mr. Grau's company."

SCIENCE AND INVENTION.

THE PHOTOGRAPHY OF LIGHTNING.

IN these days, when every man, and more particularly every boy, is his own photographer, few indeed are the objects of interest, natural or artificial, that are not recorded on the sensitive plate. Ten years ago a photograph of a lightning flash was a curiosity, while now such photographs have been taken by almost every one who has owned a camera for any length of time.

PHOTOGRAPH OF LIGHTNING.

Courtesy of *Popular Science*.

We are told by Prof. H. A. Hazen, who writes on the subject for *Popular Science* (August), that far from aiding scientific men to solve any of the problems connected with the mystery of the lightning flash, these photographs have served chiefly to add to the number of questions about it that clamor for solution. Says Professor Hazen:

"The idea of straight zigzag lines of the old-time painters has been entirely exploded. Indeed, it is a little difficult to see how this idea could have originated, for the crudest visual observation of a lightning flash would have shown that its appearance is like that of the branch or branches of a tree, and in no part of its path does it show a straight line.

"Besides the regular branched lightning flash, photography has shown a so-called 'multiple' and a 'ribbon' flash. These appearances have given rise to very diverse opinions as to their mechanism and formation. The 'multiple' flash has been variously and sometimes erroneously described. It consists

of three to seven separate and distinctive flashes side by side, all having precisely the same convolutions and all of them alike each to each. So far as known no 'multiple' flash was ever photographed except with a moving camera. A few instances where it was claimed the camera was not moved must be regarded as very suspicious. It seems impossible to believe that two separate flashes could pass through the atmosphere side by side and exactly alike. On the other hand, it has been claimed that a lightning flash is practically instantaneous (.001 to .0001 second) and that no ordinary motion of the camera could possibly show anything but a single continuous flash.

"The 'ribbon' flash, as its name implies, is simply a broad ribbon of light. In no case, so far as known, has this ribbon been of a uniform shade, but it has always had alternate brighter and darker bands. It seems probable that the 'ribbon' flash must be made with a camera in very slow motion."

In severe storms several flashes have been seen to descend in quick succession over the same path, and such a series, if taken

with a moving camera, would of course show as several parallel streaks or, with slow motion, as a broad "ribbon." Professor Hazen regards this as the true explanation of these photographs. He goes on to say:

"Another form of lightning has been photographed which shows an appearance like a rope in the air, as tho the electricity had had some difficulty in making a path for itself. The appearance may also be likened to the masses of smoke that often roll out from a chimney. It seems difficult to account for this formation.

"Enough has been said to show the intense interest attached to this subject of lightning photography, and it is to be hoped that every amateur interested in this subject will make an effort to secure a number of photographs during the coming season. The use of the camera is simplicity itself. It has been found practically impossible to 'take' lightning when more than six or seven miles away, or when so far away that the thunder becomes inaudible. It has been suggested that the light is nonactinic.

"In one instance, incandescent electric lights on a tower three quarters of a mile away showed beautifully, but several flashes of lightning which crossed the plate during the exposure were not taken. The lens should be wide open and also the quickest plates should be used. The window should be opened and the camera held as still as possible on the sill, or it may be held in the hand, and pointed in the direction of the flashes. As a general thing, the different flashes will not seriously affect the plate. If the lens does not have a fixed focus it should be focused beforehand on an object a mile or two away and the place marked on the bed."

WHAT IS THE BEST WAY TO LEARN A LANGUAGE?

THIS question is taken up by M. Georges Saint-Paul, who believes that the chief factor in language-study is memory, and who applies to the problem the modern psychologic view of memory, with interesting results. Says M. Saint-Paul in the *Revue Scientifique* (July 8):

"The practical study of the languages necessitates an attentive education of the memory. The rôle of the intellect, properly speaking, is much more limited, especially at the beginning of the study. Altho linguistics, etymology, and the historic and scientific knowledge of language imply the activity of the very highest cerebral functions, aptitude in speaking the current language of a foreign people is especially, and above all else, a question of memory. Know the words, and know how to pronounce them sufficiently well to make yourself understood, and you will never be at a disadvantage. You may know every one of the most delicate rules of grammar and syntax; if you do not know many words, your knowledge, interesting as it may be from certain points of view, will remain a dead letter, for all the practical use you can make of it."

We do not teach languages properly, thinks M. Saint-Paul; or at any rate, they do not in France (it is his own country that he is talking about), and the reason is that altho memory is the faculty, as has been just said, that is chiefly concerned, we do not know enough about what memory really is. He says:

"This [knowledge of what memory is] would not be indispensable, perhaps, if memory were a function of only one nerve-center; but the organs of memory are numerous; we should know them as we should know the working of the muscles to teach gymnastics intelligently. As the organism may be benefited, in striving for a certain end, by exercising a special group of muscles, even so it may be for our interest to educate one memory-center in preference to another, and to divide and classify our efforts to obtain certain determinate results.

"The fact of the dissociation of the mechanism of memory is one of the fundamental physiological discoveries of the century. . . . I speak now only of the memory of words—verbal memory.

"Anatomical or physiological data indicate with certainty the existence of nerve-centers corresponding to these memories. The center of memory for the necessary movements to be made in speaking is situated in the back of the third frontal convolution, at the left (at least in right-handed persons); likewise, in such

persons, according to Exner and Charcot, the foot of the second left frontal convolution is the center of memory for those movements of the hand made in writing. . . . [Another lobe] is the center for visual verbal images. Finally, the center of memory for the auditive impressions of words is in the first temporal convolution.

"These important discoveries have enabled pathologists to explain and to specialize the different kinds of aphasia . . . and physiologists to classify healthy persons into visual, auditive, and motor subjects; that is, into persons who read mentally the words of their thoughts, those who hear them, and those who pronounce them."

Altho this classification, which was first made by Charcot, is not accepted as sufficient by the author, who believes that most persons belong to no one of these classes, but may visualize one class of thoughts, while pronouncing the words that express another class, and that they may even translate from one class into another, M. Saint-Paul thinks that we should certainly take it into account in formulating our systems of teaching. We should remember, in short, that memory depends not on one organ, but on a group of them; that each person thinks in a formula of his own, which depends on a nerve-center that may be called his "interior-language center"; that this center, however, is not necessarily the best of his memory centers, nor the only one that we must educate, since another formula, depending on another center, may be used for a different language. These facts may be practically utilized as follows:

"Every method that addresses itself to all the centers, and seeks by the exercise adopted to bring about the development of the memory centers and the creation of an interior-language center for the language to be taught, will be the best method, if it can be conveniently employed; that is, if there are at our disposal a very long time and the means of impressing all the memories at once.

"If not, it will often be preferable to limit ourselves to the exercise of one of the centers; not to make all the organs of memory do work, but one alone; to bring all our efforts to bear on the one that has been selected, and to limit the labor of acquisition of foreign words to a single cerebral group, so as to bring into play, instead of all the modalities of the language (auditive, visual, and motor), only one of its equivalents.

"Hence, in numerous cases it is necessary to choose between two methods: education by making a simultaneous impression on all the different centers, and education by limited impression of one group of centers."

The first method can be practically carried out only by living for years among those who speak the language to be learned, so that it can be spoken, understood, and read like the mother tongue. No system of instruction, M. Saint-Paul insists, will ever equal this. But for those who have neither time nor opportunity for it, it is better, the author believes, not to try to educate all the centers, but to confine our efforts to one—say the visual center; in other words, he would bend all energies to getting a reading knowledge of the language without endeavoring either to speak it or to understand it when spoken. Otherwise the result will be, and generally is, that after years of study the pupil can neither speak, understand, read, nor write like a native. It is better, M. Saint-Paul thinks, to do one of these perfectly and the others not at all, than to do all imperfectly.—*Translation made for THE LITERARY DIGEST.*

Does Marriage Lessen Crime?—The statistical investigations of Dr. Frederick Prinzing seem to show that married men are more law-abiding than bachelors, and that widowers are worse transgressors than either. We quote an abstract given in *The American Journal of Sociology* (Chicago, July) from his article appearing in the *Zeitschrift für Socialwissenschaft*:

"Property rights of all kinds are more generally respected by the married than by the single. The graver offenses against

property—robbery, extortion, fraud, etc.—are committed by the married man with comparative infrequency. When he is driven to the unlawful acquirement of wealth or of material goods, he generally chooses some of the less dangerous methods of so doing. Receiving stolen goods, breaking of laws relative to trade, commerce, and public health, forcible detention of pieces of property, bankruptcy, etc., are the forms which offenses against property usually assume among married men. Among those married at an extremely early age (eighteen to twenty-five) trespasses against the rights of property are much more common than among the unmarried of a corresponding age. This is probably explained by the fact that in such marriages poverty, if not a concomitant, is frequently a result. Incendiarism is most largely found among the unmarried, the greatest proportion falling to the account of widowers and single men between the ages of thirty and sixty years. . . . In the sphere of crime and offense against human life, the unmarried are greater sinners than the married, tho not so markedly so as in the offenses against property rights. Only in the matter of careless and negligent killing and wounding do the married surpass the unmarried. The difference in the criminality of the married and the unmarried grows less with advancing years. Between the ages of fifty and sixty years it is small; after that period it is still less. . . . It is of interest to note in this connection that drunkenness claims the major share of its victims between the ages of thirty and fifty years. The criminality of widowers decreases with advancing age. Their share in crime between the ages of thirty and fifty is notably greater than that of either of the other classes mentioned. . . . It has been said, in attempted explanation of this fact, that widowers are, as a rule, ill situated financially, but there appears to be no satisfactory evidence that this is true. Statistics do not prove that widowers belong to the poorer classes in any unusual degree. Widowers are especially prominent in offenses against property; but they also stand first in the series of those guilty of other classes of crime. The loss of the wife very frequently leads to mental derangement, and it is probably true, as well, that certain types of self-control are peculiarly difficult for this class to exercise."

SENSATIONS OF THE BLIND.

IT has been widely believed that, to make up for their lack of one sense, the blind possess one or more of the others in abnormal acuteness, being generally quick of hearing and delicate of touch. A long series of experiments by Prof. H. Griesbach, of Basle, whose results are published in recent numbers of *Pflüger's Archiv*, do not support this belief. We quote an abstract of Professor Griesbach's conclusions from *The Lancet* (London). Says this paper:

"It may be premised that the observations were made on those who were otherwise healthy. In the differentiation of tactile impressions no remarkable differences were observed between the seeing and the blind, or if small differences did exist they were in favor of the seeing. In those born blind the tactile sharpness was somewhat less than in the seeing, and in some cases the sensorium generally was equally defective. The blind in particular feel less acutely with the tip of the index finger than do those who see, and in many cases the tactile acuteness of the two index finger-tips differs. In the blind, especially in the region of the hand, a stronger impression is required to produce a tactile impression than in those possessed of sight. In the capability of localizing impressions of sound no difference exists between the blind and the seeing. In both great individual variations occur. As a rule, both in the seeing and the blind the use of the organ of both sides gives better results than the use of one alone. No difference in the acuteness of hearing exists between the blind and those who see. No relation was observed between the acuteness of hearing and the power of localizing sounds in either the seeing or the blind. No difference was observed in the two classes in regard to the acuteness of smell. In the execution of manual labor the blind become fatigued sooner than do those of equal age who see. The blind are more fatigued with manual than with mental work, which is not the case with the seeing of the same age. If any difference exists in regard to exhaustion after mental labor it is in favor of those of the same age who see.

failures, the Americans are carrying out a thousand, 90 per cent. of which may be failures; but their gain is a hundred good things, while we have gained twenty! They lose far more in their trials; they gain far more in their successes.

"So far as the writer could judge, the American appears perfectly fearless of foreign competition, and is a staunch believer in the survival of the fittest; and, what is more, that the weak will go to the wall. He knows that if he is weak, he will go to the wall, and is hence always on the move to do something clever. . . . It is this which makes them what we should call 'fool-hardy' with one another, and, if one may so put it, with ourselves; they do not care who sees what they are doing. Their works are equally open to the stranger and to the competitor. It seems an inbred idea with them that if they can not themselves keep up to date, and be at least as good as, if not better than, their neighbors, they are bound not to succeed. This at once accounts for their many successes and their many failures."

The writer next discusses the quality of our labor. We use comparatively so few workmen, he thinks, that our works often appear as if they were "closed down" when they are really in full swing. This is because we have used labor-saving machinery wherever such a use is possible, so that a thousand men here go much farther than they do in Europe. Not only this, but the thousand men work better and faster. His view of the character of our mechanics is almost too flattering. Says Mr. Dixon:

"The fewness of workmen is not, however, more strange than the activity of those who are employed.

"The writer has been intimately connected with large numbers of our workmen for the past twenty years or more, and has talked labor questions over with many classes in America, with the conclusion that, just as our own men, generally speaking, are bent on doing as little as possible in a given time, the American workman is bent on doing as much as possible. . . .

"The American artisan earns more wages than our own, but he does more work and thus often produces at a cheaper cost, and it must be obvious that if we are to maintain our position one of the greatest needs of the country is, that it shall be able to get an honest day's labor for an honest day's pay."

As to our resources, Mr. Dixon believes that they are wellnigh inexhaustible. No one, he says, can possibly get an idea of the size and wealth of the United States except from traveling over it:

"For the first time in the history of the world and of a highly civilized nation, we who, mainly through our large iron and coal deposits, have risen to be the foremost nation in the world, have now to face the fact that these resources which have made us what we are, and which are irreplaceable, are fast becoming exhausted. . . .

"We have for so long held and maintained an impregnable position that we are naturally of a buoyant and sanguine temperament, so much so that it is difficult to comprehend the exact position in which we now stand, and that we hold anything but the supreme and topmost place in any industrial pursuit is such a new idea that, as a nation, we may be forgiven our slowness to realize it."

Under these circumstances the "American invasion" of the British market is but the natural course of events, and Mr. Dixon believes that it will continue. He says in conclusion:

"Our American competitors are of the same blood as ourselves, and that means a good deal; we are not measuring our strength against unworthy foemen. Again, their young men make the pace, probably the men who spend the money are not those who make it. They build works, pull them down, and rebuild them on improved plans, with a rapidity that is truly astounding and incomprehensible either physically or financially, so much so that some of our attempted partial copies of American practise were regarded as obsolete there before we had got them erected. . . .

"Further, their country is new, and their trade is not embarrassed by all the ties and restrictions which come of such an old civilization as our own. Their industries are new, and their works are all on the most modern principles, and they have an inborn idea that they must be kept so. The question which so

often troubles us, 'Will it pay to break up and replace?' is not serious with them.

"As to the labor question, it will no doubt find its level, tho what injury may be caused individually and nationally in the process one can only surmise. One thing is clear, that no amount of restrictions which may be made as to hours, output, wages, etc., will alter 'the impossible,' and we are getting more and more able to define every day more clearly what is 'the impossible.' The increasing number of orders going to our competitors is a constant lesson in possibilities and of the effect and futility of artificial restrictions on labor. . . .

"To maintain our position, our workmen must be sober and industrious, and prepared to give an honest day's labor for an honest day's pay.

"Conditions obtain in America which must of necessity evolve methods of manufacture of paramount importance to us; and just as the Americans are not slow to visit us for information, so it is equally important, if not imperative, that those who now play or are to play, in the immediate future, an important part in the iron and steel industries in the United Kingdom should not be content with reading of, but should know and see for themselves, what is being done in the works of America."

Electrical Treatment of Cancer.—Dr. Massey, an Ohio physician, is treating cancer successfully by diffusing salts of mercury through the affected tissue by electric action. Says *Electricity* in a leading editorial in which Dr. Massey's method is described: "A method of destroying cancer germs by the aid of electricity has recently been discovered which it is claimed almost invariably proves successful provided the disease has not gone too far. In a paper read a short time ago before the Medical Association of Columbus, Ohio, by Dr. G. Betton Massey, this new method of treating cancer was fully explained. It consists in inserting in the body of the person afflicted nascent salts of mercury by electric diffusion. This is said to be a most convenient means of destroying tuberculous deposits in any part of the body except the brain, the lungs, and the abdomen. The details of the method of procedure are interesting as showing the important part played by electricity." The patient lies on a large pad connected with the negative pole of a battery, and a tubular gold electrode filled with mercury is inserted into the cancerous growth. The action of the current results in the formation of an oxychlorid of mercury which diffuses into the tissue in all directions at the rate of about an inch in half an hour, depending on the voltage of the current. The diseased tissues are thus absolutely destroyed, while the healthy ones beyond are only slightly affected. "In concluding," says the writer, "the author states that out of ten cases of carcinoma, or cancer, operated upon he succeeded in curing nine by the use of electricity as outlined above."

SCIENCE BREVITIES.

ACCORDING to the report of the German Chemical Society, the average of 142 analyses made in Sheffield, England, show that the air of that city contains $3\frac{1}{4}$ parts in ten thousand of carbonic acid, the maximum being 5.14 and the minimum 2.16. In the center of the city the average was 3.9 parts, with a maximum of 6.22 and minimum of 2.8. These figures are higher than those observed at Paris (2.85), Dieppe (2.94), and Odessa (3.04); but at Liege the proportion of carbonic acid is about the same (3.4). Wind and snow increase the proportion, but rain has no effect. It is greatest in January and least in April, and also decreases in hot weather.

THE too free use of water as a beverage is condemned editorially by *The Medical Brief*, July. It says: "A fact perhaps not generally known to the profession is that water, as well as food, requires to be assimilated, to properly fulfil its natural offices in the system. Water is not readily incorporated into the blood-serum, thinning it, increasing its solvent qualities, and lessening its plastic properties, unless it is drunk in response to thirst, such as normally follows good digestion, brisk exercise, eating salt foods, a hot bath, vigorous sweating, fever, etc. Adventitious water, water taken into the stomach without appetite or demand for it, lingers long in the digestive organs, often producing a feeling of weight. . . . Unless measures are employed to stimulate the assimilation of water by creating a legitimate demand for it, as expressed by thirst, it is not advisable to force too much on the system. A single glass between meals and at bedtime will wash out the stomach as well as several, where the individual manifests no desire for, or an actual repugnance to, water. Indifference to a fluid which constitutes three fourths of the human body is abnormal, and requires treatment; but the treatment must consist in establishing a physiological need for water in the system, not in forcing nature by distending the digestive organs with a heavy fluid."

THE RELIGIOUS WORLD.

INGERSOLL AND THE RELIGIOUS PRESS.

AT Colonel Ingersoll's funeral, which took place with simple ceremonies at his home in Dobbs Ferry, his last poem, "The Declaration of the Free," was read by his friend, Dr. John Clark Ridpath. It is in part as follows:

The simple truth is what we ask,
Not the ideal;
We've set ourselves the noble task
To find the real.
If all there is is naught but dross,
We want to know and bear our loss. . . .
We have no God to serve or fear;
No hell to shun;
No devil with malicious leer.
When life is done
An endless sleep may close our eyes—
A sleep with neither dreams nor sighs. . . .
When cyclones rend—when lightning blights,
'Tis naught but fate;
There is no God of wrath who smites
In heartless hate.
Behind the things that injure man
There is no purpose, thought, or plan.
The jeweled cup of love we drain,
And friendship's wine
Now swiftly flows in every vein
With warmth divine.
And so we love and hope and dream
That in death's sky there is a gleam. . . .
We do not pray, or weep, or wail;
We have no dread,
No fear to pass beyond the veil
That hides the dead.
And yet we question, dream, and guess;
But knowledge we do not possess.
We ask, yet nothing seems to know;
We cry in vain.
There is no "master of the show"
Who will explain,
Or from the future tear the mask.
And yet we dream and still we ask:
Is there beyond the silent night
An endless day?
Is death a door that leads to light?
We can not say.
The tongueless secret locked in fate
We do not know. We hope and wait.

The address delivered by Colonel Ingersoll at his brother's bier two decades ago was also read. It was as follows:

"DEAR FRIENDS: I am going to do that which the dead oft promised he would do for me.

"The loved and loving brother, husband, father, friend, died where manhood's morning almost touches noon, and while the shadows still were falling to the West.

"He has not passed on life's highway the stone that marks the highest point, but, being weary for a moment, he lay down by the wayside, and using his burden for a pillow, fell into that dreamless sleep that kisses down his eyelids still. While yet in love with life and raptured with the world, he passed to silence and pathetic rest.

"Yet, after all, it may be best, just in the happiest, sunniest hour of all the voyage, while eager winds are kissing every sail, to dash against the unseen rock, and in an instant hear the billows roar above a sunken ship. For whether in mid-sea or among the breakers of the farther shore, a wreck at last must mark the end of each and all. And every life, no matter if its every hour is rich with love and every moment jeweled with a joy, will, at its close, become a tragedy as sad and deep and dark as can be woven of the warp and woof of mystery and death."

The following passage, summing up the religious and ethical principles which Colonel Ingersoll desired to have recognized as his belief, was also read:

"To love justice, to long for the right, to have mercy, to pity the suffering, to assist the weak, to forget wrongs and remember benefits; to love the truth, to be sincere, to utter honest words, to love liberty and wage relentless war against slavery in all its forms, to love wife and child and friend, to make a happy home, to love the beautiful in art, in nature; to cultivate the mind, to be familiar with mighty thoughts that genius has expressed, the

noble deeds of all the world; to cultivate courage and cheerfulness, to make others happy, to fill life with a splendor of generous acts, the warmth of loving words; to discard error, to destroy prejudice, to receive new truths with gladness; to cultivate hope, to see the calm beyond the storm and dawn beyond the night, to do the best that can be done and then be resigned—this is the religion of reason, the creed of science. This satisfies the brain and heart."

The religious papers of all denominations give much space to comments on Colonel Ingersoll. Appreciation of his good traits of mind and heart, mixed with charitable criticism, prevail, altho condemnation is not lacking.

The Independent (undenom.) says:

"To the end of his life he was a consistent unbeliever and a scoffer at the Christian religion in all its forms, and an ag-

INGERSOLL'S CINERARY URN.

On the front is the motto: "L'Urne garde la Pousière, le Cœur, le Souvenir." (The Urn guards the Ashes, the Heart, the Memory.)

nostic as to a future life or the existence of a God. It was as such that he preferred to be known, and as such he will be chiefly remembered. It is impossible to claim that he did not believe as he taught; it is also impossible not to believe that his mind was warped from his very childhood by the treatment much more than by the teachings of his father, who was a minister of the Christian church. His genius was not that of a scholar or thinker. There was about him not a bit of philosophy; but he had a very poetical nature, an absolute genius for public speaking, and the gift of being a good hater and a good fighter. People loved to hear him speak even when they disliked what he said. Religion he always identified with Calvinistic teachings, and for that reason his influence as a denouncer of religion was with the ignorant rather than with the intelligent. But on many subjects of reform he could speak admirably. Rhetorically he was too florid, but his utterances were often rarely beautiful as well as eloquent, and we would not fail to give him credit for very much of that frankness and honesty which are a large part of true manliness, not to say Christianity. . . . He was while he lasted a beautiful

sparkling Fourth-of-July rocket, and he leaves a brief memory behind him."

Christian Work (undenom.) says:

"In later days his deliverances against the Bible attracted diminishing attention. And so people began to realize that it was a caricature of Christianity, and not the real thing, that he was assailing; as a recent writer has said, 'His guns were all pointed astern.' And what especially minimized the attention that Colonel Ingersoll received in later times was the fact that he wholly failed to show the least comprehension of the really critical investigations of scholars, which are so profoundly modifying Christian theology, but went slashing away, in his rough, gladiator fashion, at 'the mistakes of Moses,' so that he was undertaking to hold Christianity to the very letter of the Old-Testament record, while evangelical scholarship on both sides the Atlantic was busy demonstrating that the Bible was no less the Word of God than it contained many errors. . . . He was a master of epigrams, of poetical imagery, of telling phrases; but he was not a deep thinker; he spoke of subjects which he had not studied, and ridiculed things which he knew only by half; he contributed little, really we may say he added nothing, to the sum of human knowledge. And now he has gone, much of the evil engendered by his teaching remains, but none of the good which he has been instrumental in accomplishing—and we are glad to know the sum of that good in the shape of personal benefactions is not small—is interred with his bones."

The Congregationalist says:

"Mr. Ingersoll was one of the few infidels whom this country has produced. In fact, he is about the only one who has won notoriety, and the only one who has traded on his unbelief. Thomas Paine was a deist, who earned immortality by his services as a patriot, as a trenchant pamphleteer. Voltaire profoundly influenced the political history of France, and still shapes somewhat its current popular philosophy of life, if not its metaphysical speculation, and he must ever be reckoned with as one of the masters of French prose and verse. But no such fame awaits Mr. Ingersoll when our children's children study either the history, the literature, or the philosophy of the period in which he lived. . . . He was a Don Quixote tilting at wind-mills. He was a bold assailant of views, which, however much they obtain among the illiterate and superstitious, no longer obtain among intelligent rational men."

The Christian Register (Unit.) says:

"Colonel Ingersoll was best known and will be longest remembered as the most famous of American agnostics. That which Huxley undertook grimly, resolutely, and painfully, Ingersoll cheerfully, humorously, and with apparent delight engaged in. This eager enjoyment of the contest has excited the suspicion that, while he believed his cause to be just and that the world would be better for the destruction of the popular institutions of religion, he did not even in his own thought take seriously enough his mission as a reformer. He enjoyed his own wit, the exercise of his power of humorous exaggeration and caricature, the laughter and applause of the multitude, and the consciousness of success. No other man of his generation, holding his ideas of religion, could have announced them as he did, frankly, and with a jocular defiance of the most potent sentiments which shape the affairs of man, without being hissed, hooted, and execrated. He gloried in his power of defying public sentiment and yet carrying with him a large following of respectable and intelligent people. There was a lingering suspicion also that he was not indifferent to the receipts at the box office, altho these might have been regarded as trophies of victory.

"At the outset of his career as a lecturer he drew certain lines of attack and defense. From them he never departed. In later years his mind seemed closed to all new thought, whether within or without the Christian church. No Presbyterian of the most bigoted sort could have been more indifferent than he was to the advances of the higher criticism, to the religious interpretation of the doctrine of evolution, to the increase of light, and the decline of superstition in all parts of the Christian church. Much that he attacked deserved attack, and his denials were commonly justified by preposterous affirmations. It is a notable sign of the times, however, that the enmity to him had almost died out, because the things he attacked are no longer regarded as venerable, and his

influence was no longer greatly felt or feared because modern progress has made for itself ways wherein his criticism neither helped nor hindered the wayfarer seeking a religious home."

The Universalist Leader says:

"Robert G. Ingersoll has been a name revered by many people in this country and abhorred by many others. His was a remarkable personality. Gracious in manner, dignified in bearing, fluent and rhetorical in language, eloquent and magnetic in speech, he had few rivals as an orator among the public men of the day. His heart and brain were big, but he was swayed by impulse rather than guided by reason, and his philippics showed the effects of prejudice and passion rather than of research and logic. A champion of fair dealing and of justice, he was himself in his arraignment of religion most unfair and unjust. He posed as an educated man and a scholar, yet he displayed woful ignorance of the real genius of Christianity and failed utterly to interpret the theological trend of the times. Calvinism has had no more bitter or ingenious assailant, and he dealt the old creeds the sturdiest of blows, but he wronged his own manhood and lowered himself in the esteem of the world when he persisted in making Calvinism synonymous with Christianity and ignored the sweet reasonableness of the true Gospel."

The Christian Advocate (Meth. Episc.) says:

"No one has ever spoken of him as a philosopher; for never in his speeches or writings has he exhibited the essential capability of that calm, profound, unbiased, and protracted reflection which views a subject equally in itself and in its relations.

"In reality he was a poet, in spirit, mode of thought, language, and rhythm—a prose poet, not of the highest, but of no mean, order. All his speeches, even the most argumentative, exhibit this element. An exquisite superficial sensibility; a gliding current of thought spontaneously connecting itself with felicitous language, and not subjected to close criticism—except with respect to euphony—characterized his spoken style. He possessed little of that quality of imagination which enables one to place himself at another's point of view. He could forecast how a legal opponent would defend his client and prepare to meet him; for that is part of the technic of the profession. Only a genius could radically surprise a skilful lawyer as to the plan. But Colonel Ingersoll appeared to have little or no power to form a true idea of how another would regard a complex system of thought upon a strictly philosophical theme.

"Ingersoll wrote: 'Under many circumstances a man has a right to kill himself. . . . When life is of no value to him, when he can be of no assistance to others, why should he continue? When he is of no benefit, when he is a burden to those he loves, why should he remain?'

"In this city alone in a few months twelve men and women died by their own hands, upon whose persons or at whose abode were found extracts from his justification of suicide. As to have seen certain pictures once poisons the mental and moral blood, so to have heard his sarcasms upon God, his denunciation of future punishment, and his eulogy of an everlasting sleep is to scar the soul. But perhaps his influence in promoting popular irreverence has wrought most harm."

The Interior (Presby.) says:

"All faith in God whether as shadowed forth in nature, or revealed in Scripture, or impersonated in Jesus Christ, or attested in the experience of the Christian, was, to him, 'superstition.' To destroy this superstition, to rid the minds of men of its power, was the purpose to which his life was consciously devoted. Nor did he fail to have power over an enormous number of people. Of the personal responsibility for such influence it is not for us to speak; God, into whose unveiled presence he has now come, is his judge. Nevertheless, it is impossible to pass over the fact of such a career without some earnest questioning. If Providence has any meaning open to our apprehension, such a providence as this man's life presents must have important significance; some meaning which it is worth while in all humility, charity, and reverence to search for. . . . As to those noble and splendid qualities as a man, as husband and father, as friend and citizen, as humanitarian and philanthropist, for which all who knew him admired and loved him, and all those standards of right by which he assumed to judge the 'Mistakes of Moses' and the Old-Testament

ment seeming portraiture of Jehovah—all this of course he got, and without the grace of thankfulness, from the Book he reviled, the religion he assailed."

The Central Presbyterian says:

"He was only negative and destructive, striving with intense purpose to pull down, and never proposing anything on which to build morals for the present life or hope for the life to come. He was constantly striving to remove the foundations of faith in God and His truth, to take away that fear of God which is the strength of virtuous living, to remove the consolations of the bereaved and burdened, and to wipe out the hope of the dying. And in all his vigorous and eloquent platform ministry, there was not one word of positive conviction, not one ray of light in the darkness of the world's sin and death."

The Living Church (Prot. Episc.) says:

"It has always been to us a source of pity that he should have identified Christianity with that travesty and corruption of it which Calvinism is—a mistake which has created many unbelievers, and which gave him great influence over thousands of men who listened to his brilliant invective, who had themselves been reared under a system against which their better nature revolted. Perhaps we may confess that the career of Mr. Ingersoll as a lecturer tended to good, at least in the sense that it tore up by the roots that malign philosophy which so many Protestant bodies have identified with the very essence of the Gospel, but which, happily, they are now seldom preaching and scarcely believing."

"Whatever new light may now have dawned upon his immortal spirit, whatever enchantments of prejudice may now be dissolved, the influence of Mr. Ingersoll's words will continue to draw many away from the faith of Christ; but it will be a vanishing influence, for its power was due less to what he said, than to the captivating manner in which he said it; less to his coarse, but genial, invective, than to his strikingly attractive personality."

The Pilot (Rom. Cath.) says:

"He never had a following of really educated people—his thought was too shallow and his sophistries too slight for these. He drew the half-educated and the irreligious ignorant, for flippancy and irreverence follow semi-education, as its shadows; and the mental and spiritual barbarian loves a horse-laugh. Among such people, Colonel Ingersoll wrought incalculable moral and spiritual evil."

"God gave this man the eloquence and personal magnetism which, rightly used, had made him an apostle. God gave him success, wealth, domestic happiness, friends. Nay, even, God gave him several unmistakable warnings of his approaching death. But the man, with a perversity that looks like monomania, used every one of the divine gifts against the Giver."

The New York Freeman's Journal (Rom. Cath.), whose editor, the Rev. L. A. Lambert, is the author of "The Mistakes of Ingersoll," says:

"He did not understand Christianity as a whole. It may be that he was not conscious of his many inconsistencies, just as a man who is color-blind is not conscious of the fact and persists in calling a red object blue, because, by reason of his defective vision, he can not see it otherwise. There is such a thing as intellectual color-blindness. His antipathy to Christianity did not arise from his intellectual perceptions, but from his imagination, emotions, and sentiment. These had been wounded to an insufferable degree by a false presentation of Christianity in his early youth. Puritan extremism, that gave a false philosophy of life and a false idea of the beneficent Creator, gave his young imagination and emotional nature a shock that it never recovered from, a shock that left no alternative but despair or revolt, and he chose the latter. The Christianity he hated was not true Christianity as it is, but the Christianity that had been burned and scalded into his consciousness and memory. His feverish animosity to the Christianity of his imagination—the only Christianity he knew—was the result of pain from the wound that had cicatrized his very soul. This animosity grew with his growth and increased until it became the monomania of his life. This monomania accounts for much that he has said that will not stand the cold test of calm reason and common sense. Instead

of being a curb his intellect became the slave of his emotions and his imagination, which accounts for his fitfulness and inconsistencies and for its perverted vision of truth and facts."

The American Israelite (Jewish) says:

"His standard for the conduct of a man and a citizen, a husband, a father, a friend, was the very highest and, as well as a man may, he lived up to it. His scorn of priestcraft and superstition may have led him too far, but let it be remembered that he hated injustice, cruelty, and shams just as heartily, and raised his voice as sincerely in condemnation of them."

The Jewish Voice says:

"We Jews have good reason to hold him in grateful remembrance, for while to him Judaism never appealed in its grandeur and purity, and Moses's undying work appeared to him full of mistakes, as Christianity but a nursery tale replete with incongruities, he nevertheless denounced, in unmeasured terms, the unreason of religious fanaticism and the inhumanity of race hatred. The Jew is indebted to him, not for his opposition to established religion and to positive faith, but for tearing down old barriers and trying to bring to him nearer the love of his Christian brother."

"And then, he loved the arts, and the best in the world's literature was to his soul a joy. The outpouring of the holy spirit of man's intellect, no matter in what form, made of him, unconsciously, a prophet of his time and generation. Passionately patriotic, he never missed an opportunity to imbue others with love of country and with a willingness to devote to it the best energies and the best talents."

"Even his denial of the existence of the Supreme Being can not prevent us from recognizing in him a child of the Father in whose loving embrace he, too, rests. Such is the sweetness and strength of our faith that we can not help hoping and praying for him, too, rest and felicity 'in the shadow of the Most High!'"

CONVERSION OF A WHOLE CHURCH.

ONE of the most extraordinary events in ecclesiastical history is the conversion of almost the entire Nestorian church in Persia to the Orthodox or Holy Eastern church. The Nestorian church has for fifteen hundred years been linked in history with Persia, but is now practically extinguished in that country. It is one of the oldest of sects, having been founded by Nestorius of Constantinople in the fifth century. Its principal doctrine, namely, that of the separate human and divine personality of Christ, has caused it to be usually termed heretical, altho in ceremony and doctrine it has little to distinguish it from the other Oriental communions. The Nestorians are very careful to call Mary the "Mother of Christ," not the "Mother of God," but they recognize seven sacraments, accept the doctrine of transubstantiation, and have an ornate ritual.

This church, which was the national church of Persia for many centuries, and once had no less than ninety diocesan bishops under regular metropolitans, has now come bodily into the communion of the Orthodox Russian church. Of this interesting event and its causes the *New York Independent* (July 27) writes thus:

"It will be remembered that in 1897 two priests, delegated by the Greek metropolitan of Georgia, came to Urumia, and were met with the wildest acclaims of enthusiasm from several thousand Nestorians, and they made a triumphal progress through the villages. In the course of a few months no less than ten thousand persons enrolled themselves as desirous to become members of the Russian church. In September, 1898, the transfer was accomplished. A monastic priest came to be the superior of a permanent mission, and with him a Nestorian bishop, who had been received with great *éclat* into the Russian church. No other mission in modern times can show such a record. Where a year ago there was not a single Greek Christian, there are now over 20,000, including children. . . . There are, however, 65,000 Nestorians who are Turkish subjects, and it is not at all unlikely that they will follow their brethren in Persia, tho their attachment to

the traditional faith of their church is much stronger. Yet this is a national movement and not a missionary one. It must be interpreted from the social rather than the religious side."

As to the effect which this movement will have on mission work in Persia, *The Independent* says:

"There is a well-organized and influential body of Protestant Christians, numbering about 2,500 communicant members, and the French Roman Catholic mission has gathered a somewhat smaller body. The Archbishop of Canterbury's Anglican mission has also work there, but has not attempted to establish a separate communion, but only to strengthen the Nestorian church so as to resist the influences of non-Episcopal Protestantism. There are some other smaller independent missions carried on by native Christians who have found supporters in England or America. These independent missions will all, doubtless, come to an end, and there will be no reason for continuing the Anglican mission. The case with the American and French missions is entirely different, and their work will be thoroughly tested, for in the excitement of this national movement there will be many motives to lead Protestant and Catholic Nestorians to join the Russian church. Mr. Shedd says that the Protestant are standing the severe test much better than the Catholics, and, on the whole, there is very good reason for regarding this movement as a vindication of the methods of their work. Yet the larger part of their work will probably have to be henceforth in Turkey, and with it is connected the task of evangelizing the Armenians, Jews, and Moslems."

DR. ZAHM'S RETRACTION.

THE Rev. Dr. John A. Zahm, Provincial of the Fathers of the Holy Cross and president of the University of Notre Dame, some years ago published a work entitled "Evolution and Dogma" which was severely criticized by many churchmen in America and Europe as containing views contrary to the teachings of the Cath-

olic faith. So much criticism was aroused that a committee of cardinals was commissioned by the Congregation of the Index to examine the book in order to determine whether or not these claims were true. No report has yet been made, but now Dr. Zahm has himself announced that he desires his book to be withdrawn from sale. In a letter to Mr. Alfonso Golea, one of the translators of the book, Dr. Zahm says (we quote from the Rome correspondent of the *New York Freeman's Journal*):

Courtesy of *The Irish World*.

"NOTRE DAME, IND., May 16, 1899.

"MY DEAR ALFONSO:

"I have learned from unquestionable authority that the Holy See is adverse to the further distribution of 'Evolution and Dogma,' and I therefore beg of you to use all your influence to have the book withdrawn from sale. You have probably foreseen this result, and it will, therefore, cause you no surprise. . . . However, we can both thank God that we labored only for His

honor and glory in giving the work to the public. As for myself, it will cause me no pain to see the fruit of so much toil consigned to oblivion. God rewards the intention, and our intentions were good."

Mr. Golea has also submitted. He makes this public announcement:

"I, too, join with the illustrious Dr. J. A. Zahm, as the translator of his 'Evolution and Dogma,' and I ask my true friends neither to read nor to give further publicity to my poor version of the above-mentioned book, in obedience to the desire of the Holy See, and am always ready to retract when called upon."

The *New York Independent* comments on this incident as follows:

"Professor Zahm is the most distinguished student of biology in the American Catholic church, and his book has been received with the greatest praise within the church and has been translated into various European languages. . . .

"What interests us in this matter is not the condemnation of the book. Many such books have been condemned, and the Congregation of the Index is an anachronism only a little worse than that other anachronism which requires, or expects, Catholic books or newspapers to carry an imprimatur. What does interest us is the way that the withdrawal and the virtual interdict on which it is based have been received by the Catholic press.

"It would be too much to expect that any Catholic newspaper would condemn the action of the Congregation of the Index or do anything that would ostensibly indicate a spirit of rebellion; but the feeling behind can be expressed in other ways, just as in Finland criticism of the action of the Russian Government in overthrowing the constitution of the province found utterance in quotations of Scripture about kings and princes and tyranny. So here numerous Catholic papers quote in full the correspondence between Professor Zahm and Mr. Golea, and they make no comments in approval. But they proceed to tell that Dr. Zahm is one of the foremost scientists in the Catholic church; that his opinions are the result of years of labor spent in the laboratory; that his work has been translated into every European language of importance; that it is almost a text-book in American classrooms; that he added to his European reputation at the International Scientific Congress at Freiburg, where he read a paper in which he applied to teleology his theories on evolution. They tell how the conservative Roman Catholics, and especially the Italian theologians, made adverse criticism and thought it a great heresy to hold that animals and plants could have been created not by fiat but by slow evolution, or that the Hebrew word *yom* could mean a period of time instead of a day. They then make long quotations from his book, notwithstanding the adverse judgment of the Holy See, showing how derivative creation can harmonize not only with the Bible, but with Thomas Aquinas and Saint Augustine, and they quote his recent words as follows:

"My views may not be looked upon with favor by all in Rome. I do not expect so much and I really do not care for the approval of every one. But I know that every eminent man of science throughout Europe is in perfect sympathy with my views. I venture to say that the twentieth century will not be very old before nine out of every ten thinkers will be evolutionists as opposed to believers in special creation."

"And there these papers leave it, with not a word of approval or disapproval, but the impression they leave and desire to leave upon their readers is not difficult to apprehend. They mean that he has been treated unjustly and absurdly; they mean that the Roman Congregation of the Index is away behind the times, and that the Catholic church must break away from its ancient traditions on matters of no essential importance, if it wishes to escape the condemnation it received in the times of Kepler and Galileo."

AFTER all that has been written about the health of Leo XIII., says *The Academy*, some interest attaches to a candid and close observer's disinterested opinion. Cardinal Vaughan, who has long known the Pope, and who has had several long audiences during his present stay in Rome, states in a private letter to a friend in London that he has been astonished at the Pope's vigor, both of mind and body, and that he has taken, to all appearances, a new and good lease of life. The Cardinal himself has been reading lately in the papers that he is to be the "favorite" at the next conclave, and therefore the next Pope. "What nonsense the newspapers do sometimes print!" is the Cardinal's only comment on the much-telegraphed report.

FOREIGN TOPICS.

AN INTERNATIONAL PETITION TO THE CZAR.

THE Emperor of Russia has been approached in the most unprecedented fashion. Emboldened by his peace manifesto, a number of eminent scholars and scientists have asked him to preserve the autonomy of Finland. The address is international, written in English, French, German, Hungarian, Swedish, Dutch, Italian, and Flemish, and signed by citizens from twelve different countries. Its text—the German lies before us—runs as follows:

"The undersigned feel compelled to express their sympathy for the Finnish nation. A people not numerous, but able and of strong character, a people who, despite their rough climate, have raised themselves to a state of growing prosperity and of scientific, artistic, and educational achievements, denoting a wealth of unique civilization—such a people are now threatened with the loss of their individuality, a loss which would rob them of their greatest incentive to continue their able intellectual and economic work. It appears to us our duty to protect against this, a duty so urgent that we waive all differences of nationality. May the destruction of a valuable member of the great family of European nations be prevented. We can not believe that the ruler who summoned the International Peace Conference will doom an able, loyal people to destruction."

The Czar refused to receive the petition. Instead, the oppression of the Finns becomes more rigorous and the last papers published in Finnish have been suppressed. *Politiken*, Copenhagen, thinks this will hardly have the desired effect. It says:

"The more you rob a vigorous people of their political rights, the more their national feeling is strengthened. If the use of the printing-press is prohibited, the pen or the typewriter must be employed. If the mails are closed to such matter, other means of communication will be found. The mouths of the Finns can not be closed."

As a matter of fact, the resistance of the Finns, tho not open, is very determined. The threats of the governor, General Bobrikoff, have failed to procure for Prince Vladimir, the Czar's uncle, a pleasant reception. At Abo, where the governor hoped to muster a large number of loyalists, only six persons could be found who accepted an invitation to meet the prince at dinner. The *Nieuws van den Dag*, Amsterdam, thinks the Finns and their friends should have agitated at the Peace Conference. "It would have been such fun," says the paper. But many people think the foreign petition injudicious. *The Spectator*, London, says:

"The address was carried to St. Petersburg by a deputation of six professors, all eminent, who sought an audience of the Czar. They were most politely received by the Minister of the Interior, but informed, however, that their address could not be presented. They could hardly have expected any other result of their effort, as no government, not even that of Great Britain, will endure foreign interference between itself and its subjects, but they may have done good nevertheless. The Czar was probably not aware that in creating such discontent in Finland, hitherto a perfectly loyal province, he was attracting the attention of all Europe."

The St. James's Gazette says:

"We wonder whether any one of the more or less distinguished men who signed the English petition to the Czar asking him not to be unkind to the Finns imagined for an instant that they would succeed in altering the policy of the Russian empire. Did they think the Emperor would say to himself, 'Bless my heart, there must be something in this Finnish case after all, for the author of "Jude the Obscure" says so, and so do the authors of some quite learned books in English. I must see that my Ministers change all they have done for the last year or so in this matter'? If they did not think like this, what purpose did they imagine would be served by their interference? We of course entirely share the views of the petitioners, but that does not prevent us also sharing

the astonishment that stunned the Minister of the imperial household for twenty-four hours when he was approached by a deputation of learned professors in twelve languages, intent on persuading the Czar to listen to them instead of his own Ministers. No one seemed quite to know what to do with the gentlemen, who were therefore forwarded from one place to another like a lost parcel, till at last they managed to get a civil dismissal from the Minister of the Interior. Of course they got nothing more for their trouble.—*Translations made for THE LITERARY DIGEST.*

KAISER WILHELM AND THE FRENCH.

A GREAT number of civilities have of late been exchanged between the French and the Germans. The *Mémorial Diplomatique* relates that the French and German detachments of the foreign troops which visited Peking were exceptionally friendly to each other. Frenchmen visiting in Germany have cheered the Emperor more readily than would German Socialists, and altogether the ground was prepared for an event of no little international importance—the visit of the Kaiser on board a French war-ship, the training-ship of the French naval cadets. An exchange of telegrams between the German ruler and President Loubet followed this visit to the *Iphigénie*, and the French cadets met the German cadets of the *Gneisenau* on board the *Hohenzollern*, the Emperor's yacht. International diplomacy must reckon henceforth with the probability of what seemed impossible—a Franco-German alliance. M. J. Cornély, writing in the *Matin*, Paris, expresses himself to the following effect:

His own professors occasionally dub the exuberant Kaiser "the Emperor of the French." As a matter of fact, if we had such a sovereign he would be extremely popular with us. If William II. could hear the conversations of Frenchmen about him, he would feel flattered. We do him justice. We have watched him and know that he can be firm and yielding as occasion demands. He resembles the skilful mariner who, while going ahead full

"HOCH! HOCH! THE WOOLING O'T!

DRAMATIS PERSONÆ.—*Romeo*, The German Emperor; *Juliet*, La République.

JULIET: "What man art thou, that thus bescreen'd in night, so stumbl'st on my counsel?"

ROMEO: "By a name I know not how to tell thee who I am; my name, dear saint, is hateful to myself, because it is an enemy to thee."—*ROMEO AND JULIET*, Act. II., Sc. 2.
—*Punch*, London.

steam, is ever alert and ready to reverse the engines in case of danger. He takes great pains to tell us that Germany does not want war; her prosperity is due to the arts of peace. After the war of 1870 we used to console ourselves with the idea that Germany was a poor country, and that our wealth would soon give us an advantage. That is no longer true. Germany is to-day a rich country; we are neither in men nor in money superior to her. But Germany does not intend to risk her wealth in a destructive war. The Emperor's manifestations are perfect, and should cause us to think. If neither we nor the Germans want war, it is time that we should behave like polite neighbors who are at peace with each other.

The *Figaro* wishes a Franco-German *entente* in colonial matters. This is also desired by Senator Ramboud, Meline's Minister of Education, who writes to the following effect:

A perfect accord between the two nations will not easily be brought about, nor is it desirable. German unity and the prosperity it has brought are based upon the fear of powerful enemies on two frontiers, and France would be much more restless if the thought of the "hereditary enemy" did not exercise a wholesome restraint. But the two countries might, with great advantage, work in harmony outside of Europe, to prevent more "Fashodas." And this is the Emperor's idea too. When his reign began, it was thought that he would become a conqueror. He has, but his conquests are of colonial, industrial, and commercial character. Through him Germany has accomplished the economic conquest of the Balkan states and of Turkey. It is quite consistent with French patriotism to join him in his work.

The *Petit Journal* believes that the Emperor's advances are really based upon his fear of France and a childish desire to visit the finest of World's Fairs, which will, of course, be the Paris Exhibition of 1900; and the *Petit Journal* represents a large class, whose opinions are not, however, very stable. The *Gaulois* does not like these attentions to a foreign potentate while legitimate French princes are ignored, but on the whole the French press is very friendly. The Germans, too, are gradually warming to the subject. The *Kreuz-Zeitung* remarks that evidently the French are calming down. The *Kölnische Zeitung* says:

"For a long time France seemed to think of nothing but revenge, and Germany's policy, based upon a just understanding of the fact that friendship with France is tremendously important, remained ineffective. Lately France has begun to understand us. The fear that one day we would treacherously attack her is gone, and there have been many points of contact which forced France, for the sake of her own interests, to act in concord with us. It must be admitted that the lion's share of gratitude for having brought about a better understanding is due to the Emperor. His frequent personal efforts have taught the French that we really desire nothing better than to be on good terms with them."

The *Tageblatt* remarks that the French can not resist the Emperor's politeness. The conservative *Post* is a little skeptical. It says:

"The suggestion that France and Germany should work hand-in-hand in colonial matters deserves attention. As yet, however, it is doubtful that a lasting friendship can be established. It is very probable that, when Fashoda is forgotten, the French will return to their revenge idea. This will cause them to look around for a more congenial ally."

The *Hamburger Nachrichten* declares that the Franco-German *entente* is Germany's answer to "the arch enemy of peace, Great Britain," and to English endeavors to engage some other nation in the task of destroying German prosperity by a war. Many English papers express similar views. It has long been a maxim, often expressed in so many words, that the interests of Great Britain require the existence of an unhealing feud between France and Germany. The present cordial relations are, therefore, from the British point of view, a "disturbing factor." The *Westminster Gazette* says:

"The thing, of course, must not be exaggerated, but it may suggest to us that the hostility of France and Germany is not to be relied upon as a necessarily permanent factor in Europe. . . . But so much of European policy is based on the assumption that France and Germany are forever to be reckoned enemies that we may well understand the flutter which is caused by the exchange of these messages. The alliances and friendships of nations are, indeed, at this moment on a foundation of very slippery sand, and we had better count upon nothing except what is probable from plain motives of self-interest. . . . If France and Germany come nearer together, it will more than ever be necessary for us to remain on as friendly terms with Russia as may be, and not to be driven from our course by any mere sentiment of hostility."

The *Spectator*, too, regards the news as serious. It says:

"If Germany and France could be friendly, or even neighborly, France would no longer need Russia, Italy would become an ally of France, Austria would again be isolated, and Great Britain would be left out in the cold, possibly even exposed to attack from a coalition penetrated with the idea that she monopolizes too much of those sources of commercial wealth which in the belief of half the statesmen of the Continent are the only available defenses against a great uprising from below. [The Emperor will] probably fail in that very natural and unobjectionable effort, the people of France being still too full of the memories of 1870 to regard the representative of Germany as anything but a foe. . . . They want to beat Germany, and so rehabilitate themselves in their own eyes, and until they have done so friendship with Germany is to them impossible. They wish to be looked up to, and they think they are looked down upon. They feel, in fact, toward Germans as many British colonists feel toward Boers, that to be happy they must extinguish the contemptuous thoughts which they think are in the others' minds. Sedan is to them as Majuba Hill is to British South Africans. . . ."

"Even, however, if Germany and France did come to an agreement to hate each other at home and love each other abroad, which is the suggestion now so frequently made, we do not see that the combination need create apprehension in this country. . . . Even a coalition of all Europe might prove insufficient, for such a coalition would at once draw America to our assistance, and it is very doubtful whether at sea the English-speaking peoples would not be a match for all the rest of the world."

The suggestion of many English papers to stop the "policy of pin-pricks" hitherto pursued with regard to Russia has been received with pleasure by the Russian press, and causes the Russians to regard the Franco-German *entente* with favorable eyes. The *Novoye Vremya*, St. Petersburg, warns France that it would be foolish to neglect the old love for the new. But the custom of keeping unpleasant facts from the public is, so far as foreign politics are concerned, unknown to the Russian editor. The paper just named publishes the following plain statement by its Paris correspondent:

"The Franco-Russian alliance has cooled off remarkably of late. Mainly responsible is the utter indifference of Russia with regard to the Fashoda affair. An important group now agitates for a *rapprochement* with Germany. Chauvinism has given place to sober second thought; everywhere are to be found advocates of a Franco-German alliance. The press, the political clubs, discuss it, the people begin to become familiar with it. The authorities at the Quay d'Orsay favor it. France must learn to abide by the loss of Alsace-Lorraine, is the opinion expressed in the foreign ministry, and a commercial treaty with Germany is suggested. The French may shiver at the idea, but they can not help noting that friendship with Germany has its advantages. People are still slow in saying so, but if Kaiser Wilhelm were to visit the Exposition next year, he would be received with open arms. Many people wish for his visit."

The *Handelsblad*, Amsterdam, sees nothing impossible in a Franco-German alliance. The latest rumor, unconfirmed but suggestive, is that France, Germany, and Russia will together do something for the protection of the Transvaal against British aggression.—*Translations made for THE LITERARY DIGEST.*

OUR WAR THROUGH FOREIGN EYES.

THE Hongkong *Telegraph* remarks that, whereas the case of the United States in her war against the Filipinos is as a rule very flatteringly represented, the Filipino view is not given. It points out that the proposal to conclude peace comes from the Filipinos, but the Americans would not even permit an armistice to ascertain the opinion of the Filipinos by means of the ballot. As for the terms offered by the American Commission, the *Telegraph* thinks these are simply preposterous. We quote as follows:

"There is not one word in these proposals from beginning to end that secures to the natives of the Philippines any one of the things they have been fighting to secure. It leaves the future permanent government of the country entirely at the mercy of Congress, without even a hint that the Filipinos will be represented before Congress, or that their opinions and desires will be taken into consideration.

"It provides an interim government of the vaguest possible description, leaving absolute power in all things great and small in the hands of the nominees of the President of the United States for the time being. It says nothing about the laws to be administered, the taxes to be levied, the rights to be accorded. Each village community has under Spanish law largely governed itself. It is not stated that even these limited rights are to be preserved to them. It says nothing about religion or the religious orders.

"An advisory council whose recommendations the governor-general can absolutely veto can have no attractions even for people till recently under Spanish dominion.

"The proposals are farcical. They concede nothing. They promise nothing for the present or for the future. The Filipinos are right to reject them, if they are not in a position where there is no chance but absolute surrender. An absolute unconditional submission would give them as much as is now offered them. If these are, as they reasonably may be, the opinions of the Filipinos, then all men will say they are right.

"The American nation requires enlightening upon the subject of the Philippines and the Filipino people. . . . The rejection of the American proposals at least serves to prove that the Filipinos are by no means so uncivilized as to be incapable of appreciating to what they would have committed themselves had the proposal been accepted. We do not think that matters will be improved so long as the American Commission fails to realize the fact that they are dealing with accomplished and civilized diplomats, and not with a rabble of uneducated savages who have not sufficient brain power to distinguish between good and evil."

The St. James's Gazette, London, says:

"We use the candor of a friend, and must tell the United States that the blunder they have made in the Philippines is little to their credit. . . . But when you set about the acquisition of real property, in a spirit at once of thrift and universal philanthropy, it is only business-like to consider what servitudes you take over together with the land. It has been pretty obvious for some time that the Americans have omitted this precaution.

"The Americans, as all the world can now see, made a gross initial mistake when they took over the Philippines. They forgot to provide an efficient public service and an effective army. Perhaps the ease with which the Spanish rule went down misled them, but this is really no excuse. The 'political faculty of our people,' about which they are very fond of talking in America, ought to have shown them that the collapse of the Spaniards was due to the fact that they were already overpowered in the struggle with the Filipinos. A moment's consideration might surely have shown them that a people who had practically secured their independence by their own fighting would not give it up to the first comer tamely. . . . Why the agents of American newspapers, who wish to pass in the world for possessing considerable enterprise, never thought of sending their letters home by Hongkong we do not know. They have found the road at last, and their combined voice sends a message which can not be very pleasing to American self-respect. The sum and substance of it is that the sovereign people of the States have been gloriously befooled, that the Filipino army is a vast deal better than General Otis will confess it is, that the Filipinos have a government, and that the Americans have suffered reverses which the general

has never confessed. . . . This by itself is not creditable to them; but what is far worse is the prolonged and deliberate dishonesty of the government intent on deceiving the people. It must be taken together with the prevalence of Algerism at home."

Continental papers are, on the whole, a little less plain-spoken. There is much wonderment, however, that the Democratic Party does not come out boldly against the war. The *Indépendance Belge*, Brussels, says:

"So far the chances of the next election (tho it is not safe to prophesy upon so distant an event) are very much in favor of McKinley. . . . The Democrats assist the Republicans by their maladdress, for they neglect to use the most effective weapon they have, *i.e.*, the Philippine trouble, with its militarist virus, the bad state of the American army, the dangers of megalomania, of corruption, and the Caesarism of the military commanders, all of which would be dangerous arguments to use against McKinley. Instead, the Democrats trot out their old war-horse, the free-silver heresy."

The *Journal des Débats*, Paris, says:

"Let us remember how McKinley, who has no will of his own, came to annex the Philippines. Public opinion demanded it, and he was about as much master of the situation as a log drifting down stream. Yet to-day 'his' war and 'his' generals are cursed, and his chances of reelection grow dim because he did what everybody wanted him to do. The great majority of the Americans have only just discovered, in consequence of the protest of the Manila correspondents, that they are cruelly fooled. As if the text of messages published, altho they reported ceaseless victories, did not reveal the situation to any one willing to read between the lines and to follow the movements of the troops on the map. Nor did the Americans realize that a regular army, whose quality should not be underrated, opposes them in the Philippines. What is McKinley going to do? Obviously he must come to a decision, a thing he is not fond of. He may close the Philippines altogether to the obnoxious newspaper correspondent; but that is a dangerous game. He may recall Otis; but that is not good for military discipline. Perhaps he will send a new commander, who will in reality carry on the operations in the field, while General Otis remains commander-in-chief at least in name. Whatever may be done, the task of the Americans is not easy. They have undertaken to conquer a people determined to have liberty, and fitted for the struggle by the education given them by their old masters, which is quite good enough to make them redoubtable enemies."

The German papers point out that the censorship exercised in Washington is rigorous, but not skilful. Many items published show that the Americans make no headway. (One account of a "victory" contained the statement that the flying Filipinos took with them their artillery, drawn by water buffaloes, animals not quite as fast as Jersey cows.—ED. THE LITERARY DIGEST.) "Systematic efforts were made to keep the truth from the Americans, while the trade established by other people is slowly killed," says the *Berlin Tages Zeitung*. The authenticated accounts of American soldiers boasting openly of the money they "found" in the houses of the natives, and the stories published in American papers of the theft of silver and gold chalices from the churches and of richly ornamented clerical vestments tend to lower the prestige of the American name in countries where such crimes are punished by long terms of hard labor. The reported intention of the Government to use exceptionally ferocious weapons also excites comment. The *Handelsblad*, Amsterdam, says:

"While American delegates appear earnestly working for some practical results of the Peace Conference, a report comes from New York which must be read twice, it seems so incredible. The War Department is busy trying a new dynamite gun which, it is hoped, will kill a whole regiment at a time. The horrible projectiles of this gun are intended specially for the Filipinos. General Otis, we are told, has expressed his hope that this weapon will terrorize the Filipinos into submission."

Our Canadian neighbors profess to discover in the Philippine

war a proof that the United States would be no match for Great Britain. The *Victoria Times* says:

"Military talents General Otis seems to have none, but he possesses, if the despatches are to be trusted, all the arrogance and presumption which are usually found associated with the inferior mind. Such a man could not obtain a commission in the British army and he would never be likely to reach anything higher than a third-class clerkship in our civil service."

Events, Ottawa, thinks "Uncle Sam should 'let up' on the Filipinos and gracefully withdraw, as it is no use forcing himself on a people who do not want either his friendship, his protection, or his institutions." Otherwise Uncle Sam invites destruction of his forces in the Philippines in case of war with Great Britain. This paper describes the next "Battle of Manila" as follows:

"Suppose war were to be declared between the United States and England, what a pie the Philippine Islands would be for the British fleet! Talk of Dewey cooping up the Spaniards, it would not be in it with the trap the Americans would find themselves in. History would repeat itself with a vengeance, for the Americans would be caught in the very trap they set for the Spaniards when they brought Aguinaldo to Manila and set him on its defenders. It is sincerely to be hoped that there will not be any war, but if there is, there will be a certain amount of grim and ghastly humor in the situation."

Similar sentiments are not confined to Canada. The *Volks-Zeitung*, Berlin, commenting on some recent attacks of American papers upon Germany, remarks that "the Americans had better beat the Filipinos first."—*Translations made for THE LITERARY DIGEST.*

TURKEY AND HER RESTLESS NEIGHBORS.

SINCE the evacuation of Crete, the great powers have left the Sultan pretty much alone, and there are many indications that Turkey is approaching a period of political and economical prosperity. Still, the Ruler of the Faithful is not bedded on roses. Now, as ever, internal dissensions furnish enough excitement in one month to provide a "yellow" editor with sensations for a year. There is the Cretan emigrant question. Driven from their homes, robbed of their farms and live stock, the Cretan Moslems have gone over to the mainland and are now clamoring for a chance to make a living. The *Frankfurter Zeitung* describes the situation to the following effect:

Smyrna is in a very disturbed condition, for some 23,000 Cretan refugees are encamped before the city. They are entirely without means, and imperiously demand food and shelter. The authorities have been ordered to disperse them by sending them inland. A certain number did go, but they soon returned. They demand land enough to stay together. They are well armed, and arguments do not influence them.

It is hoped that these Cretans may find a home on the soil formerly occupied by the Armenians so "benevolently assimilated" out of existence a few years ago. On the other hand, the Russian Government suggests the export of Armenian refugees to Crete. But the Greeks hate the Armenians, and the last state of Crete might be worse than the first.

More troublesome is the attitude of the Young Turks, a Moslem reform party which, tho it does not attempt to oppose or even slight the Mohammedan religion, aims at political liberty as opposed to the Sultan's present unlimited personal power. A Young Turk expresses himself to the following effect in the *Handelsblad*, Amsterdam:

The Sultan will not interfere with the Moslems who are subject to other powers. His greatest worry is from the Young Turks. Even the Armenians do not disturb him as much. If a Turkish diplomat wishes to gain the Sultan's favor, he need only intimate his willingness to work against the Young Turks. The Sultan is not very liberal, but whoever promises to buy over prominent Young Turks is liberally supplied with money. Several Young

Turks have thus been bribed to desert their party. If they can not be bought over, they must at least be persecuted. How Ahmed Riza and his *Machvaret* have fared in European countries is well known.

The Armenian troubles, nevertheless, are not to be underrated. Armenia is unable to pay taxes now, and the worry and expense of providing for the widows and orphans is great. It must be remembered that this is a duty which, according to Mohammedan maxims and custom, must be attended to. Altho the accounts of the massacres were exaggerated, a reliable account in the *Revue de Paris* speaks of 39,000 orphans and 18,000 widows to be looked after. Of these, nearly 7,000 orphans and 3,000 widows are still without assistance.

No less serious are the disturbances on the frontiers of the Balkan states, where the Mohammedans driven from the new states and the Christians chased from Turkish soil are forever cutting each other's throats. The *St. James's Gazette*, London, says:

"International crises come and go everywhere except in the Balkans, where strained relations have a permanent abiding-place. Once more the powers may have to bestir themselves to insure the maintenance of a condition of affairs more equable than that which usually passes for peace on the frontiers of the Balkan states. Spasmodic and irregular warlike raids, undertaken with much frequency by Servians and Albanians alike, are part of the national disorder of things and excite little comment. It is only when some unusually large raiding party is unduly successful and reprisals can not conveniently follow on an equally extensive scale that official cognizance is taken of affairs, and the Sultan and the King of Servia politely exchange notes asking each other to keep their turbulent and lawless subjects quiet. Then matters drift on as before until serious outbreaks occur once more. This has lately been the case, and so grave has the situation become that it is not impossible the powers may intervene."

The *Freie Presse*, Vienna, speaks of these troubles as follows:

"The settlers on the frontier are, on the Servian side, of Montenegrin origin, and the vendetta is a sacred institution with them. On the Turkish side are the Arnouts, driven out when Servia became independent. Servia paid an indemnity on their behalf, but Turkey only gave them a chance to occupy land in Turkish territory. When these elements come into contact with each other bloodshed necessarily follows."

The London *Daily News* and other Liberal papers again agitate against "the unspeakable Turk," but many English papers think it wise to let the Sultan work out his own salvation so long as he has the backing of "my friend the Kaiser." Even *The Saturday Review* regards interference as imprudent, and says:

"It is in Asia Minor that Germany will find her India if she is ever to find it. England might have had the development of that splendid country but for our political and diplomatic perversity, and Germany has entered into our heritage. The railway through Diarbekr and Bagdad to the Persian Gulf is practically in Germany's pocket, and the cries of wrath that are resounding through the Russian press only serve to call attention to the fact that for once St. Petersburg has been too late. The strategic railway Tiflis-Alexandropol-Kars is near completion, and the branch via Erivan to the Persian frontier will be finished in a couple of years; but these lines, important tho they are for the future of Armenia and Persia, can not thwart the German parallel advance in the south. And with Germany installed as military adviser and drill-sergeant from Constantinople to Bagdad, Turkey may in the future show surprising vitality for a sick man."

The German papers assert that the commercial advantages which Germany gains in Turkey are quite sufficient, and that no attempt is made unduly to influence the Turkish Government. On the other hand, the Turkish papers do not think it beneath their dignity to reiterate that the Turkish army would not be what it is if it were not for German training, and there is little doubt that a war against any power attacking the Germans would be very popular with the Moslems.—*Translations made for THE LITERARY DIGEST.*

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

Mr. Mertens, in charge of the consular agency at Valencia, under date of June 5, 1899, says:

"Since the loss of her colonies Spain's sugar factories, with a yearly production of about 60,000 tons, are unable to satisfy the public demand, which amounts in all Spain to about 100,000 tons of sugar during the year. A high prohibitive duty of 102½ per cent. on foreign sugar protects the home industry and stands in the way of sugar dealers and consumers. For this reason, a union of tradespeople and merchants of the different cities of Spain have petitioned the Spanish Government to reduce the import duty to 50 per cent., which would afford a fair protection for the refineries and at the same time permit the import of sufficient sugar to supply the demand. While this petition meets with great opposition from the refiners, still, in view of the need of sugar and the small chance of increasing either the number of factories or their output in the near future, the Spanish Government will probably reduce the duty, more especially as this will add to the customs income of the country and do away with the incentive for smuggling. As soon as this reduction becomes a law, our dealers in refined sugar should be ready with samples to secure contracts, before the competition with other countries becomes too keen."

Consul Ravndal writes from Baireut, May 26, 1899:

"American manufacturers and exporters, as well as importers, will be interested in learning that Barber & Co., Produce Exchange, New York City, will despatch a steamer direct for Baireut on the 15th proximo, which, after discharging at this port, will receive cargo for New York, touching on the way home at Alexandria. According to information in my possession, it is more than likely that a steamship agency will have steamers calling at Baireut regularly once every six weeks, and, if it proves true, a lively interchange of goods may be expected. The consular representatives of the United States in the Levant have for years been working for direct transportation facilities, as essential to the development of United States trade with countries of the eastern Mediterranean. Now that this seems to be realized, all concerned should encourage the promoters, in order to make the service permanent and a success. Steps are now being taken toward the establishment of a sample room in Baireut, to facilitate the introduction of American goods."

The following, dated Copenhagen, April 27, 1899, has been received from Vice and Deputy Consul Blom:

"The meteorologists in Europe have for many years desired a telegraphic connection with Iceland, Farø Islands, and Greenland. Daily tele-

graphic reports from Iceland would be of the most importance to the weather service, as well as to the large fishing interests in the North Atlantic. I understand that the British fishing interests have recently petitioned the Government to grant a yearly subvention to the proposed cable. The Danish Government looks favorably upon the plan, but is of the opinion that it should be realized by private individuals. The Great Northern Telegraph Company, Limited, of Copenhagen, is willing to lay and work the cable, provided it is guaranteed a certain sum from the various governments and other parties interested. The royal Danish meteorological office, in Copenhagen, has issued circulars to kindred institutions throughout the world, requesting them to subscribe to daily weather bulletins from Iceland and Farø Islands; the matter is also being seriously considered by other bodies, especially in Great Britain, and the prospects for a realization of the enterprise are promising."

Consul Avery, of Belize, under date of April 20, 1899, says:

"On April 1 the system of interchange of postal money orders between this colony and the United States went into effect. To send a money order from Belize to any city in the United States has required from twenty-five to thirty days. While the money was paid here, the order was issued from London, upon the receipt of mail advices from this post-office, and then sent to the receiver in the United States. There is no bank in the colony, and merchants disliked to sell drafts for less than \$15. Even by registered mail, it was difficult to remit, for United States bills are scarce; but now the safe and convenient system of direct orders has been adopted, with the usual charge for different amounts."

Consul Macrum sends from Pretoria, April 18, 1899, copies of the report of the chamber of mines on the production of gold in the Transvaal for the month of March, 1899.

The following extracts are from the report: "Yesterday saw one of the largest increases over the previous month ever recorded in the Rand's history. An increase of close upon 40,000 ounces is a marvelous achievement. The Transvaal production of the precious metal, when expressed in ounces, is now getting within measurable distance of 500,000, yesterday's declaration being within 36,000 of that aggregate. The March yield is 23,361 ounces better than the declaration of December, 1898—a month which is invariably good. The Rand output itself was 37,240 ounces in advance of the February figure and 22,074 ounces higher than the record of December. Yesterday's output was wellnigh double the figures of two years ago; it was, indeed, 115,500 ounces in advance of the showing of March, 1898. We can not compare these results to those of any other gold-fields, for they have no analog. The Rand stands preeminent, singular, and will continue so to stand far in advance of all rivals."

Mr. Macrum adds: "The value of these 464,036 ounces of the precious metal was £1,763,336 (\$8,584,666), and the average exports of gold from the ports of South Africa amount now to about £430,000 (\$2,092,595) each week."

Under date of May 10, 1899, Consul Sorshy, of San Juan del Norte, writes: "The fruit trust, operating in the West Indies and Central America, the principal associates of which are the Boston Fruit Company, of Boston, Minor C. Keith, of Costa Rica, and others, have entered the banana fields of the department of Zelaya (Bluefields and Rama districts), Nicaragua. Their representative, Mr. J. Lamotte Morgan, arrived at Bluefields on the 28th ultimo, and, going into the heart of the banana district, secured contracts from nearly all

If you Feel Irritable

Take Horsford's Acid Phosphate.

It makes a refreshing, cooling beverage, and is an invigorating tonic, soothing to the nerves.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

"What you want when you want it"

Libby's Luncheons

Delicious, delightful, delectable meat dainties—always all ready—no fire, no bother—all you have to do is to serve—for home, for picnics, for everywhere.

of the larger planters. Mr. Morgan tells me that it is the purpose of his people to put on a line of steamers immediately, with the view of controlling all the banana trade of Nicaragua. The advent of this new corporation will probably have the effect, at least for the present, of advancing the price of bananas and cheapening freights on incoming and outgoing cargoes. Mr. Morgan states that the freight and passenger service of the new line will be in every respect superior to that of the old company, and it is probable that a small but fast steamer will be run as an auxiliary between Port Limon, Costa Rica, and San Juan del Norte, Bluefields, and Cape Gracias, Nicaragua."

Consul Nelson, of Bergen, reports that a company has been formed in Telemarken, Eastern Norway, for breeding and raising reindeer on a large scale. At the head of this undertaking is Nils Bohnen, one of the teachers in the people's high school, and for a time he will personally superintend the industry. The company has already bought 2,400 deer for 28,000 kroner (\$7,504), and by degrees they will increase the herd to between 3,000 and 4,000 deer. When this number has been reached, the company will be enabled to kill about 1,000 deer every year without diminishing the herd. When slaughtered, a deer is worth about 20 kroner (\$7.36), and there are good markets for this meat, especially in France and Belgium. The company also hopes to induce England to purchase it. In order to prevent the glutting of the market during the winter season, a canning plant will be attached to the farm for the purpose of preserving the meat. This hermetic factory will also can red char (a species of small salmon) and ptarmigan. The company controls 50 to 60 square miles of wild mountain land.

The importation of Russian hogs into Germany is only permitted in the following places in Silesia: Beuthen, Kattowitz, Myslowitz, and Tarnowitz. Consul Erdman, of Breslau, under date of May 13, 1899, reports the number of Russian hogs imported through these border towns as 3,002, the duty being \$1.19 per head. Of the total imported, 40 were rejected as being measly and one as being affected with trichina. These were destroyed, in accordance with law.

The department has received from Consul-General Haywood, of Honolulu, under date of May 26, 1899, a copy of a report to the chamber of commerce, recommending that an exhibit of the products of the islands be made at the exposition to be held at Omaha. The exhibit will comprise native fruits and plants, coffee, rice, sugar, etc.; photographs, antiquities, woods, shells, curios, etc.; also a display of the educational institutions of the country, including the handwork done by seminary girls.

Consul Plumacher sends from Maracalho a copy of a recent decree of the Department of Agriculture, Industry, and Commerce of Venezuela, according to which the North American Sucking Company is to be allowed to examine the pearl-beds existing on the coast. In former years, says the consul, the pearl-fisheries on the Spanish main were celebrated, and the products were valuable. Fishing with rakes is prohibited. A report is to be made to the government, and the commissioner, Mr. Garcia, is to receive 600 bolivars (\$115.80) per month.

Ambassador Clayton writes from Mexico, under date of June 8, 1899, in regard to the conversion of the foreign or gold debt of the republic of Mexico. A 5-per-cent. loan has been effected for £23,000,000 (\$111,929,500), guaranteed by the customs, redeemable in forty-five years and inconvertible for ten years. The bonds are to be taken in England, Germany, and the United States—the larger part in Germany, on account of the fact that most of the old debt was held by the Germans. The foreign debt formerly earned 6 per cent. interest.

PERSONALS.

THE coolness in action of great commanders like Marlborough, Wellington, John Nicholson, and Stonewall Jackson has been worth whole battalions in the fighting line. Basil Jackson, who had frequent opportunities of seeing the "Iron Duke" during the hours of the terrible Sunday, says a writer in *The Cornhill Magazine*, has recorded the interesting and characteristic fact that the only sign of nervousness that he remarked in him was that in a dangerous crisis he observed him moving in and out the folds of the powerful field-glass which he carried, and of which he made such admirable use in this and his other campaigns. By the way, English telescopes of the time were far better than the French, and it was looked upon as a prize when one of them fell into their hands. In one of Wellington's battles against Soult he was able to read the very able general's intentions by his gestures to an aide-de-camp, and accordingly took prompt measures to counteract his plans; and years afterward, when they were both old men, he astonished the Marshal by telling him how he had defeated him. Captain Shaw, later on Sir James Shaw Kennedy, gives another example of the Duke's astonishing coolness. Near the close of the day, about 7 P.M. he galloped up to the Duke, then directing the defense being made by Maitland's Guards, with the momentous news that his line, the right center, was open for the whole space between Halket's and Kemp's brigades. All that the Duke replied was: "I shall order the Brunswick troops to the spot, and other troops besides; go you, and get all the German troops of the division on the spot that you can, and all the guns you can find"; and so he did. The Duke himself led five battalions of the Brunswickers into the gap, and with the charmed life which he bore on the great day, when these young and untried troops staggered under the fierce fire they encountered, and the vigorous onset of the French, he threw himself among them, and by voice and gestures rallied them into the fighting line. And then, his dangerous duty done to his right center, he galloped back farther to his right to prepare for the storm just about to break—Napoleon's final effort with his Guard, which he only employed in his battles in some great crisis of the struggle.

In an article on the family of Gen. Joseph E. Wheeler (in *The New Voice*), Mary C. Francis says of the little Southern soldier:

"The unassuming hero of two wars I found even more shy and reticent than he had been represented; in fact, he is painfully so to the ambitious interviewer. Absolutely nothing can be drawn out of him about himself. The instant he scents the personal note he retreats to impenetrable jungles of silence, and there he stays until the conversational wind blows to general quarters again. In cautiously referring to the unpardonable Charleston incident I assured him that it could not have occurred in any Northern city. His deep-set eyes looked at me straight and gravely, lit up in comprehension; then he bowed silently. It was the reserve of dignity and self-centered power.

"One subject there is which is likely to draw forth an expression of opinion from the general at any time, and that is the now-exploded statement that he ever was guilty of disobedience of orders at the battle of Las Guasimas, and also that on the evening of the 2d of July he advocated retreat. These two charges, made in a book on the war by a well-known newspaper man, were the cause for special analysis and contradiction by General Wheeler in his report to the War Department on the conduct of the Santiago campaign, and no one can read it and remain in ignorance of the truth.

"When the Fifth Army Corps landed in Cuba with General Shafter in command, Maj. Gen. Joseph Early Wheeler was second in command, and ranked in the following order Brigadier-Generals

A NEW RHEUMATIC REMEDY.

A prominent physician writes:

SPOTSWOOD, N. J.

DEAR SIR:—Please send me, by mail, four more bottles of TARTARLITHINE.

I will also here state, in justice, that this is the most welcome remedy that has come into my hands since my beginning of the practice of medicine. It has given me, in every case of rheumatism in which I have used it, the happiest kind of results. I have used discretion, perhaps even more than necessary, in its employment; that it be given to patients whose cases do not yield to ordinary treatment, old chronic cases of gouty diathesis, where there is a tendency to calcareous deposits, etc. These are undoubtedly the most troublesome patients to give what might fairly be termed good results. Now these have been the very kind in which I have been using Tartarlithine with the very happiest results to patients and myself. Many valuable remedies come daily to our aid, but this has been the most welcome one to me thus far.

Yours very truly,

J. G. D.—M. D.

Regular package \$1.00.

AUTHORS. Do you desire the honest criticism of your story, essay, poem, biography, or its skilful revision? Such work, said George W. Curtis, is "done as it should be by The Easy Chair's friend and fellow laborer in letters, Dr. Titus M. Coan." Send for circular L, or forward your book or MS. to the N. Y. Bureau of Revision, 70 Fifth Avenue.

LEGAL DIRECTORY.

We append below a list of leading lawyers in different portions of the United States.

Legal business, collections, and requests for local information will meet with prompt attention at their hands:

Henry C. Terry, 505-7-8 Hale Building, Philadelphia, Mordecai & Gadsden, 43-45 Broad St., Charleston, S. C.

W. B. Hutchinson (Patents and) 88 Broadway (Patent Law) N. Y. City.

Arthur M. Higgins, Minneapolis, Minn.

Oscar C. Mueller, Wilcox Bldg., Los Angeles, Cal.

John Moffitt, 59 Dearborn St., Chicago, Ill.

Wm O. Thompson, 10th St. and Wash. Ave., St. Louis

Kent, Hawkins, Sumner, Bates, Young, Lawton, and Chaffee. General Wheeler was the only officer in Cuban waters who was a major-general, and as the senior officer on shore much was naturally left to his discretion. While avoiding any extended discussion of the matter, General Wheeler expressed himself briefly and unmistakably on these two points. 'As General Shafter was my superior, I can only refer to his own statements, made time and again, and especially to some members of Congress in the military committee of the House, speaking of my conduct of the Las Gnasimas fight in the most complimentary terms, and adding that the Las Gnasimas fight had a very important and beneficial effect upon the entire campaign. I was also in receipt of letters from many officers, including Governor Roosevelt, explicitly denying both of these assertions. The statement that on the night of the 2d of July I was in favor of retreat is absolutely false. I was most emphatic against retreat from the time we took San Juan Hill to July 16, when Santiago surrendered. Colonel Roosevelt in his report of the campaign said: "A very few words with General Wheeler reassured us about retreating. He had been through too much heavy fighting in the Civil War to regard the present fight as very serious. He was second in command, and to him more than any other man was due the prompt abandonment of the proposal to fall back."

"These are scarcely questions for controversy now," added the general, with a modest smile. "The war is over, and continued accusation and denial are not good for the public mind."

LABOUCHERE, according to *The Argonaut*, tells an amusing story of how he did a good turn for a legal friend, who, altho accustomed to address juries and judges, was afraid of the House of Commons. "One day, walking home with him," says Labouchere, "I told him that he should get over this curious dread. A matter was coming under discussion which involved a good deal of law. I said to him: 'If you like, I will get up and speak against the government view. You must jeer at me. I will complain of this, and suggest that as you are an eminent lawyer you should express your objections articulately; then you—having prepared your speech—must get up and crush me.' This was arranged. When I laid down the law, he laughed. I looked indignant. I went on; he uttered sarcastic 'Hear, hear.' On this I protested, sat down, and invited him to reply to me. He got up and made an excellent speech."

If it be asked what is Wesley's supreme title to fame, the answer, we think, says the *London Spectator*, would be that he arrested the moral and spiritual decline of England, and that he was the chief agent in the renewal of her inward and spiritual life. Tho the story has been often told, we doubt whether any person who has either no vivid imagination or no very intimate acquaintance with the history of the time can realize how rotten was the condition of England in the middle of the last century. There seemed to be scarcely a healthy piece of social tissue. An agnostic Whiggism had degraded the church from a spiritual organization into a mere political mechanism; it had, as Cowper later on put it, made—

"The symbols of atoning grace
An office key, a picklock to a place."

The hungry sheep looked up and were not fed: half the parishes in England were void of spiritual life; many were sunk in the lowest vice without restraint or reproof. The governing classes were perhaps even feebler and more corrupt than in the reign of the second Charles. Sir George Trevelyan, in his admirable work on the American Revolution, has shown how England's failure in her struggle with her colonies was in no small degree due to her immorality and corruption; and that was when a distinct movement upward had begun. What must have been the condition a quarter of a century before? It seemed as tho all the purity and earnestness of the English-speaking folk must henceforth be sought on the other

side of the Atlantic, where simple and healthy Puritan life had made its home. The new industry, ill understood and unregulated, was making slaves of the poor, while the rich were living in practical atheism, and to sneer at religion was the part of a man of fashion. Englishmen were being enriched by slavery and the slave trade, to the horrors of which they were utterly callous. Gibbon and Adam Smith have described for us the learned ignorance and blank indifference of the universities, Horace Walpole has given us an insight into the lives of the upper classes and the morals (or no-morals) of public men. It seemed as tho English society were doomed to decadence.

I AM sure, says a writer in *The Pall Mall Magazine*, very many of my readers will be glad to hear that, notwithstanding the enormous amount of business with which she has to deal, the Queen is to a large extent her own housekeeper. The first thing every morning a paper of suggestions from the clerk of the kitchen is placed before her, from which in her own hand she orders the menus of the day, both for herself and such of her grandchildren as may be with her. These menus are at once sent to the kitchens, gardens, and other departments concerned, to obtain the viands required; and their contents duly entered, together with the quantities of materials used, in the books which are kept in the royal kitchen. The Queen's chef receives a salary of £500 per annum, and has as satellites four master cooks, two yeomen of the kitchen, two assistant cooks, two roasting cooks, six apprentices, and six kitchen-maids, besides pantrymen and other lesser lights. In addition to the great kitchen at Windsor there are the green-room for vegetables, and the confectionery and pastry kitchen. This last is a most important department, controlled by a confectioner with six assistants, and fitted in the most complete manner. All her Majesty's favorite cakes, biscuits, pastry, etc., are made here and sent by special messengers several times a week to whichever of her residences the court may be staying at. All stores at Windsor are under proper supervision, no materials being served out without proper requisition signed by the head of the department concerned. Not a bag of dog-biscuits can even be ordered for the kennel unless on the proper printed form. In fact, the whole vast establishment is practically as methodically conducted as any great London business. This method, which was evolved by her Majesty and the late Prince Consort out of the chaos which descended from the days of George IV., entirely does away with waste, extravagance, and the abominable perquisite system, and moreover enables her Majesty to exercise that wise control over her finances which enables her to keep the grandest establishment on relatively the smallest royal income in Europe.

MORE OR LESS PUNGENT.

The Test.—FRIEND: "How do you like your new teacher, Freddy?"

FREDDY: "I don't know; I haven't misbehaved any yet."—*Puck*.

Gone.—HER FATHER (from the head of the stairs: "Ethel, is that young man gone?"

ETHEL (in an ecstatic stage whisper): "Awfully, papa."—*Tid-Bits*.

Then it Began.—"He ould mon an' yer onld mon fought soide by soide, Larry." "Mayhe they did, Dinny; but Oi'll bet me ould mon wuz on top."—*Chicago News*.

Aha!—"It is my experience," she said thoughtlessly, "that the kissing-bug is misnamed." Then some one said, "Why, Ethel!" and she blushed.—*Chicago Evening Post*.

Possible Reason.—DOCTOR PUFFER: "Fact is, it's hard for me to keep track of all my patients."

FOGG: "Yes, seeing that when a man dies his name is dropped from the directory."—*Boston Transcript*.

Great Truth.—"Advice," said Uncle Eben, "is hard to manage. If you gives it away you doesn't git no benefit, an' if you sells it you's gwineter spile de quality tryin' to please customers."—*Washington Star*.

Professional Sarcasm.—YOUNG DOCTOR: "Congratulate me, old man. I'm just preparing to visit my first patient."

YOUNG LAWYER: "Good. I'll go with you. Perhaps he hasn't made his will."—*Chicago News*.

Foxy Dog.—FIRST TRAMP (in the road): "Why don't you go in? The dog's all right. Don't you see him waggiu' his tail?"

SECOND TRAMP: "Yes; and he's growling at the same time. I dunno which end to believe."—*Tid-Bits*.

Continuons Performance.—"I spent the whole day to-day helping Julia huy a hat."

"What kind of a hat did she choose?"
"Oh, this was only the first day; she never makes up her mind till after the third day."—*Chicago Record*.

Thoughtful Girl.—"Are you going to the seashore, Mabel?" "No, I'm afraid not." "But you are making a bathing-suit." "Yes, it is better to be ready and not go than to go and not be ready."—*Chicago Record*.

A Wise Woman.—MRS. NEWED: "Oh, Jack! The cook was in such an angry mood to-day I thought it best to call in a policeman."

NEWED (astounded): "What! To arrest her?"
MRS. NEWED: "Oh, no—to pacify her."—*Brooklyn Life*.

A Boy's Query.—"You have only had half of the poodle clipped, mamma," said little Tommy. "Yes, Tommy." Tommy thought a moment and asked: "Is it so that the warm end of the dog can enjoy the coolness of the other end all the more?"—*Detroit Free Press*.

His Rebellion.—"They say Buxton and his wife have separated." "Yes. They expect to be divorced in a little while." "What's the trouble?" "Oh, they qnsarred because she refused to go away for the summer unless he went along."—*Chicago Times-Herald*.

To Tease.—"Freddy," said the teacher, "you have spelled the word 'rabbit' with two 't's.' You must leave one of them out." "Yes, ma'am," replied Freddy; "which one?"—*Tid-Bits*.

English.—SHE (who did not know they were to meet): "Why, Mr. Brown, this is a pleasant surprise!"

HE (who did): "I can't altogether say that it is so to me, Miss Jones."—*Punch*.

Late Style in Waves.—"Just look, Annt Mary," shouted blue-eyed Mabel, as she pointed out of the stateroom window on the first morning out—"just look at the water; it is all covered with flounces!"—*Harper's Bazar*.

No Joke.—UNCLE SAM: "Don't you think I'm getting more like you every day?"

JOHN BULL: "You are, my hoy, and I'm only afraid of one thing."

UNCLE SAM: "What's that?"

JOHN BULL: "We may grow so much alike that we will love the same things."—*Life*.

Should Read Cautiously.—"The end of that detective story startled me—" "You shouldn't jump at conclusions."—*Philadelphia Bulletin*.

A Deceiver.—"Hawkins is very fond of his horse, isn't he?" "Why no; he hates him." "That's queer. I saw him riding in the park the other day and he had his arms about the animal's neck."—*Tid-Bits*.

Those Loving Girls.—TODDY: "Jennie tells me young Woody proposed to her last night."

VIOLA: "I don't think I know him. Is he well off?"

TODDY: "He certainly is. She refused him."—*Chicago News*.

Naturally.—"How much sugar do you put in your gooseberry pie, Mrs. Wiggins?" "Well, between you and me, Mrs. Higgins, I don't put in any; them boarders o' mine allus puts in such an awful lot theirselves."—*Puck*.

Gloomy Future.—"James," said his mother, "I have told you four times now to stop making that racket." "Five times, mamma," replied the youth, who has a great future before him in the exact sciences.—*Philadelphia North American*.

Assimilation.—"What we want to do," said the earnest patriot, "is to take hold of these Filipinos and extend to them the blessings of our civilization." "Well," answered the Kentuckian from the Green River region, "ain't that what we're doing right now? Ain't we right in among 'em shooting just as quick and straight as we know how?"—*Washington Star*.

No Escape.—When the freckled girl took a seat directly across the car from the bright child, the others were oppressed with forebodings. But they had not long to remain in suspense. "There's a complexion with a pattern in it!" exclaimed the bright child almost at once. Hereupon the others breathed more freely, for it was likely that the worst was over.—*Detroit Journal*.

Taking Her In.—"When will your new frocks be done, Amelia?" "I don't know; my dress-maker is very reserved, and has not yet taken me into her confidence."—*Chicago News.*

Sound.—FRED: "And what do you think of my argument, Will?"

WILL: "Sound—most certainly sound."

FRED: "And what else?"

WILL: "Nothing else—merely sound."—*Tid-Bits.*

Made a Hit.—"Spouter says he dreamed he was making a great speech last night, and got so wrought up that he tumbled out of bed." "I see. He took the floor."—*Philadelphia Bulletin.*

Civil Service.—"Th' trouble is," said the janitor philosopher, "that thors' altogether too much civil service in the gover'mint, an' altogether too little in th' cars an' in some hotels."—*Chicago Times.*

His Preference.—BROWN: "Did you ever try to reduce weight? I think if you took more exercise and drank no beer you could knock off twenty pounds."

SCHMIDT: "Vell, I would radder be happy dan skinny."—*Puck.*

The Power of Habit.—"How are you getting on with your automobile?" asked Miss Cayenne. "Well," answered Willie Washington, "I can run the machine all right, but it will be a long time before I can get over saying 'geddnp' and 'whoa' to it."—*Washington Star.*

That's All.—"Mrs. Young says she has solved the servant problem." "She's a genius! What's the solution?" "Why, she says all you've got to do is never find any fault, submit to everything, do as you're told, keep out of the way, and pay good wages, with privileges, and you won't have a bit of trouble."—*Philadelphia Bulletin.*

Current Events.

Monday, July 31.

—Secretary Alger issues a statement in reply to newspaper criticisms.

—Three new cases of yellow fever and one death are reported at the Hampton Soldiers' Home.

—Admiral Sampson brings suit in the District of Columbia Supreme Court for prize-money in behalf of the officers and men of his fleet.

—The Filipinos attack Calamba, a town captured last week by General Hall.

—Street mobs in Cleveland are dispersed by troops and some arrests are made; the strikers are extending the boycott.

—Sir Julian Pauncefote, British Ambassador to the United States, has been elevated to the peerage.

—Col. du Paty de Clam is released from prison.

Tuesday, August 1.

—Kilhu Root takes the oath of office as Secretary of War.

—The boycott by the trolley strikers in Cleveland is pressed with renewed vigor.

—William Waldorf Astor is naturalized as a British subject.

—The Kaiser's yacht *Meteor* wins the Queen's cup at the Cowes regatta.

—The court-martial of General Toral for surrendering Santiago is held in Madrid.

—The Belgian cabinet resigns.

Wednesday, August 2.

—Ex-Secretary of War Alger arrives at his

UNIVERSITY COLLEGE OF MEDICINE

RICHMOND, VIRGINIA.

Medicine—Dentistry—Pharmacy

HUNTER McGUIRE, M. D., LL.D., President.

56 in Faculty 310 Students last year.

Record of Graduates before different State Examining Boards this year:
Virginia: 42 applicants, 42 passed; North Carolina: 18 applicants, 18 passed;
and 100% likewise, before all (four) other
State Examining Boards that have reported.

FOR 88-PAGE CATALOG, Address,

J. ALLISON HODGES, M. D., Proctor.

home in Detroit and is enthusiastically welcomed.

—Iowa Republicans renominate Gov. L. M. Shaw.

—Maryland Democrats nominate John W. Smith for governor.

—Roland D. Molineaux pleads "not guilty" when arraigned on the indictment charging him with the murder of Mrs. Adams.

—Four of the assassins of the late President Heuresaux, of San Domingo, have been captured and shot.

—The Scandinavian Inter-Parliamentary Peace Congress is opened at Christiania.

Thursday, August 3.

—The President directs "that the census of Cuba be taken as speedily as possible."

—The yellow fever situation at the Hampton Soldiers' Home is reported improved; there are no new cases and no deaths.

An insurrection breaks out in San Domingo in the support of Jimenez, who aspires to the presidency.

—President Roca, of Argentina, and his cabinet sail for Brazil, for the purpose "of inviting the presidents of Brazil, Uruguay, and Chile to a conference on the questions of reducing armaments and an alliance of the four republics."

—The Russian Government publishes a review of the Peace Conference, declaring that "the results of the Conference have fully come up to the expectations of the Government."

—The British cup challenger *Shamrock* sails from the Clyde for America.

Friday, August 4.

—A serious rebellion of the Yaqui Indians in Mexico is causing destruction of life and property.

—Sir Wilfred Laurier, the Canadian Premier, declines an invitation to visit Chicago on the occasion of the laying of the cornerstone of the Federal Building, "because of the harsh tone of the American press relative to the Alaskan boundary question."

—The cruiser *New Orleans* is sent to San Domingo.

Saturday, August 5.

—The Argentine minister to the United States denies the reports that South and Central American republics are intending an alliance against this country.

—Ex-Governor Altgeld announces that "silver will not be made a paramount issue of the Democratic platform."

—The steamer *Saturnus*, coasting under the American flag, is captured and burned by insurgent Filipinos.

—Admiral Dewey arrives at Naples.

—The Transvaal Government accepts the British proposal for a joint inquiry into the grievances of the Uitlanders.

Sunday, August 6.

—By the collapse of a slip at the Bar Harbor ferry, Me., twenty-six persons are drowned.

—Jimenez, the Dominican revolutionist, returns to Havana.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Westerleigh Collegiate Institute

A COLLEGE PREPARATORY SCHOOL
OF HIGH ORDER

Pupils board in private families with teachers. Board and tuition, from \$275 to \$325 per year.

All teachers graduates of noted schools, and many have studied in European universities. Faculty numbers fourteen members.

WESTERLEIGH COLLEGIATE INSTITUTE

WESTERLEIGH, STATEN ISLAND.

The Dwight School for Girls

While in beauty and healthfulness of situation, desirability of environment, and efficiency of equipment, Dwight School offers peculiar advantages, the chief aim, kept constantly in view, is true scholarship. The standard of instruction is indicated by the admittance of its graduates without examination to leading colleges.

General college preparatory and primary courses. Advanced work in languages, music, painting, etc.
Miss E. S. CHRIGHTON
Miss E. W. FARRAR
Principals.
Englewood, N. J.

New York University.

Comprehends six Schools. The LAW School (with Day and Evening Classes). Medical College. Graduate School, Pedagogy, APPLIED SCIENCE and UNIVERSITY COLLEGE. For circulars address the Registrar, Washington Square, New York City.

CHICAGO COLLEGE OF LAW.

LAW DEPARTMENT OF LAKE FOREST UNIVERSITY.
Three-Year Course leading to degree of LL.B., prepares for admission to the Bar in all the States.
For catalogue address
E. E. BARRETT, LL.B., Secretary,
Title & Trust Building, Chicago, Ill.

THE SIGLAR SCHOOL.

A preparatory School for boys. Thirty-sixth Year begins September 19th, 1899. Circulars free.
HENRY W. SIGLAR, A. M., Newburgh, N. Y.

THE WESTERN, A COLLEGE AND SEMINARY FOR WOMEN.

Course of study furnished on application.
Miss LEILA S. McKee, Ph.D., President,
Oxford, Ohio

THE PRATT TEACHERS' AGENCY

70 Fifth Avenue, New York.
Recommends teachers to colleges, schools and families; advises parents about schools. Wm. O. Pratt, Mgr.

End-Game Studies.

No. 5.

(From *Wiener Schachzeitung*.)

The following position occurred in a game played in the Wiener Schach-Club, between Eduard Hamlich (Black) and Dr. Gustav Zeissl (White):

WHITE (4 pieces): K on Q 4; Ps on K Kt 4, K R 3, Q B 4.

BLACK (4 pieces): K on Q Kt 5; Ps on K Kt 4, K R 5, Q Kt 3.

White to play. What result?

Solution of First End-Game Study (July 8).

1...., K-B 2!; 2 R-Kt 2 (must), R-B sq ch; 3 R-Kt 8, B-B 6 ch; 4 P-B 6, R-K B sq; and a Draw is inevitable, for R x R is useless, and White can not take R from K B file.

Our Correspondence Tourney.

FOURTEENTH GAME OF THE FINALS.

Falkbeer Counter Gambit.

Notes (abridged) by Emil Kemeny, in *The Ledger*, Philadelphia.

(a) The play leads to an open game, rather favorable to Black, since the White Queen is hardly well placed. Tschigorin's second move, Q-K 2, is inferior to the usual play, P-Q 4.

(b) Necessary, since White threatened P-Q 4, and it is important for Black to maintain the K P.

(c) Hardly good, for it relieves the Black center and prevents White from getting his Bishop into play.

(d) White threatened Kt-B 4 and Kt x B, which would have equalized the position.

(e) This move materially weakens the White position. Better, it seems, was P-Q 4, followed eventually by P-Q 5.

(f) Kt-B 2, followed eventually by P-Q 4, was, perhaps, better. The text move enables Black to play B-Q 5, and both Bishops will be placed to the best advantage.

(g) He should have played Kt-Q sq and Kt-Kt 2.

(h) A neat but ineffective move.

(i) The play would be very forcible were it not for the brilliant and decisive answer Black had on hand.

(k) There was no better play.

(l) He could not maintain the exchange. Had he played R-Q 2, then B-B 2, followed eventually by Q-Kt 5.

(m) Brilliant and sound.

(n) Had he played R-Kt 2, which was, perhaps, better, Black would have answered B x R, followed by Q x P ch and Q x B.

(o) R-Q 2 would have been answered by Q x Q, followed by Q x R ch and Q-Kt 8 mate.

THE WORLD AGAINST THE FRENCH.

Queen's Gambit Declined.

The Literary Digest

VOL. XIX., No. 8

NEW YORK, AUGUST 19, 1899.

WHOLE NUMBER, 487

Published Weekly by

PUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

A CRY FOR RELIEF FROM PUERTO RICO.

THE widespread suffering, loss of life, and destruction of property at Ponce and other towns in Puerto Rico have brought home with considerable force the obligations which accompany our authority there. The *New York Press* says:

"There is no mere charity to be extended to Puerto Rico. There is duty to be performed, promptly and persistently, if we are to avoid the reproach which now rests on Russia for the famine in seven provinces of the East. These are a dependent people. They are subject to our control. They have no voice in our Government. They are as much the wards of the nation as the Indians of the plains. We are responsible for their well-being before the world. And from the ominous words of General Davis's despatch, 'At least half the people in Puerto Rico subsist entirely on fruit and vegetables, and the storm has destroyed this source of support,' the present phase of this responsibility is likely to be onerous.

"Secretary Root's appeal to private beneficence is not out of place, but the duty of which we speak can not be transferred to the general public's philanthropic impulses. It is a duty of government. This is no State of Mississippi or Texas, amply able to take care of its own 'flood sufferers,' and having, as an equal member of the family of States, laying and disbursing its own taxes, no claim upon the national treasury. This is a province conquered from Spain and consigned to the care of the War Department. The island's revenues are in federal hands, and any advance made to the island's use may be repaid from them. The situation since the hurricane is a reduced reproduction of that in India during famines, when the imperial Government freely administers relief out of the dependency's funds and stores. Our occupation of the island has been too recent and the calls upon the government established there too frequent to permit its grappling with the situation. But all outlays for food, and hereafter clothing and temporary housing, may be gradually reimbursed to the department. If there is red tape in the way the Secretary will do well to hack it through and leave it to Congress to tie it up again."

The *New York Journal* sees in this an opportunity to show the world the quality of our mercy:

"The news that Puerto Rico has been raised from her misfortunes by American good will and restored to prosperity and comfort will show the people of all our new possessions and of all the neighboring lands that incorporation into the United States is the most desirable thing that can happen to any small community. Alone, such a community may be prostrated by a single blow. Under our flag it is backed by the world's greatest republic, and nothing can do it permanent harm.

"This is a lesson that even Aguinaldo may learn if he be capable of assimilating a new idea. If he could secure the independence he is fighting for he would cut his people off from the greatest reservoir of practical, effective sympathy that mankind has ever known. Storm, floods, pestilence, and famine will never be allowed to ravage any region under the American flag without meeting prompt and thorough measures of relief.

"Let us restore happiness to Puerto Rico without counting the cost.

"And then there will be one story, at least, that may be allowed to pass over the wires to Manila without interference from the censorship."

Compared with other hurricanes of recent years, this one was of unusually savage character. The *New York Tribune* says:

"Not only has this storm been more destructive than most of the class to which it belongs, but it has come surprisingly early in the season. To be sure, it was preceded ten days ago by one of the same nature, tho of insignificant violence. And only a few years have elapsed since the United States gunboat *Yantic* was obliged to take refuge from a similar hurricane in July. She was engaged in blowing up derelicts off the Carolina coast at the time. Usually, however, the pioneer hurricane makes its appearance late in August or early in September. The famous storm of 1885, which did so much damage at Charleston, assailed that city on August 23 and 24. The only notable disturbance of this class in the West Indies last year visited Barbadoes, St. Vincent, and Lucia on September 11. And occasionally October arrives before the season opens. It is an interesting coincidence that typhoons, which are identical in character with West India hurricanes, developed in Asiatic waters unusually early this year. Several of them have already been reported from the Philippines, where they have embarrassed military operations to a considerable extent.

"Many West India storms, after they get within the range of observation, continue to move nearly due westward for several hundred miles before curving away to the northwest, north, and northeast. It is thus possible for them to pass south of the Greater Antilles, and either strike the coast of Yucatan or enter the Gulf of Mexico. But this latest representative of the family had already acquired a northwesterly course when it first struck the Leeward Islands Monday night. From Dominica, the first to suffer, to Turk's Island, where its effects were felt forty-eight hours later, the storm seems to have followed an almost straight line. And altho the diameter of the hurricane does not appear to have exceeded one hundred miles in the earlier stages of its history, the route which it pursued lay right through a region well strewn with islands. Practically the whole of Puerto Rico came within its influence."

Court for Children in Illinois.—The police and the magistrates have long been accustomed to treat juvenile law-breakers less severely than they treat older criminals, acting from their own sense of justice rather than in obedience to specific law. Now, however, the legislature of Illinois has taken the step of

establishing a court to have special cognizance of crimes committed by or affecting children. *The American Lawyer* (New York) describes it as follows:

"By the provisions of the law, no child under twelve years of age can be held in a police station. A room for the detention of children must be provided. The law also enacts that under the age of twelve there shall be no arrests, but that the child shall be brought into court upon summons, and if the parent or guardian of the child ignores the summons he may be arrested for contempt of court. In the case of neglected children without parent or guardian the offender may be taken in charge by an officer and delivered by the court to a probation officer.

"The court is empowered to provide for both dependent and delinquent children (by the former being understood children not guilty of offenses but without oversight and in need of it), being authorized to use its own judgment as to commitment. The child can be released upon the responsibility of the probation officer, or it can be committed to industrial or other schools. All offenses of whatever character committed by children under the age of sixteen years come under the provisions of the law, which is modeled upon the Massachusetts statute."

The same journal says in comment:

"It is useless to refer to the many times stated fact that our law is notoriously insufficient in so far as infants are concerned, in that it seems to recognize no real distinction between the juvenile offender and the hardened criminal. Crime is crime, it says, irrespective of the age of the offender, and the same hard and fast rules are to be applied whether the wrongdoer be a mischievous schoolboy or a hardened criminal. The reform school, while a step in the right direction, meets the difficulty only half way, as the child comes from it with more or less of a stain upon its reputation which only time removes. The special need of a court which will not administer strict rules of law, but to which some latitude of discretion will be permitted in cases of infant depravity, is certainly apparent."

AGUINALDO'S APPEAL FOR RECOGNITION.

THE appeal which the insurgent government of the Philippine Islands sent to the consuls of foreign powers asking that its independence be recognized, is regarded by the press as a matter of no great consequence, the general view being that none of the powers will pay the slightest attention to the appeal. The anti-expansion press, however, do not miss the opportunity to compare the strength of the Philippine government with that of the Cubans, which some of our most belligerent expansionists were impatient to recognize not long ago. Thus the *Springfield Republican* (Ind.) says:

"The indisputable truth is that the Filipino claim to recognition has been much stronger than the Cuban, while it is equally strong even now. At the beginning of this year the Filipinos had an organized government that maintained order and fully protected life and property through a great extent of territory, and, besides, controlled a number of seaports and a long stretch of coast line. The Cuban army was never comparable with the Filipino army in numbers or organization, while, as for their fitness for self government, Dewey says that the Filipinos are far superior to the Cubans. Furthermore, when the present war began, the Filipinos were not even subject to the authority of the United States, and not rebels according to international law.

"Aguinaldo's appeal for recognition of Filipino independence may be very absurd, yet what a curious foot-note to history are these facts: That a report favoring the same thing for a weaker and less organized people was signed less than three years ago by one of President McKinley's secretaries of state, was reputed to have been written by another of his secretaries of state, was signed by two of his treaty commissioners to Paris and favored by a third, and, lastly, was signed by the junior Republican Senator from Massachusetts."

The *Boston Journal* (Rep.) points out that it is customary to base requests for recognition upon military successes, as the Confederates did after such Union disasters as Fredericksburg and

Chancellorsville, the Peninsular campaign and the second Bull Run; and inquires where Aguinaldo has administered any such reverses to our arms, or whether he has not, in fact, been kept on the run ever since the campaign opened. The *Brooklyn Eagle* (Ind. Dem.) says he is nothing more than a blackmailer and a bandit:

"Aguinaldo is a trifle inconsistent when he claims the sufficiency of his people to govern themselves in view of the fact that he is so ignorant of the rights of a now neutral nation as to hold captive several hundreds of its citizens. He claims to have 7,000 Spanish prisoners, of whom some are soldiers, some merchants, and several harmless priests and servants. He offers to release these men for a thousand dollars apiece. Doubtless he has grossly exaggerated the number in order to force a big sum from the Spanish Government. His action, then, is precisely that of the Greek and Sicilian bandits who kidnap prosperous travelers and hold them in the mountains for ransom. In other words, Aguinaldo is a blackmailer, and nothing more. He wants this

—The World, New York.

money for his own purposes, and in order to obtain it he will put to continued suffering some hundreds of men with whom he has no quarrel, with whom he is not at political odds, who are as neutral under present circumstances as are the French and the Norwegians. His pretensions are absurd, his course is criminal, and his hopes are vain. For Spain to recognize the independence of the Philippines would be a virtual declaration of war against the United States, and after its recent little difference with this country we have a notion that Spain is not anxious to renew hostilities.

"Aguinaldo might once have been respected, but that time is past. He is a nuisance, now. He will have to suppress himself or be suppressed. He is not acting for the people of the Philippines, but only for a certain faction in Luzon, and while he is in a position to make trouble for a time longer by a system of guerrilla warfare, retiring into the jungle after every raid, it is a satisfaction to know that the vigorous hand is to be employed in his island. The new Secretary of War, Mr. Root, will not continue the dilly-dally policy. He will not countenance skirmishing on the fringes of the Filipino army, but will send to the Philippines a force large enough to crush the insurrection and restore peace. It is only Luzon that is involved, and this makes the task one of reasonable certainty, if not ease. General Otis has shown that his confidence in the sufficiency of his present army was misplaced. Our troops beat the Filipinos in every battle, but there are not enough of them to hold the conquered territory. The war is draining the resources and patience of the nation, is giving heart to malcontents both in Boston and Manila, is delaying

peace and prosperity and civilization in the islands, and should be brought to a speedy end."

One of the foremost advocates of the recognition of Cuban independence was Senator Frye, of Maine, who was also one of the Peace Commissioners who negotiated for the Philippines at Paris. Speaking of our present position in the islands he said a few days ago: "God opened the door, pushed us in and closed it. No man on earth or angel in heaven can now take us out." This extreme statement of the "Duty-and-Destiny" theory has caused something of a ripple of merriment among the press on both sides of the question. The Chicago *Evening Post* (Ind.), for example, says:

"This is a little unfortunate for our friends who are still awaiting the arrival of transports, but—the Lord's will be done. It is not for us to quarrel with the operations of the Deity, as revealed by His chosen prophet, Frye, but it strikes us that the figure representing the Lord hustling us into the Philippines and closing the door is unpleasantly suggestive of the old Roman authorities pushing the gladiators into an arena of wild beasts. Our recollections of the Lord are that the Deity put in more consecutive effort leading the chosen people out of traps than pushing them in, and we can not understand why this wise and beneficent policy has been changed in our generation. However, as we have intimated, Mr. Frye, who speaks of the Lord in that frank, familiar way permissible in statesmen of high rank, enjoys opportunities for celestial intercourse of which we are wholly deprived, and if he says that the Lord has instituted the closed-door policy in the Orient we must act on the manifestation of divine will and give Sir Charles Beresford the horse-laugh. It is pleasant and instructive to discover that when the Lord shuts gates and closes doors Mr. Frye is never caught within the enclosures."

Mr. Astor's Change of Fealty.—Much comment, mostly of a semi-humorous sort, has attended William Waldorf Astor's transfer of allegiance from this country to England. The New York *Journal*, for example, points out that in this country Mr. Astor was considered as good as any other man, so long as he behaved well, while in England he is outranked by seventy-four classes of British subjects. "What a fall," exclaims the *Oswego Times*, "for an American sovereign!" His attempt to prove that his family is of noble lineage and the prompt rejection of his claim by the family with which he sought to establish a relationship has added piquancy to the incident. Mr. Astor's defection, it is remarked, instead of reflecting on the United States, brings attention to the rarity of such a move on the part of American citizens. E. S. Martin says in *Harper's Weekly*:

"In the last century and a quarter not more than a handful of American citizens of standing have swapped their flag for any other. During the Revolution many Tories left the country, but most of them merely continued to be British subjects, and as they never accepted citizenship from the republic, they never renounced it. Count Rumford (Sir Benjamin Thompson), who was perhaps the most famous of the Americans who sided with King George, left the country in 1776 as the messenger of the governor of Massachusetts to London. He never returned, but for years he was the prime minister of the Elector of Bavaria, he continued all his life to be a British subject, never renouncing the allegiance to which he was born. After the Civil War some Southerners, like Judah P. Benjamin, became British subjects, but in Mr. Benjamin's case there were said to be personal as well as political reasons of weight which made England an agreeable home to him, and possibly kept him there. After Tammany's collapse Mayor Hall became a British subject, and no doubt there are good many other cases of lesser note where the change of citizenship was made as matter of convenience.

"A good many Germans have come to this country, made their fortunes here, and gone home in their old age to end their lives in the country of their birth. No doubt some of them have renewed their allegiance to the Emperor, but it has made no stir, especially since they have usually left their children behind them. The Astors, as every one knows, came from Germany, and it is

worth noting that Mr. Waldorf Astor, in leaving us, has not returned to the old allegiance, but has become an Englishman. There is some significance in that, and it is worth considering whether descendants of persons of German birth, after speaking the English language and being steeped in English law and literature in America for some generations, do not respond more readily to the influences of London than to those of Berlin."

NEW YORK SLUM TENANTS.

THE third of a series of articles by Jacob A. Riis, dealing with present problems in the New York slums, appears in the August *Atlantic Monthly*. Mr. Riis graphically describes the conditions of tenants on the East Side, with whom he has had intimate personal acquaintance for many years. Sixty-two per cent. of them, he finds, are foreign born, and the percentage of illiteracy is as high as forty-six. Of these foreigners, the Italians are considerably in the majority, and from 1891 to 1898 more than half a million of King Humbert's subjects came to this country. Mr. Riis thus sums up the characteristics of our Italian population:

"It is charged against this Italian immigrant that he is dirty, and the charge is true. He lives in the darkest of slums, and pays rent that ought to hire a decent flat. . . . He is ignorant, it is said, and that charge is also true. . . . He lives cheaply, crowds, and underbids even the Jew in the sweatshop. . . .

"He is clannish, this Italian; he gambles and uses a knife, tho rarely on anybody not of his own people; he 'takes what he can get,' wherever anything is free, as who would not, coming to the feast like a starved wolf? There was nothing free where he came from. Even the salt was taxed past a poor man's getting any of it. Lastly, he buys fraudulent naturalization papers, and uses them. I shall plead guilty for him to every one of these counts. They are all proven. Gambling is his besetting sin. He is sober, industrious, frugal, enduring beyond belief, but he will gamble on Sunday and quarrel over his cards, and when he sticks his partner in the heat of the quarrel the partner is not apt to tell. He prefers to bide his time. Yet there has lately been evidence once or twice in the surrender of an assassin by his countrymen that the old vendetta is being shelved, and a new idea of law and justice is breaking through."

The account of the Italian's political ethics throws a new sidelight on city politics:

"He came here for a chance to live. Of politics, social ethics, he knows nothing. Government in his old home existed only for

Copyright by P. Mook.

JAMES ENTWISTLE,

Chief Engineer of Admiral Dewey's Squadron; retired with the rank of Rear-Admiral.

his oppression. Why should he not attach himself with his whole loyal soul to the plan of government in his new home that offers to boost him into the place of his wildest ambition, a 'job on the streets'—that is, in the Street-Cleaning Department—and asks no other return than that he shall vote as directed? Vote! Not only he, but his cousins and brothers and uncles will vote as they are told, to get Pietro the job he covets. If it pleases the other man, what is it to him for whom he votes? He is after the job. . . . Was he not told by the agitators whom the police jailed at home that in a republic all men are made happy by means of the vote? And is there not proof of it? It has made him happy, has it not? And the man who bought his vote seems to like it. Well, then?"

The second great class among the slum dwellers is the Jews. In fourteen years more than 400,000 Jewish immigrants have landed in New York. It is said of them:

"They had to have work and food, and they got both as they could. In the strife they developed qualities that were anything but pleasing. They herded like cattle. They had been so herded by Christian rulers, a despised and persecuted race, through the centuries. Their very coming was to escape from their last inhuman captivity in a Christian state. They lied, they were greedy, they were charged with bad faith. They brought nothing—neither money nor artisan skill—nothing but their consuming energy, to our land, and their one gift was their greatest offense."

Yet Mr. Riis believes that the Jewish race, with all its faults, has great possibilities. The Jew is the "yeast of any slum," and his thirst for knowledge surmounts all barriers. The charge of promoting the sweat-shop system has been brought against the Jew, but Mr. Riis states that the real "sweater" is the manufacturer, not the workman, and that in the last resort the responsibility rests upon the public, from whom comes the demand for sweatshop-made goods. The Jew is simply the victim of his environment.

Some well-known attempts have been made here to colonize refugee Jews. With the assistance of the Baron de Hirsch Fund, several hundred Jews were transplanted to New Jersey, where they have proved to be good dairy farmers and poultry raisers. Mr. Riis says:

"I have spoken at length of the Jew and the Italian, because they are our present problem. Yesterday it was the Irishman and the Bohemian. To-morrow it may be the Greek, who already undersells the Italian from his pushcart in the Fourth Ward, and the Syrian, who can give Greek, Italian, and Jew points at a trade. From Dalmatia a new immigration has begun to come, and there are signs of its working further east in the Balkan states, where there is no telling what is in store for us. How to absorb them all safely is the question."

Mr. Riis feels that the outlook is hopeful, in spite of all the crushing degradation of the East Side slums. The best in human nature asserts itself in defiance of its hostile environment, and he cites many instances of generosity and heroism:

"It was over here that the children of Dr. Elsing's Sunday-school gave out of the depth of their poverty fifty-four dollars in pennies to be hung on the Christmas tree as their offering to the persecuted Armenians. One of their teachers told me of a Bohemian family that let the holiday dinner she brought them stand and wait, while they sent out to bid to the feast four little ragamuffins of the neighborhood who else would have gone hungry. I remember well a teacher in one of the Children's Aid Society's schools, herself a tenement child, who, with breaking heart, but brave face, played and sang the children's Christmas carols with them rather than spoil their pleasure, while her only sister lay dying at home."

Mr. Riis adds:

"I might keep on and fill many pages with instances of that kind, which simply go to prove that our poor human nature is at least as robust on Avenue A as up on Fifth Avenue, if it has half a chance, and often enough to restore one's faith in it, with no

chance at all; and I might set over against it the product of sordid and mean environment which one has never far to seek. Good and evil go together in the tenements as in the fine houses, and the evil sticks out sometimes merely because it lies nearer the surface. The point is that the good does outweigh the bad, and that the virtues that turn the balance are after all those that make for good citizenship anywhere, while the faults are oftenest the accidents of ignorance and lack of training, which it is the business of society to correct."

A Government for Negros.—General Otis's plan for the government of the island of Negros is interesting as a probable step toward the ultimate form of government for all the Philippine islands. The plan seems to contemplate permanent American occupation, especially in the provision that English shall be taught in the public schools. The following outline of the plan is given in the *Philadelphia Ledger*:

The chief official naturally is to be a military governor, named by the governor-general of the Philippines, but there are to be also a civil governor and eight members of an advisory council, to be elected by the people. What should constitute the elective franchise, and the extent to which it could be safely granted, seem to have been determined with exceeding liberality. According to the announced terms of the proclamation, all males of twenty-one years of age, who are able to read and write English, Spanish, or Visayan understandingly, or who are owners of \$500 in realty, or who are the renters of \$1,000 in realty, and have resided in their respective districts one year and properly registered themselves, are clothed with the privilege of participating in the elections. The civil governor, however, does not appear to possess much power, for his office is rather an advisory than an executive one. He is to advise the military governor concerning public questions of a civil character and attest the official acts of his superior concerning civil matters. But while this places him somewhat in the position of a confidential secretary, it is not wholly so, because he is given the power to grant commissions, of what character is not stated, and to preside over the deliberations of the advisory council, the functions of which are legislative. The acts of this body are subject to veto by the military governor, which can only be overridden by the governor-general.

"The measures taken for the development of the people and the industries of the islands are of equal or greater importance. A secretary of the treasury, an attorney-general, and an auditor are to be appointed by the military governor, who are expected to perform the duties usually pertaining to their offices, and there are also to be a secretary of the interior, a secretary of agriculture, and a secretary of public instruction. The first, in addition to supervising the public lands, forests, mines, and census, will have charge of the public health. The second must attend to the work of developing the resources of the island, to recommend

new and improved methods of cultivation, and introduce new products suitable to the soil and climate.

"A free-school system is to be given the people, under the direction of the secretary of public instruction, and one of the chief features is that the English language must be taught. It is here that delicate ground is reached, and much of the chance of success or failure of the American administration rests upon the management of the school question. It is the experience of England that in her colonial possessions the people are loth to give up their language for that of the sovereign power, and trouble is apt to result where they are forced to do so. If English is to be taught as an important study, without insisting that it shall be the language universally spoken, its introduction is in line with the other wise provisions of the proclamation. If, on the other hand, the teaching is coupled with the mandate of universal use, the wisdom of the proposition may be brought into question."

SOUTHERN GOVERNORS ON LYNCHING.

AT a time when lynchings in the South are of almost daily occurrence, and range all the way from the hasty taking-off of some negro suspect to the execution of Italian subjects by a Louisiana mob—an affair that threatened to become an international "incident"—the opinions of the Southern governors, whose duty it is to enforce the law, become of special interest and importance. The relation of the federal Government to the state governments is such that if the governors fail to protect the people under their rule, or fail to arrest and punish the lynchers, the national Government can not interfere, and the people must go unprotected and the lynchers unpunished. Such was the ruling in the case of the New Orleans lynching in 1890, when Secretary of State Blaine informed the Italian Government that the United States Government could not punish the lynchers or be held responsible for indemnity. When we learn the attitude of the governors toward mob executions, therefore, we have a very good index of the prospect for law and order in the States they represent.

The most turbulent State in the South just now appears to be Georgia. Outbreaks have been occurring there with alarming frequency. On Wednesday, August 2, the day after the publication of Governor Candler's proclamation against crime, four persons were murdered in the State, two assaults on women were committed, there was a bloodless duel in the streets of Rome, a riot on an excursion train, and a lynching was averted only by a hard ride of seventeen miles by a sheriff's posse and a negro prisoner. Even after the prisoner was lodged in the jail at Newnan, the mob surrounded the building and would have taken him out and lynched him if it had not been for the unprecedented zeal of Governor Candler. The governor left Atlanta at four o'clock Thursday morning, reached the scene of the trouble before breakfast, took personal command of the militia and the sheriff's posse, and took the prisoner safely through the mob to the train and back to Atlanta—the first time a Georgia governor ever personally stopped a lynching. The governor, in his proclamation, gives a dark picture of Georgia's social condition:

"Reproach has been brought upon the fair name of Georgia. For more than a hundred years Georgians have merited and maintained the character of a conservative and law-abiding people. But of late fearful crimes have been committed by lawless men within her borders. Robbery, arson, burglary, assassination, murder, and that foulest of all crimes, rape, have blurred our fair escutcheon. To avenge these foul crimes, lynch law, that most dangerous of all remedies, has been resorted to by misguided citizens. The press of other parts of the country has rung with denunciations of our State and our people. Sensational newspapers have magnified the fearful vengeance inflicted upon the despoilers of female virtue, and our people have been denounced as Apaches and barbarians. From the mountains to the sea we have trembled for the safety of our wives and our daughters because of the diabolical assaults made on pure womanhood by

black demons who are a disgrace to their race; while because of the fearful retribution that has been visited upon the perpetrators of these fiendish assaults, the entire negro race in the localities in which they have been made have lived in a state of constant terror and alarm."

The governor then makes a firm stand against crime in every form, including lynching:

"The purity of the fair mothers and daughters of Georgia must and shall be preserved, and at the same time the lives and liberties of all of the law-abiding negroes in Georgia must and shall be protected. Arson and burglary and assassination and robbery and rape must stop, and at the same time lynch law must stop. The good of both races and the fair name of the State demand this.

"The ordinary processes of the law are amply sufficient to punish all crimes. Our judges are pure and incorruptible. Our juries are composed of our most intelligent, upright men, who seldom make mistakes. The mob often makes mistakes and the innocent are made to suffer with the guilty. It never knows where to stop, but after punishing the guilty, drunk with the blood of one victim, it thirsts for the blood of another, and often sacrifices on the altar of vengeance those who are guiltless of any crime. Under its rule, the very foundations of society are undermined, life and property are insecure, the courts are defied, and the majesty of the law is insulted.

"We must away with the mob. We must enthrone the law. We must restore the altar of reason and tear down the altar that passion has erected. We must do this in the interest of the white men of Georgia and in the interest of the negroes of Georgia and for the fair name of Georgia and to protect the virtue of the women of Georgia.

"Lynch law does not stop arson nor murder nor robbery nor rape. This requires the strong power of the statute law, sustained by a healthy, vigorous public sentiment . . . The man who lynches the ravisher is as guilty in the eyes of God and the law as the ravisher himself. 'Vengeance is mine, saith the Lord.'"

But it is not enough to declare that order must be restored. How is it to be done? The governor says:

"I would appeal to all officers of the State, civil and military, urging them to remember that the dignity and the fair name of Georgia are in their keeping. I would appeal to them to remember that they are the guardians of the peace and happiness of the people of the State. It is their duty to apprehend and bring to justice all who violate the law, whether it be the negro who commits rape or the white man who kills him for his crime. The

M. E. INGALLS

Who will resign the presidency of the "Big Four" and the Chesapeake and Ohio Railroads, it is reported, and become "arbitrator" for the Pennsylvania, the Vanderbilt, and the Morgan railroad interests, at a salary of \$75,000 a year.

grand juries must realize that it is as much their duty to ferret out and return true bills against members of the mob who lynch a murderer as it is to return a true bill against the murderer himself.

"I would appeal especially to the bar to bring that potent influence which the members of the profession exercise in every community to the aid of law and order, not only by discountenancing mob rule, but by aiding the courts and juries in bringing accused parties to speedy trial. It is the duty of a lawyer to see that his client has a fair and impartial trial, but he should not resort to mere technicalities and pretexts to defeat the ends of justice or even to delay the enforcement of penalties whereby society suffers and the confidence of the people in the ability of the courts to punish crime is destroyed.

"In bringing about this end I would invoke the active, earnest cooperation of all good men, white and black, with the officers of the law in their efforts to prevent crime, suppress mob violence, and bring criminals to justice and to restore peace and order and tranquillity to all of our people of every race, class, and condition."

In a statement made public a few days before the above proclamation, Governor Candler said that the race problem in the South owed its origin to the gift of the ballot to the negro, and that the negro was encouraged in his crimes by Northern expressions of sympathy. The remedy, he said, was disfranchisement:

"The greatest crime ever perpetrated, not only against American ideals and institutions and human liberty, but against the Southern negro, was when without preparation he was clothed with all the rights and privileges and responsibilities of citizenship.

"We need a remedy immediate in its effects, and this remedy can only be found in a qualified suffrage. The ballot must only be entrusted to the virtuous and intelligent. How many men vote who are intelligent, but are not virtuous, and many more vote who are virtuous but not intelligent. Restrict the suffrage to those having both these qualifications, and one of the greatest causes of irritation will be removed, race prejudice, at least in politics, will be eliminated, and the happiness and the material and moral condition of the Southern negro will be greatly enhanced."

The *New York Times* has obtained from a number of other Southern governors their views on lynching and its remedies. Gov. Joseph F. Johnston, of Alabama, tells of a new law which may prove effective in preventing crime:

"At the last session of the General Assembly a law was enacted authorizing the governor, whenever a serious crime was committed, to order a special term of the court for the immediate trial of the offender. One case has arisen since then (February). An unoffending white woman was shot in her own house by two negroes. The negroes fled. One, probably the least guilty, was captured and hanged by a mob. Subsequently the other was captured in another county, detained there by my direction, a special term of the court ordered within a few days, the court held, the negro tried, convicted, and sentenced to be hanged in about thirty days. No kind of effort was made to intercept the orderly administration of justice in the case of the negro tried. This is the only case we have had under the act. We have been almost free of mob law for two years. I think the new law will tend to suppress the influence of the few who are ready to ignore the laws of the land."

Gov. M. B. McSweeney, of South Carolina, sees little prospect of improvement in his State:

"There have been complaints of tardiness in the trial and punishment of criminals in South Carolina. It has also been stated that too many guilty persons escape punishment through technicalities of the law. For the first complaint there is some reason. Punishment is too slow. But this trouble seems almost inseparable from civil courts as distinguished from military tribunals. The drumhead court-martial, necessary in war, is intolerable in time of peace.

"Every person charged with crime has certain rights guaranteed by the Constitution. One of these rights is to have a fair trial. The right of appeal is likewise guaranteed. The proceedings made necessary by these guaranties are, from their nature,

slow. What a military court can do in days must in civil tribunals require months.

"In South Carolina we have three criminal terms a year in every county. I can not see that this number can be increased. Special terms might be ordered for the trial of particular crimes, but even then the impatience of the mob might not be allayed. The mob seeks instant punishment. In its view a week's delay is as bad as a year's.

"The principal cause of delay in the courts in this State lies in the hearing of appeals. In almost every case the entering of an appeal assures a delay of at least a year in the execution of a sentence. More than one effort has been made to cure this trouble by increasing the sittings of the supreme court, which hears appeals. But the legislature has never seen fit to change the law existing here for almost a century—the law which provides two sessions a year for the supreme court.

"Viewing the whole situation, I can not say that I expect any legislation here looking to the speedier punishment of crime. As now advised, I can not say just what form such legislation should take.

"My own judgment is that we must look beyond legislation to stop lynchings. These acts of violence every good citizen deplores. They are dangerous in the extreme. No man would rejoice more than I to see them end. I fear, however, that the only hope of relief lies in the stopping of the particular crime which is chiefly the occasion of mob law in the South. The negroes as a class do not appreciate the enormity of this crime. If they did there would be few lynchings in the South.

"The conditions altogether are unsatisfactory. We can look for improvement only through better regard for the law on the part of all classes of the people."

Gov. D. M. Jones, of Arkansas, sees no prospect of a change for the better so long as human nature remains as it is:

"In my judgment, the so-called delays in the administration of criminal law so far as Arkansas is concerned have not been the cause of the lynching of any person accused of crime. The lynchings in this State have generally been in cases of rape, and especially of rape and attempted rape, and especially when the assault has been made by a negro upon a white woman.

"This crime is so heinous and revolting that all the laws in the

At Ocean Grove Governor Roosevelt said: "It remains for the decent element to purify New York."

And just then the "decent element" flitted softly by.

—*The Evening World, New York.*

world, no matter how severe the punishment or how speedy its infliction, can not in my judgment prevent lynching when the accused falls into the hands of the enraged mob.

"I can suggest no remedy because there is none, except the cessation of the crime itself. Of course, this is to be deplored, because it is always best that the law should be permitted to take its regular course, but so long as human nature remains as it is the conditions in this respect will not be improved."

Gov. W. D. Bloxham, of Florida, quotes from his message to the legislature in 1897 in which he said:

"I feel a profound regret in stating that since my incumbency of the executive office lynchings in two counties have caused the character and civilization of our people to suffer in the estimation of the world."

He favors more stringent laws as a remedy, and says of the courts:

"Our constitution should be so amended as to have a circuit judge appointed for the State, who could be directed to hold court in any county where a necessity existed, whether that necessity was produced by unusual crime or by disability of the judge of the circuit. Until such an amendment could be ratified, I would recommend that Section 1,374, Revised Statutes, be so amended as to authorize the governor to appoint and assign any of the judges of the circuit courts to hold special terms of the court in any county, at such time or times as the governor may direct, to try any criminal case that he may call to the attention of the judge, and such other cases as the judge may deem proper to take up."

After recommending the removal from office and punishment of every sheriff who permits fatal mob violence, the governor says:

"In addition, public sentiment should be awakened to the necessity of educating the popular mind to the necessities of observing the law. To that end, the public press, the teachers of the land, and all good citizens should unite. The press of our State has done noble work in that direction, and let the law-abiding and honor-loving people sustain it, and with the cooperation of teachers, spiritual and clerical, and all who look to an elevated citizenship as the true solution of good government, join in the laudable effort to enthrone law and justice as the only governing forces that can sustain our social fabric. There should be no individual redress of wrong. There must be no lynching."

A GERMAN-AMERICAN DEFENSE OF PRESIDENT MCKINLEY.

IT is well known that the German-American papers are against imperialism, or expansion, and especially against the forcible subjugation of the Filipinos. The Administration in general, and President McKinley in particular, are held responsible for our attack upon the former subjects of Spain. But the Cincinnati *Volksblatt* points out that it is very difficult for the President to adopt a new course. We take from its argument the following:

"The Filipinos will not make peace unless we grant them complete independence. We ourselves believe this to be the best solution, but it must be admitted that the President can not give way at once to that demand. A war of conquest has procured the islands for the United States. Be they valuable or not, the President has no constitutional right to make the Filipinos a present of their liberty. The Senate would probably refuse to ratify such a peace. The United States would be in a queer position if the legislature refused to acknowledge a treaty concluded by the President. But let us suppose that the President wishes to fulfill the demands of the Filipinos. Can he admit it? Is he to say: 'I carry on an unjust war against the Filipinos, but I can not give them their liberty until Congress authorizes me to do so?'"

"President McKinley is at present in this case simply the commander-in-chief of the United States army. He can not even call Congress to assist him. The military prestige of the United States is, to a certain extent, at stake. It is no elevating idea that the United States was forced to withdraw because we could not conquer the islands. No nation likes to acknowledge itself

beaten, and a wise statesman must reckon with this. To convene Congress now is neither more nor less than an acknowledgment of defeat. On the other hand, Congress can, at its regular session, declare that it never intended to conquer the Philippines.

"Let it be understood that we have not changed our views. Now as ever we maintain that the islands are not worth fighting for, that the Filipinos have a right to demand their independence, that the Constitution gives Congress no right to annex the Philippines. But certain formalities are necessary for the prestige of the country. The editor at his desk may decree that we must have peace right off. The President can not express himself in so radical a manner."—*Translation made for THE LITERARY DIGEST.*

LETTERS AND ART.

SOCIAL NOVELS IN FRANCE AND RUSSIA.

THE announcement of a tetralogy of social novels by Emile Zola—on the family, truth, labor, and justice—has led a Russian writer to discuss the artistic requirements of "tendency" fiction, and to draw an interesting parallel between Russian and French methods of teaching new ideas by means of novels. He makes the claim, moreover, that the best work of Zola and other modern French writers owes much to Russian influence and example, especially to the influence of Turgeneff and Tolstoy. In the early eighties this was freely acknowledged by the French themselves, and Daudet and Zola paid willing tributes to the services of their contemporaries from the North. Subsequently there was a reaction, due to a literary misunderstanding between the French and the Russians. Zola, Daudet, and the De Goncourts went to the length of warning their countrymen against excessive attention to Russian literature. This mood did not last, but the earlier mutualism and interaction never were restored, and if we are to believe the Russian critic, the result has been unfortunate for French literature, and peculiarly unfortunate for Zola, who has lost his artistic cunning. We quote, in translation, from the suggestive article in the *Novoye Vremya*:

"Unquestionably, in his first novels, written prior to his acquaintance with Turgeneff and Russian fiction, Zola appeared with all the characteristic marks of the French novelist, whereas in his later works he manifested traits alien to the French spirit and distinctive of the Russian. The tendency, the conscious aim to give naturalism a humanitarian substance; to invest the novel of manners with a broad social significance; to elevate an individual type into a representative of a whole generation and a stage of national culture—these elements of the realistic novel, foreign even to the naturalistic Balzac, hardly established themselves in French literature apart from the influence of Turgeneff and Russian fiction generally."

And what has happened since the withdrawal of direct Russian literary pressure? Taking Zola as a conspicuous exemplar of modern French fiction, the writer goes on to make the following comparisons:

"There can be no doubt that in the later productions of the famous novelist there has been less and less of the peculiarity found in Russian fiction—the organic binding of social and philosophical ideas with living, typical personalities. The unflinching artistic beauty and strength of the Russian novel are in this indissoluble connection between ideas and realized characters. The idea and mood of Turgeneff's 'Nest of Nobles' can not be separated from Lavretski and Lisa, just as it is impossible to divest, in 'Fathers and Sons,' Bazaroff of the social rôle he is made to play. Zola never reached this degree of perfection in creating his characters, but he admirably acquired the manner of expressing a social idea by the grouping of living personalities and the lucid depiction of their environment. He was particularly excellent in the painting of social groups, a fine comprehension of which gave of itself his novels a social significance. Of late, however, his works have had fewer and fewer realized characters, less and less flesh and blood, and instead we have abstract and colorless types, and the moralizing to which they are addicted seems wholly separable from their individualities. In 'Rome' the characters and the teaching are plainly divorced, to the complete destruction of artistic unity."

"Just now Zola has announced a new series of four novels in which he intends to make a heavy contribution to the world's thought. The undertaking is a bold one in any case, and especially for a man who has been a strikingly realistic painter of everyday life, but never a thinker—so little of a thinker, in fact, that hardly any part of the reading public cares in the least degree what his opinions are about large families, truth, labor, and justice, the respective themes of his promised novels."

Continued Russian influence, the writer believes, would have

saved Zola from the lapse from artistic standards. Meanwhile Zola himself has expressly defended the use of the fictional form for the propaganda of ideas. He has stated, in explaining his tetralogy, that he has a high opinion of the utility of the novel as a means of spreading truth. He has something new and of value to bequeath to humanity, and instead of writing treatises he has selected the novel as his vehicle. Originally the novel was only a pastime, an amusement, but it has so developed in the last century that it is capable of responding to any need, according to Zola. While his work has always had a higher purpose than that of pleasing and entertaining people, Zola declares that hereafter he will lay even more stress on the educational quality of his fiction. He remains a novelist because he is convinced that in this way he can most effectively spread and impress his important ideas. He does not admit, however, that his intentions require the violation of any artistic principles.—*Translation made for THE LITERARY DIGEST.*

BRET HARTE ON THE "SHORT STORY."

IT has been a frequent custom to attribute the origin of the American short story to Bret Harte; and if we take the modern short story, dealing with characteristic American life and habits, as the type, there is little doubt that Harte first gave the

BRET HARTE.

impetus to the outburst of story-writing which during the past thirty years has illustrated almost every phase of American custom and illuminated every corner of the American continent. Bret Harte has himself traced the history of this form of literature in an article in *The Cornhill Magazine* (July). The short story was familiar enough, he says, during the early half of the century, through the tales of Irving, Poe (who, he says, "was a master of the art, as yet unsurpassed"), Longfellow, and Hawthorne; but it was not the short story of to-day:

"It was not characteristic of American life, American habits, nor American thought. It was not vital and instinct with the experience and observation of the average American; it made no attempt to follow his reasoning or to understand his peculiar form of expression—which it was apt to consider vulgar; it had no sympathy with those dramatic contrasts and surprises which are

the wonders of American civilization; it took no account of the modifications of environment and of geographical limitations; indeed, it knew little of American geography. Of all that was distinctly American it was evasive—when it was not apologetic. And even when graced by the style of the best masters, it was distinctly provincial.

"It would be easier to trace the causes which produced this than to assign any distinct occasion or period for the change. What was called American literature was still limited to English methods and upon English models. The best writers either wandered far afield for their inspiration, or, restricted to home material, were historical or legendary; artistically contemplative of their own country, but seldom observant. Literature abode on a scant fringe of the Atlantic seaboard, gathering the rift from other shores, and hearing the murmur of other lands rather than the voices of its own; it was either expressed in an artificial treatment of life in the cities, or, as with Irving, was frankly satirical of provincial social ambition. There was much 'fine' writing; there were American Addisons, Steeles, and Lambs—there were provincial 'Spectators' and 'Tatlers.' The sentiment was English. Even Irving in the pathetic sketch of 'The Wife' echoed the style of 'Rosamund Grey.' There were sketches of American life in the form of the English essayists, with no attempt to understand the American character. The literary man had little sympathy with the rough and half-civilized masses who were making his country's history; if he used them at all it was as a foil to bring into greater relief his hero of the unmistakable English pattern."

It was through the writings of the early American humorists—"Artemus Ward," Lowell in the "Biglow Papers," and other less known and cruder writers—that a literature smacking of the soil began to take root. But the American short story had yet to come. Even the great Civil War did not bring it. But it brought to people of all sections a widespread interest in other parts of the country, and thus prepared the way for the first story with "local color." Curiously enough, to the far distant Pacific coast was reserved the honor of giving birth to this new literary product. Mr. Harte describes the conditions of life prevailing there at the time when he sent forth his first immortal tale to the readers of *The Overland Monthly*. He refers to the heterogeneous population which had been drawn there by the discovery of gold—farmers from the plow, merchants from their desks, and students from their books, while every profession was represented.

"They were mainly young; a gray-haired man was a curiosity in the mines in those days, and an object of rude respect and reverence. They were consequently free from the trammels of precedent or tradition in arranging their lives and making their rude homes. There was a singular fraternity in this ideal republic into which all men entered free and equal. . . . Add to this Utopian simplicity of the people, the environment of magnificent scenery, a unique climate, and a vegetation that was marvelous in its proportions and spontaneity of growth; let it be further considered that the strongest relief was given to this picture by its setting among the crumbling ruins of early Spanish possession—whose monuments still existed in Mission and Presidio, and whose legitimate Castilian descendant still lived and moved in picturesque and dignified contrast to their energetic invaders—and it must be admitted that a condition of romantic and dramatic possibilities was created unrivaled in history."

A better field for the development of a characteristic literature could hardly be found than such a unique environment. Yet, as was the case upon the Atlantic seaboard, this raciness of the soil was reflected only in the local humorists, among them Lieutenant Derby with his "Squibob Papers," and Mark Twain with his "Jumping Frog of Calaveras." "The more literary, romantic, and imaginative romances had no national flavor. The better remembered serious work in the pages of the only literary magazine, *The Pioneer*, was a romance of spiritualism and psychological study, and a poem on the Chandos picture of Shakespeare!" Mr. Harte continues as follows:

"With this singular experience before him, the present writer

was called upon to take the editorial control of *The Overland Monthly*, a much more ambitious magazine venture than had yet appeared in California. The best writers had been invited to contribute to its pages. But in looking over his materials on preparing the first number, he was discouraged to find the same notable lack of characteristic fiction. There were good literary articles, sketches of foreign travel, and some essays in description of the natural resources of California—excellent from a commercial and advertising view-point. But he failed to discover anything of that wild and picturesque life which had impressed him, first as a truant schoolboy, and afterward as a youthful schoolmaster among the mining population. In this perplexity he determined to attempt to make good the deficiency himself. He wrote 'The Luck of Roaring Camp.' However far short it fell of his ideal and his purpose, he conscientiously believed that had painted much that 'he saw, and part of which he was,' that his subject and characters were distinctly Californian, as was equally his treatment of them. But an unexpected circumstance here intervened. The publication of the story was objected to by both printer and publisher, virtually for not being in the conventional line of subject, treatment, and morals! The introduction of the abandoned outcast mother of the foundling 'Luck,' and the language used by the characters, received a serious warning and protest. The writer was obliged to use his right as editor to save his unfortunate contribution from oblivion. When it appeared at last, he saw with consternation that the printer and publisher had really voiced the local opinion; that the press of California was still strongly dominated by the old conservatism and conventionalism of the East, and that when 'The Luck of Roaring Camp' was not denounced as 'improper' and 'corrupting,' it was coldly received as being 'singular' and 'strange.' A still more extraordinary instance of the 'provincial note' was struck in the criticism of a religious paper that the story was strongly 'unfavorable to immigration' and decidedly unprovocative of the 'investment of foreign capital.' However, its instantaneous and cordial acceptance as a new departure by the critics of the Eastern States and Europe enabled the writer to follow it with other stories of a like character. More than that, he was gratified to find a disposition on the part of his contributors to shake off their conservative trammels, and in an admirable and original sketch of a wandering circus attendant called 'Centre-pole Bill,' he was delighted to recognize and welcome a convert. The term 'imitators,' often used by the critics who, as previously stated, had claimed for the present writer the *invention* of this kind of literature, could not fairly apply to those who had cut loose from conventional methods, and sought to honestly describe the life around them, and he can only claim to have shown them that it could be done. How well it has since been done, what charm of individual flavors and style has been brought to it by such writers as Harris, Cable, Page, Mark Twain in 'Huckleberry Finn,' the author of 'The Prophet of the Great Smoky Mountains,' and Miss Wilkins, the average reader need not be told. It would seem evident, therefore, that the secret of the American short story was the treatment of characteristic American life, with absolute knowledge of its peculiarities and sympathy with its methods; with no fastidious ignoring of its habitual expression, or the inchoate poetry that may be found even hidden in its slang; with no moral determination except that which may be the legitimate outcome of the story itself; with no more elimination than may be necessary for the artistic conception, and never from the fetish of conventionalism. Of such is the American short story of to-day—the germ of American literature to come."

Mr. Bret Harte, it may be remarked, fails in his article to give credit to Dr. J. W. Palmer, who, years before Harte began writing, was publishing in the old *Putnam's Monthly* short stories rich with the racy and picturesque life of California in the days of '49.

A Question of Up or Down.—Some unkind remarks are being made about Mr. Stephen Crane's new book of verses, "War Is Kind." For instance, "The Lounger" in *The Critic* (August) says that many of the poems will read equally well backward or forward—tho perhaps we should regard this as an

advantage rather than a flaw, since each poem is thus equal practically to two. Says the writer:

"Take the lines on page 28 and submit them to this process as I have done, and you will see that nothing is lost. (This might be done with Mr. Will Bradley's illustrations.) Will the reader please say which of the following is right-side up without referring to the book:

"Fast rode the knight
With spurs, hot and reeking,
Ever waving an eager sword,
'To save my lady!'
Fast rode the knight,
And leaped from saddle to war.
Men of steel flickered and gleamed
Like riot of silver lights,
And the gold of the knight's good
banner
Still waved on a castle wall.
.
.
.
A horse,
Blowing, staggering, bloody thing,
Forgotten at foot of castle wall.
A horse
Dead at foot of castle wall."

"Dead at foot of castle wall.
A horse
Forgotten at foot of castle wall.
Blowing, staggering, bloody thing,
A horse.
.
.
.
Still waved on a castle wall.
And the gold of the knight's good
banner
Like riot of silver lights,
Men of steel flickered and gleamed
And leaped from saddle to war.
Fast rode the knight,
'To save my lady!'
Ever waving an eager sword,
With spurs, hot and reeking,
Fast rode the knight."

ANTIQUITY AND ART VALUE OF THE POSTER.

THE poster, tho often spoken of as modern, can be traced back to early Egyptian days. One of the oldest extant specimens, offering a reward for the recovery of two slaves who escaped from Alexandria in the year 146 B.C., is preserved in a collection in the Louvre. In France the poster was the most prevalent form of advertisement during the time of Francis I. It was, however, not until the commencement of this century that the poster became in some sense a work of art. In 1836 La Lance, a French artist, designed the first really artistic poster, for a book entitled "Comment Meurent les Femmes." Twenty-five years ago Gavarni was the leading poster artist of France. Other prominent artists in this field since his time are Johannot, Manet, Cherét (called the "father of the modern poster"), Grasset, Willette, Boutet de Monvel, Steinlew, and Murcha.

England and America followed the lead of France rather tardily. The following sketch of the rise and subsequent decline of the "poster craze" in these countries is given in the New York *Times* of recent date:

"While pictorial posters undoubtedly existed in England before Fred Walker's beautiful 'Women in White' made its appearance, they were entirely lacking in artistic qualities. It was not until quite recently that good English posters were produced to any extent. In 1880 Walter Crane made a design in blue and yellow to advertise the Covent Garden concerts, which was very successful. Like the Walker poster, this is now very rare. Since then Mr. Crane has designed many more, most of which were very successful. Hubert Herkomer's, however, are much less attractive. In the last few years there has sprung up in England a large number of artists who have won much fame through their poster work, in particular Dudley Hardy, Aubrey Beardsley, Maurice Greiffenhagen, the Beggorstaff brothers, and Roren Hill.

"America was not far behind, either in point of time or in the quality of the work done. For do we not number among our poster artists such names as Edward Penfield, Louis Rherd, Will Bradley, Carqueville, Gould, E. A. Abbey, Francis Day, George Wharton Edwards, Kenyon Cox, and Ethel Reed, to name a few only?

"There is little doubt that poster collecting originated in Paris, some twenty-five years ago. About this time Frenchmen realized that advertising might be made artistic, and thereby become all the more valuable as an advertisement. So the artist made his design. It was reproduced by lithography and hung so as to attract the attention of the passer-by, who soon grew so much interested that it suddenly occurred to some one it would be well to collect what posters could be easily obtained. So gradually the poster collector came into existence. In Paris, affiches, as they

are called, are regularly published, increase in price, and go out of print. The buying and selling of posters is a regular and well established business, Saylor being the oldest and best known dealer. Catalogs and price-lists are regularly issued, and, indeed, the value of the poster is so thoroughly recognized that stories are written in which the typical boy—poor, hungry, and cold—steals a still damp Cherét from a wall to sell for the benefit of his suffering family.

"In April, 1893, Penfield made his first Harper poster, and for nearly a year we admired his designs and watched for their appearance from month to month, with no thought of collecting, until it suddenly dawned upon some one how valuable a complete set would be, and the fad grew with surprising rapidity. The earliest poster exhibition in America, so far as the present writer knows, was given by the Grolier Club about ten years ago, the posters shown being mainly of French origin; but, beginning in 1894, such exhibitions became very common for the next two or three years."

The writer believes that the influence of the poster craze has been almost wholly beneficial in creating a taste for the artistic. He says:

"Our walls and fences became things of beauty, and many of our shop windows a delight. There were, as is natural, all sorts and conditions of poster collectors. There were those who took everything, good, bad, or indifferent. Then there were collectors who were keenly alive to the artistic value of the design and its execution. Others desired only the rarest and scarcest of them all; while, in addition, was the man who devoted himself to the work of a single artist, or would have only the best French work. One French collector, for instance, has a full set of Cherét, which runs well up into the hundreds. The man of the hour, however, is Murcha, who has so far done about seventy-five designs, including those for decorative panels, bookcovers, and *ménus*.

"Two or three years ago, when the poster craze was at its height in America, the competition was fierce—many of the large bookshops, as, for instance, Brentano's, opened poster departments; magazines were published, collectors compiled descriptive catalogs of posters in their possession, and many books were written on the subject, such as 'The Reign of the Poster,' by Charles Knowles Bolton; 'Picture Posters,' by Hiatt, and 'The Modern Poster,' a beautifully illustrated book, published by the Scribners. The craze became the fashion, but, like everything taken up in that spirit, has died a natural death. There are still many *bona-fide* collectors who value their posters as highly as ever for their artistic merit, gladly adding a new specimen whenever they find it.

"But the influence of the craze, passing tho it was, is apparent in many directions. Book and magazine covers, lettering, theatrical bills, advertisements, in fact, everything with which the poster could have the slightest affiliation, profited materially. Indeed, we are at this time so accustomed to good, strong decorative work in advertising of all sorts that we have almost forgotten the short time in which it has all been brought about. While the craze in America is already a thing of the past, in England it is hardly yet at its height. And the little poster magazines and price-lists are just coming into general circulation there. Up to the present time, while England can show very fine work, her ordinary book and magazine posters compare most unfavorably with the average American work.

"It is quite possible that if people fully recognized what the craze and its devotees have accomplished, even if unwittingly, in raising the standard of artistic advertising in all its branches, less ridicule would attach to the pursuit."

The Author of "Richard Carvel."—Some interesting information about Mr. Winston Churchill, whose new novel bids fair to rival "David Harum" in popularity, is given in *The Critic* (August) by one who knows him well. The writer says:

"Mr. Winston Churchill was educated at the Naval Academy, Annapolis—hence his taste for naval scenes and his strength and accuracy in them. He came to *The Cosmopolitan* and helped Mr. Walker get out that publication for a year or so. While working at Irvington he married a young lady of wealth, hailing from his native city, St. Louis, and thereafter was not obliged

to do office work or be bound by the limitations of a salaried life. He was ambitious to write stories, and had, mixed up with the longing for authorship, a commendable quality of common sense which told him hard and systematic work was necessary to do anything much worth the doing. This has been the secret of his success. Tho a handsome, spirited young fellow, with plenty of

MR. WINSTON CHURCHILL,
Author of "Richard Carvel."

Courtesy of The Macmillan Company.

savoir vivre and a good taste for the refinements and enjoyments of existence, he has buckled down to the drudgery of authorship with a right good will. For instance, while he and his wife were living in St. Louis after leaving *The Cosmopolitan*, he, like Anthony Hope, hired an office in an office building, and went down to it and ground away as regularly each day as if he had had a set of books to keep instead of a novel to write. He went to Virginia and Maryland and studied up the country and the antiquarian records available

with considerable thoroughness before tackling 'Richard Carvel.' In short, he has no taste for posing as a brilliant young author throwing off clever things whether he wants to or not; he is a painstaking, conscientious, healthy-minded young gentleman, with a good idea of the dramatic, who wanted to make a name for himself as a writer, and is making it. He, his wife, and their little child are rather nomadic in their habits, so far as his friends may judge from the variation in post-office addresses, but they now have bought a farm on the upper reaches of the Connecticut River, and declare that they are going to stay on it."

BYRON'S LETTERS TO MISS MILBANKE.

MR. RICHARD PROTHERO, in his third volume of "The Works of Lord Byron," presents many letters which have never before been published. The period embraced is between January, 1814, and November, 1816. There are not less than two hundred and thirty-three letters, of which one hundred and eighteen are new.

How did Byron come to know Miss Milbanke? Lady Caroline Lamb was probably the medium, Mr. Prothero thinks. It seems that she had given the poet some of Miss Milbanke's verses. He was not apparently flattered, for he wrote to Lady Caroline Lamb:

"You will say as much of this to Miss M. as you think proper. I have no desire to be better acquainted with Miss Milbanke. She is too good for a fallen spirit to know, and I should like her more if she were less perfect."

But the lady's coolness possibly excited his curiosity, for such a woman as Miss Milbanke, the editor of these letters tells us, Byron had not yet known. At any rate, before long, they became acquainted, and gossip soon said a poet was to marry a rich heiress.

There was mutual indifference. There was estrangement. Byron liked to paint himself a wicked man, and this naturally alarmed the decorous young lady. Here is a letter from Byron to Miss Milbanke on August 25, 1813, which shows his coolness:

"I am honored with your letter, which I wish to acknowledge immediately. Before I endeavor to answer it, allow me, briefly as possible, to advert to the circumstances which occurred last autumn. Many years had occurred since I had seen any woman with whom there appeared to me any prospect of rational happiness. I now saw but one, to whom, however, I had no pretensions—or at least too slight for even the hope of success. It was, however, said that your heart was disengaged, and it was on that ground that Lady Melbourne undertook to ascertain how far I might be permitted to cultivate your acquaintance on the chance (a slender one, I allow) of improving into friendship and ultimately to a still kinder sentiment. In her zeal on my behalf—friendly and pardonable as it was—she in some degree exceeded my intention when she made the more direct proposal, which yet I do not regret, except in so far as it appeared presumptuous on my part. That this is the truth you will allow, when I tell you it was not till lately that I mentioned to her that I thought she had unwittingly committed me a little too far in the expectation that so abrupt an overture would be received. But I stated this casually in conversation, and without the least feeling of irritation against her or pique against yourself. Such was the result of my first and nearest approach to that altar to which in the state of your feelings I should only have led another victim. When I say the first, it may perhaps appear irreconcilable with some circumstances in my life to which I conceive you allude in part of your letter. But such is the fact. I was then too young to marry, tho not to love; but this was the first direct or indirect approach ever made on my part to a permanent union with any woman, and in all probability it will be the last."

Byron writes here as if Lady Milbanke were trying to entrap him into marriage, which, the editor observes, was, to say the least, in very bad taste. But at the conclusion of the letter he warms to an open confession of his real feelings when he says:

"I must be candid with you on the score of friendship. It is a feeling toward you with which I can not trust myself. I doubt whether I could help loving you."

Miss Milbanke, in reply, dwelt upon the emptiness of life with such a partner as Byron intimated that he was. He rejoins in this cynical tone:

"After all, bad as it is, it has its *agrémens*. The great object of life is sensation—to feel that we exist even tho in pain. It is this 'craving void' which drives us to gaming, to battle, to travel, to intemperate but keenly felt pursuits of any description, whose principal attraction is the agitation inseparable from their accomplishment. I am but an awkward dissembler; as my friend, you will bear with my faults. When you can spare an instant I shall of course be delighted to hear from you; but do not let me encroach for a moment on better avocations."

But Miss Milbanke about this time seemed to have become much interested in Byron, for she asked him many questions which he endeavored to answer in a long letter. His letter is under date of September 26:

"On my return to town, I find some consolation for having left a number of pleasant people in your letter—the more so as I began to doubt if I should ever receive another. You ask me some questions, and as they are about myself, you must pardon the egotism into which my answers must betray. I am glad that you know any 'good deed' that I am supposed ever to have blundered upon, simply because it proves that you have not heard me invariably ill-spoken of. If true, I am sufficiently rewarded by a short step toward your good opinion. You don't like my 'restless' doctrines—I should be very sorry if you did; but I can't stagnate, nevertheless. If I must sail, let it be on the ocean, no matter how stormy; anything but a dull cruise on a land lake without ever losing sight of the same insipid shores by which it is surrounded. . . . I now come to a subject of your inquiry, which you must have perceived I always hitherto avoided—an awful one—'religion.' I was bred in Scotland among Calvinists, in the first part of my life, which gave me a dislike to that persuasion. Since that period I have visited the most bigoted and credulous of countries—Spain, Greece, Turkey. As a spectacle, the Catholic is more fascinating than the Greek or the Moslem; but the last is the only believer who practises the precepts of his prophet to the last chapter of his creed. My opinions are quite

undecided. I may say sincerely, since when given over at Patros in 1810, I rejected and ejected three priest-loads of spiritual consolation by threatening to turn Mussulman if they did not leave me quiet. I was in great pain and looked upon death as in that respect a relief—without much regret for the past, and few speculations for the future. Indeed, so indifferent was I to my bodily situation that, altho I was without an attendant but a young Frenchman as ill as myself, two barbarous arnouts, and a deaf and desperate Greek quack—and my English servant (a man with me) within two days' journey—I would not allow the last to be sent for—worth all the rest as he would have been in attendance at such a time, because—I really don't know why—unless it was an indifference to which I am certainly not subject when in good health. I believe, doubtless, in God and should be happy to be convinced of much more. If I do not at present place implicit faith in tradition and revelation of any human creed, I hope it is not from want of reverence for the Creator, but the created, and when I see a man publishing a pamphlet to prove that Mr. Pitt is risen from the dead (as was done a week ago), perfectly positive in the truth of his assertion, I must be permitted to doubt more miracles equally well attested; but the moral of all Christianity is perfectly beautiful—and the very sublime of virtue; yet even there we find some of its finer precepts in the early axioms of the Greeks—particularly, 'do unto others as you would they should do unto you'—the forgiveness of injuries, and more which I do not remember."

The following extract from another letter indicates that Miss Milbanke had other suitors. Byron writes:

"I have heard a rumor of another added to your list of unacceptables, and I am sorry for him, as I know that he has talent and his pedigree assures him wit and good humor. You make sad havoc among 'us youth.' It is lucky that Mme. de Staël has published her 'Anti-Suicide' at so killing a time—November, too."

But as his marriage approached Byron seems to have become deeper in love. On October 22, 1814, he writes: "I am sure we shall be a very happy couple." In the last letters of the series he says: "Do you think, my love, that happiness depends on similarities or differences in character? I doubt it. Happy with you! Nay, if you doubt, at least do yourself justice and reverse it."

The two people so dissimilar in character and education were married on January 2, 1815. Letters showing the rupture between them are also found in this volume. There are also a number of new letters to Leigh Hunt, Hogg, and Shepherd, as well as to Jane Claremont, the mother of Byron's illegitimate daughter, Allegra.

A NEWLY DISCOVERED REMBRANDT.

A PAINTING by Rembrandt hitherto unknown to art students has lately been found in a distant castle in Poland, and its discovery suggests the thought that many other masterpieces may be hidden in out-of-the-way nooks of Europe. The discovery was made by Dr. Bode, the author of a monumental "Life of Rembrandt" now in course of publication. He had heard a rumor of the picture in the old Galician castle, and through a friend who was about to visit Kra-kow obtained a photograph of the painting, which is called "The Polish Rider." A writer in *The Critic* (August) gives the following account of it:

"The castle dates from the first half of the seventeenth century, and the collection, Professor Bredius found, contained, among a good deal of rubbish, a genuine Lucas van Leyden, a good Teniers, and a small portrait by Albert Cuyp. The Rembrandt is probably 3 x 4 feet. It is a portrait of a Polish nobleman, probably a Prince Poniatowski, as the picture has been

among the heirlooms of that family. The horseman wears a yellow riding-coat with red trousers and brownish-yellow boots. His sword is fastened by a silver belt, and he carries a small battle-ax, a bow, and arrows. The horse is white. In the fantastical landscape back of him are shadowy cupolas and indications of other buildings, and the light is that of the setting sun."

William Waldorf Astor as a "Representative American."—Mr. W. L. Alden thinks that Americans are deficient in a proper appreciation of the merits of Mr. William Waldorf Astor. It is pleasant to learn that in Mr. Alden's opinion Mr. Astor is to be regarded as a leading representative of America before the British public. He says (in the *New York Times*), just a short time before Mr. Astor took the step that made him a "representative Briton": "There are people who insist that because a man is a millionaire, or because a woman has a title, neither he nor she ought to have any connection with literature. Mr. Astor, for example, is constantly sneered at in certain American papers because, being a millionaire, he has the audacity to spend his money in making the best evening newspaper and the best monthly magazine in England. *The Pall Mall Gazette* had little merit and small circulation when he bought it. Since then it has had two editors, Mr. Cust and Sir Douglas Straight. Both of the gentlemen were selected by Mr. Astor, and neither of them had had any previous experience in the editorship of a great newspaper. But the result showed the soundness of Mr. Astor's judgment. Under Mr. Cust *The Pall Mall Gazette* speedily became the leading evening newspaper, and under his successor it has fully maintained its reputation. As for *The Pall Mall*

THE POLISH RIDER.

Magazine, no one can deny that it is admirably conducted, and that Mr. Astor spends money without limit in making it worthy of the place which it has won. I can hardly imagine a more creditable way in which a millionaire could use his wealth, but the reward that Mr. Astor receives at home is far from a pleasant one. That a quiet, inoffensive gentleman should choose to spend his money in journalism and literature instead of spending it in buying legislatures, seems to be regarded as conduct wholly unworthy of a millionaire. Americans ought to be proud of Mr. Astor as a representative of America in England; but, having the misfortune to be a millionaire, he is the natural target for the sneers of a certain class of people."

SCIENCE AND INVENTION.

PLANS FOR REACHING THE SOUTH POLE.

UNDER this heading, Gilbert H. Grosvenor contributes a prospectus of the two Antarctic expeditions that are soon to be sent out under British and German auspices respectively. Says Mr. Grosvenor in *The National Geographical Magazine*, August:

"Announcement is made that the British Government is ready to grant a subsidy of \$200,000 for the Antarctic expedition that is

[leader of the German expedition] proposes, therefore, to construct his ship on lines that will insure seaworthiness. This he believes can be secured by a vessel stanchly built of wood, with strong internal supports, which will at the same time afford protection against powerful magnetic influences.

"The Kerguelén Islands, lying in the Indian Ocean at 70° east by 50° south and open to navigation at all seasons of the year, are to be the starting-point. From these islands the route follows a line southwestward to some point on Wilkes Land, where a winter station will be built upon the edge of the ice-sheet and systematic observations taken. In the early spring an advance will be attempted on sleds across the ice in the direction of the magnetic pole, and in the fall a return will be made in a westerly direction along the little-known coast of Wilkes Land. Perhaps the party will be able to reach the most southerly known land, Victoria Land, discovered by Ross in 1842. As the English explorers are to build a station on the edge of this same Victoria Land and thence proceed southward as well as along Wilkes Land, Victoria Land will be the objective meeting-ground of both expeditions. But naturally no geographic limits can be set in a region about which scarcely a single conclusion can be formed."

It is believed that the following year will be specially favorable for Antarctic work, we are told by Mr. Grosvenor, as we are now in a warm-temperature period and the ice in those regions is at a minimum. Mr. Grosvenor concludes his notice with the following paragraph:

"The advantages, both from a geographic and general scientific point of view, of a further exploration of the South Polar regions have been so repeatedly set forth that it is hardly necessary to enlarge upon them here. Briefly they may be stated as: the verification or disproof of the existence of a vast Antarctic continent; the determination of the origin of the cold ocean currents which have their rise in the South; the study of the nature of ice itself, of the differences between land-ice, sea-ice, river-ice, etc.; and the investigation of the conditions of atmospheric pressure and temperature, of volcanic action, and of terrestrial magnetism within the Antarctic circle."

The accompanying map is from an article in *The Outlook* by Dr. von Drygalski, the leader of the German expedition.

DR. VON DRYGALSKI'S MAP, SHOWING ROUTES OF PROPOSED EXPEDITIONS.

to set out in the summer of 1901 under the joint patronage of the Royal Society and of the Royal Geographical Society, and unless the promoters of the German expedition are being misled in their expectations, the Reichstag will soon guarantee substantial aid to the German national expedition. . . . The plans of the [British] expedition have not yet been finally determined in all their details, but it has been decided that the ship shall follow what is known as the South American route, sailing from the South Shetland Islands southward to Alexandria Land. Here, at about 70° south by 90° west, a landing will be made, if practicable, and the first station established. Continuing onward, their course being dependent upon the amount of ice encountered, the party expect to establish on Cape Adare, Victoria Land, a second station, from which the great dash for the South Pole will be attempted, and in the vicinity of which the principal scientific work will be accomplished. . . .

"The principal danger to navigation in the Antarctic region is not ice pressure, for the currents radiate outward and not inward, but rather the stormy nature of the sea. Captain Drygalski

Is Distilled Water Poisonous?—The opinion of a recent German authority answering this question in the affirmative was recently quoted in this department. *Good Health* takes exception editorially to the conclusion reached, and remarks as follows:

"It is, of course, true enough, as every physiologist knows, that pure distilled water brought in contact with pure protoplasm will cause the protoplasm to swell and perhaps burst, thus destroying it. This is due to the simple law of osmosis. The movement of fluids is toward the denser medium. It is for this reason that surgeons prefer to sponge raw surfaces with a normal salt solu-

tion (six drachms to the gallon of water) instead of ordinary distilled or boiled water. But in the use of distilled water for drinking purposes we have no trouble of this sort. No protoplasmic cells and no raw surfaces are exposed to distilled water in the stomach, tho there is always in the stomach a quantity of salts, often free hydrochloric acid, and a strong proportion of chlorides which quickly mingle with the distilled water, thus readily changing its character so as to adapt it to the surfaces with which it comes in contact. When the distilled water is absorbed into the blood, it simply dilutes the saline constituents of the blood, a dilution never extending beyond a certain point, for the reason that the kidneys stand as a protecting sentinel, ready to begin at once the rapid elimination of water, as soon as excessive fluidity of the blood is threatened.

"It is thus apparent that no real danger can possibly come from the use of distilled water; that on the other hand many actual advantages are offered. It is free from germs, free from injurious salts, from lime and other substances with which they are found in combination, if not always of the same uniform quality. The fact that in the laboratory distilled water has been made to destroy protoplasm has no bearing at all on this question, for the conditions under which distilled water is used for drinking and culinary purposes are such as do not involve at all the conditions which exist in the case of the unprotected protoplasmic body. It is a pity that such an unscientific and misleading statement should be allowed to appear before the public."

TELEGRAPHY AMONG THE ANCIENTS.

WE are apt to think that because the ancients and our immediate forefathers had no electric telegraph, they had no telegraph at all; but that is far from the truth. Many systems of telegraphy, most of them depending on signals addressed to sight or hearing, have been known from the earliest times, and some of these are described in an article contributed to *Cosmos* (July 15) by M. L. Remy. Says this writer:

"Three or four centuries before our era, Eneus invented several systems of signaling. In particular, he devised the first synchronic apparatus. At each station was installed a great vessel of uniform capacity, having in its side a hole of the same size for each vessel. At the surface of the liquid contained in the vessel was a float in which was fixed an upright rod divided into equal parts, each of which corresponded to one of the phrases to be telegraphed. The attendant at each station had a torch. When the first raised his torch he uncorked the hole in his vessel, allowing the water to escape and the float to sink; the attendant at the second station did the same, and this was repeated from station to station. When the division of the rod corresponding to the message to be sent had fallen to the level of the edge of the vessel, the first attendant lowered his torch, and replaced the cork; the others, imitating his action, could then read off on their rods the particular message sent by the first.

"In all such methods as these the messages were limited to words or phrases agreed upon beforehand. In the second century B. C. Cleomenes invented a method of doing away with this inconvenience by combining luminous signals so as to form a code. Each station was furnished with several huge fire-vessels corresponding each to a group of letters of the alphabet. The one that was exposed so that it could be seen from the next station, while the others were hidden, indicated the group including the letter to be transmitted, which letter was then shown more closely by lanterns. Polybius improved this by dividing the alphabet into five groups, four of five letters and one of four. These were telegraphed by torches, moved in given directions. For instance, three torches at the left of the station meant the third group, then two at the right meant the second letter of this group."

The Chinese, M. Remy tells us, also used signal towers at an early period, and the Romans learned how to employ them from the Carthaginians. The Roman telegraphic system was altogether 4,200 miles in length, and remains of the stations still exist. The Gauls telegraphed by shouting from post to post, and there was a similar system between Athens and Susa (450 miles). When Europe was overrun by barbarians, these systems of tele-

graphy were destroyed. Altho some effort at similar communication was made in the Middle Ages, modern telegraphy dates from the sixteenth century. It began with some very curious propositions. Says M. Remy:

"About 1570, Porta, a Neapolitan physicist, inventor of the camera obscura, thought that he could cast upon the moon, by means of a mirror, characters that could be read over the whole earth. Father Kircher proposed to let the sun's rays fall on mirrors in such manner as to form letters. François Kessler used an empty barrel containing a lamp with a movable shutter. Opening the shutter once signified the letter A, twice meant B, and so on. This seems to be the beginning of our present telegraphic alphabets.

"About the same time, experiments were made at Mayence with five masts each divided into five sections. Large objects were hoisted on these, and the point at which they stopped signified a prearranged phrase. This is a modification of the method of Polybius.

"Next, Robert Hooke, an English scientist, proposed to make huge letters of some opaque substance and to suspend them in space. But neither this nor the preceding methods were ever adopted in practice."

In 1690, M. Remy goes on to say, Amontons, a Frenchman, introduced the telescope as a means of observing telegraphic signals, which made it possible to increase the distance between stations. He proposed to use for his signals a large black screen in which a cross was cut, but he failed in getting the government aid needed to carry out his plan. Later, Marcel of Arles, built a machine which, it was claimed, could signal as fast as one could write; but he, too, failed to get government aid and broke his invention. In 1782 Gauthey devised a system of speaking-tubes, by which he expected to transmit speech hundreds of miles, but expense prevented its adoption. Soon after this, however, the invention of the semaphore furnished a successful system of visual telegraphy, and not long afterward the electric telegraph gave to the world a means of communication to which distance sets no limits.—*Translation made for THE LITERARY DIGEST.*

DOES THE HUMAN BODY EMIT A SPECIAL RADIATION?

FROM time to time it has been asserted by experimenters that they have proved the existence of a special form of radiation akin to Roentgen rays, emitted by living organisms, or particularly by the human body. These rays have usually been reported to be invisible to the naked eye, but capable of affecting a sensitized plate. As very many organisms give off visible phosphorescence, there is no reason why others should not emit invisible rays, the difference being simply a matter of wavelength; but scientific men have looked askance at most of these reports, and in some cases the experiments on which they were based have been proved to be inaccurate or explicable in other ways than by the hypothesis of a special organic radiation. The latest experimenter in this direction is Dr. Ottokar Hofmann, a Western mining engineer, who believes that he has established the existence of such a form of radiation beyond a doubt. A description of his experiments is contained in *Popular Science News* (August), and from it we quote the following paragraphs:

"Pictures have been taken by this human light, or body-halo, which are moderately distinct, but the limit of the accuracy varies, depending, so the experiments he has conducted indicate, entirely upon the state of the body.

"These experiments seem to have shown that the rays are not light, tho they have a similar operation on a photographic plate. The human rays have the property of passing through materials which are non-conductors of electricity, such as glass and rubber, and producing the same effects as if there had not been any foreign substance between the body and photographic plate; while if the substance is a conductor of electricity, such as silver or lead, the rays do not pass through it, but their vibration seems to

be imparted to the metal and the same then acts on the sensitive film as if it was a luminous body, making an imprint of its own shape, while the tips of the fingers are not marked on the film.

"During the tests made by Dr. Hofmann, several persons were tested as to the chemical energy of the rays their body emitted. Some persons gave a faint demonstration on the film, others a very strong one, and a few gave no result, and yet after the lapse of a few hours the results were reversed, showing the difference of the chemical energy in the same body at different times. The

temperature and moisture in the air apparently had no effect in the production of the rays.

"Dr. Hofmann's experiments were conducted under all possible conditions to test the activity and penetrating power of the rays; no camera was used. The ordinary developing tray was employed, about half filled with the developing solution, and the film was such as every photographer uses. The tests were made in perfect

PICTURE BY HUMAN LIGHT.
Courtesy of *Popular Science*.

darkness without the use of the developing lamp.

"In order to get rid of the possibility that the photographs might have been taken by a chemical reagent, the film, after being saturated with developing solution, was placed on the rim of a glass vase, so that there could not be any contact of air or communication between the fingers pressed against the outside of the glass and the film, and an almost perfect photograph of the fingers was produced after ten minutes' exposure.

"This experiment and others demonstrated clearly that the reaction on the silver compounds of the film was caused by human rays and not by any chemical reagent. A silver dollar left on the glass side of a photographic plate for hours developed nothing, but when pressed in darkness for ten minutes by the tips of the fingers a distinct impression of the dollar was shown without any of the details of the inscription on the coin.

"The fingers were not imprinted upon the film, showing that the rays did not pass through the silver, but imparted their vibrations to it. In order to prove that it was the rays from the fingers which did the work, two silver dollars were used upon the glass plate, and the one which was touched by the fingers only made the imprint on the film.

"One of the best photographs of the fingers was obtained by Dr. Hofmann by placing a hard-rubber tray between the film and his hand. The usual ten minutes were used in making the test and a very clear imprint of the fingers was shown. The rays to do this work have to pass through rubber one quarter of an inch thick."

No comments on Dr. Hofmann's experiments have yet reached us, but it is doubtful whether his brother laborers will consent to see the workings of any special form of "human rays" in them. Other similar results have been shown to be caused by ordinary heat rays, and it is possible that Dr. Hofmann's may be due to this agency also; altho they are certainly of great interest in any case.

Rapid Progress of Modern Invention.—Referring to the speed with which a chemical curiosity or a laboratory toy is transformed nowadays into an everyday commercial article, *The Engineering News* says editorially: "A new idea appears sometimes merely as a suggestion in a discussion, or in the form of a note to a learned body. In a few weeks some one else takes it up; then comes a popular article, and before long what was only an interesting fact becomes a commercial possibility, developing into a great industrial factor. An excellent example is found in the progress of the liquefaction of air. It is but a short time since a few drops, hardly more than a deposit of dew on the walls of a glass bulb, were exhibited in a lecture-room as a rare curiosity; then came a beakerful on the table of a popular lecturer, followed

by larger quantities, available for experimental purposes and original research, and now we have the announcement among the articles of the month of the completion of a commercial plant to supply thousands of gallons per day. The story of liquid air is but a repetition of that of aluminum. Once a rarity in the chemical museum, then a commercial material at many dollars a pound, ranging almost with the precious metals, and all at once brought by the methods of practical electro-chemistry into the market as a commercial product with innumerable applications in the arts. There is something curious in the fact that the metal which applied electricity made possible in the markets is likely to become a rival of copper as an electrical conductor, and thus we find electricity supplying the materials for its own utilization."

HAS THE ESSENCE OF ANTITOXIN BEEN FOUND?

THE Washington correspondent of the *New York Sun*, in a despatch printed in that paper on July 10, tells us that Dr. Woods and Dr. Loew, chemists of the United States Agricultural Department, are thought to have succeeded in isolating the active ingredient of antitoxins. If this is true, an important step forward has been taken toward the conquest of disease. The meaning and history of the discovery is told in *The Sun* as follows:

"After an attack of scarlet fever, smallpox, measles, yellow fever, and several other diseases, the sufferer is reasonably secure from another visitation of the same affection, and one aim of modern medicine is to produce immunity without the dangerous process of going through the disease.

"The greatest success in this line has been by the use of the antitoxins. Some animals are more or less immune to certain diseases naturally, and will take them only in a mild form, if at all. To such an animal is purposely given a disease, and as it is recovering its blood is found to be filled with the substances that antagonize the disease. The blood is carefully drawn and is cleared of the little corpuscles and other things that go to make up the blood, until nothing remains but a clear, straw-colored serum that holds the antidote in solution. When injected into one suffering from the disease this serum opposes it and overcomes the poisons that make the disease.

"Blood serum is very unstable. It is liable to become infected with other bacteria or molds and to undergo changes that make it very dangerous if injected into the body. Chemists have, therefore, been trying to find out what it is in antitoxin that really produces its effect. As the poisons made by the bacteria are distinct chemical bodies, there is no reason why their antidotes should not also be bodies that can be separated out in a pure condition and be got in a shape that will avoid the chance of giving decayed serum to a patient already prostrated by sickness.

"There exists a number of substances that are styled enzymes by chemists and physiologists, and that produce some curious effects. They are the active principles of the ferments, the things that set up the processes known as fermentation. The yeast plant produces enzymes that will split sugar and starch into alcohol and carbonic acid; the lining of the stomach produces an enzyme that changes certain parts of our food into matters easily dissolved, and various others are known that bring about chemical changes by their presence.

"Dr. Woods of the Agricultural Department has separated one that has great oxidizing power, and Dr. Loew has found others that destroy the bacterial poisons in some plant diseases by changing the composition of the morbid products. It is probable that he has reached the active ingredient in the antitoxins, and that in the isolation of these enzymes in a pure state he has made a step that may lead to the conquest of the contagious and infectious diseases. The importance of these discoveries can not be overestimated."

Injurious Effect of Glazed Paper on Eyesight.

"The effect of glazed papers on the eyesight has recently occupied the attention of some German doctors," says *The Druggists' Circular*, as quoted in *The Scientific American Supplement*. "One authority examines the causes of the changes in the general reading and writing habits of the nation, and explains that in the

earlier part of the century the old rag papers then in use both for writing and printing purposes were mostly of a dull gray or blue color, and were coarse-grained, so that thick letters had to be used by writers with quill pens or by printers on their old slow presses. With the introduction of more modern fibers, paper received a smoother surface, steel pens could be employed, and the printing paper could travel over quicker printing-presses.

"The fashion for brilliant colors and elaborate type-setting has been carried to such a state of perfection that a reflection is often created which could never arise from the former rougher surface. Now, what is the effect upon the reader's eye? In the old books or letters, with a mild and soothing light, the surface contrasted easily from the thicker and darker type or writing characters; now the highly glazed surface offers reflections of the light which, with the more elaborate and thinner type, produces a lot of shades and lights which are most trying to the eyes. The paper has often to be turned in various directions to be seen more clearly in order to distinguish the gray (or maybe other shades) of the type from the shining white of the paper. This is similar in effect, as to the result of trying to decipher writing in the dusk. An experiment would soon prove this.

"Take an old edition, say of Shakespeare, and a new magazine on highly glazed paper and compare the sensation in the eye after half an hour's reading. The doctors, therefore, propose that the public inspectors of schools should order the use of sanitary paper for the eyes, by which they mean that a glazed or highly polished surface should be avoided, and the colors chosen should rather be gray or light blue, but no white, and, in fact, no brilliant colors at all. The type should be clear and simple, and not too thin.

"The children, whose eyes require protection, and through them the parents, should be taught to demand their favorite books and papers to be printed in the right style, and the excesses of a falsely guided taste should be avoided. It is suggested that a few years of such policy would soon improve the eyesight."

HOW MICROBES LOOK.

THOSE who enjoy looking at the photographic likenesses of celebrities should view with eager interest the latest portraits of our ever-present enemies the disease-germs. A number of these, accompanied with brief descriptions by M. A. Acloque, appear in *Cosmos*, and are reproduced herewith. The bacilli are shown, of course, as they appear under the microscope, but it may be clearly seen that each has its distinguishing characteristics, so that the method of diagnosing disease by bacteriological examination is quick and sure. Says M. Acloque:

"Among the most redoubtable of bacilli is that of tuberculosis, which can develop in man and in various animals. It has the form of straight or curved rods, often having in their interior a small number of granulations that are supposed to be spores. These rods are always motionless. To find them, aniline colors are used, which give them slowly a coloration that is not removed by washing with nitric acid, distinguishing them from other microbes.

"The tuberculosis bacillus can be cultivated in serum and in glycerin; its culture in certain liquids yields tuberculin, which Professor Koch considered to be a vaccine against consumption, but which is really useful only to reveal the presence of the disease by the characteristic febrile reaction that its inoculation causes in tuberculous animals. The introduction of a tuberculosis bacillus into the organism at any point attracts the phagocytes [white blood-cells], which set to work to devour the intruder. If the animal is refractory, or in excellent health, the phagocytes get the upper hand and the bacillus disappears; in the contrary case it multiplies, founds a colony, and originates a tubercle. . . .

"Contrary to the preceding, the bacillus of Eberth, or typhoid bacillus, can move about to a certain degree, owing to the *cilia* with which it is furnished. It is found abundantly in the organs of victims of typhoid, especially in the spleen and liver; it can be cultivated in many mediums, develops equally well in or away from the air, and is not particular about temperature, growing between 4° and 46° Centigrade. It is found in water, which is probably the vehicle by which it is introduced into the body.

"The cholera bacillus, or rod-bacillus, is also movable. It exists in the form of small filaments diversely curved. . . . The temperature can be lowered below the freezing-point without killing it. Its action in the disease seems to be by the production of a toxin that poisons the organism.

"The Klebs-Loeffler bacillus of diphtheria is found only at the surface of the false diphtheritic membranes, and never occurs in the blood nor in the viscera of those who die of the disease. It is

LOCKJAW BACILLUS.

DIPHTHERIA BACILLUS.

CHOLERA BACILLUS.

BACTERIUM OF TUBERCULOSIS.

PLAQUE BACILLUS.

TYPHOID BACILLUS.

a little thicker than the tuberculosis microbe, but equally long. It makes a very violent poison, which, penetrating the blood, produces the symptoms of diphtheria. If animals are inoculated with it they die speedily, even if it has been cleared by filtration of the microbes that secreted it. In one infectious form of diphtheria this bacillus is associated with a streptococcus that penetrates into the blood and makes the result even more serious.

"The bacillus of tetanus, or lockjaw, has the form of a narrow rod, sometimes joined to others in a straight or sinuous chain; it is generally accompanied by an elliptical spore of considerable size joined to the rod at one end like the head on a pin. The toxin produced by this microbe is mortal in very small doses and the bacillus causes death even if it does not reach any vital organ. Its spores can bear a boiling temperature for several minutes.

"We close our account with a mention of the plague bacillus, whose short forms, with rounded ends, are now learning how to get possession of the blood of Europeans."—*Translation made for THE LITERARY DIGEST.*

THE RELIGIOUS WORLD.

THE "WHITE MASS" IN PARIS.

THE French capital has for years been the gathering place of a variety of religious eccentricities. Several months ago the *Matin* gave an account (reproduced in our columns) of a new religious communion, called "worshippers of Satan," whose chief rite consisted in a "black mass." Now the same journal has discovered in Paris the "religion of love," the chief observance of which is the "white mass." At bottom, this, like most new religions movements, is only a revival of an old deception, being a modified reproduction of the old gnostic cultus that so sorely vexed the early Christian church. A detailed account of the public portion of this creed and its religious observance is furnished by Serge Basset, the correspondent of the *Matin* (June 21), who gives us the following facts:

The adherents of the new "religion of love" are really modern gnostics, following especially the system of Valentinus, who claims that the secret rites have been quietly handed down from generation to generation, those to whom these traditions were entrusted being the Perfecti and the Perfectæ, and at all ages these people have suffered and even died for their creed. The present patriarch of this band calls himself Synesius, which is, however, the pseudonym of a well-known French poet. It was he who extended the invitation to Basset to be present at the service of his coreligionists.

In a white hall about thirty persons were present: on the one side the men in black dress-suits and wide white sashes, and on the other side the women with black robes and white sashes. A black curtain separated the main hall from the niche in which the altar stood. On this curtain, in blue silk letters, were found the words: "Come hither all ye who thirst for true love; God is love!" The services are conducted in accordance with a printed ritual, which begins with a chant modeled after the chorus song of the ancient tragedy with the words:

Lucerna Pleormatis,
Lucet mei semitis.
Inclina cor meum
Ad tuum eloquium.

(O light of all fulness, it shines upon my path. Incline my heart to thy word.)

Suddenly the curtain parted and the altar became visible in pure white and gold and in a wealth of light. The patriarch celebrated the mass. He was dressed partly in Oriental costume, and at his side, as assistants, were two "bishops" with the stola and the cross of St. Anthony. Behind them stood a lady of rare beauty, the "Superior Deaconess," elevating her hand over a choir of young women, who were all dressed in the tunica and the peplon of the ancients. The full light falling upon their white garments, bare arms, and placid faces made them look like statues. The patriarch blessed those assembled, and then stepped toward the deaconess with the words: "*Accipe osculum pacis*" (Receive the kiss of peace), when they embraced and kissed each other, after which the bishops embraced the young women of the chorus as the perfect ones, the believers, as brethren and sisters.

Then there followed after this communion of souls the so-called "creed," which was repeated by the deaconess with a great deal of enthusiasm. Its leading parts are these:

"I believe in a God of the universe, the one Father, whose thought, namely, the holy Eunoia, an agency equally as eternal as Himself, has produced the hierarchy of the holy eons.

"I believe that the last of the holy eons, Sophia [Wisdom], has been filled with love to the Father, attempted with power to force her way up to Him, but by the weight of this effort was hurled into the lower regions.

"I believe that out of this desire was born Sophia Achamoth, who brought into existence the imperfect demiourg (creator) of this world, the one who brought order into the elements and is the creator of the heavens and of all existing things.

"I believe that the eon Christ, the fruit of the holy pleroma, after he had restored again the disharmony caused by the desire of the Sophia, descended into this world in the person of Jesus, and that both gave to him through inspiration the doctrines of the Gospel and that they did not again desert Him till the moment of His sufferings.

"I believe in the deliverance of the entire world in love and through love."

After the repetition of this creed, the deaconess withdrew and the Patriarch bestowed his blessing in these words: "Perfecti and Perfectæ, and ye Hylics [*i.e.*, those who have not yet attained the complete inner wisdom of this sect], may the holy eons be with you!"

After these preliminaries the mass proper began, which in most particulars is an imitation of that found in the Roman Catholic service. In connection with it portions of the gospel of St. John were repeated in Greek. While the elements were being consecrated the choir of young women under the direction of the deaconess conducted some sacred dances between the curtain and the altar, the purpose of the various motions being to symbolize certain ideas of the religion of Valentinus. Then followed mystic prayers and poems, and the communion was celebrated with both elements and the kiss of peace was bestowed by the communicants. After some further ceremonies of this kind the words *Ite missa est* (Go; the services are over) are said, and the esoteric portion begins, to which no outsiders are admitted.—*Translation made for THE LITERARY DIGEST.*

CONDITION AND PROSPECTS OF CHRISTIANITY IN JAPAN.

"WHEN Christianity first came to Japan it was warmly welcomed; in after years it was bitterly opposed; and, at the present day, it is treated with indifference." This sentence from a Japanese journal is said by Mr. Stafford Ransome (in his volume, "Japan in Transition") to sum up accurately the state of Christianity in Japan. From Mr. Ransome's book we summarize the following facts concerning Christianity in that country:

The early missionaries succeeded in winning over many thousands of the people to Christianity, for they were greatly attracted to the religion of the foreigners who could do so many wonderful things. But the rivalry between Protestant and Catholic sects soon followed. The Protestants at first were able to convince the natives that the Catholics were not Christians, and were merely, under the guise of Christianity, plotting against the state. After much massacring and banishing of the Catholics, the natives learned that both sects were Christians, and quickly came to the conclusion that if one had treasonable designs, both had such purposes. From that day Christianity lost its hold upon Japan, never to recover it, altho the Government was later forced to concede treaty ports and receive the foreigners in great numbers. Many large missionary schools were established after the opening of these ports, and they were crowded with pupils. It looked as if Japan had again made up its mind to accept Christianity. But, no. The Japanese attended these schools in their eagerness to learn the English language.

Now the intelligent Japanese has a highly developed desire to avoid hurting people's feelings, and when he goes to these schools he makes no objection to being called a Christian for the time being. He does this with a respect that an atheist observes on entering a church edifice. But when he lays his books aside and leaves the school, he thinks no more of being a Christian as a matter of course. Again, when a Japanese is traveling in Europe or America, his instinct of adapting himself to circumstances never fails to assert itself in a conspicuous manner. To all appearances he is a "Christian" until he returns home. The Japanese professor or other experienced adviser will say to the young man starting on his journey: "You had better buy a Bible, and go to church when you are away; it may make things easier for you, and can not do any harm." This traveler looks upon the possession of a Bible as a sort of passport to protect him from danger in the West. The Englishman or American is inclined to look upon such pretense as contemptible, but the Japanese feels that it is perfectly proper.

But it must be borne in mind that the Japanese man has no strong religious convictions of any sort. Many of the educated classes have as much knowledge of Christianity as they have of Buddhism, the rudiments of the Christian faith being much simpler than those of the other, and the rush for modern education

having elbowed out many of the opportunities offered in the old days for profound religious study.

Shintoism, which many foreign authorities hold to be no religion at all, suffices for the requirements of the ordinary Japanese to-day. A man worships his ancestors presumably for having brought into the world so perfect a specimen of humanity as himself, and the satisfaction and self-assertion such a faith begets help to hold families and the nation together; but this sort of faith does not amount to a profound conviction anywhere in Japan.

It is alleged that a great many of the educated Japanese know more about Christianity than the half-educated missionaries who go there; but along with their study of this subject they have carefully read the materialistic writings of John Stuart Mill, Auguste Comte, and other such philosophers, which goes to prove that they are after the practical, money-making knowledge in the West and not its spirituality. Thus it is seen that Japan is a poor soil for any sort of new religion; and since the war with China the people are so well satisfied with themselves and so eager to advance their material welfare that the moment is not opportune for spiritual innovations.

"It is difficult to estimate the number of Christians in Japan, but it is safe to say there is not one in every 100,000 of the population, the statistics of the missionaries to the contrary notwithstanding. Without impugning the good faith of the missionaries it may be said that they often take natives for Christians who appear to acquiesce with them in conversation on religious subjects. Nine cases in ten a native will do this, if he knows the foreigner to whom he is talking has pronounced views on Christianity. Until recently people of the lower classes made no objection when asked by the missionaries to allow their names to be put in the returns as Christians. It is to be presumed then that the returns of "Japanese Christians" made from time to time to European and American missionary societies are largely made up of this sort of "Christians."

But with the spread of education the Japanese are now getting tired of pretending to be Christians, which after all is doubtless the best thing for Christianity, for the genuine converts will then become known. The growth of education among the lower classes has taught them that baptism carries with it obligations which they are averse to discharging. Consequently many of the large missionary schools in the country are now either empty or are conducted under purely secular auspices.

But after all has been said as to the indifference of the Japanese toward Christianity, it should be borne in mind that the best side of Christianity has never been presented to them. Mr. Ransome admits that this is a strong statement for him to make, but in making it he declares that he is expressing the feeling of accredited church representatives of England in Japan. The conviction that the interests of Christianity are being abused by the missionaries is so strong that many of the leading Protestant foreigners maintain that the Roman Catholics are the only body of workers who are effecting any real progress in the conversion of the Japanese. The reason for this is plain. All the Roman Catholic missionaries are well educated, and they form a band among whose members there is no dissension. They live the lives of the people, and work quietly, systematically, and on small compensation. They set excellent examples, and the *bona-fide* Japanese Christian is a Roman Catholic rather than a Protestant. There are of course many excellent and noble men among the Protestants, but they are greatly handicapped by a large class of men and women half educated and whose lives are often not above criticism. The word missionary to an English or American reader implies a career containing a certain amount of hardship and self-denial and even a risk of life at times. In Japan to-day no such conditions face the missionary. It is one of the easiest places in the world for any sort of person to live. There is there no great suffering, no wretched poor as are found in cities like New York and London.

But one of the chief faults of the Protestant missionary is that he has not mastered the fundamental principles of Christianity. "Brethren, love one another," is ignored in his practise, and he passes too much of his time in degrading squabbles with his fel-

lows about methods and details of faith. The local foreign papers teem with these controversies, often clothed in bad English, and betraying unchristian sentiment. When this sort of a missionary approaches an intelligent Japanese, urging him to forsake his pagan gods and become a Christian, his natural rejoinder is: "What sort of a Christian? One of your sort, or one of the sort advocated by your brother in Christianity, who sent me this pamphlet last week describing you as a worthless charlatan? Which of the hundred and one sects represented out here am I to belong to? For you are always casting mud at each other, and I do not know which to believe!"

Mr. Ransome details a conversation between a missionary and Li Hung Chang as illustrating the character of these missionaries. This was an American missionary who said to Li Hung Chang through the interpreter, "Why don't he become a Christian right away, and set a good example?" The Chinaman replied by asking a counter-question, "Who was Jesus Christ?" "Why, our Savior, of course," was the reply. "Yes, yes, I know," said his excellency, "but what I meant to ask you was, what is the meaning of the word 'Christ'?" The missionary hesitated, then turning to the interpreter said triumphantly: "Guess it don't mean much. Tell him his name is Li Hung Chang, and that don't mean anything; and Christ was called Christ, that's all." "His excellency says you are wrong," said the interpreter. "Li Hung Chang means 'Ever-glorious plum-tree,' and his excellency is under the impression that Christ signified 'anointed.'" "Well," said the missionary, "some people may attach that meaning or another to it. But He was our Savior." The interpreter, after a few words with Li, then said to the missionary: "His excellency is of the opinion that if, when you get to China, you will place oil on your head, and call yourself 'Christ' the Chinamen will not know you are not speaking the truth." The missionary went about telling this story as an illustration of the depraved mind of the educated Chinaman, without a thought of how well it illustrated his own ignorance and stupidity.

Mr. Ransome says there are more than two thousand paid foreign missionaries in Japan, and, with the exception of the Catholics, they are well paid. They form their own colonies, their own societies, live in their own houses and on good food. Many of them, tho paid as missionaries, run successful mercantile business in connection with their religious work. In the warm months the Tokyo colonies migrate to the mountains, where they spend most of their time speculating in house property and attending to other secular affairs. The American colony is so strong that it has a potent voice as to who shall hold office in the American legation at Tokyo. These people give their official representatives a lot of unwarrantable trouble.

And yet in spite of the bad example set by many of the missionaries and the alienation of the sympathy of the natives from Christianity, there is a possibility that the Government may adopt Christianity as the state religion. It would do this from the conviction that Christianity as illustrated in Europe and America is superior to the other religions. The people would accept the change as a matter of course.

The Epworth League Convention.—The fourth international convention of the great Methodist organization called the Epworth League, held at Indianapolis in the latter part of July, brought together something like twenty thousand people. The total membership of the League is estimated to be several millions. Prominent among the speakers were Bishops Ninde, Candler, and Galloway, and Bishop Carman, of Canada. Pronouncements were made against the army canteen, Sunday newspapers and recreations, and the Hon. B. H. Roberts, member of Congress from Utah. Of the spirit which animated the convention *The Northwestern Christian Advocate* says:

"We are sure that no religious convention ever had a finer

series of speakers, preachers, and paper-writers. The convention will be remembered for its excellent oratory. Strong men uttered their strongest conclusions and poured into the hearts of young men and women thousands of thoughts that breathe and words which will burn for a lifetime.

"Best of all, spiritual power was a constant theme, and we are sure that increased spiritual power is among the best and lasting fruits of the gathering. Generals appoint reviews in order to see the marching hosts and to measure their enthusiasm and real readiness for service. One of the best results when armies march past the reviewing officers is the stimulus given every soldier through his vision of his thronging and cheering comrades. We are sure that the mutual sight of each other had in turn by all those glowing thousands of leaguers will suggest to each and all that the Epworth League is a host from which the League itself and the including church have a right to expect great things in the future."

DAVID HARUM'S VIEWS UPON RELIGION.

SOME religious people have been finding fault with the author of "David Harum" because that worthy's attitude toward religion appears unregenerate, not to say pagan. For instance, a writer in *Mosher's Magazine* (Roman Catholic) says:

"It is to be regretted that the author of 'David Harum,' so commendable in another respect, follows the prevailing fashion in this. Mr. Harum has no religion, and is given as an admirable illustration of how good a man may be without it.

EDWARD NOYES WESTCOTT.
Author of "David Harum."

That he is merely an excellent pagan appears from many passages, but particularly from his severely rational treatment of a half-brother, whose past certainly deserved nothing better at his hands. The Christian hero does not stand on strict right, nor return evil for evil. Justice is tempered by charity. He forgives, as he hopes to be forgiven; he heaps coals of fire on his enemy's head. Mercy, not justice, is the Christian ideal. The author,

therefore, who goes back to pagan days for his hero, reverses the world's progress. Moreover, he sets forth a false type. The natural man is not a good man. If this were so, why did Christ come to regenerate the world? If the unreligious man can be so good, what service does religion render mankind at all? The truth is, the man's best traits are not owing to his unaided nature, which is corrupt, but to the divine influences of the religion he ignores or despises. And this important fact, so far from being emphasized as it deserves, is simply lost sight of or passed over. Authors, impelled (consciously or unconsciously) by the pride of life, delight in exhibiting their heroes as independent of their Creator."

The admirers of "David Harum," on the other hand, say that David is a type actually found in many a country town, and that Mr. Westcott was strictly within the bounds of art and morals when he painted that shrewd but kindly philosopher as he actually lived and moved. Since David Harum is really representative of a rather numerous class of Americans—perhaps of the class which Governor Rollins says is so prevalent in New Hampshire (see *THE LITERARY DIGEST*, April 29, May 6)—it may not be

uninstructive to examine some of his deliverances upon the subject of religion. In the first place it must be admitted that he is not much of a church-goer:

"'E-um'm!' said David, and, after a moment, in a sort of confidential tone, 'Do you like goin' to church?' he asked.

"'Well,' said John, 'that depends—yes, I think I do. I think it is the proper thing,' he concluded weakly.

"'Depends some on how a feller's ben brought up, don't ye think so?' said David.

"'I should think it very likely,' John assented, struggling manfully with a yawn.

"'I guess that's about my case,' remarked Mr. Harum, 'an' I sh'd have to admit that I ain't much of a hand fer churchgo-in'. Polly has the princ'pal charge of that branch of the bus'nis, an' the one I stay away from, when I *don't* go,' he said with a grin, 's the Presbyteriun.' John laughed.

"'No, sir,' said David, 'I ain't much of a hand for't. Polly used to worry at me about it till I fin'ly says to her, "Poly," I says, "I'll tell ye what I'll do. I'll compermise with ye," I says. "I won't undertake to foller right along in your track—I hain't got the req'sit speed," I says, "but f'm now on I'll go to church reg'lar on Thanksgivin'." It was putty near Thanksgivin' time,' he remarked, 'an' I dunno but she thought if she c'd git me started I'd finish the heat, an' so we fixed it at that.'

"'Of course,' said John with a laugh, 'you kept your promise?'

"'Wa'al, sir,' declared David with the utmost gravity, 'fer the next five years I never missed attendin' church on Thanksgivin' day but *four* times; but after that,' he added, 'I had to beg off. It was too much of a strain,' he declared with a chuckle, 'an' it took more time 'n Polly c'd really afford to git me ready.'"

In the remarkable interview between the widow Cullum and David, in which pathos mingles with exquisite humor, the following dialog takes place:

"'It's amazin' how much trouble an' sorer the' is in the world, an' how soon it begins,' she remarked, moving a little to avoid the sunlight. 'I hain't never ben able to reconcile how many good things the' be, an' how little most on us gits o' them. I hain't ben to meetin' fer a long spell 'cause I hain't had no fit clo'es, but I remember most of the preachin' I've set under either dwelt on the wrath to come, or else on the Lord's doin' all things well, an' providin'. I hope I ain't no wickeder 'n than the gen'ral run, but it's putty hard to hev faith in the Lord's providin' when you hain't got nothin' in the honse but corn meal, an' none too much o' that.'

"'That's so, Mis' Cullom, that's so,' affirmed David. 'I don't blame ye a mite. "Doubts assail, an' oft prevail," as the hymn-book says, an' I reckon it's a sight easier to have faith on meat an' potatoes 'n it is on corn-meal mush.'"

But David, in spite of his often cynical words and hard exterior, was to offer to this widow in her affliction one of the most touching of object-lessons as to what is "true religion and unde-filed." It is in the course of this interview between David Harum and the widow Cullom that the former gave what he says is the commonly received version of the Golden Rule: 'Bns'nis is bus'nis ain't part of the Golden Rule, I allow; but the way it gen'ally runs, fnr's I've found out, is, 'Do unto the other feller the way he'd like to do unto you, an' do it fust.'"

For the weakness that is worse than positive dishonesty David had no tolerance. John Lenox and David are talking, in the banking office, of David's former clerk:

"'I should say he was honest enough, was he not?' said John.

"'Oh, yes,' replied David with a touch of scorn, 'he was honest enough fur 's money matters was concerned; but he hadn't no tack, nor no sense, an' many a time he done more mischief with his gibble-gabble than if he'd took fifty dollars out an' out. Fact is,' said David, 'the kind of honesty that won't actually steal 's a kind of fool honesty that's common enough; but the kind that keeps a feller's mouth shut when he hadn't ought to talk 's about the scurcest thing goin'.'"

Perhaps the pure pagan crops out most unmistakably in the following bit of epicurean philosophizing:

" 'I understand,' said David, 'an' if I had my life to live over agin, knowin' what I do now, I'd do diff'rent in a number o' ways. I often think,' he proceeded, as he took a pull at the cigar and emitted the smoke with a chewing movement of his mouth, 'of what Andy Brown used to say. Andy was a curious kind of a customer 't I used to know up to Syrchester. He liked good things, Andy did, an' didn't scrimp himself when they was to be had—that is, when he had the go-an'-fetch-it to git 'em with. He used to say, "Boys, whenever you git holt of a teh-dollar note you want to git it *into* ye or *onto* ye jest 's quick 's you kin. We're here to-day an' gone to-morrer," he'd say, "an' the 'ain't no poc'ket in a shroud," an' I'm dum'd if I don't think sometimes,' declared Mr. Harum, 'that he wa'n't very fur off neither. 'T any rate,' he added with a philosophy unexpected by his hearer, 's I look hack, it ain't the money 't I've spent fer the good times 't I've had 't I regret; it's the good times 't I might 's well 've had an' didn't. I'm inclined to think,' he remarked with an air of having given the matter consideration, 'that after Adam an' Eve got bounced out of the gard'n they kicked themselves as much as anythin' fer not havin' cleaned up the hull tree while they was about it.'

"John laughed and said that that was very likely among their regrets."

David Harum's views as to what he regarded as a prevalent fault of preaching were pronounced. Lenox and he were discussing the Episcopal rector in Homeville:

" 'Putty nice kind of a man,' remarked David when John came back; 'putty nice kind of a man. 'Bout the only 'quaintance yon've made of his kind, ain't he? Wa'al, he's all right fur 's he goes. Comes of good stock, I'm told, an' looks it. Runs a good deal to emptins in his preachin' tho, they say. How do you find him?'

" 'I think I enjoy his conversation more than his sermons,' admitted John with a smile.

" 'Less of it at times, ain't the? ' suggested David. 'I may have told ye,' he continued, 'that I wa'n't a very reg'lar church-goer, but I've ben more or less in my time, an' when I did listen to the sermon all through, it gen'ally seemed to me that if the preacher 'd put all the 'really was in it together he wouldn't need to have took only 'bout quarter the time; but what with scorin' fer a start, an' laggin' on the back stretch, an' ev'ry now an' then breakin' to a stan'till, I gen'ally wanted to come down out o' the stand before the race was over. The's a good many fast quarter hosses,' remarked Mr. Harum, 'hut them that c'n keep it up fer a full mile is scarce.'

THE LATIN-AMERICAN COUNCIL AT ROME.

THE plenary council of the Latin States of America, which was convened at Rome by the Pope's command to consider certain problems of the Roman Catholic Church in those countries, has completed its work, after adopting something over a thousand new regulations relating to changes and reforms in ecclesiastical administration.

It is now officially denied that the council passed any decree relating to the separation of the Latin-American churches from the control of the Spanish primate, or that that ecclesiastic has ever had any proper jurisdiction over these provinces. Monseigneur Santiago Zubiria, Archbishop of Durango, Mexico, who has just returned from the council, in the course of an interview quoted in the *New York Times* (August 11), pronounces the alleged decree a canard. He says:

"It is true that the Archbishop of Toledo in Spain still possesses the title of Patriarch of the Indies, but it is purely an honorary one, and he has no more to do with the churches in South America than has, say, the Protestant bishop of New York. The assertion that an American primate is to be appointed to exercise control is of course absurd. The foundation for this report may be that the Holy Father, as a special mark of favor and as an expression of his satisfaction at the meeting of the council, has announced his intention to appoint one of the archbishops who attended it a cardinal, but who the recipient of the honor is to be is not known.

"The cardinal, whoever he may be, will exercise no authority over the churches in South America. There is no supreme head there. Mexico and the South American countries are divided into ecclesiastical provinces, each of which is independent of the other. Each province is in charge of an archbishop, who is an-

swerable only to the Vatican. At the Council in Rome various matters relating to church discipline and the general welfare of the church in Latin America were considered, and a complete report of existing conditions and the prospects of the church was laid before the Pope. There is nothing much in this connection that I can tell you that would be of interest to laymen.

"The Catholic church in Latin America does not wield the power it formerly did. All the governments there are against it. Despite continuous attacks, however, it has not lost one inch of ground with the people. Its influence is ever extending, and with the understanding among the archbishops arrived at as a result of the council—one of the objects of which was to bring church work more in consonance with the changed circumstances of modern times—the outlook for the future is hopeful indeed.

"No provision for another meeting of the council was made. It may be many years before another is held. When it is it will be duly convened by a papal bull. It is pretty safe to say, however, that in these days of rapid and easy communication the next meeting will not be deferred for three more centuries."

The other points considered by the council, which included the archbishops of nearly every metropolitan see in South America, Central America, and Mexico, relates to matters of doctrine, discipline, and liturgy. Many differences of usage have arisen in these far distant countries, but under the decrees of this council these will now be completely harmonized.

Bishop Warren, of the Methodist Episcopal church, who has lately returned from his second episcopal tour of the South American missions, takes a rather somber view of the prospects for Roman ecclesiastical reform, which he thinks is needed in all the Latin-American countries. He says (in *The Christian Advocate*, July 27):

"The thing that constantly impresses one more and more is the emancipation that all thinking people are working out for themselves from the tyranny of an ecclesiastical organization that has held undisputed sway for three hundred years. On the one hand, the follies of the church, the gross superstitions inculcated, the frequent lack of the common and necessary morals even in the clergy, and the utter failure to meet the conditions of advance in thought for men contribute greatly to this result. On the other hand, the great tidal influences that are sweeping the human mind everywhere to-day toward freedom and development, the excellent schools that we have established in these countries, and the preaching of the gospel of power that has efficiency to change lives and dissipate even the darkness of the grave, have still further contributed to this end. . . .

"The opposition of the common people to the papal church in South America has reached such an extent as to obtain the notice of the Pope at Rome. About a score of bishops were called to Rome early in May to consult in regard to what should be done. If these bishops had come together and discussed these matters in South America, there would have been a probability of some valuable conclusions being reached, at least much information would have been obtained. But they were called to discuss this question under the predominating influence and stress of the papal power in Rome itself; they were confined to a list of questions drawn up by the Pope, and from the report of proceedings, as far as they have been given to the public, I have not seen that the least progress toward a better state of things has been made. Doubtless these bishops will come back impressed by the grandeur of the Romish churches, the magnificence of the millinery, the sensuousness of the ritual of the church; but as for any amelioration of the real difficulties there is little possibility."

RELIGIOUS NOTES.

THE Ministerial Union of Richmond and Manchester, Va., has determined to institute a series of Sunday afternoon meetings of all evangelical Christians, at which, in addition to devotional exercises, addresses shall be delivered by men appointed by the ministerial unions of the several denominations on the vital oneness of Christians.

WE learn from *The Christian Advocate* that the Brotherhood movement in Cincinnati for concerted Christian work, instituted about a year ago with organizations from the Methodist, Presbyterian, Congregational, and Episcopal churches, has been strengthened this year by the accession of branches from the English Lutherans, Baptists, and Christians. A permanent organization, called the Church Brotherhood Union, has been formed in which the different denominations are represented among the officers.

THE census of British Wesleyan Methodism for the current year has been taken and is reported in *The Methodist Recorder* of London. The statistics are collated from the reports made by the superintendents to their quarterly meetings. Of the 34 British districts of the Wesleyan Methodist church 21 show increase, 12 show decrease, and the district of York is in the unique position of having neither advanced nor receded during the year. Of the 836 circuits and stations in British Methodism 508 report an increase this year, 286 a decrease, and 42 remain stationary.

FOREIGN TOPICS.

CANADIAN PRESS ON THE ALASKAN
BOUNDARY DISPUTE.

THE recent speech of Premier Laurier, in the Canadian Parliament, tho it has been rebuked to some degree in England, evokes approval from most Canadian papers for its war or arbitration sentiment. Even the *Toronto Globe*, which is prone to get a little nervous over war talk, says:

"The greater the amount of time consumed in negotiations the better pleased the Americans will be. They are quite content with the *status quo*. They want no change which will deprive them of their present grip of the Yukon trade, and if they could waste a few years negotiating it would be profitable years for their coast cities.

"This is the governing factor in the matter. Washington is playing the game of Seattle and San Francisco, and, according to the catechism of American diplomacy, that is its first duty. . . . It is not a time for regret, however, but for action, and whatever course Parliament may see fit to take it will find the country behind it. There does not seem to be any present need for such measures as the shutting out of American miners; the master-key to the situation is an all-Canadian route to our own territory. Having once obtained that, we may be as indifferent as the Americans themselves as to how long it takes the diplomats to settle the boundary line."

Complaints about the attitude of the American editors in this matter are very numerous in Canada. "The ingenuity of the American scribe in twisting the matter to the advantage of his country, altho at the expense of truth, is characteristic and amusing," says the *Victoria Times*; and *The Witness*, Montreal, remarks:

"We refuse to believe that the people of the United States wish to plunder and overreach us, or at least that they would so wish if they were taught by their press and their government to love us as brethren and not to hate us as rascals. We believe that if they knew the whole facts a righteous conclusion could easily be reached. If governments in democratic countries dare not do right for fear the people will not approve, it seems to follow that where diplomacy is being carried on on behalf of democratic peoples, they who have the final, and indeed the only, say in the matter should hear what is said on both sides of the argument, or, in other words, that the negotiations should be carried on practically in public. As it is, wise men come together bound hand and foot to the service of the giant Ignorance."

The *Montreal Herald* claims that the United States is afraid to submit the matter to a board of arbitration that may be considered fair by Canadians, and adds:

"Canada's right to impose such restrictions upon aliens entering her territory as to her may seem right and proper, is categorically denied by our American friends in this claim respecting the Lynn inlet. In so many words they say, We hold the door to your country, and propose to hold it, whether it belongs to us or not, in order that we may restrain you from passing legislation that we might consider prejudicial to our interests."

The suggestion that England should exercise pressure upon Canada has aroused the wrath of many commentators. The *Chatham Banner* says:

"The Americans' whimpering and whining about England not caring anything for Canada—that she would be better off without us—that we are neither good nor useful to England, etc., borders on the ridiculous, rather than a serious discussion of an important international question. They throw to the winds all the professions of settling disputes by arbitration."

The *Toronto Telegram*, nevertheless, admits that Great Britain, in order to stand well with the United States, may be quite willing to sacrifice Canadian interests. It says:

"Great Britain is still in the business of offering Canada's

rights as the purchase price of the gold bricks which Uncle Sam is always ready to work off on John Bull. . . .

"Canada should make sure of the trade with a genuine all-Canadian line from a British Columbian seaport, and then it matters little how soon the United States, with the aid of Great Britain, completes the robbery of this country.

"It may be necessary that Canada should be a victim to Great Britain's insane fondness for the United States, but it can not be necessary that Canada should be a fool and blind to the truth that Great Britain has a weakness for throwing away the rights of this country in vainly pursuing the phantom of American good will."

The Westminster, Toronto, says:

"In the United States the disposition toward fair discussion of the issue is growing, altho a good many of the more ill-conditioned newspapers persist in the theory, often abusively expressed, that because a community is a colony it thereby has no rights worth respecting. . . . The gold-fields which may lie along the disputed boundary line are of far less importance than the question of free access or a barred gateway. But the American State Department has of late shown a disposition to concede this free access, their offer . . . now being a lease of a port on the Lynn canal, American sovereignty being retained. This is very satisfactory; but what Canada wants is arbitration. If the parties to the arbitration choose to insure themselves against an adverse decision by an agreement whereby in any event each will retain a foothold on the Lynn canal, that is another matter."

Many Canadian papers inform their readers that England saved us from destruction during the Spanish-American war, and tho they do not mention anything in direct proof of this assertion, they charge us with base ingratitude. *The Anglo-Saxon*, Ottawa, says:

"A little over a year ago the great American people had a foreign war on their hands and were in danger of being turned down by the European powers. England saved them this humiliation, and while England's aid was necessary they swore all kinds of friendship. But how is it to-day? . . . Their entire press is talking fight, and suggesting if we do not bow to their demands, they will wipe out the whole boundary line, annex Canada, and bid adieu to England as a power on the American continent. . . .

"As to war no right-thinking person wants to see it if it can by any honorable means be avoided. A war betw en the United States and England, with Canada as the field of action, would be criminal, and the government responsible for it deserving of the condemnation of every Christian man. At the same time, however, Canada must have justice. That is all she asks, and the refusal to grant her that will throw the responsibility for whatever may happen upon the United States Government."

The *Toronto Saturday Night* speaks of "the extreme dishonesty of the writings emanating from Washington and New York" in this case, and of the "trickery resorted to by American politicians." It adds:

"The McKinley Government, which has misled the people with regard to the condition of affairs in the Philippines, seems to find it easier in other matters to misinform the republic than to wisely manage its affairs. The surprising thing is that great newspapers which are opposed to the McKinley Government are so deficient in knowledge or in honesty that they do not unmask McKinley and show what a false countenance he turns to his own people when dealing with this boundary dispute. It was from Washington that the story came charging Canada with having upset the proposal to arbitrate the boundary question, and altho this has been shown to the world to be false—shown by the published minutes of the conference—yet that false statement, with arguments based upon it, goes out daily from high officials at Washington to newspapers all over the republic. The Administration at Washington is studiously misinforming the people of the United States, and for a purpose that may lead to something disastrous."

The following, from *Events*, Ottawa, leaves nothing to be desired in the way of plain speaking:

"The Yankee plays poker and the Englishman does not. Now a Canadian can play poker quite as well if not better than the

Yankee. The Americans are shouting like the French did—"Not an inch of our territory." Sir Wilfrid knows quite well, better than any Englishman does, what that means. He knows that that is bluff, and he is calling the bluff. His cards are arbitrate or fight. *The Globe*, like a nervous old thing, says, 'Oh, my! Don't fight.' But we hope Sir Wilfrid will put his cards face down on the table and if necessary put his six-shooter on the top of them and say. 'I call that hand.' Then we will see what the bluff means."

The paper, moreover, complains that Mr. Chamberlain was too civil to the Americans, and adds:

"For any trouble that may come out of this dispute the Americans will not be as responsible as the colonial secretary who is chiefly responsible for having puffed them up with a false idea of their own importance. The only circumstances that compensate for this state of affairs is the knowledge that, if war does come, the United States of America will get such a smashing as will put them in their place for the next hundred years."

EUROPEAN VIEWS OF THE BOUNDARY DISPUTE.

THE recent strong expressions by Canadian statesmen and editors can not be said to have awakened much of an echo in Great Britain. Even journals with a very jingoistic tendency advise the Canadians to "go slow." *The St. James's Gazette* infers that "the bracing air of the American continent has developed a love of strong words," and adds:

"But nobody thinks of war in connection with the Canadian-American dispute, and therefore it is thought safe to mention the word. This explains a good deal; and yet, since it is we who will have to fight if Canada does make the quarrel, our fellow subjects must allow us to plead for the use of a more quiet style. We put it to them whether continual talking about war is not one way of making people think of it. . . . Nor is it at all soothing to hear that all Canada's sorrows have arisen because 'British statesmen' have been 'most unwilling to allow any circumstances whatever even to threaten collision with the United States.' Therefore, says Sir Charles [Tupper], the States are taking advantage of the backwardness of Great Britain, which really must make them understand that she will be treated as a vertebrate animal, seeing that the present attitude of Washington would be offensive from the Almighty to a black beetle. Sir Charles presumably wishes to influence the actions of the Dominion Government, and through it of the imperial Government. He looks, we conceive, to being Prime Minister again, and yet, if words mean anything, he is agitating for the presentation of an ultimatum which could only produce war. Sir W. Laurier was calmer, but even he was tolerably emphatic."

The Speaker, London, also thinks that some moderation on the part of the Canadians would be useful in settling the question, and fears that our politicians are not quite initiated into the duties of diplomatists. It says:

"It must be admitted that the course of the dispute has not been exactly encouraging to the less circumspect among those who have regarded the 'Anglo-American alliance' as already virtually complete. It has been said that the biography of almost every conspicuous American Senator or Congressman might record that its subject worked on a farm and read law with a country attorney; and the American diplomatist, still more the American Senator, seldom realizes the fact that he is not merely an attorney, bound to press every consideration that may tell in favor of his client, and get the utmost from the other side that he can. English diplomatists have always recognized that this course is not the duty of the diplomatist; that friendly relations with America mean compromise, and may even be worth a sacrifice. The Canadian negotiators, unfortunately, have taken the American rather than the English view of their functions. Both sides, consequently, have stood out and made difficulties."

The Saturday Review, however, thinks it is time to call a halt to "such gross, unprovoked insults" as the arbitration forced

upon England in the Venezuelan boundary dispute, when Lord Salisbury "sat down to pen a long scholarly answer to the vulgar bombast of Mr. Olney," and it demands that Canada stand firm, even to the withdrawal from all intercourse with the United States. It says:

"With thousands of Americans slaughtering Filipinos, whom they want to free, while the truth is concealed from the public by methods worse than Russia's, as an instance of external aggression, and with a reign of terror in Cleveland, where a strike is conducted with nitroglycerin bombs, as an example of internal convulsion, there is raised the grave question of what will happen when the present tide of prosperity turns. Therefore to urge Canada to go beyond the bounds of reasonable concession would be good neither for her nor the empire."

On the continent of Europe, the dispute is looked upon as a good joke. *The Neuesten Nachrichten*, Munich, says:

"It is a strong piece of irony to find the allied, or at least friendly, Anglo-Saxon nations thus quarreling among themselves. At The Hague they try to beat the 'humanity' record and loudly proclaim their love of peace. On the other hand, they are willing and determined to destroy the independence of noble, if numerically weak nations, whose territory they regard as within their 'sphere of interests.' The greatest joke of all, however, would be if the Peace Conference were immediately followed by actual complications between the two cousins."

Nobody believes that such differences could really occur over this question. "The Americans," says the *Amsterdam Handelsblad*, "are getting really worried over the matter, and wish to have it settled." Secretary Hay, relates the paper, has declared that the United States would rather lose the disputed territory than go to war. *The Journal des Débats*, Paris, says:

"There is too much of good humor in the relations between England and the United States at present to warrant a fear of serious difficulties. The Americans certainly are well disposed toward England. Yet this Alaskan boundary question can not be shelved indefinitely. Railroads are being constructed there, and authority must be established by either country among the miners who emigrate there. Yet England, despite her wish to conciliate the United States, can not use her authority to force Canada to make important concessions. Nor is it expedient for Laurier to abate his demands, despite his manifest imperialism. The Americans will probably consent to a form of arbitration satisfactory to Canada and Great Britain. But even if it does not become more threatening, the present crisis is not without interest to the civilized world. Some months ago British newspaper agents succeeded in making the Americans believe that England alone saved the United States from the dark conspiracies of Europe. The same men announced that America, from sheer gratitude, would be the page who carries the train of Britannia's imperialism. The English presented the situation as a sort of menace to the rest of the world, and this, at last, put the European continent out of humor with the United States. It is not necessary to believe that this petty frontier quarrel will cause serious estrangement between the United States and Great Britain, yet it shows that the United States has preserved its independence as regards John Bull, and that the pretensions and assurances of the British journals end in smoke."

The above quotation expresses to a nicety the opinion of the great European journals which, if they are not taken by the masses, indicate what passes through the minds of the ruling classes.—*Translations made for THE LITERARY DIGEST.*

The Spy Mania in France.—President Loubet of the French republic, has pardoned Gen. de Giletta de San Guiseppe. The unfortunate Italian was caught with a French map in his possession, on which he had marked some excursions he meant to undertake from Nizza. The French will and must have a spy, so the Italian was sentenced. *The Figaro*, Paris, regards the pardon as a special act of international courtesy. It expresses itself, in substance, as follows:

The release of the prisoner is a special mark of esteem to Italy,

and will be appreciated as such in that country. It has, at least, been shown that the Italian Government had nothing to do with the matter, and that, if General Giletta acted as a spy, he did so entirely on his own responsibility. The authorities at Rome do not approve of his conduct, and may even punish him.

This last statement is not exactly correct, if the Italian press is to be trusted. The *Secolo*, Milan, declares that the general merely wished to make bicycle excursions, and mapped them out as other people do. What he could have seen is known to everybody, and the sketches found in his possession are of old fortifications whose value is chiefly historical. The *Tribuna*, Rome, bitterly complains of the continued animosity of France toward Italy, "an animosity which some day will bear unpleasant fruit."

The French jingo press, however, are not at all satisfied with the release of the general. The *Intransigant* calls the Italians knaves, and the French President a traitor. The *Autorité* and the *Libre Parole* express themselves in similar terms. The *Petit Journal* says:

"This untimely release of a noted spy will only encourage others who are equally anxious to hurt France. It is difficult to offer to foreign spies, in a more humble manner, an opportunity to examine our defenses. The true friends of France stand aghast. Loyal Frenchmen think to do their duty to their country by tracing the footsteps of the shameless agents of the Triple Alliance. This incident shows that their unselfish endeavors are not appreciated. Our Ministers should have at least shown enough sense of duty to wait a longer time ere they obeyed the orders received from Rome or Berlin."

The *Militär Wochenblatt*, Berlin, remarks that there is very little in any country that could be discovered by tourists. But since the French, who are as secretive in their industrial affairs as in military matters, see a spy in every foreigner, foreigners should not give them any excuse to arrest them, and should stay away from France.—*Translations made for THE LITERARY DIGEST.*

OUR WEST INDIAN WARDS, AND ANNEXATION.

THE general tenor of the information received abroad from Cuba and Puerto Rico is that American military rule is not welcome, and that an administration by politicians appointed from Washington would be still less popular; yet there is a tendency to await the decision of Congress before any attempt is made to obtain independence by main force. General Gomez's words are regarded as in keeping with the opinion of most Cubans. He is reported to have said:

"We have called in the help of a neighboring people, and their interference has ended our late struggle. But no one could have thought that this memorable incident would be followed by a military occupation by the troops of our allies, who now treat us as a people incapable of self-government, and have placed a yoke upon us which circumstances force us to bear. But that can not be our fate in the end. We must endeavor to assist, by peaceful methods, the work of reorganization begun by the Americans, a work as difficult for them as for us. Hence there must be unity, there must be but one party, under whose banner we will prove that the peace we have won is as honorable as the war we have fought."

The great majority of Cubans, it is thought, want nothing so much as peace. "They want to work, to build up the homes that were destroyed, to retrieve their shattered fortunes," says the *Estrella de Panama*. But many of those who ranked as officers during the rebellion against Spain expect to be rewarded with government positions, and the presence of the Americans is not pleasing to them. At present their influence seems to be small. The Cuban correspondent of the *Lei*, Santiago de Chile, says:

"It would seem that the Cubans really do not feel much gratitude to the insurgents—four fifths of them negroes. An equal

proportion of the Cuban army certainly were physically unfit for service. Hence the American troops, when they entered Havana, were the more welcome."

There is said to be a widespread and growing resentment against interference with the customs of the people. Such orders as that people may not appear in their undershirts in the streets, the prohibition of smoking in the cars, and some other restrictions do not seem to suit the Cubans. The *Toronto Globe* says:

"What would be said if such an order were promulgated in Chicago or New York in midsummer, and for prolonged heat spells neither of them is in it with either Havana or Manila. In the same way smoking has been forbidden on the street cars in Havana. In a country where men, women, and children smoke, and smoke all day, this is felt to be a senseless deprivation. Whatever may be thought of the smoking habit, it can not be cured in a whole people in this way. American rule is more likely to be discredited than helped by small tyrannies of this sort."

Moreover, as in the Philippines, a tendency is reported on the part of our soldiers to treat the natives as "niggers," and to slight their language. The ex-officers of the Cuban army skillfully foster the disaffection thus created by manifestoes like the following issued by Col. Enrique Colazo:

"We can not serve Cuba and America at one and the same time. The ideas prevalent in the two countries are too different to permit it. We are treated like conquered enemies, and forced to speak English. The Americans are not true to their promises, our independence is in danger. The time has come to unite with the same energy which we showed in our struggle against Spain."

Many correspondents of European papers think, nevertheless, that with a little prudence serious trouble may be avoided. The correspondent of the *Handelsblad*, Amsterdam, writes that there are too many American soldiers who have nothing to do, get drunk, quarrel with each other, and are insolent to the natives. Were it not for this, things would run smoothly enough, as the military governors really have made very few changes so far. He adds:

"It should be remembered that the official staff of the administration remains pretty much the same as under Spanish rule. The Spanish party, therefore, is not much interested in politics, and cares nothing for the 'Cuba Libre' talk of the insurgents. Most of the former adherents of Spain are now for annexation to the United States. They fear that, if a republic is established, their former loyalty to Spain will be remembered against them. The press, too, has turned since the occupation by the Americans. The *Gaceta de la Habana*, formerly Spanish-official, is now American-official. The *Discusion* remains Radical, and prints under its title the legend, 'A Cuban paper for the Cuban people.'"

"Unless the American people wish to be deceived, their interests require the most complete disclosure of the facts," remarks the London *Spectator*; yet these facts evidently are not easy to obtain even by men who, as neutrals in Cuba, should be able to judge. For while the Dutch correspondent just quoted believes that the wealthy Spanish Cubans would welcome annexation, the correspondent of the *Weekly Register*, London, thinks that "the Cubans, in spite of optimistic reports, are solidly against it." He says further:

"Despite the American Government's altruistic pledges, Cubans and Spaniards are alike distrustful of American intentions. There is no danger of revolt, the rebels would find no difficulty in arming themselves in the event of a revolt. But suspicion is the daily bread of the Cubans. Archbishop Chapelle is the only American who seems to enjoy the confidence of the people, with Gen. Fitzhugh Lee a long way after him."

A revolt in the small island of Puerto Rico would seem altogether too hopeless to be attempted, yet from there also discontent is reported. The *Deutsche Tages Zeitung*, Berlin, is informed that our troops on the island were anything but well cared for at first, and showed too great a tendency to "help themselves" to impress the Puerto Ricans favorably with their new masters.—*Translations made for THE LITERARY DIGEST.*

WHAT IS THE CZAR'S CHARACTER?

THE power of the kings and queens in some of the monarchies of Europe is so shadowy that the character of these exalted personages is of comparatively little importance and their political opinions a matter of indifference. The case is different in countries like Austria, Germany, and Russia, where the people grant a certain amount of obedience and deference to the wishes and views of the sovereign. But while the Kaiser, impelled to augment his limited legal powers by personal influence, lives to an unusual degree in the full glare of public criticism, the Czar, invested with autocratic powers, remains a *persona incognita* until his character can be judged from many years of action. Hence we have but little definite knowledge, even now, of Nicholas II. The Scandinavians, influenced by the Danish court, which used to exercise the same power in Russia that Queen Victoria's court hoped to obtain in Germany if Emperor Frederick III. had lived, describe the present Czar as a weakling, while such observers as W. T. Stead and Bertha von Suttner see in him a pure enthusiast, energetic, tho somewhat inexperienced. In a brochure published recently at Leipsic by Bresnitz von Sydacow, entitled "Czar Nicholas II. and His Court," we find a very different description. We take from it the following:

"Nicholas II. is perhaps the most somber, silent monarch who ever occupied a throne. He smiles rarely, talks little, and turns his eyes generally toward the ground. Not that he is afraid of assassins; he has inherited the fearlessness of his grandfather, the murdered Alexander II., is a fatalist, and says: 'I will live and die for Russia; the manner of death is of no importance to me.' On the whole, his tastes are more bourgeois than princely, he lives a simple life and is a good husband and father. Of wine he takes very little, and like most hard workers he eats little and hastily. At meals he becomes a little more lively, however. He does not care for court ceremonies, does not permit the people to be kept from him, and cares little for dress. Civilian clothes he does not like, and until he visited France he did not even own a dress-coat.

"The Czar is an untiring worker. He reads every document sent to him, and adds remarks to them in blue pencil. His memory is excellent, and he knows well whether his orders have been executed. His wife is nearly always with him; she sits by his side busying herself with needlework while he is reading and writing. When visitors arrive, she often wishes to leave, but is prevented by the Czar. He loves his daughters dearly, and was deeply affected when the Czarina begged his pardon for not presenting him with a son.

"For a long time the Czar has tried to break the power of the court camarilla. But this parasitism is too firmly established on the body politic of Russia to effect its removal. He now is specially engaged in educational work. 'Russia has had her czar liberator,' he says; 'she now needs her czar educator'; and his efforts in this direction are such that he deserves the name."

That the Finns have been robbed of their independence in the endeavor to consolidate the Russian empire is true enough, we are told; but that a Finn who is willing to be a Russian first will suffer serious inconvenience from this fact is to be doubted. To this day Germans who are willing to become Russian subjects are treated with exceptional consideration in Russia. Poles who talk of independence are crushed, but Poles who are loyal to the empire are very much petted. Moreover, the advantages of modern civilization are extended to the uttermost limits of the empire. The *National Zeitung*, Berlin, says:

"The conference for the abolition of banishment to Siberia, which the Czar summoned May 19, has been mentioned as a victory of civilization, and in many ways it is such a victory. For murderers and other heavy criminals, banishment and the work in Siberian mines were not too hard a punishment; but the transportation there—marching for months with fetters—certainly was. Moreover, the banishment of decent people for political reasons,

and the 'administrative banishment' ordered by local authorities, which needed no excuse at all, certainly were blots upon civilization. True, many of the criminals could establish themselves in Siberian towns after their terms of hard labor were over, and many of the banished politicians were accorded the same privilege; but, nevertheless, their lot was a hard one.

"Yet it must not be supposed that reasons of mere humanity influenced the Czar when he abolished this form of punishment; it has been found expedient to colonize Siberia, and decent men will not settle among the criminals; hence deportation must cease."

It will be remembered that Great Britain also was forced to throw open her "Siberia" in Australia for the same reason.—*Translations made for THE LITERARY DIGEST.*

THE RUN ON CANADIAN BANKS.

THE recent defalcations of some bank clerks, magnified by certain Canadian journals, created a panic by which French Canadian banks were chiefly affected. None of the establishments attacked seems to have broken down utterly, but much inconvenience was experienced, and many depositors passed a bad quarter of an hour. Some of the more sober journals attribute the trouble to the heartless selfishness of the "yellow" journals, and suggest remedies. The London, Ontario, *Advertiser*, one of the best-edited papers in Canada, says:

"The Canadian banking system, in its stability and elasticity, is one of the best in the world, and is frequently held up as a pattern by the American banking interests; but there should be some provision against the recurrence of such disturbances as Montreal has suffered. . . . The Jacques Cartier Bank, a perfectly solvent institution, could not meet the run, and suspended temporarily, inflicting a severe hardship on scores of small traders, who will be unable to finance their business in the mean time. The Banque d'Hochelaga managed to stem the tide, having plenty of funds available. By employing extra paying tellers, and piling up gold and bills in full view of the excited depositors, confidence was partially restored. The absurdity of the panic is evident by a glance at the monthly statement, which shows the assets of the Hochelaga Bank to be \$7,884,472, against deposits on demand of \$967,016 and deposits on notice of \$3,850,885. La Banque Nationale, equally strong, was also affected, tho to a much less degree. The stock market was violently agitated, and some of the best securities fell several points.

"One of the most admirable features of the Canadian banking act is the absolute security of the note circulation. Every Canadian bank-note is as good as gold, even if the bank of issue becomes a wreck. Every chartered bank deposits with the Government a sum in cash, equal to 5 per cent. of its note circulation; and out of this fund the notes of any insolvent bank are redeemable. It should be . . . possible to apply this principle, in some form, to such a contingency as that in Montreal, by requiring all the banking interests to protect any chartered bank of unquestioned solvency from the effects of a groundless panic. Banks usually volunteer this assistance, but it might be made compulsory."

The Montreal *Witness* thinks depositors themselves, by a more plentiful exercise of common sense, may prevent the inconvenience to which such incidents subjects them. The paper says:

"It is to be hoped that one result of the present trouble will be to cause depositors intelligently to investigate the financial position of the institutions which they intend to entrust with their money, because, with the certain knowledge that these are sound, they will be able to support rather than to try to break them in times of trial. . . . It is sincerely to be hoped that a common-sense view of things will now obtain; there is no cause for mistrust, and a senseless panic such as that to which certain classes have given way during this week disturbs and interferes with even sound business to some degree."

FOREIGN POSSIBILITIES OF AMERICAN COMMERCE.

The method of collecting debts in Japan is in general similar to that prevailing in the United States, namely, by action at law simply or by action with attachment of the debtor's property.

The courts provided for this purpose are: (1) Ku saibansho, or local courts, having jurisdiction over claims under 100 yen (\$50) in amount. (2) Chibo saibansho, or district courts, having jurisdiction in cases involving larger amounts. From the chibo saibansho appeals lie to the (3) Koso In, or appeal courts, and to the (4) Daishin in, or supreme court of the empire.

Foreign plaintiffs not residing in Japan should furnish their agents or attorneys here with ample powers of attorney, with authority of substitution. Such documents should be attested by a diplomatic or consular officer of Japan. Foreign plaintiffs are required to give security for costs. The period of limitation of actions arising out of contracts for the sale of goods is two years. Foreign defendants in Japan are sued before the consular courts of their respective nations. This will cease to be the case after the operation of the new treaties in July next.

Consul-General Winslow, of Stockholm, on April 18, 1899, informs the department that the authorities there have been very active in their inspection of pork. During the month of March, no fewer than 7,040 slaughtered hogs were inspected, together with 19 pieces of American "short clears." Trichinosis was found in 24 carcasses of Swedish pork and in 1 piece of American "short clears." Mr. Winslow adds: "I want our packers to know that there is a good market here for pork products, and they will spoil it if they do not send the article properly prepared."

Mr. Mertens, in charge of the consular agency at Valencia, writes, under date of April 27, 1899, that the wheat imports of Spain during the month of March amounted to 19,000 tons (42,000 pounds), divided as follows: From United States, 7,000 tons; from France, 4,000 tons; from Russia, 6,000 tons; from other countries, 2,000 tons. Mr. Mertens also notes an increase in the imports during 1899 of cotton and artificial guano.

In reply to a Missouri correspondent, Consul-General Gowdy writes from Paris, May 4, 1899:

"The first regular bourse of commerce was established at Antwerp in 1531; Rouen followed in 1556, then Hamburg, London, Amsterdam, and finally Paris, in 1645. As is usual in France, the bourse of commerce was created under the patronage of the chamber of commerce and at the request of various syndical chambers. The concession was granted for the present building by the city of Paris in 1886 (it standing on ground belonging to the town, on the site of the old corn exchange). The building is owned by a company

EDUCATIONAL.

Miss Baird's Home School for Girls

The same care, watchfulness and sympathetic attention that a mother would give her child is extended to every pupil in Miss Baird's School for girls. The school is small enough and the staff large enough to secure this. Special attention is given to morals, manners and health—to everything that makes for the development of a well-rounded womanhood—both mentally and physically. Catalogue on application.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

known as the Société Anonyme de la Bourse de Commerce, which collects rents from those holding offices, as follows: Ground floor—large offices with entries on the hall and on the street, 9,000 francs (\$1,737) yearly; offices opening on the hall only, 4,000 to 6,000 francs (\$79 to \$1,158); entresol, 1,500 francs (\$289.50) per annum; first floor, 1,000 to 1,200 francs (\$193 to \$231); second floor, 800 to 1,000 francs (\$154.40 to \$193). The secretary states that the average attendance on the trading floor is from 1,200 to 5,000, the latter number being reached on days when the grain dealers congregate. It is calculated that on these days 10,000,000 francs' worth of business is transacted at the bourse. The articles chiefly traded within the building are sugar, oil, grain, seeds, flour, forage, and alcohol. The business transacted in the hall of the bourse of commerce is under the control of the chamber of commerce, the company holding the lease of the building having no authority beyond the enterprise of leasing the offices. The bourse of commerce is open to the public from 9 till 7, except on fête days, which are decided by the chamber of commerce."

Minister Smith, of Monrovia, under date of March 24, 1899, gives the value of imports into the Gold Coast colony from the United States from the 30th of June, 1897, to February, 1899, as \$69,172 (\$336,626). During the same period, the exports declared for the United States were valued at \$27,405 (\$133,336). The exports consisted of palm oil, mahogany, monkeys, parrots, and leopards. Twelve American vessels, with a total tonnage of 5,433 tons, arrived and cleared during the seven months under consideration.

The following extract is from a letter to a Pennsylvania firm by Consol Prickett, of Reims:

"The cost of roofing-slate, laid down in Reims, is, for the best qualities, 24 francs (\$4.63) per thousand. The size of the pieces is approximately 22 by 7½ inches. As laid here, it takes fifty-four pieces to cover a space 39 inches square. This slate weighs 350 kilograms (760 pounds) per thousand. The duty on roofing-slate in France is 1.40 francs (27 cents) per 100 kilograms (220 pounds). Polished slate is charged 4 to 5 francs (77.2 to 96.5 cents) per 100 kilograms. The principal slate quarries of this district are at Fumay and Signy le Petit. The slate of Fumay is the most valuable, being of a beautiful violet color and having a fine grain. Heat and cold do not affect it. It sells for about 4 francs (38.6 cents) more a thousand than the roofing-slate from other quarries. The principal dealer in this city is Victor Druart, Chaussee du Port, No. 37. Slate is exported from France in large quantities, and but little is imported. It is used in this country chiefly for roofing. I do not think this market promising for the introduction of roofing-slate from America."

MACBETH'S "pearl top" and "pearl glass" lamp-chimneys are carefully made of clear tough glass; they fit, and get the utmost light from the lamp, and they last until some accident breaks them. "Pearl top" and "pearl glass" are trade-marks. Look out for them and you needn't be an expert.

Our "Index" describes all lamps and their proper chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address **MACBETH, Pittsburgh, Pa.**

Disease Lurks in Zinc-Lined Refrigerators

The ordinary refrigerator is a foul affair, reeking with odors, dampness, and the poisonous oxide from corroding zinc. This must affect milk and food.

McCray Patent Porcelain Tile Lined Refrigerators are built to order for Residences, Hotels, Hospitals, Sanitariums, etc.

ICED FROM PORCH.

The McCray Patent Sanitary System insures perfect circulation of pure, cold air in all departments, absolutely dry and never sweats, therefore perfectly hygienic. They are used in hundreds of the finest homes, public and private institutions. Separate compartments for meat, milk, vegetables, wine, etc. Catalogues: No. 30 for hotels and public institutions; No. 35 for private residences; No. 50 for groceries and meat-markets.

MCCRAY REFRIGERATOR AND COLD STORAGE CO.,
97 MILL STREET, KENDALLVILLE, IND.

BUILT TO ORDER FOR D. C. ARNOLD, DAYTON, OHIO.

PERSONALS.

ONE of the most peculiar figures in modern history, says a writer in the New York *Evening Post*, was Ulisses Heureaux.

"For years he held his post with a tact and finesse that would have done credit to a finished diplomat; threatening one man, paying hush-money to another, alternately disgracing and rewarding friends and enemies alike; securing vast sums for his personal expenditure, and through it all managing somehow to keep the national credit from failing utterly, while he boasted openly and with that peculiar *bonhomie* that he sometimes chose to affect that 'no five men in the island could kill him.' Three of them did it, however, the other day, but, if the reports are to be believed, not in open fight. 'Lilyase,' as he was commonly called, was too thoroughly feared for that. . . .

"Physically, Heureaux was an impressive man. Tall beyond the height of most creoles—he must have stood nearly six feet—powerfully built, and commanding in appearance, courteous and tactful in speech, he made one forget the monkey-like grotesqueness of his features. But he was shrewd, crafty, and remorseless if thwarted. Under his rule human life was held cheaper than I ever believed could be possible. To say that he had friends would hardly be possible, but he had many adherents, for disloyalty meant, sooner or later, death to the transgressor. A friend of mine, an English merchant, told me last January that, while in conversation with Heureaux, the latter had alluded to his own quickness in suppressing crime, instancing a case where, some years before, a man adjudged guilty of burning a sugar-cane plantation had been seized, quietly carried across the river from San Domingo city to a place called Pajarito, and there hung to a tree, to remain for three days a warning to the people at large. The fact that no form of legal trial had been gone through mattered little; the President, as a man of decisive action, had sustained his reputation.

"Born of a Haitian negro father and a mother who came from St. Thomas, Ulisses Heureaux took part in Santo Domingo's early struggles against Spain, and during the war of liberation in 1863-65 rose to the post of colonel-of-staff. Later he served in the uprisings under Cabral, and held one minor office after another until 1874, when President Meriño made him his Minister of the Interior. When Meriño's term of office ceased, Heureaux was made President for the then con-

PANTASOTE

Outwears Leather!

WATERPROOF. GREASE PROOF. STAIN PROOF.

Looks exactly like leather and costs half as much.

Unlike the common imitations of leather, Pantasote does not rot, peel or crack, contains no rubber, cellulose or other dangerous inflammable substances, and is not affected by heat, cold or climate. Made in standard colors, plain or figured.

Enough to cover a dining chair, seat or foot-stool sent for 25 cents in stamps.

Sample Free! 15x20 inches, enough to make a Sewing Companion sent for act. stamp with your upholsterer's name.

Caution! There are worthless and dangerous imitations. Genuine goods have "Pantasote" stamped on the edge.

THE PANTASOTE COMPANY,
29 Broadway, Dept. P. New York City.

CUFFS HELD . . .

With the Improved Washburn Patent Cuff Holders can be placed just where you want them; will never slip but may be instantly released. Drawers Supporters, easily adjusted or taken off—excellent for holding golf trousers. By mail, 20c. the pair. For Catalogue showing these and other novelties, free.

American Ring Co., Box 55, Waterbury, Conn.

COLLAR Button Insurance goes with our one-piece collar button. Klements & Co., 63 Chesnut St., Newark, N. J.

stitutional term of two years, at the close of which he retired to private life. But two years later he cropped up again as a candidate and was elected."

In a character sketch of Andrew H. Green, "New York's foremost citizen," in *Success*, Ellery Ogden says:

"Andrew H. Green was born at Green Hill, Worcester, Mass., the home of his ancestors for six generations. This home he inherited, and occupies every summer for a brief period. He came to New York when a boy, and first did work in a mercantile capacity, and then studied law. He did not seek public place. But somehow public opinion fastened upon him as a man who could be trusted safely with great interests, and he was chosen to discharge important public duties, requiring absolute integrity, energy, and foresight. For twelve years he was the executive officer of the Park Commission, and was regarded almost as the creator of New York's magnificent park system. To his efforts, also, was largely due the establishment of the American Museum of Natural History, the Zoological Gardens, the Metropolitan Museum of Art, and the Meteorological Observatory. His crowning work for the people of his adopted city was the formation of 'Greater New York,' with an extent of territory adequate to any increase of population or of demand for commercial facilities for many years to come.

"The creative genius of this many-sided man is shown also in his advocacy of the purchase of the Niagara's shore by the State of New York, to be used forever by the people as a pleasure-ground, instead of permitting its beauties to be bartered for coin by greedy speculators. Daring as this conception was, challenging the opposition of vested interests at Niagara, and setting up a new faction, almost, for the state government, it became an accomplished fact under the guiding hand of Mr. Green and his fellow commissioners. The heritage of the people was redeemed by him once more. At a recent meeting of the Niagara Reservation Commission, a set of resolutions was engrossed, setting forth the splendid services of Mr. Green in this connection, and changing the name of Bath Island, just above the falls, to Green Island, in his honor. The Hudson River Bridge, another of his pet projects, he expects to live to see completed."

QUEEN VICTORIA is very fond of her grandchildren, and their presence with her quite softens her heart toward all sorts of suitors in whom they take an interest. An amusing story, which illustrates this statement, is told by the London papers. One day not long ago the Queen, accompanied by her grandsons, the children of Prince Henry of Battenberg, was driving out of the grounds of Balmoral Castle when just outside the gate they encountered a man who had a dancing-bear, in order to exhibit which he had been way-laying the royal carriage. The boys at once demanded the performance, and the Queen, somewhat against her own inclinations, caused the carriage to halt while the animal went through its paces. When the performance was over, the Queen sent her footman with a sovereign for the man, which she was surprised to see him refuse. Asked what he wanted, the man said: "I should like much better a certificate just showing that my bear had had the honor to dance before her Majesty." The Queen was not at all inclined to grant this somewhat presumptuous petition, but one of her grandsons again intervened. "I don't see," he said, "why a bear should not have a royal patent. In Rome a horse was once appointed consul!" This display of schoolboy erudition delighted the aged Queen, but she wished to test his knowledge further. "Well, well," she said, "tell me the name of the Emperor who committed this act of stupidity, and your bear shall have his royal certificate." "It was Caligula!" shouted the prince. A servant ascertained the name of the bear-exhibitor, and that very evening a messenger brought him a document, sealed with the royal seal, which constituted him "bear-leader in ordinary to her Majesty the Queen of Great Britain and Ireland, Empress of India." This appointment has already resulted in large profit to the owner of the bear.

COMPANY OF AMERICA

JOHN F. DRYDEN, President.
Home Office: NEWARK, N. J.

MORE OR LESS PUNGENT.

Sad.—"What was it happened to Mrs. Nibber?" "She fell out of the window while trying to see who was sitting on her next neighbor's porch."—*Chicago Record.*

Runs in the Family.—"Money, you know, is an evil." "Yes; but I don't suppose people are to blame for it when it's inherited."—*Philadelphia Bulletin.*

Defined.—"What is your definition of the word 'fad'?" "A fad," said Miss Cayenne, candidly, "is something which somebody else enjoys and I don't."—*Washington Star.*

His Impression.—DOCTOR: "My rule is, 'Be sure you're right, and then go ahead.'"

FRIEND: "Indeed? I thought it was, 'When in doubt, perform an operation.'"—*Puck.*

But No Remedy.—DOCTOR: "Have you taken any remedy for this trouble?"

PATIENT: "No, doctor, I have not; but I've taken a power of medicine."—*Harlem Life.*

What Made it Light.—"Why don't you put on the gas?" he asked sleepily. "I have," replied his wife scornfully; "all that remains to be done now is to powder your nose."—*Chicago Evening Post.*

Heights of Knowledge.—"I know a Scotchman who says he never played golf in his life." "Good; we can teach him the game and he can teach us the dialect."—*Chicago Record.*

Spoke from Experience.—SHE: "He says he loves me; yet he has only known me two days."

HER FRIEND: "Well, perhaps that's the reason, dear."—*Philadelphia North American.*

"LINENE" Collars and Cuffs

Made of fine cloth and exactly resemble fashionable linen goods. The most convenient, the most comfortable, and the most economical goods made.

No Laundry Work.

When soiled discard. A box of 10 collars, or 5 pairs of cuffs, 25 cts. By mail 30 cts.

Sample collar or pair of cuffs for 6 cts. in stamps. Give size and style desired.

Reversible Collar Co., Dept. 19, Boston, Mass.

WATER—100% PURE

Use a Sanitary Still and you have it in any quantity. Six styles, \$10 up. Used by U. S. Government. No. 128 N. Green St., Chicago.

His Handicap.—MUSINGTON (meditatively): "With all the beauties of Eden about him, I wonder Adam was not a poet?"
TELLER: "Well, you see, Adam wasn't born."—*Puck*.

At the Start.—THE BRIDE (rapturously): "Oh Jack I isn't *everything* just lovely!"
THE GROOM (devotedly): "Yes, darling—and aren't you and I just everything?"—*Brooklyn Life*.

Why They Went.—"We ought to hear from those Arctic explorers." "Oh, I don't know. If they have found the North Pole, this isn't the time of year for them to be giving it away."—*Chicago Record*.

His Last Words.—LADY OF THE HOUSE (to peddler): "If you do not go away I'll whistle for the dog."

PUSHING PEDDLER: "Then let me sell you a whistle, mum."—*Tit-Bits*.

Handicap.—The Filipino envoy came, but under a flag of truce. "Is Colonel Funston with you?" he asked hoarsely. "He is." "Then we ask for a start of five miles before the battle begins."—*Boston Advertiser*.

The One Who Was Hurt.—BILL: "Bob opened one of his wife's letters."

JILL: "Does she feel hurt about it?"

BILL: "Does she? No; but he does. You ought to see his head."—*Yonkers Statesman*.

In Error.—MR. SEALOVE (at his seaside cottage): "My dear, please tell our daughter to sing something less doleful."

MRS. SEALOVE: "That is not our daughter, my love. That is the foghorn."—*Tit-Bits*.

The Only Alternative.—KING'S DAUGHTER: "Mercy! Do you allow that half-grown girl to read Zola and Ouida?"

THE MOTHER: "I must do something to keep her away from the daily newspapers."—*Exchange*.

Happiness.—HE. "Dearest, say the little word that will make me happy for life."

SHE: "Have you spoken to papa?"

HE: "Oh, yes; he says the money is all your own, free from incumbrance."—*Boston Transcript*.

More Accurate.—"Will one in the class," asked the teacher of rhetoric, "give a better form to the sentence, 'John can ride the mule if he wants to'?" "John can ride the mule if the mule wants him to," said the boy with the bad eye.—*Chicago Tribune*.

Round-trip Tickets.—AUTHOR: "You have no idea how many stamps I use posting my manuscripts to various editors."

CRITIC: "Very likely. I think there ought to be excursion tickets for manuscripts at reduced rates."—*Tit-Bits*.

A Testimonial.—Little boy (writing to his schoolmaster): "Everybody at home is delighted with the progress I have made at your school. Why, when I came to you I knew nothing, and now, even in this short time, I know ten times as much!"—*Exchange*.

The Proper Way.—LITTLE JOHNNY: "Mama, let's play I am your mother and you are my little boy."

MAMA: "Very well, dear; how shall we play it?"

L. J.: "I'll tell you; you start to do something and I'll tell you not to."—*Puck*.

Would Not Get Wet.—SALES LADY: "Oh, yes; we have this goods in all the newest shades; it's very pretty, but it won't wash."

FAIR CUSTOMER: "That won't make any difference, as I only want it for a bathing suit; give me a yard, please."—*Philadelphia Record*.

Had Advantages.—"I am not at all certain," said the father, "that my daughter loves you sufficiently."

THE truth of the matter is, there are so many mixtures of Zinc, Barytes, Whiting, etc., sold under misleading brands of "White Lead" and "Pure White Lead," that in order to obtain Pure White Lead it is absolutely necessary to make sure that the brand is right.

Those named in the margin are genuine.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

ciently to warrant me in entrusting her to your keeping for that." "Well," replied the young man, "perhaps you haven't had the same advantages for observing things as I have."—*Philadelphia North American*.

Result of Training.—MRS. HERMITAGE (on the evening train): "I wonder why the city department stores won't deliver an order of goods free in the suburbs unless it exceeds five dollars' worth?"

MRS. ISOLATE (ditto): "Well, they know that a suburbanite can easily carry five dollars' worth."—*Puck*.

Common Experience.—OLD FOZZLE: "So, my son, you have laid aside your studies and are about to enter upon the active duties of life?"

YOUNG FOZZLE: "Yes, dad; but since I got my sheepskin and have had time to look around me, I am surprised to find the active duties of life so very closely attended to already."—*Boston Transcript*.

Resource.—Cornelia, the mother of the Gracchi, was a person of resource. Whenever she hired a new girl, she took the latter at once to the nursery and showed her the Gracchi, saying: "These are my jewels!" In this way she avoided the embarrassment of having the hired girl all the time borrowing her jewels to wear to social functions.—*Detroit Journal*.

Annoying.—LADY (engaging servant): "Why did you leave your last place?"

SERVANT: "I couldn't put up with the way one of the young mistresses used to copy me, mum."

LADY: "What do you mean?"

SERVANT: "Why, I had a private soldier for my sweetheart, and what must she do but get a hoffer for hers."—*Tit-Bits*.

Genius Here.—Life on the farm had become intolerable. "I shall run away to sea!" he exclaimed. "But why?" asked his gray, old father, tremulously. The boy felt that it was necessary to be perfectly candid. "Because," he replied, "I find that I am not a poet, and if I become a rear-admiral, I shall have space in the magazines at my disposal!" The divine afflatus, understand from this, is not easily to be headed off.—*Detroit Journal*.

J. R. W. sent solution of 396, 397, 398, and 399. Dr. H. H. D., E. E. T., and F. S. C., C. B. Bird, Wansan, Wis.; Dr. R. W. Parsons, Sing Sing, N. Y., got 398; Dr. O. F. B., 396; T. J. Merrifield, Chicago, 396 and 398.

End-Game Studies.

No. 6.

(From *Wiener Schachzeitung*.)

(From an actual game.)

WHITE (4 pieces): K on Q R 2; B on K 3; Ps on Q 4 and K R 2.
BLACK (5 pieces): K on K Kt 2; B on K B 6; Ps on K 3, K B 4, Q B 5.

White to play. What result?

Solution of End-Game Study.

No. 2, JULY 15.

1., B-Kt 3; 2. Kt-B 5, B x Kt; 3. Kt x B, P=Q ch; 4. R x Q, P-Kt 7; 5. R-B 2, K-R 3, and draws, for if 6. K x P, Black is stalemated. It looks as if 1., P=Q would draw; but 2. R x Q, B-B 3 ch; 3. Kt x B, P-Kt 7; 4. R-B 2, K-R 8; 5. Kt-K R 5 wins.

An Italian Mate.

From *Lecco degli Sacchi*.

WHITE (9 pieces): K on K R sq; Q on Q 5; Kt on Q Kt 5; Rs on K R 5, Q B sq; Ps on K B 3, K R 2, Q Kt 4, Q R 2.

BLACK (9 pieces): K on Q Kt sq; Q on K Kt 3; Kt on Q B sq; Rs on K Kt 2, K R 2; Ps on K B 3, K R 3, Q Kt 3, Q R 4.

White announced mate in five moves.

Another Morphy Brilliant.

We are indebted to the Rev. T. B. Foster, Rutland, Vt., for the score of the following game played in New Orleans in the year 1864 or 1865. It has special interest from the fact that it is one of the last games Morphy played. The comments are from an old copy of *The Evening Telegram* (Q), New York.

Evans Gambit.

(Odds of Queen's Knight.)

- | | |
|---------------|----------------|
| White—Morphy. | Black—Maurian. |
| 1 P-K 4 | 1 P-K 4 |
| 2 Kt-K B 3 | 2 Kt-Q B 3 |
| 3 B-B 4 | 3 B-B 4 |
| 4 P-Q Kt 4 | 4 B x P |
| 5 P-B 3 | 5 B-B 4 |
| 6 Castles | 6 P-Q 3 |
| 7 P-Q 4 | 7 P x P |
| 8 P x P | 8 B-Kt 3 |
| 9 P-Q 5 | 9 Kt-R 4 |

In the game between Mackenzie and Holman at the same odds, Mackenzie now played B-Q 3, and

several of the strongest modern-school players could find no better move, entirely overlooking the powerful line of play now introduced by Morphy.

- | | |
|-------------|-----------------|
| 10 P-K 5! | 10 Kt x B |
| 11 Q-R 4 ch | 11 Q-Q 2 |
| 12 Q x Kt | 12 Kt-K 2 |
| 13 R-K sq | 13 P x P (best) |
| 14 Kt x P | 14 Q x P |
| 15 Q-R 4 ch | 15 B-Q 2 |

A fine opportunity for any modern master to study out the line of play, which White had evidently mapped out several moves in advance, and which few, if any, could see, even from the present standpoint.

- | | |
|---------------|-----------|
| 16 Kt x B! | 16 Q x Kt |
| 17 R x Kt! ch | 17 R x R |
| 18 B-R 3 ch | 18 K-K sq |
| 19 R-K sq ch | 19 B-K 6 |

Well played; a beautiful move, which shows Mr. Maurian to be no ordinary player. If White takes the proffered Bishop, Black retreats with perfect safety.

- | | |
|-------------|-------------|
| 20 Q-Kt 3 | 20 K-Q sq |
| 21 Q x Kt P | 21 R-Q B sq |
| 22 P x B | 22 Q-Q 6 |
| 23 B-Kt 4 | 23 P-K B 4 |
| 24 R-K 2! | |

Of course, Black would be mated in three moves if he takes the Rook; but how many would see that this simple little move wins the Queen?

- | | |
|------------------------|------------------|
| 25 R-Q 2 | 24 R-K sq (best) |
| 26 R x Q ch | 25 R x P |
| 27 B-K 7 ch! and wins. | 26 R x R |

Game from the London Tournay.

PILLSBURY BEATS STEINITZ.

Ruy Lopez.

| 2 Kt-K B 3 | Kt-Q B 3 | 18 Kt-R 4 (d) | Q-R Kt sq |
| 3 B-Kt 5 | P-Q 3 | 19 Kt-B 5 | Kt-B 2 |
| 4 Kt-B 3 | B-Q 2 | 20 P-K Kt 4 | Q-K 2 |
| 5 P-Q 4 | P x P | | (c) |
| 6 Kt x P | P-K Kt 3 (a) | 21 P x Kt | R x B P |
| 7 Kt x Kt | P x Kt | 22 Kt-Q 3 | Q-R 5 |
| 8 B-Q B 4 | B-Kt 2 | 23 R-B 2 | P-B 4 |
| 9 Q-K 2 | Kt-K 2 | 24 R-R 2 | Q-R 2 |
| 10 P-K R 4 | P-K R 3 | 25 R-Kt 2 | Q-B 2 |
| | (b) | 26 Q-K 4 | Q x P |
| 11 P-R 5 | P-Kt 4 | 27 Kt x P | Q x Q |
| 12 P-B 4 | P x P | 28 P-Kt 6 ch | Q x Q |
| 13 B x P (c) | B-K 3 | 29 P x Q ch | K-Kt sq |
| 14 B x B | P x B | 30 B x B | R x B |
| 15 P-K 5 | Castles | 31 Kt-Q 7 | Resigns. |
| 16 Castles | P-Q 4 | | |

Notes (abridged) from *The American Chess Magazine*.

(a) Not to be recommended.

(b) He does not hesitate to thus early declare his policy, which is an aggressive one.

(c) An open game with a vengeance, at least on the part of White.

(d) White goes straight to the mark, occupying all the points of vantage.

(e) Relentlessly the finishing touches are administered.

The Pawn.

BY P. FYFE.

I.

In hottest fight he's never shirky,
He never jumps wi' motion quirky,
O'er the board;
But often wi' a sudden jerk he
Loups at an opposing birkie
Wi' his sword.

II.

Tae every coward he's a model;
Tae bolt ne'er comes into his noddle;
E'en the Queen,
When he gets a proper hand, he'll
Mak' wi' bitter shame tae toddie
Off the scene.

III.

On he gangs in gallant fashion,
Knights and Rooks he lays the lash on
Wi' a swing;
Then tae crown he makes a dash on.
And in regicidal passion
Slays the King.

—Glasgow Herald.

VOL. XIX., No. 9

NEW YORK, AUGUST 26, 1899.

WHOLE NUMBER, 488

Published Weekly by
FUNK & WAGNALLS COMPANY,

39 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. If local check is sent add ten cents for collection.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

TWENTY REGIMENTS FOR MANILA.

THE call for ten more regiments, in addition to the ten just recruited, is taken as an indication that a determined attempt will be made to overwhelm the Filipinos at the opening of the dry season. The many papers which have long been calling for a force of 100,000 men at Manila feel that the President has shown a tardy appreciation of advice that he ought to have heeded months ago, and the fact that the officers named for the new regiments are all from the regular army and all West Pointers is greeted with similar approval. Many papers, too, discern the hand of the new Secretary of War in the increased aggressiveness in that department, and ask if a change in command at Manila would not be followed by equally good results. Papers on both sides of the expansion issue agree that if the war is to be continued along present lines, the call for the new regiments is a wise one.

Splendid American Energy.—"General Weyler and the other quondam colonial commanders of Spain must look on with wonder and chagrin at the splendid energy of the American army. What are swamps and jungles, rains and floods, heat and moisture to Uncle Sam's devoted soldiers? They march on wherever they are led, laughing obstacles to scorn, rejoicing in the opportunity to surmount difficulties, never complaining of too much work. Has it ever struck the American public that the only complaint of our private soldiers in the Philippines has been not that there is too much work required of them, but too little? The returned volunteers who have criticized the conduct of the campaign have said only that the commanding general is not aggressive enough to suit them. Not a word of complaint do we hear of the hardships they have been called on to endure. Those are all part of 'the day's work,' mere incidents in the routine task of every twenty-four hours. All honor to our soldiers in Luzon! And let us make the work they have done a permanent achievement by advancing our lines and persevering in the task we have undertaken until the insurrection is subdued and the Stars and Stripes

float in undisputed supremacy throughout the archipelago that American valor has won."—*The Journal (Ind.)*, Providence.

Slow Transportation.—"The War Department has sixteen troop-ships, the total capacity of which is about 17,000 men, or a little over 1,000 each on the average. The vessels are not all immediately available, some being now on the way out to Manila with troops and military stores. Three are (or will be) ready to proceed to the Philippines during the current month; eight will be in port from Manila in time to make return voyages during September, and five of the ships will not be home until various dates in the month of October. As the round trip requires about eighty days, the vessels which shall sail with the first of the new regiments will not be available for the transportation of a second detachment until some time in November, while the last of the sixteen transports to leave will not return to make a second voyage until the second half of January next. It will be very near March 1 next, therefore, before the whole force can be assembled in the vicinity of Manila.

"Secretary Root has shown his grasp of the situation by the charter of four additional vessels for the transport service; but inasmuch as these four auxiliary troop-ships will accommodate only 2,550 men in all, they will expedite the shipment to no very great extent. Perhaps they will enable the department to muster the whole of the twenty volunteer regiments at Manila by February 1 next. . . . Of course, it will not be necessary to delay the campaign in the Philippines until all the new troops shall have arrived at Manila; but if the views of those military experts who believe that at least 60,000 men will be necessary to push the war simultaneously in all directions be correct, it would be idle to expect decisive results before the beginning of next year."—*The Record (Ind.)*, Philadelphia.

Southern Apathy.—"The authorities at Washington profess to feel surprised that recruits for the new volunteer regiments are coming forward so slowly, and argue that opposition to the war in the Philippines prevailing in the South is responsible for the apathy of Southern youth in the matter of entering the army.

"There is, no doubt, some opposition to the war in the Philip-

MEN PROMINENT IN THE DREYFUS TRIAL.

pires in the South, as there is in other parts of the country, but that is not the explanation of the lack of recruits for the new regiments. The opposition to the war is neither so great nor so widespread as to have any effect upon enlistments whatever. The real trouble is that Southerners are disgusted at the lack of recognition shown the Southern troops during the war with Spain, at the studied efforts of the Administration to keep Southerners in the background, and at the fact that so few Southern regiments succeed in seeing any service at all. These experiences have strongly disgusted Southerners with army management, and nothing short of a threatened attack by some foreign power could induce them to feel any enthusiasm for army life.

"There is another and special reason why enlistments are slow in the South for the new regiments, and that is the utter unfairness of the Administration in selecting officers for these commands. Altho it was expected that fully two of the regiments would be recruited in the South, scarcely a half-dozen commissions were given to Southerners, and most of the commissions actually assigned to them were of low rank. This palpable injus-

tice naturally did not attract Southerners to the new regiments, and it is not surprising that few desire to serve in them when they know that they will not have the privilege of serving under officers from their own section."—*The Picayune (Dem.), New Orleans.*

"The Administration has had loyal support from the country. It has not wanted for men or money. It has had at its hand the best little army of trained soldiers on earth and volunteers whose States gave them unreservedly for their baptism of blood and fire. It has had the benefit of the highest counsels of civilians, not only in this country, but in England, whose statesmen and students have spread before us with friendly zeal everything that can be learned from England's long experience with similar problems.

"And the country only asks one thing of the Administration, and that it will have or else know the reason why. It has the right to expect that the right thing will be done in the Philippines, and in the best possible way. It will not be pleased if it finds out that the lives of its brave young volunteers have been sacrificed to gain barren victories. It will not be pleased if it finds out that sound advice as to the Philippines has been ignored

at the behest of partizan and personal politics."—*The Oregonian (Rep.)*, Portland.

"The addition of ten new regiments to the army of the United States will add \$15,000,000 to the yearly claims upon the public treasury. This means an extra federal tax of \$1 a year upon each family throughout the United States."—*The Republican (Ind.)*, Springfield.

CHANGING VIEWS IN THE DEMOCRATIC PARTY.

THE differences of opinion among leaders in the Democratic ranks, which must result in some radical changes of position before they can all unite on one platform, are gradually being modified in the interests of party harmony. The first of the modifications was the announcement by the Salt Lake *Tribune*, one of the strongest free-silver papers of the West, of its conviction that the silver issue ought to be given second or third place in the coming campaign. The Indianapolis *Sentinel*, another free-silver paper of equal prominence, soon followed with a similar opinion. Now Mr. Croker, who has been an avowed expansionist and a supposed supporter of Judge Van Wyck for the Presidential nomination, declares on his return from Europe that he is opposed to the McKinley expansion policy and says that Mr. Bryan is one of the greatest men that America has produced. The silver question, Mr. Croker adds, may safely be left to the wisdom of Congress. As a Republican majority in the Senate is assured for years to come, many papers take this as an invitation to Mr. Bryan to drop the silver question and make the fight on the anti-expansion issue. Almost at the same time Mr. Bryan was addressing the Iowa Democrats at their state convention at

Des Moines, and in his speeches he laid some stress on the party's new issues. The Republican papers at once seized upon some of these passages and declared that Mr. Bryan had relegated silver to the rear. The paragraphs in Mr. Bryan's speeches upon which they base this conclusion are as follows:

"The Chicago platform was written for all time, and the Democratic Party is not under obligations to reiterate its details, but as new issues arise we may turn our attention to them, take them into the family, and make a fight on them without apologizing for any former fight we have made.

"I do not visit Iowa to write platforms, but so long as the Iowa Democracy is willing to accept the Chicago platform I am content. If new issues arise which seem to be of more importance than those of the past, it is proper for the party to give prominence to the new ones and even use them as the basis of a campaign. But we do not need to surrender a single syllable of the Chicago platform. Like the inaugural speech of Thomas Jefferson, it was made for all time."

A perusal of the full text of Mr. Bryan's remarks, however, show that he devoted considerably more than half of his address to the money question, and said of its availability as a live issue:

"But I must dwell a little time on a dead issue—the money question. Did you ever see anything that had so many lives as the money question? In 1892 they said it was dead. But in 1893 the President had to call Congress together to bury it. Again they buried it in 1894, and once more in 1895, and you may remember that it was up again in 1896, and had to be buried again. Then they said that would settle it. But again it was up in 1897 and in 1898. It is here now and they are burying it again. But I have examined the corpse and find it in such a good state of preservation that I believe it will last till 1900.

"Why is it? Why is it that they find it so hard to bury the silver cause?

"Because no tomb was ever made so strong that it could imprison a righteous cause.

"Why is it that our opponents continue to bury the silver cause? Because they would rather go to a funeral than a debating society."

Mr. Bryan has since denied specifically that he considers the silver issue secondary.

Mr. Croker's advances have not met a very enthusiastic reception at the hands of the Democratic press. The New York *Journal*, the Columbia *State*, the Savannah *News*, and other silver papers declare that Mr. Bryan will never abandon that issue, while the Democratic press which favors expansion, like the Brooklyn *Eagle*, the New York *Times*, the Washington *Times*, and the Philadelphia *Record*, think that Mr. Croker has made a grievous error in indorsing the anti-expansion principle. The New York *World*, which favors the same views at which Mr. Croker has arrived, says that his utterances "excite amusement and contempt because of the contrast of impudence and hypocrisy between his professions and his performances." Ex-Governor Altgeld, of Illinois, says that Mr. Croker's accession is a great blow to the Bryan cause. The Columbia *State* (Dem.) says:

"He is not an ally that the Bryan men can be proud of or need value for his power. In our national fight next year we can do without him, his city, and his State. He is only of interest at this time as showing how futile the notion that New York can run the great Democratic Party of this country, how great the delusion that the masses of the party will sacrifice their convictions to an imagined expediency."

The Louisville *Courier-Journal* (Gold Dem.), which favors expansion, says of Mr. Croker's new attitude:

"It is really good for the grumps. When Tammany begins taking itself seriously on matters of principle, 'it is to laugh.' Where was there ever an issue of principle that Tammany cared anything about except as an aid to it in its business of getting and holding the offices for its members? It has been on both sides, and on neither side of every issue of principle that has come up in recent years. It was so with reference to the tariff. It was so with reference to silver. If the Hon. Croker is to be

ANOTHER SUBJECT FOR MILLET.

Let him paint a picture entitled "The Man with the Sword."

O judges, lords and rulers in Fair France,
Is this the handiwork you give to God,
This defamed man, distorted and soul quenched?
How will you ever straighten up this shape;
Touch it again with immortality;
Give back the upward looking and the light;
Rebuild in it the music and the dream;
Make right the immemorial infamies,
Perfidious wrongs, immedicable woes?
O judges, lords and rulers in fair France,
How will the future reckon with this man?

Apologies to Edwin Markham.
—*The Journal*, Minneapolis.

recognized as speaking authoritatively for the organization it has been so with reference to expansion.

"It is entirely reasonable to believe that the Hon. Croker represents Tammany in this. Tammany cares nothing one way or another about expansion. If it can throw out its nets so as to 'ketch 'em a-comin' an' a-gwine,' so much the better, especially since the Hogg incident has shown the Tammany leaders that it won't be good pie politics to cut loose entirely from Bryan yet. Croker has made a bungling boss, but he is not so blind to what is expected of him as not to be ready to run wid or agin Bryan, as developments may dictate."

The *Atlanta Constitution* (Dem.) thinks that Mr. Croker is only late in discovering what many other people knew long before:

"In 1896 Mr. Croker and a very great number of Democrats of the East accepted the enemy's interpretation not only of the platform, but of Bryan himself. Since then they have had ample opportunity for calm, considerate study of the platform and the man, and they have come to the conclusion—which was inevitable—that both are Democratic in every respect. The masses of the people understand and appreciate and trust Bryan, and they do it because he stands for principles that are dear to their hearts and in the triumph of which lies their salvation. The people shape public opinion, and the trend of public opinion toward Bryan as the great leader of the people can not find better illustration than in the utterance of Mr. Croker."

DIVORCE AND REMARRIAGE.

SINCE the marriage of Mrs. Sloane to Mr. O. H. P. Belmont (see THE LITERARY DIGEST, May 27, June 10), the clergy both in the Eastern and Western States have shown a disposition to be more cautious in solemnizing marriages. The General Association of Congregational Ministers of Connecticut has passed resolutions declaring that it is incumbent on ministers to exercise the greatest caution before consenting to officiate at the marriage of any person who has been divorced, and "that such consent should never be given in case of the guilty party divorced" for infidelity, nor for any other reason, without a careful examination into all the facts. The Rev. W. M. Barrows, of Greenwich, who had accepted a fee of \$500 for the Belmont-Sloane marriage, but had subsequently returned it, claiming that he had been deceived, was not, however, condemned by the association.

A case somewhat similar to this Connecticut marriage occurred recently in Michigan. Two persons who, according to the laws of the commonwealth, had the right to marry were refused by each of the Evangelical ministers at Ann Arbor, on the ground that one of the applicants had been divorced. These clergymen later united in an agreement not to perform the ceremony of marriage when either of the persons concerned had been divorced or had obtained a divorce from a preceding husband or wife on any other ground than violation of the Seventh Commandment. In general, the religious press has expressed approval of this action. Some secular papers, however, think this position irrational in itself, and derogatory to the laws of the State. For example, the *Brooklyn Eagle* says:

"Law itself contains reasons for divorce, equivalent in moral weight to the reason of infidelity, tho different from it. An unexplained absence of seven years works presumption of death and makes a marriage voidable. So does a sentence of a certain duration for felony, especially a sentence for life, which establishes the presumption of civil death. So does proof of a marriage by force or fraud, or proof that one of the persons to it has not attained the age of lawful consent. There are other causes which make the hard and-fast attitude of the Ann Arbor clergy difficult to maintain, and which would present so many exceptions as to embarrass the clergy there or anywhere else.

"Refusal of sundry of the clergy of Michigan to accept the laws of Michigan, by which marriageability or remarriageability is allowed, might induce the law-making power to take away from such clergymen the right to perform any marriage ceremony at

all. It is a legal right, a right conferred by law, not a right inherent of itself in the ministerial office itself. In France, any marriage may be ecclesiastically performed, but every marriage, including those ecclesiastically performed, must also be performed by a civil magistrate, else the union is not legal and resultant children are not legitimate. In America, either the religious or civil ceremony suffices; but marriages in America, to be valid in France and in some other foreign countries, must be performed before a magistrate here. On that account, foreigners here are generally married by ministers and by magistrates. Besides, Unitarian and Universalist ministers, as a rule, take no such rigid ground as that imputed to the evangelical clergy of Ann Arbor. Uniformity of marriage conditions or of attitude toward divorce conditions will not be possible so long as every State can establish its own rules and so long as ministers themselves construe their duty in the case for themselves."

A party in the Protestant Episcopal church has long been endeavoring to amend the canon concerning divorce by forbidding the solemnization of the marriage "of any person who has a divorced husband or wife still living, if such husband or wife has been put away for any cause arising after marriage." Bishop Seymour, of the diocese of Quincy, Ill., has announced his intention to offer the foregoing amendment at the next general convention at San Francisco, in October, 1901. Of this *Christian Work* says, however:

"There is no fear that the general convention will amend the canons in this matter; their action last year is evidence on this point. And why should the physical death of an infamous and immoral wife and mother be necessary before a pure, good mother can be procured for a motherless family? Bishop Seymour's proposition has neither reason nor the teaching of Christ to commend it."

In the mean time, the secular arm has also been trying to make the estate of the divorced a hard one. Mr. Justice Beekman, of the New York supreme court, has formulated a new plan to defeat "collusion" in divorce proceedings. Altho almost all European governments assume that when both husband and wife are agreed that their union is no longer tolerable or subservient to good, this is one of the best of all reasons for their divorce, the laws in this country take just the opposite ground. If two people, who agree in nothing else, agree that they must part in order to find life enduring, the legislative or legal Dogberry feels sure in his soul that here is "collusion," something particularly despicable in his eyes, and that this is the best of all reasons why the state and church should combine to hold these two together. However, not all legal students in this country agree with this view. Mr. S. N. Tuckman, writing in the *New York Times*, says:

"Mr. Justice Beekman very properly states that the family is the pillar of the state, and the state by means of laws should preserve its sanctity. This is very true in the abstract, but I am rather inclined to believe that the husband and wife who can not live happily together and therefore collude to divorce are, if constrained to live together, more mischievous to the community and exert a more immoral influence upon their home and children than they would if they were divorced.

"Let us rather cling to the present law, and let matters of matrimony be permitted to adjust and elevate themselves."

Mr. Allen Carruthers, writing in the *New York Journal*, makes an interesting comparison of the divorce laws of Europe and the United States. He says:

"Austria grants divorce for 'unconquerable aversion,' on account of which both parties ask for a divorce. Any court in the Union would dismiss the petition as collusive where both parties agree to ask for the divorce.

"Hungary has the same law as Austria on this subject.

"Belgium grants divorces on 'mutual or persevering desire or consent of both parties.'

"Denmark, 'mutual consent.'

"In almost all of the provinces of the German empire divorces are granted for 'unconquerable aversion.'

"Agreement after five years' separation' is a valid ground for divorce in the Netherlands.

"Norway, 'mutual consent.'

"Rumania, 'mutual and continued desire of both parties.'

"Russia, 'mutual consent.'

"Sweden, 'incompatibility of temper and persistent discord.'

"Switzerland, which recently adopted a federal divorce law and amended the same generally, grants divorces where the marriage relations are 'greatly strained'; also 'incurable mental diseases of three years' standing'; 'injury to the honor or reputation of either of the parties.'

"The causes just mentioned are far more liberal than any cause known in America. In fact, some of the causes for which divorce is allowed in Europe are reasons in most every State in the Union for refusing the divorce. As an example, 'mutual consent.' While in many instances both parties may want the divorce, yet if it were known by the court that the application was based upon 'mutual consent,' it would defeat the divorce every time in America. Besides the causes just mentioned as an example of the liberality of the divorce laws of Europe, almost all of the countries of that continent have divorce laws embracing about all of the causes that we have in America. A great many are under the impression that divorce can be obtained in America for 'incompatibility of temper.' Yet as a matter of fact there is no such cause for divorce in any State in the Union."

Mr. Carruthers says that there is a marked increase in divorce both in Europe and America, but that this can not be attributed to any fault in our laws, for "the people are back of the laws in every instance in this country." He continues:

"The report of the Commissioner of Labor referred to by Cardinal Gibbons, which was based upon a very careful and disinterested investigation, plainly demonstrates that stringent or liberal laws of divorce do not correspondingly decrease or increase the number of divorces. This is also the contention of some of the best writers upon this subject, notably M. Jacques Bertillon, who is probably the ablest and most exhaustive writer upon this subject. This is also borne out by the statistics of various countries.

"The fact is, we may judge our divorce laws and also the number of divorces granted by the sentiment of the people. New York, for instance, is the only State in the Union that grants divorce solely upon the ground of infidelity. Yet New York furnishes more divorce suits than any other State in the Union, and probably more unhappy marriages. In this State marriage is easiest and divorce hardest of any State in the Union.

"It is a serious question if the policy of our law on marriage and divorce is a correct doctrine. We encourage with reckless uncertainty marriage, which we fain would approve, yet refuse to dissolve. But people will divorce themselves from intolerable relations at any cost. Marriage is a contract, and you can no more legislate it eternal than you can any other copartnership between individuals; neither can you legislate people to love, respect, and forbear with each other where the material elements of union are lacking."

Verdict of the Farmers on Expansion.—As 70 per cent. of the population of the United States still live in the country and the small towns, the opinions of the dwellers in large cities on national questions is of less relative weight than many might suppose. A plebiscite of 20,000 farmers in all parts of the country on our expansion problems, which has just been completed by *Farm and Home* (Springfield, Mass.), has, therefore, unusual value. More than half of the farmers who voted are from the Central West and the Middle States, which decided the 1896 election, and the rest are divided about equally between the New England, the Southern, and the Pacific-coast States, so that the whole country is represented. Following are the most important of the questions and replies:

Should the Filipinos be held in subjection to the United States, or should they be allowed to form an independent government?

Independent	12,520
Subjection	8,416

Should Cuba be free and independent or should it be annexed to the United States?

Independent	13,109
Annexed	7,302

Should Puerto Rico be free and independent or should it be annexed to Cuba or to the United States?

Annexed to United States	11,097
Independent	6,004
Annexed to Cuba	1,710

Should there be free trade between the United States and Cuba, Puerto Rico, and the Philippines?

No	9,117
Yes	9,117

Should coolie or contract labor be permitted in Hawaii or other tropical dependencies in defiance of the United States contract labor laws?

No	18,055
Yes	1,151

Should United States Senators be elected direct by the people?

Yes	16,643
No	1,236

WHAT SHALL WE DO WITH CUBA?

CONSIDERABLE change in public sentiment has appeared during the last few months with regard to Cuba's future government, and where a year and a half ago the American press was almost unanimous in calling for Cuban independence, there is now a strong undercurrent of opinion in favor of annexation. Some recent views of men who are eminently qualified to speak on this subject throw interesting light on the problem.

One of these, Dr. Antonio Perez, himself a Cuban, makes an eloquent plea for independence. He claims that the partisans of annexation are mostly American and Spanish residents, and that an ever-increasing number of the native Cubans is declaring for complete self-government. Writing in *The Contemporary Review*, he says:

"The independence of Cuba is as necessary to the natives as wholesome food to hungry people. It is, moreover, a matter wherein is concerned their pride, not less than their dignity and self-respect. Should the Cubans, after their long fight of half a century, now tamely renounce their rights, by such an act alone will they prove themselves unworthy of the freedom they wrested from the Spaniards at the cost of so many lives, and of the streams of blood with which the rich soil of Cuba has been drenched. It is not sufficient that a brave people should have

LET'S GIVE THE FILIPINOS AN OBJECT-LESSON

—*The World*, New York.

won their freedom after a long and heroic struggle; to maintain it intact in the hour of triumph, as well as to lay securely the foundation of future greatness, is at once their privilege and their sacred duty. Cuba independent will have a rôle to play; will hold a place in the concert of sovereign nations; will be mistress of her destinies, and will make her own history. The Cuban flag, emblem of so many sacrifices, will represent a living fact. Its lonely star, which symbolizes their aspirations, will then emphasize the integrity of their island home. Caressed by gentle breezes, or proudly carried in the storm, as it floats from land to land, it will be pointed out as the emblem of the honest and unyielding patriotism of a manly people."

Dr. Perez believes that political independence would develop self-reliance and executive ability among the Cubans, and restore condition of industrial prosperity. Figures are quoted to show that the Cuban natives, so far from being an idle race, are among the most industrious workers on the face of the earth. He also lays stress on the importance of a free and independent Cuba to the peace of the world and the commerce of the Caribbean Sea. "Cuba," he says, "would be a kind of neutral territory, and would remove all apprehension with regard to the safety of the neighboring small nationalities."

Dr. Perez thus applies to Cuba the lesson of recent labor troubles in this country:

"Annexation would bring with it social disturbances. The reduction in the salaries of workmen through the operation of trusts and syndicates would promote strikes on the part of the former, and an attempt to import negroes or other cheap labor from the States would then follow. The Cubans—the natives of the soil—having families to support and educate, would naturally oppose such importation, the opposition resulting probably in bloodshed."

He further declares:

"Those who imagine that the Pearl of the Antilles is merely a pearl to be added to a collection, a thing for sale or barter, and that in Cuba will be found another Hawaii, are altogether mistaken. If in Hawaii it was an easy matter for a dozen adventurers from different countries to dethrone a defenseless woman and to usurp the powers of government, depriving the natives of all part in them, in Cuba this ruthless method of proceeding is absolutely impossible. . . . The Cubans have been proved to possess patriotism enough to refuse with contempt anything short of independence, and courage enough to fight those who oppose that independence, without reference to the number or strength of their opponents."

The Boston *Evening Transcript*, commenting on Dr. Perez's article, states that his sentimental considerations will hardly appeal strongly to English or American readers. It says:

"The argument of the advocates of annexation is that as this country is the natural and almost the only large market for Cuba's two great staples, sugar and tobacco, the industries of both countries would be better served by the stability which comes from having a common political head. Cuba is so near our own coast line, almost a part of it, the annexationists will further agree, that its sanitary condition becomes of the deepest concern to us; and that condition, for our own protection against yellow fever, ought to be under our control."

Some prominent business men connected with the Cuban trade were recently interviewed by the *New York Journal of Commerce* on the subject of Cuban government. All were in favor of annexation, tho they did not believe in forcing the situation.

"An Officer of the Army of Occupation" writes a lucid article in *The North American Review* on "The Logic of Our Position in Cuba." He also advocates annexation, but believes that annexation without the consent and good will of the Cubans would be a violation of our recent national pledge, and of American standards of right and justice. He contends that our military occupation of the island is a source of great irritation to the natives, and that the pacification of the island removes the last reason for the presence of American troops. He continues:

"A military government at best is a tyranny. The best military government is the one which interferes least with the autonomy of the civil government. Our military government in Cuba, as a means of *rapprochement* between the two peoples, is a failure. And the extent to which this is the case is indicated by the remark sometimes now heard in Cuba that, as between the American military control and the Spanish military control, the Spanish was preferable. This remark is an overstatement, begotten of disappointment and chagrin; but it holds a terrible suggestion."

The article concludes:

"We are in a false position in Cuba; a position the outcome of which may result in wounding our national pride.

"We have the choice of two alternatives: Shall we drift, or shall we decide?"

"To decide; to carry out our promise at once; to take our troops out of Cuba, leaving the people to govern themselves until such time as they may prefer annexation—that seems to be our proper course.

"To drift means a struggle with a tremendous problem under disheartening conditions; trying to help this people in the face of daily increasing opposition, ingratitude, irritation, suspicion. It means a postponement of the settlement of problems connected with the material prosperity of the island. It means a failure to fulfil a solemn pledge.

"Judging from what we know of the ease with which revolutions are gotten up in Spanish-American countries, to drift may mean eventually a *revolt*.

"And, no matter how large or how small a revolt against us in Cuba might be (it often happens that the smallest bands are the most difficult to deal with), no glory would be ours in quelling it, whether we lost in the struggle tens, or thousands, or, like the Spaniards, tens of thousands of men. And it will be time then for the enemies of our republic to laugh. For the Spanish will seem to have made good their claim that the war of 1898 was one of pure aggression, inspired by the lust for territory.

"It is certain that the question of Cuba overshadows in gravity any other question now confronting this country."

DISARMAMENT AND INDUSTRY.

AN article in *The Engineer*, London, written during the session of the Peace Conference, discusses the effect upon engineering industries of the adoption of a scheme of disarmament by European countries, and concludes that it would be very serious. It says:

"While we are the last to advocate war we can not refrain from expressing a conviction that the state of preparedness for war and progressiveness in war-like arts has become so much a part and parcel of our common nature and our common wealth that any attempt suddenly to arrest it would be followed by economic difficulties and industrial struggles for which the saving to the

UNCLE SAM: "William, you'd better keep an eye on those leaks."
—*The Post, Washington.*

pockets of the rate-payers would be an altogether inadequate return."

Commenting on this, *The Engineer and Scientific Machinist* (Cleveland, Ohio) says:

"It is obvious that American interests, at least for the present, would not be promoted by a successful issue of the Czar's conference. Europe, burdened with her standing armies, can not, even were she on an equal footing otherwise, compete in the design and production of machinery—especially the former—with the United States, unfettered and able to devote the best native skill to manufacture. Americans do not mistrust their ability to meet any situation that may arise, but were the millions of soldiers now engaged in the unproductive consumption of Europe's resources let loose on the industrial world the latter would be very materially changed. Wages, already low, would fall lower and competition would be sharper. Of course tens of thousands would emigrate to the Western hemisphere, where they are not particularly needed. Admitting, however, that a change in the *status quo* would be quite likely to work to our injury, considerations of humanity and the advancement of civilization are sufficient to decide America and the Anglo-Saxon race to favor disarmament and work for its accomplishment."

EXTENT OF OUR RAILWAYS.

STATISTICS compiled by the experts attached to the Interstate Commerce Commission reveal the fact that we have 247,500 miles of railroad track in the United States—enough to build fifteen double-track roads from Cape Horn to the Klondike. The force of men employed on these roads is as large as the largest standing army in the world, and they receive enough in wages each year to pay Germany's national debt six times, while the railways' gross earnings could perform the mighty task of placing Spain on her feet financially. The following interesting features of the report are given in *The Railway World* (Philadelphia):

"The railway system of the United States is practically complete so far as principal lines of travel are concerned. Altho the figures of the commission do not cover the full period of unprecedented activity which has recently dawned upon the railroads, they indicate quite clearly the results of the stimulus to the transportation business imparted by the war with Spain. The railroads have 28,694 more cars than in 1897, and 248 more locomotives, while the number of passengers and volume of freight carried has increased in like proportion. At the same time the number of employees has increased from 823,476 in 1897 to 874,558 on June 30, 1898. This is the largest number of men yet engaged in railway service in this country, exceeding by nearly one thousand the army of railroad employees in service during the phenomenal year 1892. To these men there were paid in wages during the year the vast sum of \$495,055,618, representing more than 60 per cent. of the total operating expenses. There are few industries, indeed, which require for their successful prosecution a larger share of skilled labor than the railroads demand. While the gross earnings of the entire railway mileage for the year footed up \$1,247,325,621, an increase over the previous twelvemonth of \$125,235,848, the volume of stock and bonded obligations issued was so great that two thirds of the stockholders received no dividends whatever. The figures of the commission show that of \$10,818,554.031 of railway capital outstanding, dividends were paid on only 33.74 per cent. The gross dividend earnings were \$6,240,864, yielding an average of 5.29 per cent. on all stock on which a dividend had been declared."

A regrettable feature of the report is the fact that over 250 deaths and nearly 7,000 injuries have resulted in a year because the Federal authorities neglected to enforce an act of Congress relating to brakes and couplers:

"It does not appear that the act of Congress requiring automatic couplers and air-brakes on all trains has had any effect other than to induce a cessation of other forms of coupling and brake manufacture. The passenger-train service throughout the country is now fully equipped with the new brakes and couplers, but out of 1,248,826 cars in freight service only 567,409 have train

brakes and 851,533 are fitted with automatic couplers. This tardiness of the companies in complying with the Federal statute is largely responsible no doubt for the appalling list of fatalities to train hands during the past year. Of the 1,141 killed and 15,645 injured among railway employees in 1898, no less than 279 deaths and 6,988 injuries resulted from coupling and uncoupling cars. This fearful sacrifice might have been almost entirely prevented had the act of Congress been thoroughly enforced."

The total number killed on the railroads during the year was nearly seven thousand. The *Hartford Courant* says of it:

"Would you believe that the number of American citizens killed or wounded on American railroads in the twelvemonth which ended June 30, last year, was far in excess of the number of American soldiers killed or wounded in last year's war with Spain and this year's campaign in Luzon, put together? That is the story told by the Interstate Commerce Commission's figures. Here these are in all their grimness: Killed on the railroads, 6,859; wounded on the railroads, 40,882; total of railroad casualties, in one year, 47,741.

"Only 221 of the killed were passengers. The risk of sudden death accepted by the individual American citizens who buys a railroad ticket and takes his seat in the car is very slight, tho quite appreciably greater in this country than in Europe. The number of railroad employees killed in the year in question was 1,958. This leaves 4,680 victims to be accounted for. A considerable percentage of them were tramps—lazy or footsore fellows who stole transportation once too often. The deadly grade-crossing and the track-walking habit account for most of the rest.

"We come to the wounded. Of these, in that one year, 2,945 were passengers, 31,761 were railroad employees, 6,176 were 'others.'

"It would be interesting to know just how much—in money—the casualties of the year in question cost the railroad companies and the accident insurance companies. We fancy the total would be something impressive. . . . We'd be glad to learn that the commission's figures are wrong. The story they tell is anything but pleasant—or creditable."

TOPICS IN BRIEF.

MR. SEWALL, of Maine, announces that he is out of politics. That is the impression the American voters tried to convey to him in 1896.—*The Ledger, Philadelphia*.

"After all," he said oracularly, "the Philippine problem is very simple." "To all those who do not have to solve it, yes," was the reply.—*The Evening Post, Chicago*.

WHEN William Waldorf Astor ceased to support the Constitution of the United States that venerable pillar of our liberties was not observed to totter.—*The Record, Chicago*.

A HANDSOME reward should be offered to the ingenious man of brains who can find some method by which, when the Filipinos are beaten, they shall stay so.—*The Herald, Boston*.

It is reported that Captain Dreyfus, if acquitted, will devote his life to charity. There seems to be plenty of room for him to exercise this Christian virtue.—*The Transcript, Boston*.

AMERICAN enterprise has finished the Atbara bridge at about the time when English builders expected to begin to get ready to prepare to commence it.—*The Ledger, Philadelphia*.

'It would be interesting to know how much of the money coming out of the Klondike was made by the miners and how much was made out of them.—*The Chronicle, San Francisco*.

AN old lady has offered Mr. Balfour an income of £5,000 a year if he will not play golf on Sunday. In case Mr. Balfour doesn't care to accept we would be glad to find a substitute for him.—*The Times-Herald, Chicago*.

DIFFERENCE IN CITIES.—New Yorker (affably acknowledging the introduction): "From Chicago, eh? Glad to meet you, Chicago. Chicago— isn't that where they kill hogs?" Chicago Man: "Yes, that's where they kill 'em. They don't turn the city over to 'em."—*The Tribune, Chicago*.

FRENCH JUDGE: "Prisoner at the bar, you are accused of a great crime." Prisoner: "I am innocent." French Judge: "Evidently you are a hardy offender. You deny the charges of the Government, and therefore must be a traitor to France. I sentence you to five years' imprisonment for entering into relations with the German Government."—*The Transcript, Boston*.

A FILIPINO FABLE.—A boy who had a brindle dog on a string was so tired that the dog was on the point of achieving independence, when a member of the Society for the Prevention of Cruelty to Animals accosted the boy and chided him for not giving the dog his freedom, and finally bought the string for the sum of 25 cents. The last the boy saw of the kind-hearted stranger he was kicking the stuffing out of the dog because it hung back when he pulled on the string.—*Judge Charles G. Garrison, of New Jersey*.

LETTERS AND ART.

IS THE PUBLIC SCHOOL "A CURSE"?

IT will be remembered that Mrs. Rebecca Harding Davis recently raised this question (see *THE LITERARY DIGEST*, June 3), and that her answer was largely an affirmative one. Our public-school system finds a vigorous defender in Mrs. Schuyler Van Rensselaer, who in *The North American Review* (July) replies to Mrs. Davis's article. "Has the public school done its work?" Mrs. Davis wrote; "has education been always an unmixed blessing to America and Americans? This question can not be answered so easily and positively as loyal sons of the republic may suppose." But Mrs. Van Rensselaer thinks that it can be. She says: "Indisputably, the blessings it has bestowed far outweigh the curses. If we try to fancy what the condition of our land as a whole would be if it had had no free schools, the imagination shrinks from the first outlines of the picture."

She refers to the Acadian settlement in Louisiana, described by Mrs. Davis, wherein few people could even read and write, yet where a marked degree of happiness prevailed, and she comments upon Mrs. Davis's apprehensions lest schoolmasters should be sent there "to open the way for railways, business, and civilization," in the following words:

"If such a community could have been fenced in with barbed wire and placed under a strict taboo, it might have continued moral and contented without any schooling. But it was not a normal community in our day and land. It was a 'survival,' an anachronism; and, as such, inevitably destined to change. In other ages, other lands, there have been true gentlefolk who could neither read nor write. Such persons are unthinkable among ourselves; and so is the perpetuation of pastoral ignorance and innocence in any locality. Business and the railroad, politics and the newspaper, can not be kept from touching any corner that happens still to be lonely in the modern white man's world; and, little as we may like the kind of civilization they sometimes bring with them, it would hardly be improved by the elimination of the schoolmaster."

The reasons why any American community is not all that we would wish it to be are, says Mrs. Van Rensselaer, very complicated. It is a dangerous and mistaken notion to lay blame on the public school for every failure in the body politic, including the failure of certain classes of inhabitants to act in accordance with good sense and sound morals. Mrs. Van Rensselaer herself remembers the "typical" village of "X—" which Mrs. Davis so cleverly describes. In that former whaling community she spent six or seven summers as Mrs. Davis's neighbor, but she diagnoses the disease in a different way. It is not due to over-education, "to the presence of three huge schoolhouses and the free library," but to changed conditions of life, to emigration of the best blood of the community, and to the ensuing "dry rot." Mrs. Van Rensselaer continues:

"It is dangerous to exaggerate the share of blame that should be laid upon the public schools, or upon the beliefs they represent, because we may thus be led into one or the other of two opposite errors. We may come to despise our school system, and, therefore, to neglect its improvement if not its maintenance; or we may be tempted to expect too much from it, and, in consequence, to confuse and weaken its proper work by laying upon it burdens that it ought not to bear.

"Mrs. Davis's article is, I think, a sign that the first-named danger is a real one. The second is illustrated by the people who, in these latter days, still cry out that the public schools should teach some dogmatic form of religion, or at least that vague and indefinable thing called 'dogmatic Christianity,' or, at the very least, some formalized code of 'Christian morality.' To ask this is to ignore one of the great principles upon which our state and federal governments were based. If, as Mrs. Davis says, our grandfathers were more religious than we, nevertheless

they were very careful to sever religion from politics, and from those practical matters which they put under the control of the state, leaving to the individual the duty of caring for his own and his children's souls in his home, and through such religious or ethical institutions as he might choose to support. The full liberty in religions belief and practise that the fathers of the republic thought absolutely essential, can not be combined with any form of religious instruction controlled or authorized by the state."

Mrs. Van Rensselaer then cites numerous facts gained from a careful study of the public-school system in New York—a system which has especially difficult problems to solve, and yet which, she says, is without doubt accomplishing great things in the way of educating, assimilating, and Americanizing the foreign masses of the population:

"The more I have studied it, the more distinctly I have come to understand the difficulties with which it has to cope and the way in which it is often isolated in its effort to cope with them, the more clearly I have realized the difference between the average child that it now turns out and the average parent of foreign or even of American birth, the longer I have reflected upon the picture our crowded and polyglot poorer quarters would present if it did not exist—the more I have been impressed, not by its defects but by its merits, not by its failures but by its successes, not by the deficiencies of its teachers but by their unselfish devotion and the educational intelligence they often display, even when their scholastic equipment is not of the best. Any reader who will take the same practical method of inquiring into the question will soon be brought, I think, to agree with me that 'a life-giving ichor' does indeed go out of our public schools, even in their present imperfect estate. And, seeing how steadily and rationally they are being improved, he will believe that, while they may never 'conquer' ignorance, poverty, and crime, they will win victories greater than any that have yet been won or can yet be foreseen in the ceaseless battle that imperfect humanity must wage against these three terrible foes. Surely it is foolish to lose faith and courage because, in less than a century, the American free school has not done all that the home and the church, active ever since the birth of civilization, have failed to accomplish. But a cautious person may well shrink from predicting what it may do, even within the next hundred years, lest he be accused of airy optimism by those who have fallen into the mistake of blaming popular education for many of the social evils and shortcomings which, in fact and in truth, it is doing more than any other agency to uproot and to cure."

A NEW ERA IN ART AT THE SALONS.

MANY critics of late years have held that the period of original art has long been passed, and that now it is only left to copy the masterpieces of former times. It has even been said that "whoever does a new thing does a bad thing." But M. Maurice Hamel, in his review of the Salons of 1899 (*Revue de Paris*), claims that a new era in art has been reached. He says:

"The characteristic of the present exhibition is a return to life and to nature, and a better intention in the true conditions of art, as is shown by the young artists who prove by the justness of their observation their fresh and intense power of feeling. Academic art placed itself outside of life in a domain of factitious combinations, where nothing was allowed to penetrate which could move or disturb us, or make us feel that we lived; it returned in a senile manner to old themes, or hoped to render them new again by some particular oddity or whim, maintaining always a mournful separation between the man and the artist, between life and the work. Thus the artistic creation which should have exalted the inmost sense turned itself to pure mechanism. How was it possible that works born in the cold regions of the intellect and memory could have offered unity and strength of organic life, like those which germinated in the mysterious depths of the soul? Profane or sacred, the tragedies of the school seem to us to-day like shadows which vanish, and one can no longer be deceived as to their insignificance. I am not astonished that so

few of the *élite* have escaped the superstitions of the past and take again direct inspiration from living nature. Nothing stupefies so effectually as carrying a weight of prejudices, and nothing refreshes the blood like a return to native sincerity."—*Translations made for THE LITERARY DIGEST.*

ANNUAL MEETING OF THE NATIONAL EDUCATIONAL ASSOCIATION.

THE annual meeting of the National Educational Association, held this year at Los Angeles, was in many respects the most important and fruitful gathering yet held. Many signs were evident that in the qualities of compact organization, directive skill, and general vigor, the association has reached a high point of effectiveness. Some regret has indeed been expressed at the absence of representatives from the universities of the Atlantic States, and a Western delegate wittily said that the Eastern boundary of the country appeared to be the Hudson River. From the New York *Independent* (July) we quote the following *résumé* of the salient features of the meeting:

HON. O. T. CARSON,
The new President of the National Educational Association.

"The problems of chief moment considered at the Los Angeles meeting were the continued education of the adult masses, school

administration, and college-entrance requirements. The first—namely, education after the brief period of school life, is as yet scarcely more than a haunting sense of obligation quickened by our new responsibilities. Certain of its phases were tentatively broached by the president, Mr. E. Oram Lyte, in his opening address, and its racial or colonial aspect was treated by Dr. Harris, whose masterly discussion of an 'Educational Policy for Our New Possessions,' was followed with profound interest. . .

"The departure in this city [New York] was criticized by Dr. Butler in his survey of the year, and his view carries the greater weight because he regards the movement in the cities on the whole as a 'result of the newly aroused municipal conscience, which is reproaching us for inefficient, disorderly administration of a city's business,' and as a rational 'demand for efficiency.' Of the departure in San Francisco, he says: 'In the new charter soon to go into operation we find two thoroughly bad principles combined in one scheme: a bi-partizan school board and a paid school board, the members of which are required by law to give their entire time to the duties of their office. This is not only a departure from uniform American practise, but it is in flat contradiction to the principle which demands that the school board shall legislate only, and that all executive duties shall devolve upon professional officers. The city superintendent is to sit in the San Francisco school board, as in that of New York, without the right to vote, but his legitimate duties are apparently to be divided with the paid school board, so that either confusion and inefficiency or trading and practical 'deals' may be expected to follow. There is no excuse for a paid school board in an American city. Such a board can only be given work enough to do to occupy it by stripping the superintendent, the supervisors, the

principals, and the business officers of the school system of their just powers and responsibilities."

Another topic of great importance was the relation of secondary schools to the universities—a subject that has been much discussed for several years. A committee, made up of representatives of the colleges and higher schools, reported in favor of a limited recognition of elective studies in the secondary schools. Among required studies, "four units in foreign languages, two units in mathematics, two in English, one in history, and one in science" were recommended. It will be noted that no requirements in ancient languages are suggested. Of this important decision *The Independent* says:

"Thus the gauntlet is thrown down to the classicists by a body whose conclusions will prevail at least throughout the West. This is a consideration of great moment, since this vast section can no more be ignored in educational than in political affairs. It is face to face with problems differing in many respects from those with which the East has grappled, it confronts those problems with resolution and judgment, and its decisions will profoundly affect the destinies of the nation."

The Hon. O. T. Carson, an educator of national repute and former school commissioner of Ohio, was elected president of the association for the ensuing year.

AN INDIAN CHIEF IN LITERATURE.

THE late chief of the Pottawattamie Indians, Simon Pokagon, was a man for whom the title "noble red-man" might have been especially coined. Few men of Caucasian blood have displayed finer traits of generosity, earnestness, loyalty to a high ideal, or delicacy of mind than are shown in his recently published book entitled "The Queen of the Woods"—a biographical romance telling of his experiences and studies, his people, and especially of the fair Indian maiden Lonidaw who afterward became his bride. Pokagon himself says of the book, in his quaint way: "It is the story of my life, with many things about the traits and habits of my people and the wild animals and birds of the forests, with some things about nature, so related as to make a true story which Pokagon thinks will be instructive and do some good."

Mr. B. O. Flower, in *The Coming Age* (August), relates many things of interest concerning this unique character. He says:
